HE COMBINES THE BLOOD OF WORLD CHAMPIONS

Onaco Sir Lucille Jolie Beauty STANDS AT THE HEAD OF THE DENNINGTON HERD

His dam, **Lucille Jolie Pontiac**, became the World Champion senior four-year-old by producing 1,173.15 lb. butter in 365 days, her milk averaging 3.94% fat. Then, as a seven-year-old she made a seven-day record of 33.29 lb. butter, 665.5 lb. milk.

His sire's dam, **Keystone Beauty Plum Johanna**, became the World Champion senior four-year-old by producing 1,294.71 lb. butter in 365 days. This was made in strictly official test in which she produced 25,787.5 lb. milk that averaged 4.02% fat. She made a seven-day record of 665.5 lb. milk, 32.88 lb. butter in the early part of that lactation period while as a junior three-year-old she produced 1,108.08 lb. butter in 365 days, her milk averaging 3.94% fat.

The year records of these two great cows, tested as senior four-year-olds, average 1,233.93 lb. butter,—more than a **hundred pounds a month**. Then consider the average percentage of Butterfat in their milk and that both were splendid individuals.

HAMPSHIRE S

FOR 5 YEARS in succession, Hampshires have won grand championship over all breeds at the International Livestock Show in carload lots, 1918-1919-1920-1921-1922.

HAMPSHIRE S are the practical farmer's practical hog, because of their meat type—their grazing qualities—their activity—health and vigor—their highly developed mother instinct—their milking qualities—their early maturity and economical gains, and because they are Recognized Market Toppers.

The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

Subscribe for the official breed paper—THE HAMPSHIRE ADVOCATE.

This is a monthly publication, devoted to the interest of the Hampshire breed.

Subscription price \$1.00 per year or \$2.00 for 3 years.

Free Service Department—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

No. 1

Successful Cooperation by Brothers

Two Herds of Closely Related Animals

SUSQUEHANNA COUNTY is the greatest dairy section of Pennsylvania and leads all her sister counties for number of purebred Holsteins. This district has been termed "The Switzerland of Pennsylvania" on account of its beautiful scenery and its prominence in dairying. Its picturesque hillsides and fertile vales are the homes of splendid purebred Holstein herds, and one can drive for miles over its winding

CATTLE BARNs ON THE FARM OF FLOYD E. MACK

roads and see no other cattle except black-and-whites.

In the Snake Creek Valley, a short distance north of Montrose, the county seat, are the Mack herds, owned by L. N. Mack & Son and Floyd E. Mack.

L. N. Mack and Floyd E. Mack are brothers who have owned herdsires in partnership and their herds are so closely related that we plan to discuss the two establishments in one article.

The farm of L. N. Mack & Son consists of 400 acres and is the home of a herd of 75 purebreds of which 30 or more are of milking age.

About ten years ago Lafayette Mack, the senior member of the firm, purchased his first purebreds. He had then been running his present establishment about seven years and had found it up-hill business to make money by dairying with common cattle. Mr. Mack says that he averages to get as much milk from 20 purebreds as he used to get from 30 scrub milkers and that if he tore up the registration papers of his 70 animals—his entire herd—he would still be financially ahead of where he would have been had he continued with his scrubs.

The Macks are believers in the old adage that the bull is more than half the herd and that the best is none too good. After the herds were started they faced the problem of securing a herdsire and paid visits to a number of high-class breeding establishments. In Mr. E. C. Brill's herd at Stewartsville, New Jersey, they took great fancy to a heifer named Bell Segis

Champion. This heifer had a seven-day official record of 17.75 lb. butter, 383.4 lb. milk, but Mr. Brill assured them that this mark was not anywhere near the limit of her capacity, that she was one of the very best daughters of King Segis Champion and that her dam and granddam were both splendid cows, the dam having a record of 26.77 lb. butter, 577.8 lb. milk and the granddam having a record of 25.62 lb. butter, 682.6 lb. milk. The Macks not only liked this heifer but they also liked her young son, Grand Champion Segis 2d, and they decided to own him. That their judgment was sound and that Mr. Brill's estimation of Bell Segis Champion was justified, was seen when Bell Segis Champion, as a senior four-year-old, made the splendid records of 37.15 lb. butter, 523.6 lb. milk in seven days; 123 lb. butter, 2,294.1 lb. milk in thirty days, her seven-day butter record being the fourth highest reported that year in the senior four-year-old class.

Grand Champion Segis 2d is backed by animals well known to Holstein breeders everywhere. The sires in his pedigree have been made famous by the records made by their daughters; the dams in his ancestry have made wonderful records in official tests and several of them have won high honors in the show ring. The three nearest dams of this bull have seven-day records that average 31.36 lb. butter, six of the seven dams appearing on a four-generation pedigree

LAFAYETTE MACK LOOKING OVER HIS PROSPECTIVE MILKERS

Two-year-olds that will freshen during winter and spring

chart have been tested and their seven-day records average 32.07 lb., while his seven nearest tested dams average 32.80 lb. butter. His dam, his sire, one of his granddams, his grandsire—for he had only one—and the paternal granddam of both his sire and dam have won high honors at leading shows in the eastern states. His offspring in both herds indicate that he has transmitted the excellent qualities of his ancestors to his

progeny and we think the pictures we are showing of his heifers, untouched snapshots, are evidence of the truth of this statement.

Incidentally we may mention that Bell Segis Champion was sold in the National Sale at Worcester, Mass., for \$5,000. Although cattle were selling for high prices in public auction about that time it is evidence that her type, producing capacity and records appealed to the assembled breeders.

Lafayette Mack and his son Morris are first-class dairymen and cattle raisers. Morris is a graduate of

DAUGHTERS OF GRAND CHAMPION SEGIS 2D
Owned by L. N. Mack & Son of Montrose, Pennsylvania

the Montrose High School and is planning on taking a course at one of the leading agricultural colleges. One daughter is married and away from home and there are two younger children at home. Our story would be incomplete without mentioning Mrs. Mack. Besides running the house, she looks after the raising of the calves, and the quality and development of the young stock shows that she is a real expert.

The barn of L. N. Mack & Son is equipped with modern conveniences as are necessary on every up-to-date dairy establishment. The land, although stony, is very productive. There are about 250 acres tillable and plenty of clover, corn and oats are grown to feed the horses and the large herd of cattle.

Mack & Son have never officially tested their animals but whenever the local cow testing association was functioning they were enrolled and animals in this herd have always stood high in the testers reports.

The milk produced is sold to the Borden Plant at Montrose. The Macks are members of the Dairymen's League. Mr. Mack is one of its strong supporters and declares that as long as the League lasts he will belong to it.

The farm of Floyd E. Mack adjoins that of his brother. It consists of 190 acres of well-watered land. The buildings have modern equipment and the herd is a real good one. Mr. Mack, who was born at Brooklyn, Pennsylvania, is a bachelor and has owned his present home about seven years. His mother resides with him and despite her years, takes an active interest in the business.

Floyd Mack has been breeding purebred Holsteins about eight years. His first purebreds consisted of three cows for which he paid \$200 each, from these three animals the present herd has been developed.

The older members of the herd are daughters of Grand Champion Segis 2d. These, like their sisters in "Lafe" Mack's herd, are typical Holsteins, great, big,

handsome animals with broad, level rumps and nice top lines, and last but not least, square udders of large size and great capacity.

Floyd E. Mack is a member of the local cow testing association and his cows always rank well toward the top of the list. For several years animals of this herd have been shown at the Susquehanna County Fair with a considerable degree of success. Floyd Mack has been a regular consignor to the Susquehanna County Holstein Breeders' sales and his animals have brought good prices for they have always been choice individuals and the producing capacity of the Mack herds are well-known in their native county. Floyd Mack is a member of the Executive Committee of the Susquehanna County Fair Association, is a member of the Dairymen's League and can always be depended upon to boost for anything that tends to make a farmer's life more pleasant and profitable.

The junior sire in the two Mack herds is King Valdessa Pontiac Perfection, a very handsome, light-colored bull, whose offspring inherit his individuality and show promise of becoming big producers. The dam of this bull has an official record made as a six-year-old of 556.1 lb. milk, 27.21 lb. butter made in seven days and a thirty-day record of 2,027.2 lb. milk, 108.63 lb. butter. His sire is the well-known King Valdessa Pontiac, whose daughters have made such splendid records in the Bell herd both in short time and long time tests. He was from the famous 40-lb. heifer, Mabel Segis Korndyke, and was by King Valdessa, whose dam, Valdessa Scott 2d, was the first cow to make a 40 lb. seven-day official record. King Valdessa Pontiac, it will be remembered, was the "daddy" of the prize winning "get of sire" at the National Dairy Show.

The Macks have recently purchased Colonel Joh Lyons, a real good individual and a bull of remarkable breeding. He is a son of King Joh and the 33.63 lb. cow Gypsy Lyons. Gypsy Lyons has made a number of good official records and has several good daughters, including Gypsy Lyons Pontiac, 34.76 lb. butter in seven days as a senior three-year-old. Gypsy Lyons was

YOUNG DAUGHTERS OF GRAND CHAMPION SEGIS 2D AND
KING VALDESSA PONTIAC PERFECTION,
In the L. N. Mack herd

from Gypsy Hengerveld, a 29.24 lb. daughter of Judge Hengerveld De Kol and Gypsy Queen Clothilde, a 24.91 lb. cow, a direct descendant in the female line of the famous old foundation cow Prilly.

Gypsy Lyons was by King Lyons, he by Colantha Johanna Champion from Segis Betta 28.99 lb. butter in seven days, a daughter of King Segis and Betta

Lyons Netherland a 34 lb. cow whose dam was also a 34 lb. cow.

King Joh, the sire of Colonel Joh Lyons, has a number of good record daughters including the 40 lb. four-year-old Highland Burke Joh. He was from Uneeda Korndyke Abigail 33 lb. of butter in seven days, the highest record daughter of Johanna McKinley Segis, who was by King Segis from the second 40 lb. cow Johanna De Kol van Beers. King Joh was sired by King Segis Pontiac Alcartra, he by King Segis Pontiac from K. P. Alcartra, a heifer that made a world's record in year test as a junior two-year-old and then the next year made world records for seven- and thirty-day butter production as a senior three-year-old. The eleven nearest dams of Colonel Joh Lyons have seven-day records that average 32.15 lb. butter. Eight of his eleven nearest dams have records ranging from 30 lb. to 40 lb. butter. Cows among the ancestors of this bull have made world records for milk and for butter production in year test and his ancestors include many of the greatest sires and some of the greatest producing cows ever developed in the Holstein breed.

Cattle from the herds of the two Mack brothers have been exhibited at the Susquehanna County Fairs and in this "hot-bed" of good Holsteins have won their share of prizes. The offspring of Grand Champion Segis 2d and King Valdessa Pontiac Perfection would attract attention anywhere on account of their individuality, and as they are well-fed and well-grown they always please the judges. Both herds are under State and Federal Supervision and it is the ambition of the owners to be placed on the accredited list.

The Mack Brothers are real dairymen who keep purebred Holsteins because they have found that these cattle give better returns at the pail for the food they consume than do ordinary cattle. In other words, that they are economical producers of large amounts of milk and butterfat. The income received from the sale of surplus stock is in addition to the dairy earnings of the herds. The showing these herds make in cow testing association work and the many cans of milk produced daily is reason for the demand for the daughters of Grand Champion Segis 2d and his stable mate. Animals from these two herds have been used as foundation stock for several herds in Susquehanna and adjoining counties while a number of sales have been made to parties in New Jersey and southern Pennsylvania. In every instance of which we have heard the purchasers are delighted with the animals they obtained from these two herds.

L. N. Mack and his brother Floyd are substantial

farmers and dairymen who have attained success by hard work, good judgment and purebred Holsteins. These two men are now well-to-do farmers but they have made every dollar they possess and they and their families have worked hard for what they now have. We believe they are destined to rank high among Holstein breeders of Susquehanna County and we believe that their dairies will produce more milk and butterfat and make more profit per cow than do many of the so-called famous breeding establishments which have been established by the use of large sums of money, but whose owners lack the skill and judgment and the knowledge of stock acquired by these two dairymen-breeders by contact with and work among the animals they own.

Something Like a Producer

THE fifth British-Friesian cow to exceed 30,000 lb. of milk in a year is Higham Eva 2d owned by H. Purser of Abberton, Pershore, Worcestershire. This cow is credited with a production of 30,810 lb. of milk in 365 days and was producing 70 lb. daily at the end of the year. Her breeder, H. D. Squirrel-Dawson, made the supreme sacrifice in the great war. The cow was born on December 25, 1915. Her last freshening was on November 8, 1922 and then she is due to calve again next April.

"The Milk Industry" in reporting her record tells a story about this cow that is only equalled by Ward Stevens' story of the milk produced by "Bos" the granddam of the imported bull, Karel Bos. We do not remember the exact figures for "Bos" at this time but during May and June 1923 Higham Eva 2d was the only cow in milk on Mr. Purser's farm. She is claimed to have supplied:

- (1) All the milk, cream and butter used by the Purser household.
- (2) The entire village with exception of one household with milk, one of these customers taking five American quarts daily.
- (3) Three customers obtained all the butter they needed.
- (4) The grocer took the remainder of the butter.
- (5) A family of pigs were raised on the separated milk.

It is Segis Pietertje Prospect's turn to be heard from. Probably we shall hear that her product for a week kept one of the branch condenseries busy when otherwise it would have been shut down.

Boy Wins State Fame With Holstein Cows

By J. H. Lewis

HOW to keep the boys on the farm is the greatest and most vexatious problem the farmers of this country have to solve. This has been solved in Wisconsin to a great extent by the development of the dairy industry. After all, success is largely a matter of personal interest. Boys who grew up on the farm left for the larger centers of population because there good jobs and higher pay could be had and much of the drudgery and long hours of farm life avoided. The dairy industry has opened up a big field for the younger generation,—boys growing into manhood. There is a more certain element of profit connected with the business than is ordinarily found in the other branches of farming and dairy farmers have learned that getting ahead in the world is a matter of money making whether it be in the professions or upon the farms. As a result they are taking their boys into partnership or, instead of educating them for professions long ago over supplied and underpaid, they are sending their young men to the State Agricultural College at Madison and when their boys have graduated they come back to the farm better qualified to make a success out of farming than ever before.

There was a time when these same farmer fathers rather ridiculed the idea of "book larnin" in connection with farming operations but they have discarded their old foggy ideas and now they are getting crushed in the doorways and entrances to the Short Course colleges and Farmer's Institutes seeking vantage points of observation.

Go where you will in the dairy farming districts of the state, one thing stands out as conspicuously as a boil on a pretty school teacher's nose, and that is, the interest being taken in dairy farming by boys not yet out of their teens. In this interest is found the greatest harbinger of the success of the future. Better education; the advantage of knowledge gained through experience in the agricultural schools, both major and junior; close contact with the practical problems of the dairy business; all contribute to the making of a high-class type of dairy farmer, and while Wisconsin people may be justified in throwing their hats in the air and hurrahing over their

CLARENCE KUHL,
Hazel Green, Wis.

accomplishments to date, it is not a circumstance to the developments bound to take place in the state within the next five or ten years.

It is easy to interest mere boys and young men in an animate working machine. The excitement of gradually developing high producing butterfat cows in competition with hundreds of others in cow testing as association work is keying up the younger generation to accentuated interest in the business. Weeding out the boarders, solving feed problems, improving the type of the herd are all intensely interesting because productive of results from a dollar and cents standpoint and also from the standpoint of satisfaction and the combina-

tion affords incentive to go ahead and work out new ideas and methods. A higher type of dairy farmer as well as higher type of dairy herds is being built up in this state. The leading officials of the state and the public press realize the good work going on and therefore there is little wonder that a boy achieved state wide fame through the performances of a registered Holstein cow.

In the extreme southeast corner of Grant County snugly nestled among the hills is the village of Hazel Green. It is the center of a fine dairy country which is the home of many fine dairy herds. The Hazel Green Cow Testing Association has been organized but a few years but it has gained prominence because it has in the registered Holstein-Friesian herd of Leo Kuhl & Son.

There is system on this dairy farm which goes by the name of Evergreen Grove Stock Farm. This name

appears on the stationery which also shows an engraving cut of the Kuhl herd. The place is most inviting for the dairy barn is large and well equipped and the yards and home are immaculately clean and the herd shows fine type and uniformity. Every cow is on test. Great diligence and care

is manifested in keeping records and every dollar's worth of feed and every dollar's worth of return is figured with accounting-house accuracy. In this way father and son, working together harmoniously, know exactly how their business is progressing from day to

CLARENCE KUHL AND HIS PET HOLSTEIN, PAULINE ORMSBY DE KOL CANARY.
She has a cow testing association record of 1,002.5 lb. butter.

Clarence Kuhl, the son who is not yet twenty years of age, is a bear for work. When most young men seek the soft allurements of our modern day civilization, this boy in overalls and jumper is working early and late for production, for a better herd, for better money returns. For him there are no movie pictures, no boon companions, no rides to dance halls far removed from the scene of his labors because his sole ambition is to

LEO KUHL AND PABST KORNDYKE CONRAD,
Head of the Evergreen Grove Stock Farm Herd

become one of the greatest dairy farmers in the state, and the lad is well on his way to the coveted goal.

In one of the engravings shown here Clarence Kuhl is depicted with his particular pet Pauline Ormsby de Kol Canary, No. 370068, born on the Evergreen Grove Stock Farm, February 13, 1917. She has given birth to five fine calves. In the single month of May, 1923, Canary produced 2,650 lb. milk and 102.9 lb. butterfat on twice a day milking.

Over in Rock County, Katterhenry Bros., members of the Beloit Cow Testing Association, own a Holstein cow called Kit. This Kit hung up a record in cow testing association work for her year of 807 lb. butterfat, giving her first rank in the state. When this information reached Clarence he said, "I have a cow that can do better" and the job of exceeding the production of the Rock County cow was launched there and then. How near he came to turning the trick was seen when Canary's production for the year in the Hazel Green Cow Testing Association was completed, for she had to her credit 20,178 lb. milk and 802 lb. butterfat, the equivalent of 1,002.5 lb. butter.

It is needless to observe here that Clarence was disappointed as he wanted his darling cow to stand first in the cow testing associations of the state. But he was not dismayed. He set to work with a vim and is using the feeding knowledge he gained during the past year. The young man is now beaming with confidence. The record so far shows that the cow will excel her performance for the past year by a considerable margin and, barring accidents or sickness, Clarence Kuhl and his cow Canary are well along toward a record which will return her top cow of this state.

Canary's best day's milk was 97.2 lb. Her milk sold to the Galena, Illinois, condensery for \$437.66. Her total feed bill for the year including pasturage was \$105.22, leaving a net profit of \$332.44.

Leo Kuhl, the father, is shown here with Pabst Korndyke Conrad, No. 235558, a son of the 38-lb. bull Korndyke Segis Johanna whose thirty-four daughters include the former world's champion and present Wisconsin champion, Pabst Korndyke Cornflower. The sire's dam is a daughter of King Pontiac Champion and is credited with a 25-lb. seven-day record as a four-year-old. Next February, Pabst Korndyke Conrad terminates his relation with the Kuhl herd. Clarence, who is very much the boss about the place, has a deep rooted feeling that a better herdsire can be secured. The Kuhl's agree that any money invested in a good herdsire is money well invested and the best is none too good.

Space forbids dilating on the entire herd. One other cow will be shown here, more to bring out the type of cows in this herd than to expatiate on records. Lady Lyons Mutual De Kol, No. 364830, was born August 6, 1918. She has an excellent combination of blood lines and is a great producer and you can see for yourselves that she is fine looking.

For the month of November, 1923, the five highest producing cows in the Hazel Green Cow Testing Association were all in the Kuhl herd and this herd led the association for average production, and had the fourth highest average of all the herds in the state.

The Kuhls sent thirteen animals to the annual consignment sale of the Grant County Holstein Breeders' Association. The animals offered were all youngsters.

LADY LYONS MUTUAL DE KOL, A TYPICAL MEMBER OF THE KUHL HERD

They excited the admiration of the audience and many praiseworthy notices from representatives of livestock and farm publications. The prices brought demonstrates that blood lines, type, breeding, care, records of production and manner of offering contribute toward high bids.

In addition to the marketing of milk and the consign-

ment of a few animals to the annual sale there is a long list of private sales which last year amounted to thirty-eight animals—six registered cows, four high grade cows, eight registered males and twenty registered females. The receipts amounted to a handsome sum. One buyer acknowledged that he paid close to \$700 for three registered cows. Sales were made to buyers from North Dakota, Illinois, Iowa and Wisconsin. The fame which the Kuhl cows achieved through their records has brought many visitors to the farm most of which came equipped to make investments. Clarence Kuhl is a reticent fellow when it comes to talking about money affairs, but the writer did learn that an Iowa breeder last spring offered to take the entire herd and submitted a real flattering offer which was refused. While this contributes to the comfort and prosperity of the Evergreen Grove Stock Farm and its inmates, the same diligent effort to hold first place in the Hazel Green circuit goes on from day to day without frills or flourish.

If I were to hold up Clarence Kuhl as the one shining example among young men in Grant County, I would be manifestly unfair. I can name scores. In Livingston, another small village in the same county there are two young men, Andrews and Goldman, who own and operate a dairy farm. Neither one of these men has as yet obtained his majority. They operate two milk routes, receive a fat check for cream every month and have sold cows at fancy prices but Clarence Kuhl has labored prodigiously to build up high production and is after the championship of the state for his top cow which is proof that his ambition is not alone profits from his business but includes the honor of being regarded as one of the greatest dairy farmers of a state where competition is fanned into a white heat by the rivalry that exists within the well organized cow testing associations in every quarter of the state. It takes a real man and a real cow to win out in such a field.

The hobby of Clarence Kuhl is purebred, registered, Holstein-Friesian cattle. He is a constructive breeder. Witness his determination to supplant the herdsire who has done so well by one that he knows will be better. It is not a case of hit or miss—his intent is well defined. His ideal is the best and he is working toward that goal. He is bringing fame to Grant County and to the state.

I have never seen the boy dolled up in Sunday meeting clothes. I have seen Pa Kuhl in store clothes, due partly to the fact that he was confident everything down on the ranch was running all right because his nineteen-year-old partner is on the job, and partly because he looks after business matters which now and then demand his attention away from home.

With such well laid foundations what might we not expect of this boy in the future. His example is an inspiration to all young men who would succeed in their life's ambition. Genius may have its reward but honest toil and intelligent effort holds as high an altitude of eminence as genius ever dared attain. It is mighty refreshing in these days of jazz music and jazz dances, movie picture houses, billiard halls, flappers, and the countless tawdry amusements with which some are interested that we have young men growing up who have no use for these things and who are qualify-

ing for sturdy citizenship by following lines of useful pursuit and of wholesome benefit to the community and our leading industries. Wisconsin may well congratulate itself that it has growing up a generation of young men who prefer the milk pail and unionalls to starched collars and gaudy neckties; who prefer hard labor to expensive fun; who are helping parents on the shady side of life to lean back and take things a bit easy knowing that the establishments they labored for so long and hard will not be lost to their progeny. Men of the Clarence Kuhl type insure the future of the commonwealth.

Meantime Canary is plugging along for her 1924 record and it seems now that she is destined to make a greater showing than Kit made over in Rock County.

On Guard

THE POLICE activities of the United States Bureau of Animal Industry are not appreciated as they should be by the cattle owners of the country. An alert force of trained specialists are ever on the watch to see that animals afflicted with contagious or infectious diseases are not brought into the country. Blood tests are frequently taken to see that the animals are healthy.

During the past year the dangerous disease known as surra was found in the blood of five dromedaries offered for importation and inspected at one of the Government's animal quarantine stations.

Foot-and-mouth disease, that ever-present menace to the livestock industry in the United States, was found in Guatemala and in Jamaica during the past year. Its presence in the latter island is a direct threat to our livestock industry on account of the great trade between this country and the West Indies and because of the highly contagious nature of the malady.

During the past year more than 73,000,000 animals were slaughtered under Government inspection, an inspection which protects the consuming public against unwholesome meat.

During the past year the battle against cattle tuberculosis has been going forward rapidly. At the close of the departmental fiscal year there were more than 615,000 cattle in 28,526 herds officially accredited as free of the disease, a 76 per cent increase in the number of these herds over the preceding year. The plan of cleaning out the plague in entire counties at one time is becoming popular. Fifty additional counties were freed during the year, raising the total to 81. In the course of the year the tuberculin test was applied to nearly three and a half million cattle, most of those found diseased being slaughtered under inspection and the owners indemnified with Federal, State and county funds. Areas in which practically all the tuberculous animals have been removed are now designated as "modified accredited areas," an arrangement which permits shipments of cattle from these areas without the usual restrictions.

"Holstein milk, obtained under the best possible conditions, would be my choice at all times for the artificial feeding of infants."—DR. C. K. JOHNSON, *Instructor in Pediatrics, University of Vermont.*

We Breed Holsteins

That will pay a handsome profit in any man's herd.

ECHO BELLE MODEL KING

Stands at the head of our herd.

He is a son of CHAMPION ECHO SYLVIA PONTIAC and of BELLE MODEL PIETJE 2d, 28.18 lb. butter in 7 days, her dam 36.13 and three times over 33 lb., and the granddam twice over 37 lb. ECHO BELLE MODEL KING has 87½% of the same blood as the new 41 lb. four-year-old ECO-SYLV BELLE PIETJE.

We offer some exceptionally nice heifer calves for sale at \$100 each.

Herd numbers 85 head and is under State and Federal Supervision. ::

WARD D. LOOMIS

Bainbridge, R. D. 4. Chenango Co., N. Y.

BUY A SHOW BULL

for your herdsire.

FOR \$200 YOU CAN BUY

TOBE ECHO SYLVIA KORNDYKE

now past a year old. Straight and right in every way. His sire is Woodmont Echo Sylvia Champion, 1st prize three-year-old at the 1922 New York State Fair, a son of the 1921 Grand Champion, Butter Boy Empress, 30.27 lb. butter, 600 lb. milk in 7 days.

His dam, as a three-year-old, produced 19.73 lb. butter in 7 days, averaging 60 lb. milk a day. She has a good long-time record made as a two-year-old—is from a 25-lb. daughter of a 22-lb. cow and has a 28-lb. three-year-old and a 20-lb. two-year-old daughter, both juniors.

Individuality, transmitting ability, production, and a wealth of good breeding are all wrapped up in this one animal.

AND he is from an Accredited Herd.

GEORGE LIGHTBODY—Ever Breeze Farm
Lackawanna Co., Dalton, Penna.

How Others See Us

LEUTENANT COLONEL C. W. EDWARDS, the delegate of the British-Friesian Cattle Society to the World's Dairy Congress, evidently had a great time and thoroughly enjoyed himself while he was in this country. The Colonel was a keen observer, kept his eyes open and did not take for granted everything that was told him. Most of the time the Colonel was accompanied by someone deputized for that purpose by the directors of the Holstein-Friesian Association of America. He saw some of the well advertised herds but very few herds operated by men who care for their own cows. Some of the comments the Colonel makes are amusing to us Americans while some afford food for thought. Colonel Edwards strongly praises our system of milk distribution, particularly the retail end.

He had never been on an American sleeping car and he comments on them in the following words: "Leaving Boston at night we had our first introduction to the sleeping cars of American railways. On entering these long cars with a row of seats on each side of the central passage there seems nothing uncommon. As bedtime approaches the attendant pulls out of the roof of the car one bed and fills up the space between two seats with another, making an upper and a lower berth. In front of both are drawn curtains. At one end of the compartment is a retiring room for women, at the other for men. When you want to go to bed you dip into your recess, draw the curtains, and hope for sleep. From my bed at home I can on most nights now hear the foxes barking and I can tell if the voice is that of a dog or vixen. I got quite expert in the States in discerning between the male and female snore. One wakes you up, the other keeps you awake."

Colonel Edwards gives a detailed report of his inspection of the Winterthur herd. He is not an advocate of milking more than three times a day and he found more men here to agree with him than to disagree, as evidenced by the following: "I had several discussions about the economic value of the four times milking, and I gather that a good many of the owners of heavy milking cattle think that three times in twenty-four hours would be a more paying proposition."

The Colonel was greatly interested, as we said we expected he would be, in an earlier issue, in making mental comparisons between the type of American Holstein-Friesians and British-Friesians. This is what he has to say on this subject: "I had numberless occasions on which to compare the types in conversation with breeders there. It seems to me that for a very long time the Americans have been breeding 'on paper,' using sires and dams exclusively for their production records, and taking little thought for their conformation and type. Production capacity they have undoubtedly obtained in excelsis, and have lost, in my opinion, in appearance of the animals. A large proportion of their cows are light, deficient in depth and with coarse and short shoulders. Their udders are capacious though a large proportion of them do not come sufficiently forward. Their udder veining and milk veins are very good. The bulls are, in my opinion, very poor in conformation and type. My remarks

about the shoulders of the cows are equally applicable to the bulls. They are also deficient in depth and lack power behind. The hindquarters of the bulls have in many instances no more substance than many of our best grown heifers. They are 'split up' behind. Their buttocks do not come down into their thighs. This characteristic the American breeders believe is apt to beget heifers with plenty of room for their udders. Color has been neglected over there, a white bull with a few black spots and black ears having been as much appreciated as a well marked one. Now the leading breeders have recognized that their cattle have lost type, and the American Holstein-Friesian Association have issued 'True Type' models of what they consider the breeder should aim for. It must not be concluded from what I have written that all the American cattle are poor in conformation. I saw very many beautiful cows that would be good here or in any country. Most of their celebrated cows are big, well shaped animals, while the prize winners at the Dairy Show were those that most coincided with our ideas of make and shape."

Colonel Edwards inspected the herd of John Erickson at Waupaca, Wisconsin and he liked the animals in this breeder and dairyman's herd better than he did those in the larger herds for he says "If I had been offered my pick of six cows to bring home with me from America I think I should have chosen three from this herd."

Being an Englishman, naturally he wanted to see Dairy Shorthorns and was surprised to find that there were no classes at the National Dairy Show for this breed of cattle. He says "I asked to be shown the Dairy Shorthorns, but there was not one among the 1,300 cows in the show; no classes for them. The Americans do not look upon them as dairy cattle, although they acknowledge that you come across individuals that are good milkers among them. They maintain that the high average herd is what counts in milk selling and they won't bother with cattle that they can't rely upon to breed daughters with a high average. There is no romance in the American dairyman. It is a thorough business proposition with him."

Colonel Edwards' comments on our auction sales are not at all flattering although he was an interested spectator for a long time at the National Dairy Show sale. This is what he has to say about it: "The day following the judging I went to an auction of Friesian cattle, held under the auspices of the New York Holstein-Friesian Cattle Association. In the rostrum the auctioneer, divested of coat and waistcoat, his collar off and a handkerchief tied round his neck, presumably to absorb perspiration, is accompanied by the pedigree expert—also prepared for violent exercise—who tells you the ancestors of the cattle in the ring and their production records, during the less violent shouting of the auctioneer. In the ring with the animal to be sold is the relief auctioneer and another violent gentleman also declaiming the merits of the animal in question; both are 'back-chat' artists of considerable merit. It is all amusing enough, but a terrible waste of time."

The British visitor was quite carried away with cooperative marketing of milk as he saw it in the Twin Cities and he wishes that the British milk producers could put some similar scheme into operation.

Century Ella Pontiac

Pretty nice, isn't she?

But there are dozens just as good among my herd of 75 choice producers.

They are bred to bulls whose dams are show cows noted for large production.

Let me supply your foundation stock.

WM. S. GRIMM

Red Lion R. D. 1. :: York Co., Pa.

Sun Set View Herd

is now headed by

KING IDEAL, FAYNE ORMSBY, son of KING ORMSBY IDEAL and K. S. V. H. ELNA FAYNE, a daughter of KING SADIE VALE HENGERSVELD. Calving at 25 months old she produced 21.62 lb. butter in seven days and has just closed a year record of 21,194.9 lb. milk, 805.04 lb. butter. She is from a cow that made 27.87 lb. butter, 605.1 lb. milk in a week.

He is handsome, straight, nicely colored and a dandy.

WM. BENNING

Kingsley, :: Susquehanna Co., Pa.

SPRING BROOK HERD

KING ARTIS WACUNDA

is not only a handsome individual but he is also bred in the purple.

His dam, a 30-lb. cow that averaged 82.8 lb. milk a day during the week of her official test, also made a World's Record in Year Test as a junior three-year-old.

His sire is from a 31-lb. cow whose progeny are noted for wonderful production and his sire's sire is from a 41-lb. daughter of the first 30-lb. cow.

Better still, he is siring a lot of splendid youngsters that show remarkable promise. Yet I offer his sons and daughters at reasonable prices.

SAM T. WITMER

Dauphin Co.,

Union Deposit, Pa.

As Nice As They Make 'Em!

CREAMELLE KORNDYKE KONIGEN

our herdsire, is not only a splendid individual but is backed by great producers.

His dam produced 23.53 lb. butter, 571.1 lb. milk in seven-day A. R. O., is from a 20.85 lb. cow and is by Walker Korndyke Copia, a splendidly bred grand-son of King Segis.

His sire, Dutchland Konigen Creamelle Boy, is from Dutchland Creamelle Colantha Vale 881.21 lb. butter, 21,701.5 lb. milk in a year; her ten nearest dams have year records that average over 27,000 lb. of milk and 1,145 lb. butter.

A Few Choice Females for Sale.

Fully Accredited Herd.

A. L. BOWELL & SON

Susquehanna County, Thompson, Penna.

It is a good thing that he left when he did and did not stay to see the recent drop in milk prices experienced in the districts supplying New York, Baltimore, and Philadelphia.

In conclusion he pays a tribute to the kindness and hospitality shown him and also pays quite a compliment to the American Farmer, "I shall always have very grateful memories of the wonderful kindness and hospitality shown to your delegate in the U. S. A. The Americans took great interest in any information about our cattle over here. The small farmer over there takes a much greater interest in milk recording than he does here. When buying a bull he is careful to look into the records of its ancestors—a low yield descent doesn't interest him. Also the American farmers are more familiar with the constituents of food stuffs and their nutritive values than ours."

Speculation and Its Result

SPECULATION and speculators work havoc with a purebred livestock industry. This has been the experience in every breed of cattle and in practically every breed association. For a time things apparently go well; prices stiffen and demand increases largely because of the spectacular methods employed to create interest and partly because men are inclined to buy on a rising market; but in time the boom collapses demand practically ceases and prices drop. The speculators materially restrict their operations or turn to other fields and many men who bought stock at high prices are ruined especially if they have gone in debt for their animals. We have recently seen prices for certain so-called families soar to unreasonable heights and have experienced the crash which has ruined men who have paid fancy prices for individual animals and for whole herds. But we are not alone in this experience. It forms part of the history of purebred breeds in many countries. Even in Britain where the Friesian industry has only been going a comparatively few years they have experienced their vicissitude of high and low prices, their boom and the resulting crash.

Speaking of this state of affairs the *British-Friesian Journal* in a recent issue says:

"Gone are the days of speculation. May they never return. No longer is it possible for a so-called breeder to buy some females and one male, obtain a few calves, and then call a sale in the sure and certain hope of making a good profit on account of a rising market, and owing to no skill or effort of his own. The growing tendency to buy for sales by public auction is an increasing barrier to the improvement of all breeds, and may easily become a serious menace to the British livestock industry, as the incentive or even the opportunity to exercise the breeders' art is missing. The herd that will make big money is the one that has been carefully and skillfully developed as the result of years of patient and loving labor. That is a breeder's herd, and buyers are anxious to have the benefit of the experience of such an expert and enthusiast."

"Nothing better could happen to the breed than that all members should become imbued with the notion to breed a good herd, and to make milk-selling or butter-

making an increasingly profitable business during the process. The few sales that must take place would then be more successful and all-sufficient, and the improvement of the breed would be continuous. Some of the sales that are held do incalculable harm to the breed, as newcomers buy inferior animals and judge the breed by its lowest standard. Sales of inferior or cull animals benefit no one and injure all.

"If members will breed the right cattle, prices will take care of themselves.

"Any member working only for a sale is on uncertain ground, but any breeder who improves his herd banks on a certainty, as good cattle will always command prices in accordance."

Typically Irish

THERE are very few countries in the world that do not acknowledge that Holsteins are dairy cattle. We only know of one and that is one of the latest to become a self-governing nation, The Irish Free State. To improve the dairy stock of that country the Irish Department of Agriculture recognizes five breeds of cattle namely, Shorthorn, Kerry, Hereford, Aberdeen-Angus and Galloway. The last three mentioned are beef breeds pure and simple, although occasionally there are good milkers among them. There are many good milkers among the Shorthorn breed and the true dairy Shorthorn is quite a producer. There are few herds of Kerry cattle in this country although they are exhibited at many fairs by professional showmen. They are the smallest of all well-known dairy breeds. The best Kerry cows give a large amount of milk for their size and it is of good quality.

Just why the Irish Department of Agriculture does not include the "Black and White" cow, the Ayrshire or the Channel Island breeds in their list of dairy cattle, no one except an Irishman could possibly tell.

The expert of the Irish Department of Agriculture is D. Twomey. Mr. Twomey has typical Irish views on the cattle industry. In a recent official document he says "The introduction of new breeds with a view of improving Irish cattle by a process of crossing can not be recommended." He and his Department seem to have no use whatever for Friesians, as the breed is there called.

An aged negro, clad in two or three suits of old clothes and an overcoat of ancient lineage, was feebly breasting his way against the winter's chilling blasts. "Wind," he was heard to apostrophize a particularly ferocious gust, "wind, whar wuz yo' las' Augus'."

The mother missed her tiny son when out shopping. She found him at last near a doorway, making faces at a very passive bulldog.

"Whatever are you doing making faces like that?" she asked. "But, mother," protested the boy, "he started it."

New Office Boy—A man called here to thrash you a few minutes ago.

Editor—What did you say to him?

New Office Boy—I told him I was sorry you weren't in.

Berylwood Prince Aaggie Chicago

combines individuality of the highest order with remarkable Production and Presistency, as shown by the performance of his dam and female ancestry.

His dam is a beautiful cow that produced 31.05 lb. butter, 701.9 lb. milk in 7 days, more than 100 lb. milk a day. She produced 1128.89 lb. butter in a year averaging 73 lb. milk a day for the entire time and is again in test promising to make an even greater long time record.

He is by the greatest show bull of California, is backed by wonderful producers and heads our Accredited Herd.

L. L. ALLIS,

Rummerfield, Pa.

A specimen member of my herd. Cows of her individuality and producing capacity are being mated with my herdsire

King Pontiac Ormsby Pietje

a son of the noted show bull and show sire, King Pontiac Alcartra Pietje. His dam was by Ormsby Korndyke Lad, while her dam was by Nannettson and from a daughter of Paul Beets De Kol.

The resulting calves, animals of royal breeding, are offered at reasonable prices.

Herd under Supervision and Clean.

A. CONRAD SILFER

Lewsburg, R. D. 3, Union County, Pa.

Berks Farm Doings

THE Berks Farm herd at Reading, Pennsylvania, is now headed by Sir Pietertje Chloe Ormsby, a son of Sir Pietertje Ormsby Mercedes 41st and the noted Chloe Pietertje Ormsby, the youngest cow in the world to make three year records of 1,000 lb. butter. Chloe has made a number of large records including:

Length or record	Age	Lb. Butter	Lb. Milk
365 da.	5 yr.	1,175.07	20,875.2
365 da.	4 yr.	1,149.86	21,127.1
365 da.	3 yr.	1,067.88	20,253.3
365 da.	23 mo.	801.13	15,783.1
(World's record when made)			
7 da.	4 yr.	30.81	532.4
7 da.	3 yr.	27.78	465.1
7 da.	23 mo.	19.43	335.6

The picture furnished us shows that Sir Pietertje Chloe Ormsby is a splendid individual, dark in color, straight on the back and square of rump, deep in chest and possessing a large barrel,—a real choice individual. The picture, however, is too indistinct for reproduction but we hope to show him to readers of the BREEDER AND DAIRYMAN soon after a clearer picture is taken.

Sir Pietertje

Chloe Ormsby is a double grandson of old Sir Pietertje Ormsby Mercedes and is a three-fourths brother to the well-known show bull, Sir Hengerveld Pietertje Ormsby, who heads the great herd owned by the Detroit Creamery Company.

A number of good records have recently been completed

in the Berks Farm Herd. Sparrow Hawk Johanna, purchased by Mr. Deysher at the Pinery Farm sale last June, has completed a year record of better than 1,100 lb. of butter and 22,000 lb. of milk. Then, after dropping twin calves by the noted bull, King Ona, she was put on official test as a six-year-old and produced 115.2 lb. of milk in a day, 36.15 lb. butter, 775.1 lb. milk in seven days and 150.03 lb. butter, 3,132.1 lb. milk in thirty days. She is again on year test and is still milking around 100 lb. daily. The thirty-day butter record of this cow is the Pennsylvania State record as she surpasses the previous leader, Pocono Constance Pietje, with 149.2 lb. butter.

Sparrow Hawk Johanna is from Princess Ondit, 34.33 lb. butter, 662.5 lb. milk in a week and she was sired by one of the best sons of Aaggie Cornucopia Johanna Lad sire and grandsire of many great cows.

Charlotte Lyons Korndyke No. 306679 is another cow that has produced over 100 lb. milk in a day at Berks Farm. She recently closed a 305-day record, producing in the ten months more than 1,000 lb. of butter and 21,000 lb. of milk. She is due to freshen again January 26, 1924, and will qualify in the ten months division while her record will be the Pennsylvania State record for butter in the ten months division of the mature cow class. She was doing so well at the end of her ten months that Mr. Deysher and Superintendent Berry decided to run her for the year which closed the 27th of December and she will have well over 1,100 lb. of butter to her credit.

Charlotte Lyons Korndyke is the dam of Lyons Sarcastic Korndyke No. 605517. This heifer was purchased soon after she had freshened as a junior three-year-old. She was brought to Berks Farm and placed on official test when she made 21.09 lb. butter, 559.7 lb. milk in seven days. In thirty days she produced 85.24 lb. butter, 2,455.1 lb. milk. She was placed in semi-official test. On September 26th, she finished ten months of production making 878.06 lb. butter, 21,016.4 lb. milk. Her milk record is the high

mark for the State in the ten months division and her butter record is the world's record for age for a junior three-year-old. For 192 days of her test she carried a bull calf by King Tweede Spring Farm which weighed at birth 110 lb. Her picture was taken soon after she freshened as a junior four-year-old.

The most remarkable thing about this heifer is her consistent production. Since she freshened as a junior four-year-old she has produced 32.16 lb. butter, 615.1 lb. milk in seven of her first eight days on test. She has produced over 105 lb. milk in a day and is the sixth cow at Berks Farm to produce over 100 lb. milk in a day.

The first cow that was ever run on year test at Berks Farm was Amsdale June Colantha, a granddaughter of old Colantha Johanna Lad. She finished her year with 1,084.85 lb. butter from 21,142 lb. milk and averaged better than 4% fat during the entire year.

At the dispersal sale of the Springdale Herd owned by B. F. Jones & Son, two daughters of King Tweede Spring Farm, the senior herdsire at Berks Farm, were purchased by Mr. Deysher. These two heifers have since freshened. Wynola Tobe Pontiac Lass as a

CHARLOTTE LYONS KORNDYKE
She produced more than 1,000 lb. butter, 21,000 lb. milk in 305 days and is due to freshen in time to make a Pennsylvania State record in the mature class. Dam of Lyons Sarcastic Korndyke, world's record junior three-year-old.

three-year-old produced 25.10 lb. butter from 510.8 lb. milk in seven days while in thirty days she is credited with 104.69 lb. butter and 2,151 lb. milk. Her sister, Korndyke Tobe Pontiac Lass, also calved as a

LYONS SARCASTIC KORNDYKE
21,016.4 lb. milk, 878.06 lb. butter in 305 days. World's record in the ten months division for a junior three-year-old

three-year-old and she has made 21.75 lb. butter, 526.2 lb. milk in seven days and 82.39 lb. butter, 2,245.9 lb. milk in thirty days. Both these heifers are now on long time test.

SPARROW HAWK AND HER TWIN CALVES BY KING ONA
Since the birth of these calves this cow has made 150.03 lb. butter in thirty days, Pennsylvania State record

Lady Tweede Pontiac Lass is the only daughter of King Tweede Spring Farm to be given an opportunity to make a long time record. Superintendent Gardner's monthly report credits this heifer with 819 lb. butter,

AMSDALE JUNE COLANTHA
1,084.35 lb. butter, 21,142 lb. milk in 365 days

20,260.5 lb. milk with sixteen days yet to run to make the full year. She was tested as a junior two-year-old.

L. H. C. Princess Annetje Alcartra recently completed a 305-day record producing 830.88 lb. butter,

18,230.5 lb. milk. She is a daughter of King Segis Pontiac Alcartra and when fresh made a seven-day record of 602.9 lb. milk, 30.39 lb. butter.

Credit is due Clark F. Berry, herdsman at Berks Farm, for his skillful handling of these cows and heifers. To make one world's record and a number of state records and to have the cows freshen again in time to qualify for the ten-months division is quite a task and requires careful feeding, steady work, regularity and strict attention to details.

The Requirements

A FELLOW who is worthy of the name of breeder of livestock, and especially better livestock, should have some special fitness for his work. He should at least have a natural liking of livestock and this tendency should be cultivated until one so engaged is most continually thinking, talking, and breathing the subject. Natural endowment must be supplemented by careful training. To be successful in the most genuine application of the term one must take such as his life work; he must possess a real love for his herd which must be broader and deeper than the love of the money he gets out of the herd. Oh yes, the money is all right and the business must make a profit if one continues to follow it indefinitely, but the greater success as a breeder most surely and very naturally comes to him who follows the business because of his natural preferment. Such feeling and honest longing of the human heart will prompt one to do the essential things which ultimately lead to a successful career in livestock husbandry.

"The general relation between the quantities of fat, carbohydrates and protein should be based on the relation found in human milk."—The late DR. THOMAS MORGAN ROTCH, *Harvard University*.

Secretary Wallace on General Agricultural Conditions

THE general agricultural improvement noted is most gratifying to everybody and gives renewed hope to millions of farmers who have struggled against most distressing conditions. This does not warrant the assumption, however, that the state of agriculture in all sections is now satisfactory, viewed either from the standpoint of the farmer or from the standpoint of national interest. In many regions agriculture still is at a disadvantage. The adverse influences of which mention was made in my report of a year ago still exist, though less powerful than at that time. The ratio between prices of most farm products and prices of other commodities is still far out of line. Industrial wages continue at war-time levels and thus help to maintain high prices for most of the things the farmer buys. High freight rates still prevail, and, while not the cause of low farm prices, place one more additional burden upon the farmer which he can ill afford to pay in view of the prices he must take for his products; also they place him at a disadvantage with his foreign competitors in world markets in the case of those farm products which we export. Unfavorable exchange rates with European countries, together with financial difficulties in those countries which need our surplus, make it more difficult for them to buy, and our export outlet for farm commodities is narrowing. Aside from this difficulty, it is to be expected that as the countries of Europe get on their feet, they will strive to produce more of the things they need and buy less from us, and this must be considered in planning our own production. The costs of retail distribution of farm products are unreasonably large, thus enhancing the price to the consumer and depriving the farmer of the benefit of increased consumption which ought to follow lower prices which result from large production.

Studies by this department indicate that 42 per cent of the farmers feel that their financial difficulties are due to low prices of farm products; to high taxes, 17 per cent; high costs for farm labor, 11 per cent; high freight rates, 10 per cent; high interest, 10 per cent; reckless expenditures during boom period, 6 per cent; and too much credit, 4 per cent.

Too frequently persons who have not inquired into the matter express the opinion that the farmers' difficulties are due to reckless expenditures for land, speculative securities, and other purposes during the flush years. The percentage who suffered in this way, however, does not seem to be very large. The farmers' troubles are due primarily to the low prices of their farm products and the high prices for the services and articles they must buy.

In addition to the handicaps just mentioned there is underlying this agricultural situation the fundamental factor of the lowered price level which has shrunk the purchasing power of the farmer's income. Economic justice would require that the price level during the years when the debtor is paying individual and public debts should be as high as when these debts were incurred, thus making it possible for him to meet his fixed payments of taxes, interest, and principal with

about the quantity of labor or for the products of labor required to meet them at the time the debts were incurred. This is not the case now with the farmer. It is not possible to adjust the price level with that nicety which will do justice to everyone, but in so far as it is possible it should be done. Our investigations lead us to estimate the property taxes and interest combined paid by agriculture in the year 1920 at about \$1,457,000,000; in 1921 at \$1,684,000,000; and in 1922 at \$1,749,000,000.

Statements to Make Men Think

THE true financial condition of the farmers, especially in the great grain growing states, is hardly realized by those who live in the East, particularly the residents of the cities. Secretary of Agriculture Wallace in his annual report said that his department instituted an inquiry through both bankers and farmers as to the number of farm owners and farm tenants who lost their farm or property through foreclosure or voluntary relinquishment.

It was found that of the owner farmers in 15 corn and wheat producing states on an average over four per cent had lost their farms through foreclosure or bankruptcy, while nearly 4.5 per cent had turned over their farms to creditors without legal process, making a total of about 8.5 per cent who had lost their farms with or without legal proceedings. In addition, more than 15 per cent were in fact bankrupt, but were holding on through leniency of their creditors. Considered by groups of states, the percentage of owner farmers who lost their farms since 1920 was found to be as follows: For 5 east North Central States, nearly 6 per cent; for 7 west North Central States, over 9 per cent; and for 3 Mountain States, nearly 20 per cent. The percentage of tenants who lost their property ran materially higher.

The records of the Department of Justice indicate that in the prewar years 5 per cent of all bankruptcy cases were farmers, but in 1922 it had grown to 14 per cent. In some of these states, where in prewar years the farmers' bankruptcy cases represented about 7 per cent of all such cases, this percentage in 1922 had risen to nearly 30.

These losses have not been due to inefficiency on the part of the farmers. Practically all of them were incurred by men who had been doing fairly well until they entered the period of drastic deflation. Some few were caused by overexpansion in the purchase of land during the period of high prices. In general, however, the trouble has been due to the deflation in prices of farm products and the increased cost of production and of the necessities farmers must buy.

"The best milk is said to come from Holstein cows, and the superiority of their milk is probably due to the unusual vigor of these animals."—BERNARD MAC FADDEN AND DR. CHARLES S. PORTER, in *"The Miracle of Milk."*

"Children cannot grow properly on the proteins of cereals, beans, tubers, roots and fruits. It is essential they have a liberal allowance of milk protein."—J. E. LYMAN, Prof. of Chemistry, Ohio State University.

A Typical Merryall Group

The leading cow in the group produced 861 lb. butter, 20,000 lb. milk in ten months in C. T. A. work and then freshening again before the year ended made 850 lb. butter, 18,405 lb. milk in ten months.

The Junior Breeder and Dairyman

The Development of a High-Class Cattle Judge

First place in the junior judging at the National Dairy Show was won by John Visny, son of a Slovak immigrant. The story of this boy and his success reads like a romance.

The elder Visny owned a farm at Easton, Conn., which was purchased about five years ago by the Bridgeport Hydraulic Co. The Visnys moved to another farm near Newtown. This farm was small so the boys of which there were three, worked out. They occasionally worked for J. Arthur Sherwood of Easton, a Farm Bureau Director, and after they moved to Newtown two of the boys worked for George McKay of Danbury, also a Farm Bureau official. They were keen and intelligent and readily grasped the idea that there were better methods of farming than were practiced by most of their neighbors.

The older boy, Vlasto, and the younger one, John, agreed to try and run their own farm in partnership while the second boy, Martin, was taking a two-year course in agriculture at the State College at Storrs. The two boys who were to run the farm decided upon keeping registered Holsteins. The letters which Martin wrote back from State College were both a means of inspiration and of help to the boys who read them for they were really taking a correspondence course in agriculture.

After a very short time the boys began to study their cows and to keep track of the milk yields, making record sheets from wrapping paper.

The county club agent started a health club in the near-by district school and his students gave an entertainment in March, 1923. John, the youngest of the three boys, attended and during the evening learned that a man sitting in front of him was connected with the

Farm Bureau. He asked this man where he could obtain milk sheets and a herd record book of some kind. Naturally the Farm Bureau man paid a visit to the Visny farm and after talking with the boys enrolled them in the Young Farmers' Club, furnishing them with barn milk sheets, a record book and a Connecticut Farm Account Book. He also induced them to try an improved variety of silage corn and to test some certified seed potatoes.

In June, John enrolled in a Junior Dairy Record contest. This extended over a few weeks in the summer and at its close there was a judging competition open to all the members. John says that before his first trip he knew but few parts of the cow and usually named them incorrectly although he had carefully watched the cattle judging at the Danbury fair. After the first day's training with Mr. Begg, John Visny wrote the four breed associations asking for illustrated publications descriptive of their respective breeds. He read all the bulletins on judging he could obtain and secured old copies of dairy papers from the Farm Bureau office. He clipped pictures of noted animals from these papers and pasted them in a scrap book which he studied at odd times. When the country club agent showed him pictures of the youngsters judging dairy cattle at the 1922 Junior Short Course, John made up his mind that he would compete in 1923. In preliminary work he did very well but he failed utterly in the contest and made up his mind that he had learned nothing worth while about judging dairy cattle.

About a week before the state contest at the Hartford Fair, nine boys of Fairfield County went with Mr. Merrill, the dairy specialist, on a judging trip, the purpose of which was to decide the team that would represent the county. John was placed sixth and so just made the team. He studied his scrap book and prac-

(Concluded on page 23.)

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

The Holstein Breeder and Dairyman

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

January 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Wasting Money and Spoiling the Market

MEMBERS of the Holstein-Friesian Association of America counted upon a substantial increase in the business transacted in the Secretary's office during the year 1923.

There were several reasons for their expectations:

First—With the exception of wheat growing and possibly fruit growing in California, every branch of the farming industry made a gain during the year 1923 and was better off at the end of the year than it was at its beginning.

Second—There is not a financial authority that does not claim that the business of the entire country improved during the past year. More factories ran full time during 1923 than did during 1922. Bank clearings have increased and optimism has been more prevalent during the past year than it was during its predecessor.

Third—Those in control of the Holstein-Friesian Association of America and those who are closely affiliated with the present directorate have, by both spoken and written words, assured us all that there was a greater demand for purebred Holsteins; that more business was being transacted at Brattleboro; more animals were being transferred and that the Holstein-Friesian industry was "Day by day in every way growing better and better."

Fourth—The Association through its Extension Department has spent thousands of dollars advertising in the farm press, and in magazines of national circulation, supposedly for the purpose

of increasing the demand for purebred Holstein males and females. Billboards, designed for the purpose of creating a special demand for Holstein milk and indirectly increasing the sale of Holsteins, have been erected in a number of States. This project was favored by the Extension Department and the Extension Department was paid for recommending the billboards although the breeders themselves paid for and erected the signs. Money has been lavishly spent in other papers, magazines that assume to circulate among Holstein owners. None, except those who handed out this patronage, would assume that such advertising would increase the demand for Holsteins nor the number of transactions in black and white purebreds. So we can only look upon such patronage as a reward for continued support of those who are responsible for the present Extension Department and its activities. We did not and do not and have never found anyone who could justify this misuse of the Association's funds which really belong to the breeders. But that is another matter.

Fifth—Paid-State-Secretaries or field representatives, exist in everyone of the so-called Holstein States and while many of us knew that the cost of maintaining these paid officials was far in excess of the benefits received, yet we hoped and expected that there would be some benefits from their talkings, writings and journeyings, benefits that would be discernable in an increased demand for purebred Holsteins.

Yet what do we find? During the year 1922, admittedly the poorest year from the Holstein standpoint within two decades, there were 91,084 transfer applications received at the office of the Secretary. During 1923, with all the so-called Extension activities going on; with a betterment in the general business conditions of the country and a much greater proportionate benefit in agricultural circles, we find that there were only 91,992 transfer applications received by the Secretary's office, a gain of just 908, an average gain of merely seventy-six per month and this is all we have to show for the money spent, the work of a Calf Club man, a publicity man, a general fieldman, Extension Director Koenig and all his subordinates.

Instead of showing a business gain per member of the Association there was a loss as, during the year 1923, membership applications to the number of 1,792 were received at Brattleboro so that there was less sales per Association member than there was the year previous.

The registration applications received averaged 9,677 per month, practically the same as in 1921. During 1922, the monthly average was 9,295, so it can be seen that more animals were registered during the past year than there was in the year previous. Naturally, one would look for more sales and there was a gain—a gain of 908 in the entire year—a paltry gain of seventy-six per month scattered among the 30,000 or more men who, during the year, owned purebred Holstein-Friesian cattle in the United States.

The group in control of the Association and its finances proposed to spend at least \$220,000 in so-called extension work. Notice of this was given in February, 1923, and as there was no way to stop them carrying

out their purpose we assume that this amount of money was actually expended or a proportionate amount each month. In addition to this vast sum, around \$50,000 was, during the year 1923, available to be returned to the various states as the transfer fee refund. This is according to the Irwin amendment as adopted by the Kansas City Convention, June 7, 1922. When we add this \$50,000 to the \$220,000 directly expended from the funds of the National Association we have \$270,000 and if we add to this the amount contributed by the members of the various state associations it is very easy to see that we will have well over \$300,000 all of which is supposed to be used to promote the interests of the Holstein breed which is construed to mean—increase the demand for purebred Holsteins.

For the expenditure of \$300,000 we have, judging by the transfer applications received, a gain in sales of 908, so that for every animal sold in 1923, in excess of the number sold in 1922, we have an extension or promotion expenditure of \$330. You recall Director Koenig's own words that for eighteen months after the Syracuse Convention the Association did nothing whatever in the way of extension work. We are taking his own statement for this, and we want to see where he and his associates have bettered the financial condition of the average owner of Holsteins; where an expenditure of \$330 per article for advertising purposes will benefit any industry, livestock or otherwise, when the average selling price of that article is far below the amount expended for advertising purposes.

During the twelve months ending April 30, 1919, there were 90,887 registration certificates issued and during the same period 97,392 transfer certificates were sent from the Secretary's office. During this period the Association operated on a twenty-five cents transfer fee.

During the twelve months ending December 31, 1923, the Secretary's office received 116,127 applications for registration and 91,992 applications for transfer, this with a \$1.50 transfer fee. The number of registrations increased over 25,000—the number of transfers decreased 5,400. On this point we quote from the presidential address D. D. Aitken father of the Paid-Secretary movement and the increased transfer fee, gave at Philadelphia, June, 1919, in which he said: "Our transfer record is always a matter of supreme interest. It indicates prosperity and the state of the demand. If it falls below the number of pedigrees recorded it indicates or is coincident with a fall in prices of our cattle."

It is plain to see how the Paid-Secretary movement and the increase of the transfer fee has affected the Holstein industry. While the number of registrations have increased the number of sales have been lowered and consequently cattle bring lower prices. The strangle hold of the Rule-and-Ruin Group on the Holstein-Friesian Association of America is strangling the business of the Holstein-Friesian breeder.

League Again Cuts Milk Price

THE Dairyman's League Coöperative Association has announced that beginning January 7th, it will sell Class 1, or fluid milk, at \$2.33 per 100 lbs. This is a reduction of forty-seven cents per 100

lb., or one cent a quart below the price of \$2.80, which went into effect November 12th last. The price of milk used in other classifications will remain the same.

On December 19th, the officials of the League recommended that the January milk prices be practically the same as those in force during the latter part of December. The League officials, particularly its president, announced that the present policy of the League is to protect its fluid market under all conditions. They lay the blame of the demoralization in the New York market district to the non-organized dairymen or non-poolers. The dairymen who belong to the League support it financially because they believe that it will be profitable for them to do so. If the non-poolers have more influence on the market and the milk prices than do the organized dairymen the question at once comes to the mind of an outsider, "How long will dairymen pool their milk and support the League?"

Read this and Gasp

ONE of the Japanese delegates to the recent World's Dairy Congress exhibited a bulletin issued by the Central Association of Animal Industry of Japan. This bulletin contained photographs of two Holstein cows and particulars of records that if true surpasses any ever heard of in this country. Frins Anna Roland 10th, is credited with 37,923.2 lb. milk, 1,827.14 lb. butterfat in 365 days while Ellen Pietertje Granson is credited with 41,112.5 lb. milk and 1,793.08 lb. fat in a year. Ellen averaged 112.63 lb. milk and 4.36 lb. fat per day. She is said to have eaten 65.9 lb. feed daily much of which was green feed. Her ration consisted of eighteen ingredients including bran, barley, sweet potatoes, rice, soy bean and a number of Japanese products. Five of these eighteen ration components were fed in the form of gruel.

Frins's highest production of milk in a day was 151.5 lb. milk and the bulletin reports her as producing 18.48 lb. fat in twenty-four hours which is, from our standpoint at least, unbelievable. She averaged for the year, 103.89 lb. milk and five lb. fat daily. In addition to the grass she ate, she received a daily ration consisting of twelve lb. bran, eighteen lb. of a rice by-product called ame-kasu (a glutinous jelly refuse), five lb. barley bran and forty-eight lb. of a soy bean curd refuse called tofukasu.

WANTED.

A few years ago the *Holstein-Friesian World* offered as a subscription premium, a booklet giving Charlie Cole's feeding and testing methods.

The Holstein Breeder and Dairyman, not having this booklet, offers \$2.00 in cash and a year's subscription for a complete copy. This is wanted to complete our World Library.

THE COW, SOW AND HEN

A farmer with whiskers and long red hair,
A smiling face, and a desire to swear,
Rose as the birds, in the treetops tall,
Answered the cock in his morning call.
Followed the path, down to the barn,
Swinging a milk-pail on each arm.

The lights of the city on yonder hill,
Marked the place where they slumbered still;
How foolish were they, content and warm,
To miss the smell, and the taste of corn.

Perched on a stool, till his pants grew thin;
The flow of milk, and the sound of tin,
Filled his soul, and gladdened his heart
Like a banana peddler with his apple cart.

He thought of how with a can of cream,
He could do the thing that he often dreamed;
Betsy would smile and be as gay
As a lump-jawed mule with a bale of hay.

The can of cream by the cow shed door,
Was full to the brim, and would hold no more.
The shining pail between his knees,
Was filling fast, when he felt a breeze,
As the wings of a chicken from up on high,
Slapped old "Bossie" in the eye.

A bawl from a frightened Holstein brute,
A falling stool and a busted snoot;
The grunt of a sow, the end of a dream,
A hog filled up on a can of cream.

A milk-stained farmer, kicked and sore,
With teeth knocked out, came through the door.

No use to pin your faith on these,
Feathered birds, beneath the trees.
"It will cost me that whole Holstein cow
To get my teeth all dolled up now."
If that rich cream don't kill that hog,
She is some relation to a dog.

Just go your way, you birds and brutes,
Chew your cuds, and grunt your snoots.
"Betsy shall have that gingham gown,
If there is any copper left in town."
That pile of corn will do the trick,
'Twill bring the smile, and have the kick.
We'll modernize this durned old farm,
And pin our faith on a "copper worm."

There are some fundamentals in farming which all business men should be familiar. Success in farming is the basis of farm life. Good homes and modern labor saving devices are not a part of the unsuccessful farmer's equipment. Furthermore, the unsuccessful farmer is not buying the products of the factory and of industry.

Betty stood gazing at her grandfather.
"Well, dear, what is it?" he finally inquired. "What's on your mind?"
"I was thinking, grandpa," replied Betty, "that if the good die young what an old rascal you must be."

Farmers with roadside markets should take a tip from city advertisers and start their signs several miles down the road.

Dividing the Spoils and Spoiling the Business

THE DEVELOPMENT OF A HIGH-CLASS CATTLE JUDGE

(Concluded from page 19.)

ticed writing his reasons for their placings at odd moments. Early in the morning and late in the evening and at the noon hour, when others were resting, he studied. His lack of the English language handicapped him but it was only a short time before he found his English was improving and he could write pretty good reasons why he placed various animals in their positions. There were twenty-nine competitors at Hartford. John Visny was placed second and so earned a place on the team that represented Connecticut at the National Dairy Show.

By this time John made up his mind that he could learn more about judging cattle and he obtained textbooks and breed journals which he studied carefully. He attended the Eastern States' Exposition and compared his placings with those of Judge Moscrip and found that they usually thought alike. Accordingly when he went to Syracuse, he was confident that he could make a good showing. On October 6th, he got the highest individual score of all the boys and girls that competed in judging dairy cattle at the National Dairy Show.

The Visny boys own a purebred Holstein bull with good record backing. They are making a success of their farming enterprise with the guidance of the farm management demonstrator. Their plans at present are that the older brother Vlasto will take a two years' course at Storrs commencing next year. He already has a surprisingly good knowledge of feeds and feeding, and is getting better and still better by following the advice of competent instructors and from reading the letters from his brother Martin. When Vlasto completes the two years' course John will commence. The three brothers like dairying and the progress they have made in adopting more business like methods have resulted in better financial returns and have attracted considerable notice in their neighborhood where many of the farmers are endeavoring not to be outstripped in quality of stock and in farm improvements by these three immigrant boys.

Kindness and Regular Feed Made a Prize Winner

Early in 1920 Donald M. Smith of Muncy, Pennsylvania, joined the Moreland Calf Club and on February 5th of that year he purchased from H. J. Rakestraw of Montoursville, the three-months-old calf, Wide Water Ruth De Kol. The sire of this calf was Pietje Wayne Lad, No. 126319, and her dam was Ruth Woodhull De Kol, No. 176243.

During the first summer Ruth was kept in the stable in a well lighted box stall. She was given plenty of feed and the best of care and made a splendid growth. When she was eleven months old it was estimated that she weighed nearly 800 lb. and she showed all the indications of developing into a good producer.

In answer to a request of the BREEDER AND DAIRYMAN as to how this heifer was handled Donald wrote: "The first five months I gave her 304 lb. of grain, her ration consisting of two parts whole oats, two parts corn, one part oil meal and one part bran. The first

month I had her I fed her daily 8 lb. of whole milk and the same amount of skim milk. The second month I gradually dropped the whole milk to 4 lb. per day and correspondingly increased the skim milk. The next five months she had all skim milk and at all times she got all the mixed hay she would eat. I always scalded the oil meal and added it to the skim milk and I give much

WIDE WATER RUTH DE KOL
Prize-winning calf club heifer. Owned by Donald M. Smith, of Muncy, Pennsylvania.

of the credit for my success in the growth and development of this calf to regularity of feeding. Beginning with July and up until November she had no corn in her grain feed. In the fall of 1920 I began to feed her some silage and in the spring of 1921 I turned her out to pasture.

Ruth was exhibited at the Hughesville Fair in October, 1920, when she was eleven months of age and she won third place. The judge would not put her higher up in the line because he said she was a little too beefy about the neck.

September, 1921, when she was twenty-two months old she weighed 1,135 lb. During that month she broke through two fences and crossed a creek to get into our neighbors orchard where she ate enough apples to kill her before we could give her any help.

I had grown very fond of my heifer and then, too, it was a great loss to me financially, yet I learned many lessons during the time I owned her and think the experience was very valuable for it proved to me what kindness and regular feeding will do."

President Coolidge Endorses Club Work

In a few short years the boys and girls whose homes are now on farms will be the men and women of the nation. It long has been recognized that we derive some of the most virile manhood and womanhood from the farms and whether they remain in the country or move to the towns and cities their early training and associations always have a marked influence upon their thought and activities as men and women. It is of the utmost importance, therefore, that we all take an active interest in the clubs to which the farm boys and girls belong. I have been personally interested in the growth of these clubs, and their present membership of over 700,000 is a source of great satisfaction to me. We must double and treble this number for there are 8,000,000 children on the farms of this country.

Probably no activity is of more importance to the future standing prosperity and social position of agriculture than the Boys' and Girls' Farm Clubs. Their activities warrant the belief that they will greatly aid in the solution of many of the problems of farm life and it gives me very great pleasure to accept the honorary chairmanship of the National Committee on Boys' and Girls' Club Work.

Permit me to extend my heartiest congratulations to all the members and to their leaders at the Second Annual National Congress and to express the hope that their efforts may be increasingly gratifying.

Very truly yours,
(Signed) CALVIN COOLIDGE.

A Man You Would Like to Meet

READERS of the BREEDER AND DAIRYMAN enjoy the articles by J. H. Lewis who tells of Wisconsin farming conditions with a wealth of descriptive ability, and whose Holstein articles range from a story of the herd owned by the State Governor to the development of wonderful producers by members of junior clubs. Mr. Lewis does not confine himself to stereotyped descriptions of large record makers but depicts the herds, their owners and the surroundings in

vivid word pictures. A few particulars about Mr. Lewis is bound to be of interest to readers of the BREEDER AND DAIRYMAN.

Mr. Lewis was born at Highland, Wisconsin, August 11, 1870 and graduated from the Highland High School in 1886. The following year he graduated from the Metropolitan Business College of Chicago and then was in business with his father and brothers

J. H. LEWIS
News correspondent and magazine
story writer

at Highland, mining, farming and merchandising, gaining a wide experience that has been very valuable to him in later years.

In 1898 Mr. Lewis accepted a position with the United States Indian Service and he was in that service for ten years, first in Chicago, then in Washington, D. C., and then, in 1902 going into the field and coming in personal contact with the original American in his home. From 1902 until 1908 he, with the aid of educated United States Indian farmers, taught the Red Man improved farming methods, working on the Ponca, Otoe and Oklahoma Indian Reservations.

Giving up this position in 1908 he was engaged in zinc mining in southwest Wisconsin for the next five years. Then for five years Mr. Lewis worked as Lec-

turer and Organizer for several Fraternal organizations and for the last five years he has been news correspondent and story writer for a number of southwestern Wisconsin weeklies and also for several farm papers including the *Wisconsin Agriculturist*. His wide acquaintance and extensive knowledge is of invaluable aid to him in this work.

One of Mr. Lewis' chief ambitions is to travel extensively. He has been in many States of the Union and has visited Canada and Mexico and says that he would like to go around the world and particularly visit Hawaii, the Philippines and Japan. But his income forbids such extensive journeyings so he attends most of the farm and consignment sales in his vicinity and keeps his agricultural knowledge right up to the latest scientific notch by visits to the experiment station connected with the University of Wisconsin, by attendance at the Farmers Institutes and at the Short Courses at Platteville State Normal School.

When you fight or work don't make a fuss. The hen cackles only after she has laid an egg. The noise and sizzle of a locomotive are not force. All force is silent. The hee-haw of a mule is startling, but not as dangerous as his hind legs. Bear in mind that it is an empty wagon that makes the most noise when in motion. The noise of a drum is due to the fact that there is nothing in it.

Idle lands grow most weeds. Yes, and idle minds are unproductive. Read for ideas and information and the fact will be reflected in your farm.

*An accredited herd that pays its way, and
gives the owner a good living
plus a nice profit*

King Johanna Korndyke Cornucopia
234253

OUR senior herd sire. His daughters are being bred to Model Darius King Segis, a son of Clara Clothilde Lyons, the world's record senior two-year-old for milk in the 60-day division. She also held the New Jersey State record for milk in the 30-day division. His sire's dam is a sister to Glista Ernestine, the only seven times 30-lb. cow.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

January 9, 1924.—Yates Hotel, Syracuse, N. Y., Annual meeting, New York Holstein-Friesian Association.

January 9, 1924.—St. Paul, Minn., Minnesota Holstein Breeders Meeting.

January 22-25.—Harrisburg, Pa., Pennsylvania Farm Products Show.

January 23.—Harrisburg, Pa., Pennsylvania Federation Holstein-Friesian Clubs Annual banquet.

January 24.—Harrisburg, Pa., Pennsylvania Federation Holstein-Friesian Clubs Annual Meeting.

February 4.—Lansing, Mich., Annual Banquet of the Michigan Holstein-Friesian Association.

February 13.—Eau Claire, Wis., Thirty-second Annual meeting of the Wisconsin Holstein-Friesian Association.

HOLD FIRST ANNUAL MEETING

The Holstein Breeders' Association of Lafayette County held their first annual meeting at Darlington, Wisconsin, early in December. The Association started a year ago and now has 100 members. W. P. Martin is president; J. T. Stephenson, secretary, and M. H. Michaelson, treasurer.

WINNEBAGO ASSOCIATION ELECTS OFFICERS

The annual meeting and banquet of the Winnebago County, Wisconsin, Holstein Breeders' Association was held at Allenville, early in December. The officers elected for the coming year were: President, Frank Scovel of Winneconne; Vice-President, Louis Sorenson, Winchester; Secretary and Treasurer, Hugo Merk, Algoma; Directors, John Hofberger, Wolf River; Earl Hughes, Neenah; Edward Race, Winneconne and C. E. King of Omro.

FAIRCHILD AND REECE REELECTED

The annual meeting of the Columbia County Holstein Breeders' Association was held December 29th, at Bloomsburg, Pennsylvania. The members reelected their officers, plan to form four new calf clubs and advocate the testing of all cattle in the county probably within the coming year. The Columbia County association has a wonderful reputation for successful calf clubs.

Officers reelected are William Fairchild, Berwick, president. J. A. Patterson, Millville, E. F. Seely, Nescopeck, and Trumann Eves, Millville, vice-presidents; P. C. Niesley, Bloomsburg, and Clarence Reece, Berwick, secretaries.

NEW ENGLAND HOLSTEIN-FRIESIAN ASSOCIATION

Frederick M. Peasley of Cheshire, Connecticut, was reelected president of the New England States Holstein-Friesian Association at its annual meeting held at the American House, Boston, Massachusetts, December 18th. Thomas E. Elder of Mt. Hermon, Massachusetts, was reelected secretary and Angus P. Thorne of Bridgeport, Connecticut, was reelected treasurer. The entire board of directors was reelected. A. P. Bigelow, of Middlesex, Vermont, was elected vice-president in the place of O. L. Martin of Plainfield, Vermont.

The banquet of the New England Associations was held that evening at 6:30. The principal speaker was Prof. Elder who gave an instructive and interesting report of his recent trip to South America. His description of the Holstein-Friesian industry in that section was listened to with a great deal of interest.

The first three-years membership contracts of the New England States Holstein-Friesian Association expired January 1, 1924. Some of the breeders have already sent in their membership contracts signed up for the next three years.

MEETING OF THE ST. LAWRENCE COUNTY BREEDERS

The St. Lawrence County Holstein-Friesian Association held its annual meeting December 15th, at the Seymour House, Ogdensburg, New York. R. M. Thompson, of Heuvelton, retiring president, was in the chair.

Addresses were given by S. R. Farley of Canton, superintendent of the St. Lawrence County Farm Bureau; C. F. Bigler, of Syracuse, president of the New York Holstein-Friesian Association; Hon. Julius Frank, former Mayor of Ogdensburg; Robt. H. McEwen, president of the St. Lawrence Trust Co., who is owner of a large cattle farm at North Lawrence; and John A. Wert, president of the Ogdensburg Fair Association. The proposed rural school bill was the chief subject of discussion. A. G. Doren, moved and Samuel Fieldson of Heuvelton, seconded a resolution in disapproval of the bill and instructed the delegate to the state convention to vote against it. Mr. Fieldson made a strong speech stating that he had been connected with the rural school system for eighteen years and this is the worst bill that has ever been presented. He said it would mean the doom of the rural schools if passed.

Roy Badger of De Peyster, was elected president; C. W. Loomis, Ogdensburg, first vice-president; C. G. Tracey of Massena, second vice-president; A. G. Doren, third vice-president; E. M. Lumley of Gouverneur, secretary and treasurer; and R. M. Thompson, delegate to the State Holstein meeting at Syracuse, January 9th.

AN ATTRACTIVE PROGRAM

Those attending the annual banquet of the Pennsylvania Federation of Holstein-Friesian Clubs on the evening of Wednesday, January 23d, at the Masonic Temple, Harrisburg, Pennsylvania, will have an opportunity to listen to gifted speakers. The Toast-Master will be Dr. John M. Thomas, president of the Pennsylvania State College, an educator of marked executive ability and a pleasing speaker full of gems of literature. Had Dr. Thomas never devoted his energies to educating the youth of the Nation he would have attained eminence as an entertainer and a raconteur.

The Honorable Frank P. Willits, State Secretary of Agriculture, will discuss "Improved Markets for Dairy Products" and similar problems that perplex the farmers and Holstein breeders of Pennsylvania and surrounding states. Mr. Willits' official position and his first hand knowledge of markets and marketing will insure that his message be listened to with rapt attention.

Professor R. R. Graves, of the United States Bureau of Animal Industry, has also been secured for this occasion. Professor Graves is probably the best informed man in the United States and maybe in the world on the effects of inbreeding, its benefits and its ills. Breeding experiments have been carried on for many years at the Government farms, Beltsville, Md., under the personal charge of Professor Graves. Thousands of dollars have been spent to secure the information of which Professor Graves will tell.

"The Future of the Dairy Industry" will be discussed by A. A. Borland, Professor of Dairy Husbandry at Pennsylvania State College. Those who have heard "Andy" Borland and can possibly attend are bound to do so for Mr. Borland's talks are full of information and are always worth while, and his wide experience and extensive knowledge is passed out in a kindly and genial manner that is appreciated by his listeners.

For several years those in charge of the Pennsylvania Federation banquet have endeavored to secure as a speaker Joseph A. Turner, one of the best known Holstein breeders of Virginia and manager for twenty-five years of the purebred Holstein herd at Hollins College. Under his charge records have been made by animals in this herd on twice a day milking that rival those made in many establishments where the animals are given unlimited care and feed, are housed in well bedded box stalls

King Pontiac Alcartra Pietje

our senior herd bull, is by the Century sire, King Segis Pontiac Alcartra and from the former World Champion junior four-year-old, Fairmont Zerna Segis Pietje, 608.4 lb. milk, 35.61 lb. butter in seven days.

His daughters are beautiful individuals and they produce. The evidence can be seen in our barn and by official and cow testing association records.

How about one of his daughters for your herd? A young bull by him would make a crackjack herd-sire. Look over this herd. We have the goods.

A. E. ROBINSON

Susquehanna County

MONTROSE, PA.

THE HERDSIRE OF BROWN HILL FARM

KING ORMSBY VEEMAN KORNDYKE

is a grandson of King of the Ormsbys, King Korndyke Sadie Vale, and Emeretta Korndyke De Kol 1,346.93 lb. butter, 28,035.7 lb. milk in a year.

His seven nearest dams, including his own dam as a junior two-year-old, have seven-day records that average 30.89 lb. butter.

He is being mated with cows of superb individuality and wonderful producing capacity.

Herd Accredited—Inspection Invited—Prices Right.

CLAUDE A. BROWN

Tunkhannock, R. D. 2, Wyoming Co., Pa.

and the cost of making records far exceed the value of the milk and butterfat produced. The Hollins College herd has had to earn a profit over the cost of feed and care. Mr. Turner will tell you how this was done, will tell of "Opportunities for Holstein Business in the Southern States" and may have a word to say on loyalty to the profession and ethical standards of the Holstein industry, subjects which are close to his heart and to which he has given deep and earnest thought.

Those who attended the banquet of 1923 will be pleased to learn that the same caterer will serve the eats for this occasion. This alone is a guarantee of a good feed. As in previous years the event is not limited to owners of purebred Holsteins, but owners of grades and of cattle of the other breeds, besides anyone connected in any way with the dairy industry or interested in dairying, are cordially invited and assured of a pleasant evening and a good time.

Tickets for the banquet can be obtained from the committee in charge, Ivo V. Otto of Carlisle, Pennsylvania, and G. H. Truckell of Harrisburg, Pennsylvania. Make your reservations early.

HOLSTEINS REPEAT HISTORY

The Holstein-Friesian cow, from the record making standpoint, finished the year 1923 as she did its predecessor—in a blaze of glory. In our first issue of 1923, we carried the official news of the breaking of the United States fat record made in yearly test by May Walker Ollie Homestead. The first official intimation sent from the superintendent's office was dated December 21, 1922. Five days later Mr. Gardner announced that Aralia De Kol Mead 2d, had closed a long time test with 26,938.5 lb. milk, and fat equivalent to 1,303.83 lb. butter. Before the year closed he announced that Bessie Snowball De Kol had made 40.37 lb. butter in seven days test in California and that Princess Changeling Segis had finished a year test and was credited with 31,063.3 lb. milk and fat equivalent to 1,287.56 lb. butter.

On December 17, 1923, Superintendent Gardner announced that S. V. P. Melba of Sunnyside had broken the world's record in the senior four-year-old class of the ten months division by producing 26,556.9 lb. milk, 886.99 lb. fat. This performance establishes a new high record for both milk and fat and her showing is made the more creditable by the fact that she also completed a year record and then freshened in time to qualify for the 305-day division.

On the same day Superintendent Gardner sent out another card announcing that Pietertje Ormsby Mercedes Frisby has established a new seven-day record in the junior four-year-old class by the production of 41.14 lb. fat with the test still in progress. It will be remembered that this great young cow holds the world's record by her production of 32.91 lb. butter in seven-day test as a junior two-year-old.

Then, two days later the superintendent announced that Anna Lenox De Kol 2d, had closed a year record of 28,646.3 lb. milk, 1,367.58 lb. butter, freshening for this record when she was more than twelve years old, thus making a world's record for age.

A second 40-lb. record was reported on December 24th, by a card announcing that Eco-Sylv Belle Pietje had produced 686.2 lb. milk, 41.27 lb. butter in seven days as a junior four-year-old. Two different records over 41 lb. reported just a week apart makes one think of a few years back when records of this magnitude were being reported from several different parts of the country.

NEW CHAMPION IN TEN-MONTHS DIVISION

I am pleased to announce that the Holstein-Friesian cow S. V. P. Melba of Sunnyside 466270 has broken the record for fat production in the senior four-year-old class of the 10-mos. division by producing in 305 consecutive days 26,556.9 lb. milk containing 886.99 lb. fat, carrying a calf for 183 days of the test. This is her first and only test; and it was begun at the age of 4 years, 8 months, 17 days. Her sire is Sir Veeman Korndyke Pontiac 156051; her dam is Melba Hengerveld 173591. She was bred by Mr. R. F. Guerin, Visalia, Calif., and is now owned by Mr. Earl Graham, Rivera, Calif. Her best 7-day official production, begun 111 days from freshening, is 756.6 lb. milk containing 28.527 lb. fat. In addition to her 10-mos. test, she is credited with 29,229.4 lb. milk containing 998.40 lb. fat in 365 days. During the 10-mos. test, she had 14 official test periods of which two were retests, and two 8-day strictly official tests. Ten different supervisors were employed in the conduct of the test. S. V. K. P. Melba of Sunnyside, with her 10-mos. production of 886.88 lb. fat equivalent to 1,108.73 lb. butter on the 80 per cent basis, is the second Holstein-Friesian cow with a yearly and 10-mos. record in the same lactation period, so obtaining two certificates, to capture the class record in the 10-mos. division.

Delavan, Wis. MALCOLM H. GARDNER, Supt. of A. R.
December 17, 1923.

FRISBY COMES BACK

I am advised through preliminary reports and by wire that the Holstein-Friesian cow Pietertje Ormsby Mercedes Frisby, No. 624241, has shown a production of 698.2 lb. milk containing 32.913 lb. fat in seven consecutive days, with the test still in progress. She freshened at the age of four years, two months, five days. Her sire is Pietertje Ormsby Mercedes Dela, No. 217269; her dam is Colantha Changeling Frisby, No. 359331. She was bred by Mr. Lawrence F. Murphy, Hartford, Wis., and is now owned by the W. T. Rawleigh Company, Freeport, Illinois. At two years of age Pietertje Ormsby Mercedes Frisby broke the junior two-year record, with a production of 452.1 lb. milk containing 26.327 lb. fat; and this record has not been since surpassed. She made a fine start but was not tested in her three-year form and so has only the junior two-year and the junior four-year short-time records. For three days of the present test the cow was under constant watch verification test, which is still the case at the present writing, Mr. Earl Garver, check supervisor for Illinois, having charge. Also, Mr. M. H. Campbell, Superintendent of Official Testing for Illinois, has inspected the conduct of the test. Computed on the 80% basis, the equivalent butter claimed for Pietertje Ormsby Mercedes Frisby amounts to 41.141 lb.

Delavan, Wis. MALCOLM H. GARDNER, Supt. of A. R.
December 17, 1923.

WORLD'S RECORD FOR AGE

I am pleased to announce that the Holstein-Friesian cow Anna Lenox De Kol 2d, No. 153318, has just closed a long-time test and is credited with 28,646.3 lb. milk containing 1,094.07 lb. fat, thus showing an average of 3.82 per cent fat in the milk. She freshened at the age of twelve years, two months, twenty days. Her sire is De Kol Hengerveld Sprig, No. 55101; her dam is Anna Lenox De Kol, No. 82538. She was bred by Mr. R. D. Lee, Cazenovia, New York; and is now owned by Mr. Harry Yates, Orchard Park, New York. Previous to the time she was nine years old, she had twice produced between 23 and 24 lb. fat and twice produced between 24 and 25 lb. fat in seven days. At nine years, she is credited with 28,209 lb. fat from 755.4 lb. milk; and in continuous official test for 90 days, she at that time produced 337,090 lb. fat from 9,302.1 lb. milk. It was during this lactation period that she produced 29,162.7 lb. milk containing 1,073.30 lb. fat. Tested again the next year she is credited with 953.64 lb. fat.* During the lactation just completed she is again credited with a seven-day record exceeding 28 lb. fat. In addition to a forty-five-day strictly official test, she had twelve other test periods, of which three were retests. Eleven different supervisors were employed in the conduct of the test. Computed on the 80 per cent basis, the equivalent butter for 1,094.07 lb. fat amounts to 1,367.58 lb. With the yearly record exceeding 1,000 lb. fat previously made, Anna Lennox De Kol 2d now gains the high honor of twice producing above 1,000 lb. fat.

Delavan, Wis. MALCOLM H. GARDNER, Supt. of A. R.
December 19, 1923.

*She was ten years, five months and twenty-nine days old when she freshened for this record, during the making of which she produced 25,143.4 lb. milk.

OVER FORTY-ONE POUNDS IN MICHIGAN

I am advised through preliminary reports and by wire that the Holstein-Friesian cow Eco-Sylv Belle Pietje, No. 665344, has shown a production of 686.2 lb. milk containing 33.014 lb. fat in seven consecutive days, with the test still in progress. She freshened at the age of four years, one month, twenty-six days. Her sire is Avon Pontiac Echo, No. 203055; her dam is

Belle Model Pietje 3d, No. 404321. She was bred by Mr. A. C. Hardy, Brockville, Ontario, and is now owned by Mr. Carl E. Schmidt, Oscoda, Michigan. Tested at two years, four months, twelve days of age, Eco-Sylv Belle Pietje is credited with 543.2 lb. milk containing 21.711 lb. fat in seven days, 2,100.3 lb. milk containing 87.037 lb. fat in thirty days and 4,458.8 lb. milk containing 163.167 lb. fat in sixty days; and she was not tested officially in her three-year form. Practically all of the selected period of the present test was a verification test, the cow being kept under constant watch with four supervisors so far taking part. In addition, Mr. E. B. Hint, Superintendent of Official Testing for Michigan, inspected the conduct of the test, he himself taking part for one day. Computed on the 80% basis, the equivalent butter claimed for Eco-Sylv Belle Pietje amounts to 41.267 lb.

Delavan, Wis. MALCOLM H. GARDNER, Supt. of A. R.
December 24, 1923.

PROGRAM OF THE NATIONAL GRANGE

The legislative program for the coming year of the National Grange is very comprehensive. It includes a very definite demand for tax reduction, for economy in Government, rigid enforcement of prohibition legislation, against Government price-fixing, against old-age pensions, doles or other paternalistic legislation, against Government guarantees of profits or earnings to any class or industry, against a ship subsidy and numerous other statements clearly setting forth the view of the Grange that the Government should keep out of business, limit its activities and leave to the initiative and enterprise of the individual, whether in agriculture or other business, the working out of his own happiness and prosperity.

Specifically, the Grange has asked for a Constitutional Amendment forbidding the issue of tax-free securities and adopted a resolution urging Congress to not reduce the surtax schedules of the present Income Tax Law. These two resolutions represent the view of the Grange that extreme wealth should be called upon to pay at least as great a share as is now represented by the surtax rates of the expenses of the Government. The Grange asks for a reduction in freight rates and suggests that a new factor should be taken into account in the fixing of freight rates and classifications, namely, the selling price of the commodity in relation to the cost of its transportation.

Some other items in the program are, continued immigration restriction, new Standard Time Act which will prevent states and communities from enacting daylight saving laws, no more free seeds, extension of Postal Savings Banks to small Post Offices, Truth-In-Fabrics Legislation and truthful advertising and labelling laws, retention of the Market Bureau in the Department of Agriculture, creation of a Dairy Bureau in the Department of Agriculture, and to end the Government development of agricultural land when farmers are already suffering from over-production.

DAIRYMEN'S LEAGUE PRICE FOR JANUARY

The officers of the Dairymen's League Coöperative Association, Inc., at the meeting of the Board of Directors on December 19th recommended that the January milk prices be practically the same as those in force during the latter part of December. The only change is a reduction of 5% per hundred pounds in Class 2, that is, milk condensed or evaporated. The price then in force was \$2.80 per hundred pounds for 3% milk at the base zone of 201-210 miles from New York City.

The up-set in the milk market which the officials of the Dairymen's League blame unto the Sheffield Farms Company and the non-poolers has temporarily been stabilized. When the above announcement was made, the League was selling all of its available fluid milk at the scheduled price but the League officials declare that any future downward price changes will rest entirely with those outside the Association who have brought on these unsettled conditions by the process of dumping their milk in the market instead of merchandising it.

The League officials claim that economic conditions made it necessary for the League to acquire plants at various points. Now after 2½ years the League owns 104 plants and operates 30 more, representing an investment of \$5,683,290.35.

TWENTY YEARS OF STEADY WORK

By A. M. Loomis, Secretary, National Dairy Union

A new generation has come into the dairy industry since the National Dairy Union was organized on December 18, 1903, a generation which has taken up the task where their fathers laid it down and are engaged in building this industry on a bigger and greater scale than exists in any other branch of the great business of agriculture or than can be found in any other country excepting the United States. The National Dairy Union is proud of the part it has had in this growth and development.

This organization had its twentieth birthday on December 18, 1923 and entered upon its twenty-first year of activity as the one organization whose special interest all of the time is constant watchfulness over dairy legislation and the activities of the branches of the Federal Government which are related to this industry.

The organization of the National Dairy Union was born of necessity. Dairy interests in 1903 had seen the development for a decade or more of the manufacture and fraudulent sale of Oleomargarine and the need for legislation which would protect the consumers of dairy products against the fraudulent sale and misrepresentation of this product. They had come to realize the necessity for the conservation of the industry menaced and damaged by this traffic. It is the story of the first organized and systematic effort to substitute a synthetic and imitation product in place of an honest and essential natural food product and the resultant organization of the farmer-producers of the real and natural product to resist the synthetic imitation.

The trouble started when Oleo first began to be manufactured and sold many years before 1903, growing worse and worse as it became a common practice to sell the stuff colored like butter, put up like butter and by many manufacturers and dealers as butter. The dairy industry was not as large, as prosperous or as well organized then as it is now, and it took a heroic effort to secure necessary laws. The Oleo Law, in spite of many efforts, has never been defeated nor weakened since it was originally written on the statute books at the request of a united dairy industry.

The definite organization known as the National Dairy Union has been continuously active and effective on this proposition since the day of its incorporation December 18, 1903. The incorporation was under the laws of the State of Illinois.

All branches of the dairy industry find a common meeting ground in the National Dairy Union. Governor Hoard was one of the moving spirits in the early days of the organization. Other names that stand out in its history include Ed. Sudendorf, George L. Flanders, Prof. Oscar Erf, James Foust, J. A. Walker, E. K. Slater, S. B. Schilling, Geo. M. Whitaker and Wm. Cressey. Its work has a distinct place in the history of the development of the American dairy industry. The present officers named at the annual meeting held last October in Syracuse, N. Y., are as follows: President and Director, N. P. Hull, Lansing, Mich.; Vice-President and Director, J. R. Morley, Owatonna, Minn.; Treasurer and Director, George Caven, Chicago, Ill.; Director, Samuel Schlosser, Plymouth,

Ind.; Director, C. V. Huenke, New Bremen, Ohio; and Secretary, A. M. Loomis, Washington, D. C.

As the dairy industry has grown, the necessity for a representative in Washington to keep careful watch of legislation and to be of special service to the industry in the various Departments of the Federal Government, has become more and more urgent. This was strikingly illustrated when shortly after the writer became Secretary and almost before he knew the essentials of the job, the Emergency Tariff Bill was reported from the Ways and Means Committee of the House of Representatives without a single item of protection for dairy products, but by prompt action was amended to include proper considerations.

The 68th Congress started work the first Monday in December, numbering among its members many who have not been in previous Congresses, to whom the problems of the dairy industry are new. A number of these problems are likely to be considered in this session. One of these may be recommendations from the Treasury Department for important changes in the Oleo Law, another changes in the Butter Standards Law, and another the creation of a Dairy Bureau in the U. S. Department of Agriculture. The appropriations for dairy work in the Department of Agriculture and important tax and transportation measures which have special effect upon the dairy industry are certain to be before Congressional Committees.

Five of the seven Democratic members of the Committee on Agriculture are new members. One new Republican has been added to the Committee this year. This Committee which has charge of all dairy legislation is made up as follows: Gilbert N. Haugen of Iowa, Chairman; C. B. Ward of New York, F. S. Purnell of Ind., Edward Voigt of Wis., M. O. McLaughlin of Neb., J. N. Tincher of Kan., T. S. Williams of Ill., J. H. Sinclair of North Dakota, C. J. Thompson of Ohio, Frank Clague of Minn., J. D. Clarke of N. Y., J. K. Kalaniana'ole of Hawaii, J. C. Ketcham of Mich., J. B. Aswell of La., D. H. Kincheloe of Ky., Guinn Williams of Tex., T. D. Swank of Okla., H. P. Fulmer of S. C., T. L. Rubey of Mo., G. W. Johnson of W. Va., T. A. Doyle of Ill. and J. McSweeney of Ohio.

The last session of Congress paid special attention to agricultural legislation. That was the outstanding characteristic of the 67th Congress. The general comment in Congress this year is that "Agriculture fared pretty well at the hands of the 67th Congress and ought not to expect so much attention from the 68th." This means that all agricultural measures will have "harder sledding" than before for a number of years. There will also be increased difficulties in the way of all legislation at this session of Congress due to the political controversy which is already in evidence, the imminence of a Presidential campaign, the delays due to organization contests, and the probabilities of early adjournment.

The National Dairy Union is one of the constituent bodies in the newly organized American Dairy Federation and hopes and expects to continue its work in harmony with the policy and program which has been adopted by this great organization. It is worthy to note that its program of work which has developed naturally from its previous activities is found to be in complete harmony with the program of the Dairy Federation.

The first item on this program is Oleomargarine legislation to protect and strengthen the present laws, to cooperate in their administration, to oppose any changes which may let down the bars for the fraudulent sale of substitutes, to cooperate so far as possible with friends of the dairy industry in Congress and with the administrative departments of the Government in securing changes in these laws if needed, and at all times to work towards the day when the use of coloring matter in imitation dairy products may be ended.

The second item in the program is the safeguarding of the necessary tariff protection for dairy products.

The third point in the program is cooperation with other dairy interests for the writing into the laws of proper standards for butter and other dairy products.

The fourth item in its program is cooperation with the Department of Agriculture to secure proper appropriations for dairy work in that Department.

A fifth item in the program is cooperation with other dairy interests to secure the raising of the rank of the dairy work now done by the Department of Agriculture to a full Bureau which will include all of the dairy work in the Department under a Chief who will be second only to the Secretary in rank in the Department. These activities and the others which arise from day to day in the routine performance of the functions of the National Dairy Union constitute a work which has been and which must continue to be of great interest and importance to the entire industry.

The Dairy Union is financed by voluntary memberships and contributions. Memberships are always appreciated and are inexpensive in view of the size of the industry and its importance. Particulars of membership and any other information can be obtained from A. M. Loomis, Secretary, Washington, D. C., and all checks should be sent to him and made payable to the Treasurer of the National Dairy Union.

PENNSYLVANIA FARM PRODUCTS SHOW

Pennsylvania's Eighth Annual State Farm Products Show is expected to be an even greater success than its predecessors. Organizations of farmers and the minor industries closely allied to agriculture will meet in Harrisburg during the four days of January 22d to 25th.

Among the gatherings in which breeders and dairymen will be interested is the meeting of the American Veterinary Association which will be held in the House of Representatives, Capitol Building, on Tuesday, January 22d at 9:30. At ten o'clock and also at 1:30 of the same day the Association of Breeders and Dairymen will meet in the Senate Caucus Room. That evening at 7:30 in the Chestnut Street Auditorium will be a joint meeting of all organizations participating in the State Show. On Wednesday, January 23d the Breeders and Dairymen Association will meet in the Senate Caucus Room of the Capitol at 9:30 and 1:30 and also at the same hours and the same place on Thursday.

The annual banquet of the Pennsylvania Federation of Holstein-Friesian Clubs will be held at 7 P. M., Wednesday evening, in the dining room of the Masonic Temple. Prominent out-of-state speakers are expected to be present and the leading Holstein men of the State always attend. A special effort is being made to have the 1924 event an even greater success than the one of 1923 which was thoroughly enjoyed by all who participated. All Holstein breeders of Pennsylvania and surrounding states as well as all who are not breeders but are interested in "Black and White" cattle are invited to attend. Tickets can be obtained from the secretaries of the local Clubs and will be on sale at Harrisburg the day previous to the banquet but it is essential that all planning to attend should make their reservations so that the management can make the necessary arrangements.

The annual meeting of the Federation will be held at 9 a. m. Thursday morning at Fahnstock Hall in the Y. M. C. A. Building on Second Street. Matters of great importance to the owners of purebred Holsteins residing in Pennsylvania, Delaware and New Jersey will be discussed. Allan N. Crissey, who has been fieldman of the district during the past year is expected to render his first annual report. All members of the Federation are earnestly requested to be present and to stay through the entire proceedings.

The Holstein-Friesian breed will be represented in the cattle

building by an exhibit of high-class Pennsylvania Holsteins. There has been some talk of a Holstein-Friesian sale or even a sale to which all breeds could contribute cattle but at a recent meeting of the directors of the State organization it was decided to secure an exhibit of animals that the owners regarded too highly to place in public sale and, as the purpose of the exhibit is to demonstrate to the thousands who attend the show, the quality and value of high-class purebred Holstein-Friesians, it can be seen that in reaching their decision the directors were influenced by their desire to do the best possible for the good of the breed.

GET OF SIRE CLASS

Grand championship honors are the goal of every exhibitor. To be able to bring out the grand champion bull or the winning female is an honor not to be belittled. It takes an exceptionally good animal to win such honors at any of our larger shows and the owner is to be congratulated, especially if bred by him.

There is, however, one class which should mean much to any breeder and that is the get of sire class. It should be, by long odds, the most important class of any show. An eastern breeder who has been actively interested in the shows, both as a judge and as an exhibitor, made a suggestion which seems to us practical and which if adopted might increase the value of the get of sire class. Briefly, he suggests that the class be limited to groups of females in milk or those that have at least produced their first calf.

The more we think of this idea, the more impressed we are with it. True, under such a ruling the size of that class would be greatly reduced and no doubt it would contain a smaller proportion of finished show animals. We doubt if that is any cause for regret. The primary reason for keeping a good bull is not to have him sire smooth young stuff that may or may not develop well, or is it to produce show bulls. We stamp as successful that breeder whose herdsires beget high producing daughters of a uniformly good type. A bull is kept to produce good cows. Then why not make the get of sire class one that will show the real value of the bulls whose progeny is shown in that class?

We have seen a calf "get" beat four good type cows, cows which may have lacked finish but which were unquestionably good cows of desirable type. We do not question the correctness of the judge's decision with the class open to animals of all ages, but we do question the value of that decision because it puts a premium on the bull that sires typy youngsters rather than on the sire whose daughters develop into mature cows of good type that may come into the ring in condition which indicates they are producing heavily.

Perhaps the change suggested above is impractical and would not work out to advantage, but at least it seems worthy of consideration.—Hoard's Dairyman.

BILLBOARDS OR SCENERY

This question has been put up recently to a good many women of New York State by the State Federation of Women's Clubs. Recently the rural women of the State, speaking through the Home Bureau Federation, answered that they preferred scenery. In fact this seems to be the unanimous reply of the women.

This does not mean that New York women don't believe in advertising. In fact they even believe in billboards. They do, however, resent their destroying lovely views along New York's roadsides. The entrance to two cities in central New York is made absolutely grotesque by the heterogeneous collection of billboards which clutter up the roadside; and nature has done its best to make these roads beautiful. These are by no means unique, either; they happen to stand out in our memory from constant passage over them.

The general federation of women's clubs has started a campaign against the billboards; they are protesting to national advertisers about the practice. It seems entirely possible that some compromise might be reached with these outdoor advertisers. Billboards, yes. But billboards placed where they do not ruin our scenic beauty.—Dairymen's League News.

You never can tell. Many a girl who sits on a young man's knee has to sue him for support later.

1903—NATIONAL DAIRY UNION OBSERVES TWENTIETH BIRTHDAY—1923

The Oldest National Dairy Organization Enters its Twenty-first Year of Usefulness and Activity under the above Officers and Directors (From left to right), N. P. Hull, President, Lansing, Michigan; J. R. Morley, Vice-President, Owatonna, Minnesota; George Caven, Treasurer, Chicago, Ill.; Samuel Schlosser, Director, Plymouth, Ind.; C. V. Huenke, Director, New Bremen, Ohio; A. M. Loomis, Secretary, Washington, D. C.

DEMAND GOOD AT CANADIAN SALE

Buyers from all parts of Ontario, Canada, were present at the twenty-first consignment sale of the Oxford Holstein Breeders' Club, held at Woodstock, December 13th. Forty-seven animals brought a total of \$8,472.50 an average of \$180.26. Thirty-four females sold for \$6,610, an average of \$191.18 while thirteen males brought \$1,962.50, an average of \$151. The top price was \$355 paid for May Pauline Ormsby by G. F. Mahon of Woodstock. Keen competition and spirited bidding is reported.

NORTHFIELD COMMUNITY SALE

At Northfield, Minnesota, on December 6th, a consignment sale which included the entire Wendlandt herd was held and an average of \$203.30 was obtained for fifty-eight head. Considering the fact that many of the animals were under two years of age and were not in high condition the prices realized were quite satisfactory.

The top price was \$1,400 which George L. Craig of Sewickley, Pa., paid for Lady Lola Piebe, with a junior three-year-old record of 1,010 lb. butter. Her dam, Lola Segis Pontiac Homestead was in test and milking better than 100 lb. daily. Lady Lola is soon due to freshen by Sir Johanna Glen Ormsby.

Mack and Hansen were the auctioneers and the Twin City Pedigree and Service Co. managed the sale.

Animals bringing \$250 or more with names and addresses of their purchasers are herewith listed:

Lady Lola Piebe	Purchased by Geo. L. Craig, Sewickley, Pa.	\$1,400
Lashbrook Kappine Walker	Purchased by Geo. C. Sherman, Minneapolis, Minn.	350
Jeweline Buttercup		300
Pietertje Perfecta Burke Lass		250
Princess Rag Apple Aaggie		285
Lashbrook Korndyke Segis	Purchased by J. C. Simpson, Waterville, Minn.	305
Countess Houwtje De Kol	Purchased by Julius Johnson, Oakato, Minn.	305
Oak Dale Lassie	Purchased by Carleton College Farm, Northfield, Minn.	300
Cornerlawn Glen Ormsby		280
Lynette Pontiac Walker	Purchased by John Rosenow, Waterville, Minn.	250
Pauline Segis Homestead	Purchased by J. C. Marlow, Mankato, Minn.	285
Careme Echo Sylvia	Purchased by L. E. Schrieber, Excelsior, Minn.	265
Sarah Eusebia De Kol		250

WASHINGTON STATE ASSOCIATION SALE

The foundation Holstein Sale sponsored by the Washington State Holstein Breeders' Association was held on the Western Washington Fair Grounds at Puyallup, December 3d and 4th. The officers of the Association had received a number of Holstein inquiries from other states and extensive advertising was done in Idaho, Utah, Montana and California. When the sale was started it was found that not a single buyer was present from out the state. The prices received were a disappointment to the consignors but a number of men who never before owned purebred females bought in this sale and so a number of new herds were started. Animals out of condition brought low prices but those in real sale shape sold fairly well. There were 104 animals sold for a total of \$15,155, or an average of \$145.70. The auctioneers were Geo. Gue and C. E. Payne of Centralia, Washington.

SALE CATALOGS

We furnished the catalogs for more sales than any other company during the past season—"Our price is lower than the rest—Our work is equal to the best." Write for entry blanks today.

PEDIGREE EXPERT

Get our R. Austin Backus for your sale—in the box at more sales during the past six months than any other pedigree man. Book your date before it is too late.

BACKUS PEDIGREE CO., MEXICO, N. Y.

The top price was \$400 which Prof. Linklater of the Western Washington Experiment Station paid for Chimacum Lutscke Ayacanora. The professor bought several good ones. On the second day Gov. Louis F. Hart attended and purchased five head for the Western State Herd. The highest priced bull was Firloch Mutual Fobes Homestead, bought for \$380 by Robert Tresch of Puyallup. There was a good demand for bulls and they brought good prices.

Animals bringing \$250 or more with names and addresses of their purchasers are:

Fir Knoll Maderia, 5 yrs., Western Washington Experiment Station, Puyallup, Wash.	\$255
Bos Johanna, 8 yrs., Youngquist Bros., Mt. Vernon, Wash.	250
Korndyke Nema Ononis, 2 yrs., John J. Slack, Pacific	250
Newaukum Lunde Ann, 1 yr., John J. Slack	275
Melbrook Segis Tritomia, 7 yrs., H. R. Shoultes, Adna	320
Firloch Mutual Fobes Homestead, male, 1 yr., Robt. Tresch, Puyallup	380
Milk Monarch, male, 1 yr., W. C. Macumber, Oakville	300
Chimacum Lutscke Ayacanora, 5 yrs., Western Washington Experiment Station	400

PACIFIC INTERNATIONAL SALE

There were only three consignments to the Pacific International Holstein sale of which George A. Gue was manager and auctioneer. Thomas J. Owens of Kirkland, Wash., consigned one bull, the remainder were consigned by F. R. Beals of Tillamook and Max Arp, of Eugene, Oregon. The fifty-four animals averaged just under \$320.

The Owens bull topped the sale, being struck off to Heigo Shronaya of Sapporo, Japan, for \$2,000. C. M. Seeley owner of the Minterbrook Farm, Minterbrook, Washington, purchased the two top females, paying \$1,000 for Princess Laurel Fayne and \$800 for Lucy Freela Pontiac 3d, good record cows of the Arp consignment. The Arp herd sire, Aaggie Colantha Gerben went to I. N. Stewart of Springfield, Oregon, for \$500. The largest number going to one buyer was eight, purchased for \$1,985 by R. H. Tuttle of Walla Walla.

Animals bringing \$250 or more with names and addresses of their purchasers are as follows:

Princess Pontiac Belle Korndyke, 4 yrs., L. F. Bailey, Baker, Ore.	\$400
Colantha Carlotta Hengerveld, 2 yrs., Minterbrook Farm, Seattle, Wash.	250
Kathryn Ormsby Bos De Kol, 3 yrs., R. H. Tuttle, Walla Walla, Wash.	345
Bessie Tulip, 4 yrs., Thomas Klindt, The Dalles, Ore.	275
Snowball Val Fobes, 1 yr., L. F. Bailey	465
Lois Segis Burke, 8 yrs., W. C. Culbertson, Portland, Ore.	300
Lilly Brook Betty Homestead, H. F. Ketchum, Portland, Ore.	375
Lady Bracelet Posch, 6 yrs., R. H. Tuttle	410
Tillamook Bessie Slarrin De Kol, W. C. Culbertson	330
Rocky Lady Clorinda, 5 yrs., J. Luscher & Sons, Fairview	410
Queen Lucy Pontiac Alcartra, 4 yrs., Joseph E. Beattie, North Portland, Ore.	275
Queen Lill of McKenzie De Kol, 7 yrs., J. E. Beattie	300
Sena Johanna Bonheur, 3 yrs., Paul Rambach, Lakeside, Ore.	300

Cow Testing Association Reports

PENNSYLVANIA TESTING

Seventeen Pennsylvania associations reported that 4,558 cows were tested during November. Of this number 426 produced 40 lb. butterfat or more and 655 produced more than 1,000 lb. milk. In the Cumberland County Association in which A. A. Raudabaugh is tester, 294 cows were tested, sixty-two exceeding 40 lb. butterfat and 125 exceeding 1,000 lb. milk while in the association operating in Northern Berks County, L. B. Nock, tester reports that 247 cows were tested of which 63 produced more than 40 lb. butterfat and 68 more than 1,000 lb. milk. In the entire state 94 cows produced more than 50 lb. fat and 210 cows gave more than 1,200 lb. milk. The greatest milk record was 2,418 lb. made by a registered Holstein owned by C. J. Koller of Solebury and enrolled in the Middle Bucks County Association. A registered Holstein owned by H. E. Robertson of York and enrolled in the York Valley Association was second with a yield of 2,361 lb. milk.

A registered Holstein owned by C. J. Koller led for butterfat production with a yield of 85.9 lb. fat while a cow owned by H. I. Gray of the Juniata County Association is second with 81.1 lb. The Cumberland County Association leads for highest ten cow average with 60 lb. fat and Juniata County Association is second with an average of 58.5 lb. fat.

BANK OFFERS BULL AS PRIZE

The Pacific Southwest Trust and Savings Bank of Lemoore, California, has been endeavoring to get the dairymen in its territory to raise the quality standard of their dairy herds. It advised them to get purebred cattle on the grounds that purebred cows will return a handsome profit over and above their keep and that it costs no more to feed and milk them than it does to feed and milk poor stock.

In order to increase interest in the campaign the bank selected the purebred Holstein Prince Prilly Ignaro, a handsomely marked, well built young fellow about a year old. This bull was sired by a son of Betsy Lamb Prilly, grand champion cow at the San Francisco Livestock Show for two consecutive years, winner at a number of other great shows and a cow that in ten months produced 25,042.8 lb. milk, 915.52 lb. butter, a world's record at time of making.

The dam of Prince Prilly Ignaro is Helm Lake Prilly Ignaro. As a senior two-year-old, this young cow produced 562.7 lb. butter, 13,352.6 lb. milk in ten months. She is in her second lactation period and although December was the tenth month of her lactation period she was producing more than five gallons milk daily and making over 40 lb. butterfat a month.

The bank exhibited this young bull and invited dairymen to guess the weight

free of charge. The nearest guess to the actual weight of the bull would win him as a prize. A Portuguese dairyman named Joe Lewis guessed 698 lb., the estimates running from 500 to 1,000 lb. Prince Prilly Ignaro tipped the scales at exactly 700 lb. when he was weighed in the presence of a large crowd after the contest closed at 3 p.m. December 19.

This information was sent to us by Dr. W. C. Truckell now a practicing veterinarian at Lemoore. Many dairymen of New York state and particularly northern New York will remember Will, who was a test supervisor for five or six years under the auspices of the State College of Agriculture at Cornell University. Will Truckell went to California about a dozen years ago and after working awhile on California ranches he became a student in a San Francisco veterinary college and after completing the course took up the practice of veterinary medicine. With the exception of a number of months service in the United States Army he has followed his profession from his graduation until the present time.

ILLINOIS TESTING

Thirteen of the eighteen Illinois Cow Testing Associations were headed by black and whites for production during November. In thirteen of the associations herds consisting of black and white cows led for average production.

The two highest individual producers were purebred Holsteins, of the Rock River Farms, the well known breeding establishment owned by Senator Medill McCormick. The leader produced 86.2 lb. fat from 2,536 lb. milk and her stablemate made 80.8 lb. fat from 2,787 lb. milk. A grade Holstein, owned by W. F. Bonjour of the Jo Daviess Association No. 1 is third with 80 lb. butterfat and another Rock River cow was fourth with 2,685 lb. milk, 77.9 lb. fat. Five of the ten highest producing cows hailed from the Rock River Farms, while the entire eighty-seven milkers of this establishment averaged 1,143 lb. milk, 39.3 lb. fat. Nine of the ten highest herds in the state are Holsteins. The first position was held by a grade Holstein dairy of six cows owned by Geo. Mohrman of the Whiteside County Association. This dairy averaged 1,283 lb. milk, 50.8 lb. butterfat. Twelve cows owned by F. Flack of the Jo Daviess Association No. 1 were second with an average of 1,357 lb. milk, 46 lb. fat, and eleven purebreds owned by A. L. Goodenough enrolled in the Whiteside Association averaged 1,068 lb. milk, 42.5 lb. fat. The twenty-seven purebred cow dairy of H. M. Wood of Delavan averaged 1,100 lb. milk, 39.6 lb. fat.

"Pardon me," said the prisoner, as the governor passed his cell.

WISCONSIN TESTING

Holsteins show prominently in the November report of the Wisconsin Cow Testing Associations as of the 132 associations reporting, 90 were headed by black and white cows, 31 of which were registered and 59 grade Holsteins. Guernseys usually furnish competition but in this report we note that there are only 27 Guernsey leaders, 21 of which were grades. The state leader is a registered Holstein owned by Robt. L. Ray of Eau Claire No. 3 Association. She is credited with 98.9 lb. fat. J. Weuthrich of the Greenwood Association has the second cow, another registered Holstein, credited with the production of 91.4 lb. fat. A cow classed as a Native and therefore of no particular breed is third with 87.6 lb. fat in the month.

Black and White cattle make a good showing among the herds for 44 of the leading herds are classed as grade Holsteins, 19 others as purebreds and 23 more as consisting of both grade and purebreds while several of the other herds have more or less Holstein blood in their makeup. The four leading herds are composed of black and white cattle. In the first position is a seven-cow dairy of grade and purebreds owned by Ben Peacock & Son of the Muskego-Vernon Association. This small but select herd averaged 1,636 lb. milk, 55.5 lb. butterfat. Ten registered Holsteins owned by Clinton Skewes of Union Grove headed the Racine County Association with an average of 1,471 lb. milk, 55.3 lb. fat—only two-tenths of a pound of fat behind the leaders. The registered Holstein dairy of Robt. L. Ray of Eau Claire is in third place. This fifteen-cow dairy averaged 1,704 lb. milk, 54.7 lb. butterfat. Eight Holsteins owned by L. Kuhl & Son of Hazel Green are in fourth place with an average of 1,513 lb. milk, 53.6 lb. fat.

COW TESTING IN THE WESTERN STATES

Despite the fact that California has the largest cow testing associations of any State, the animals enrolled in such organizations maintain a high average production, for the twenty-one California Associations by the average of the 25,352 cows belonging to 659 herds enrolled, led the ten Western States for the month of November with an average production of 29.26 lb. butterfat; 3,877 cows or more than one-seventh of the number producing forty or more pounds of fat during the test month.

Washington is second with an average of 29.1 lb. fat for 6,393 cows. The Nevada cows averaged 28.91 lb. fat, the New Mexico cows, 28.10 lb. fat while the Idaho milkers are close behind with 28.07 lb. Utah, Colorado, and Montana follow in the order named with Oregon bringing up the rear with a 22.71 lb. average.

The highest average reported for a small herd is 61.2 lb. fat, 1,467 lb. milk, credited to seven Holsteins owned by Geo. T. Sinton of Colorado Springs, Colorado. The high large herd consists of twenty-three registered Holsteins owned by F. F. Pellissier of Whittier, California. This dairy averaged 1,388 lb. milk, 50.7 lb. fat.

The four highest record cows are all registered Holsteins while the next four consist of Holstein grades. The leader, Undine, owned by the Modern Woodmen Sanitorium at Woodmen, Colorado, is credited with 2,823 lb. milk, 121.4 lb. fat. A member of the Pellissier herd is second with 3,063 lb. milk, 116.4 lb. fat. This is the highest milk record reported in this issue. Queen, owned by J. A. Black of Kuna, Idaho, is third with 2,097 lb. milk, 100.7 lb. fat and Mary Alcartra owned by L. E. Dickover of Delhi, California, is fourth with 2,325 lb. milk, 97.5 lb. fat.

SOUTH CAROLINA TESTING

Sigsbee Farm Mechtilde, the great Holstein owned by Kai Schwensen of Spartanburg, South Carolina, produced 1,758 lb. milk, 71.6 lb. fat during the month of November. Although this is her fifth month in milk this was the highest record reported for a black and white cow but was surpassed by the purebred Guernsey, Donnington Gaiety 8th, an imported cow that is credited with 1,473 lb. milk, 76.7 lb. fat. Honors are well divided among the breeds as a Guernsey was in third place, a Jersey fourth, and Rereckale Johanna of the V. M. Montgomery herd in fifth place with 2,131.5 lb. milk, 68.3 lb. fat. Wellsland Mildred Johanna in the Montgomery herd is credited with 62.1 lb. fat, 2,158.5 lb. milk and is in ninth place. Princess Ona Magician in the eleventh month of her year's work produced 1,476 lb. milk, 51.2 lb. fat certainly a very creditable performance for a junior two-year-old.

The high Jersey cow, Belle de Sarah, is credited with 71.1 lb. fat, 1,437 lb. milk as a mature cow in the first month of her test.

McMILLIN HERD MAKES GOOD SHOWING

A purebred Holstein owned by W. McMillin & Son of Wampum, Pennsylvania, led the Volant Cow Testing Association for the month of November reports tester Paul J. Stonebraker. This cow produced 2,035 lb. milk, 63.1 lb. fat. A purebred Holstein owned by T. S. Minor is in fourth place with 1,854 lb. milk, 55.6 lb. fat, a purebred Jersey being second and third. The high average was made by twelve purebred Holsteins owned by Wesley McMillin & Son, these cows averaging 1,312 lb. milk, 44.6 lb. butterfat. C. L. McMillin had eight purebred Holsteins that averaged 1,222 lb. milk, 44.3 lb. butter.

There were 28 herds containing 272 cows tested of which 48 cows produced over 40 lb. butterfat.

HOLSTEINS LEAD IN CALIFORNIA

The leading producer of the 948 cows tested by the Dairy Department of the San Joaquin Farm Bureau Federation during the month of November was a grade Holstein, Mable, owned by C. A. Nutt of Ripon, California. Mable is credited with a production of 1,521 lb. milk, 86.7 lb. fat. Townsmen of Mr. Nutt own the next two producers and they were both grade Holsteins, Josie owned by E. Eisenga producing 1,404 lb. milk, 68.7 lb. fat and Funnell owned by A. Pierce producing 1,488 lb. milk, 67 lb. butterfat. A two-year-old grade Holstein heifer named May of the Nutt herd produced 888 lb. milk, 41.7 lb. fat.

No less than 127 cows produced more than 40 lb. of butterfat. The average was 760 lb. milk, 30.9 lb. butterfat. The highest average herd was that of A. Marsman of Ripon with an average of 38.37 lb. fat for ten cows.

REGISTERED COWS IN LEAD

"Latalee" a registered Holstein owned by the Kanawha Farm, with a production of 68 lb. butterfat, 1,830 lb. milk, led the Kanawha-Cabell-Mason Cow Testing Association during the month of November. "Ina" a registered Holstein owned by Harry Woodrum of Charleston, West Virginia, was second with 1,475 lb. milk, 57.6 lb. fat.

There were 200 cows under test of which 27 made the honor roll, 20 of these 27 were Kanawha County Cows.

HOLSTEIN LEADS IN JERSEY STATE

The high cow of the Lewis County, Oregon, Cow Testing Association for the month of October was Juneau Segis Cornucopia, a five-year-old purebred Holstein owned by L. F. Rayton. Juneau's production was 1,620 lb. of milk, 66.5 lb. fat. During the month of October 61 cows each produced more than 40 lb. fat in this Association.

NO CHANGE IN CASEIN TARIFF

The United States Tariff Commission has reopened its investigations as to cost of producing and manufacturing Casein. Agents have been sent to the Argentine and to various districts of the United States for the purpose of securing additional information as to the cost of production. A supplemental hearing will be given at some future date but all actions regarding the Casein Tariff are now postponed indefinitely.

THIN AND SCATTERING

C. L. Hughes, secretary of the California Holstein-Friesian Association, reports that there are now fourteen billboards of the Holstein Milk-Vitality order erected in that state. This is less than one billboard to every 100,000 square miles. No wonder Mr. Hughes says that "This number does not make a particular impressive showing."

SULLIVAN COUNTY

OUR HERDSIRE

King Ormsby Veeman Korndyke

is from a good record daughter of King Korndyke Sadie Vale and was sired by King Ormsby Ideal, who was by King of the Ormsbys from a 1346.93 lb. yearly record dam. His seven nearest dams, including his own dam tested as a junior two-year-old, have seven-day records averaging 30.89 lb. butter. Herd is under State and Federal Supervision and has passed two clean tests, in fact, we have never had a reactor.

MOTHER AND DAUGHTER

Seldom is it possible for a breed paper to report in the same issue outstanding records made by mother and daughter particularly when the animals are in herds separated by many miles. Nearly two years ago Pietertje Ormsby Mercedes Frisby, No. 624241, completed a seven-day record of 26.327 lb. fat or 32.91 lb. butter tested as a junior two-year-old. She was then owned by Lawrence F. Murphy of Hartford, Wisconsin, and her performance set a new high mark in the junior two-year-old division of which she is still the champion.

About a year previous Colantha Changeling Frisby, the dam of Pietertje Ormsby Mercedes Frisby, was sold to the Chequamegon Holstein-Friesian Association which had just been started as a cooperative Holstein breeders organization composed of business men of Ashland, Wisconsin, and farmers and dairymen living in the vicinity of that city. The cattle purchased were distributed among the farmer-members and Colantha Changeling Frisby was assigned to R. E. Pingel. When Pietertje Ormsby Mercedes Frisby made her great record, which is still unbeaten in her class, Mr. Murphy made a trip to Ashland for the purpose of buying back Colantha Changeling Frisby and other near relatives of his champion. In this purpose he was unsuccessful for the Chequamegon dairymen appreciated the value of this stock. Mr. Murphy was successful in an effort to interest Mr. Pingel to place the mother of the champion in semi-official test. She freshened for this test about three months later.

During the ten months she was milked only three times daily. The best month of the year was November, 1922, when she produced 110.4 lb. butter. During February which, in that part of the country, is accompanied with cold and stormy weather, she made her lowest month's test of 88.7 lb. butter. In ten months Colantha produced 19,993.6 lb. milk, 813.36 lb. butterfat or 1,016.6 lb. butter. She is the only Wisconsin cow to produce over 1,000 lb. butter in the ten month's division.

She is bred to freshen again in time to qualify for the ten months division and will displace Pearl Barbetta De Kol 2d, 954.72 lb. butter for the state championship.

Mr. Pingel has found out how to make records without making the feed men rich, for Colantha Changeling Frisby was fed only feeds grown on the Pingel farm. Wheat was raised which was ground at a small country mill and the bran was fed to the cow on test. Flaxseed, barley and oats grown on the farm were ground and formed part of the ration together with clover and corn silage, an ideal combination of home grown feeds.

Colantha Changeling Frisby has been exhibited at a number of local shows in Northern Wisconsin with a considerable degree of success. Her son, Chequamegon Ollie Frisby also was exhibited as a yearling and won a number of grand championship ribbons.

Right on top of the announcement of this great record made in the ten months division comes a card from Superintendent Gardner announcing that Pietertje Ormsby Mercedes Frisby, the daughter of this great cow, now a junior four-year-old, has produced over 40 lb. butter in seven consecutive days with the test still in progress. She was tested as a junior four-year-old and is owned by the W. T. Rawleigh Company of Freeport, Illinois, manufacturers of medical preparations. A representative of this company purchased this heifer at the National Sale at Kansas City, June, 1922, paying \$1,000 for her.

NEWS FROM THE ALLIS HERD

Allis Farm Abbekerk Jewel, in the herd of L. L. Allis, Runmerfield, Pennsylvania, a short time ago made a seven-day official record of 473.5 lb. milk, 21.63 lb. butter as a junior four-year-old. She is a daughter of Belva V. Clothilde 2d, the great old foundation cow of the Allis herd, a cow that now has four daughters that have made Advanced Registry records. The sire of this cow is King Pontiac Abbekerk Jewel 2d, whose sire was a son of Spring Farm King Pontiac and Tidy Abbekerk Princess Jewel, 607.6 lb. milk, 31.7 lb. butter in seven days. King Pontiac Abbekerk Jewel 2d was from Cornucopia Pontiac Abbekerk a granddaughter of King of the Pontiacs with 511.1 lb. milk, 28.10 lb. butter in a week.

Mr. Allis is offering a very choice young bull from Allis Farm Abbekerk Jewel sired by King Wandaga Friend. He was from a cow that made 711.7 lb. milk, 31.67 lb. butter in a week and was sired by the well-known bull, Wandaga, whose dam, Wandameere Belle Hengerveld has a seven-day official record of 42.65 lb. butter made as a junior four-year-old and was from the 30-lb. cow, Belle De Kol Colantha Hengerveld.

The acquisition of Berylwood Prince Aggie Chicago, the splendid young bull purchased by Mr. Allis at the Cleveland National Sale, makes unnecessary the retention of the older bull who was born February 27, 1922. The fact that Mr. Allis has retained this bull until his Cleveland purchase became of serviceable age is evidence of his opinion of the value of this youngster. This, together with the fact that he is from an accredited herd, makes him well worth the investigation of anyone in the market for a young herdsire.

WILLIE'S ESSAY ON CATS

Cats that's made for little boys to maul and tease is called Maltease cats. Maul cats is known by their quiet purrs and these is called Pursian cats. Cats with very bad tempers is called Angorie cats. Cats with deep feelins is called Feline cats.

Judge—"What's your occupation?" Rastus—"I'se a businessman, yo' honor. I'se manager of a family laundry." Judge—"What's the name of that laundry?" Rastus—"De name of de laundry is 'Liza, yo' honor."

ROBEN'S RECORDS HELP BENNING'S BULL

A couple of nice year records were recently completed by two-year-olds in the herd of W. D. Robens of Poland, N. Y., both by daughters of King Sadie Vale Hengerveld. K. S. V. H. Ardella Wayne, who made a record of 24.56 lb. butter in a week in the early part of her lactation period, finished her year with 890.42 lb. butter, 21,646.9 lb. milk. K. S. V. H. Elma Fayne, freshening when she was two years, one month and one day old, is credited with an official record of 21.62 lb. butter, 387.3 lb. milk and in the full year with 805.04 lb. butter, 21,194.9 lb. milk. These are the owner's figures and subject to correction, the official figures not yet coming from the office of the superintendent. The record of K. S. V. H. Elma Fayne is of particular interest to readers of the BREEDER AND DAIRYMAN as Wm. Benning of Kingsley, Pa., who advertised in this paper for a Holstein sire, purchased a son of this heifer to place at the head of the good herd at Sun Set View Farm.

The good young bull in question is King Ideal Fayne Ormsby, a son of King Ormsby Ideal, he by King of the Ormsbys from Emeretta Korndyke De Kol, 1,346.93 lb. butter, 28,035.7 lb. milk in a year. As King of the Ormsbys was from Spring Brook Bess Burke 2d, 1,290.94 lb. butter, and nearly 25,000 lb. milk in a year, it can be seen that Mr. Benning's young herdsire has in his pedigree a number of animals noted for tremendous production in long time test.

Mr. Benning writes us, however, that he kept three things in mind when selecting his new herdsire—butterfat production, size and type and his new bull combines all three in a very satisfactory manner. His picture shows a well grown animal, very nicely marked, straight and level, deep of chest and large of barrel, a handsome stylish bull that would look well in any company.

FLAVORS IN PASTEURIZED MILK

By S. J. PEARCE

The early types of machinery used to heat milk were not designed on the basis of heating the milk efficiently while at the same time preventing the heating surface at a high temperature from coming in contact with the milk. The important point seemingly was to be able to heat the milk in as short a time as possible. This resulted in the use of a type of pasteurizer called the flash heater. In recent years the flash process has given way to the positive or holding method, and to-day the flash method is in use in only a relatively small number of milk plants.

There are a number of pasteurizing machines of the holding type in use at the present time, and each has its particular advantages. These machines have been designed principally for heating the milk without imparting a cooked flavor, by using a relatively large heating surface, and a lower temperature. By means of these, the experienced operator finds it possible to pasteurize milk with-

out giving it a cooked flavor. If the milk is properly pasteurized, most consumers cannot detect the difference between raw and pasteurized milk.

The equipment used in pasteurizing milk should be kept scrupulously clean. Milk should never be allowed to adhere to the surface or parts of the heater. If it does, a very unclean and undesirable taste will be found in the milk. Not always, however, is unclean flavor in pasteurized milk due to insanitary equipment; some of the milk may already have an unclean flavor, and it is known that the heating of this kind of milk sometimes intensifies rather than diminishes the unclean flavor.

Prejudice against pasteurized milk on the part of some persons is probably caused by their having consumed pasteurized milk that was poor in quality before it was pasteurized. To prevent complaint arising from this cause it is essential that the raw product be free from undesirable flavors and odors. If such milk is pasteurized in clean sterile equipment, at the proper temperature, there will be little or no undesirable flavor in the finished product. Efficient pasteurization protects the consumer against infection from milk, and improves its commercial quality.

TITUS REPORTS SALES

The animals offered in an advertisement recently appearing in the HOLSTEIN BREEDER AND DAIRYMAN has been sold, reports Clarence H. Titus, of Tunkhannock, Pa. Mr. Titus is now offering a couple of cows that have just reached maturity. Both of these animals are from dams that have year records. Both cows freshened in the late summer and have not yet been bred, their owner believing that it would be better to hold them over a little and have them freshen in the early fall of 1924.

These two young cows are daughters of Napol Sir Keystone Beauty, the well-known son of the Pennsylvania state champion, Keystone Beauty Plum Johanna, the wonderful cow that produced 1,294.71 lb. butter in a year in strictly that has never yet been equalled in strictly official test as a four-year-old, a record official test by any other animal under full age.

The Titus herd has the proud reputation of never having had a reactor. The herd is under state and federal supervision and has been tuberculin tested twice and each time came through with a clean bill of health. The duties of the owner, who is now treasurer of Wyoming County, and his own ill health prevent him from giving his stock the attention his investment in his animals warrants and therefore he is gradually reducing his herd. Better look the entire bunch over and select a few good ones.

Porter—"This train goes to Philadelphia and points east."

He—"Well, I want a train that goes to Harrisburg and I don't care which way it points. I want to attend the banquet of the Pennsylvania Federation of Holstein-Friesian Clubs."

Born November 14, 1923. Price \$90

SIRE:—LOTHIAN DE KOL KORNDYKE, whose daughters stood 1st and 2d for Milk and 2d and 3d for Butter in the junior two-year-old class of the Dairyman's Division for the full year, Season 1922-23.

DAM:—ORANGE KORNDYKE SEGIS, 23.43 lb. butter, 565.4 lb. milk in 7 days, 18,102.1 lb. milk, 705.7 lb. butter in TEN MONTHS. FOUR successive years she has averaged 14,901.5 lb. milk, 469.20 lb. butterfat in Cow Testing Association work, making an average annual profit of \$182.92. She is a daughter of ORMSBY KORNDYKE LAD.

IVO V. OTTO

Cumberland County, R. D. 6 Carlisle, Pa.
Herd under State and Federal Supervision.

JOHN HOWARD'S HERDSIRE

King Onyx Pledge Ormsby No. 324660 is the splendidly bred young bull heading the accredited herd of John H. Howard of Wyalusing, Bradford County, Pennsylvania. This splendid young bull has a remarkable pedigree. His dam, Onyx Pledge Segis, as a junior four-year-old produced 27.83 lb. butter, 626.9 lb. milk in seven days and in 305 days produced 19,851.8 lb. milk, 789.5 lb. butter. She was sired by King Pledge Segis, who was by King Segis Hengerveld from Nancy Pledge Princess, a 32 lb. cow that averaged better than 101 lb. milk a day for thirty days. Onyx Pledge Segis is a daughter of the 1,100 lb. year record cow, Onyx Pledge Dawning. This cow with five of her daughters and one son was sold at the dispersal sale of the Oneida Community herd and they brought \$10,680.00. Five daughters of this cow were all officially tested as heifers yet all five exceeded 20 lb. butter in a week, three made over 27 lb. and two produced more than 30 lb. butter.

King Onyx Pledge Ormsby was sired by Ormsby Lilith Clothilde, a son of K. P. Lilith Clothilde, one of the very best daughters of King of the Pontiacs, both individually and as a producer. Tested when just past her fourth birthday she made 22,229.8 lb. milk, 1,043.27 lb. butter in a year. At time of making this was the world's record for milk for a junior four-year-old and was second largest year butter record for a heifer in the junior four-year-old class.

K. P. Lilith Clothilde has the distinction of having four sons each of which has sired one or more daughters that have made over 30 lb. butter in a week in official test.

Ormsby Lilith Clothilde is also the sire of Onyx Lilith 699 lb. milk, 30.20 lb. butter in seven days as a junior three-year-old. This young cow was purchased by Maaikenshof Farms in the Oneida Community dispersal for \$1,250 and they also paid the same amount for her twin sister, the 20-lb. two-year-old, Lilith Onyx. This pair of young cows which sold at public auction for \$2,500 carry 75% of the same blood as King Onyx Pledge Ormsby.

SPLENDIDLY BRED HERDSIRE

There are few bulls in the country whose dam and sire's dam, tested as four-year-old heifers, have made year records that average 1,233.93 lb. butter, 24,808.85 lb. milk. As far as we know there is only one bull in the entire United States whose dam and sire's dam each produced 665.5 lb. milk in seven days. This bull is Onaco Sir Lucille Jolie Beauty, the handsome young herdsire at the Dennington Stock Farm owned by Joseph J. Jermyn, of Scranton, Pennsylvania.

There are many striking statements that can be made about the pedigree of the Dennington herdsire but we have only room here for a few. His dam, Lucille Jolie Pontiac, as a senior four-year-old produced 23,830.2 lb. milk in a year making a record of 1,173.15 lb. but-

ter which was the world's record in the senior four-year-old class at time of making. This cow was sired by Ona Pontiac De Kol and is, we believe the only daughter of that sire to be given an official record. This is rather strange because he was by Pontiac Aaggie Korn-dyke and from Ona Clothilde De Kol 2d with a year record of over 25,000 lb. milk and 1,044.45 lb. butter. She is from the 1,100 lb. record cow, Ona Clothilde De Kol and is the dam of Ona Clothilde Wayne 1,266.65 lb. butter in a year, who in turn is dam of Ona Pontiac Wayne 1,087.12 lb. butter in a year.

The sire of Onaco Sir Lucille Jolie Beauty is a son of Keystone Beauty Plum Johanna, whose record of 25,787.5 lb. milk, 1,294.71 lb. butter made in a year has never been equaled by any other four-year-old in strict official test. In the early part of her lactation period she produced 32.88 lb. butter in a week and 665.5 lb. milk while as a junior three-year-old she is credited with a year record of 1,108.08 lb. butter.

Onaco Sir Lucille Jolie Beauty is a very handsome bull, light in color, well marked and his offspring show remarkable promise. We believe he is destined to take high rank among the sires that help to make Holstein history.

ANOTHER 57 VARIETIES

According to the records of the United States Bureau of Animal Industry, tuberculosis lesions have been found in fifty-seven different parts of bovine animals. No important organ or portion of the body is overlooked. The skin, bones, eye, heart and other regions where the disease is seldom looked for may be the seat of infection. So-called obscure lesions may be responsible for livestock owners doubting that cattle which reacted to the tuberculin test were actually diseased.

The increasing knowledge of tuberculosis and its eradication, however, according to Department of Agriculture veterinarians, shows that the disease is practically always present when an animal reacts to the tuberculin test. But it is difficult in some cases to find the physical signs, owing to the large masses of flesh and tissue that must be examined to find the proof. More frequently the disease is plainly evident on the inside of the body wall, on the liver, in the lungs or tissues that are visible at the time of slaughter.

WILL START COUNTY HERD

The Board of Supervisors of La Fayette County, Wisconsin, at a recent session, voted to establish a herd of purebred Holsteins on the county farm. It is hoped to make the county farm an example of progressive dairy farming by the establishment of a high class herd and the growing of alfalfa to furnish part of their feed.

"I told the editor's pretty daughter that I'd like to marry a girl like her."
"What did she say?"
"She said the edition was limited to one copy."

FORMERLY EDITOR, NOW PRESIDENT

Chas. G. Brown, the first owner, publisher and editor of the *Holstein Friesian World*, is now president of the Stazon Paint Makers, Inc. with headquarters at Norwich, N. Y. This company manufactures Stazon house and barn paints and does a good business in paint auxiliaries such as varnishes, driers, etc. The slogan of this company is "To Paint or Not to Paint—That is the Question? To Paint with STAZON costs less than not to Paint."

When Mr. Brown established the *World* there were very few breeders that thought he could succeed with that publication. Mr. Brown had several college degrees and had studied agriculture at Cornell University several years. He would stay in college a year or two until his finances were exhausted then he would work until he had a little ahead and then would resume his studies, all the while he was supporting his family. From the standpoint of the parties then in control of the Holstein-Friesian Association, he was rankly insurgent and his criticisms and suggestions did not meet with a good reception. Despite many obstacles, he worked with his paper until he sold it to some of its present owners. Many of the older Holstein men cherish a very friendly feeling toward C. G. and will wish him and the enterprise he now heads continued success.

Two Yearling Heifers from an Accredited Herd. Sired by our son of Model Daniel Glista and a 27-lb. cow that averaged 91 1/2 lb. milk daily. Dams are of record backing. \$150 takes the pair. MAPLE GROVE STOCK FARM, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

WHY THE BIG DEMAND FOR WISCONSIN DAIRY CATTLE?

First—Much stock needed for replacement in herds where animals reacting to tuberculosis have been removed for slaughter. According to tabulations on monthly summaries of Tuberculosis Eradication work of the United States Department of Agriculture in coöperation with the various states, 19,497 animals reacted last month in the United States, says A. O. Collentine, Dairy Extension Specialist in the Wisconsin Dairy Cattle Market report for the month of December.

Second—Much stock needed for the establishment of new herds in areas where single crops, such as corn, wheat, cotton, tobacco, fruit and alfalfa are the sources of farm income. According to the *Dairy Farmer*, crops fed to dairy cows and marketed in the form of milk and butterfat bring to the farmer 35% more than when marketed direct. The 1922 farm value of dairy products was \$2,090,455,000—twice the value of the wheat crop plus one hundred million left over for pocket money. In comparing relative prices of dairy products this year as against 1922, we find that wholesale milk

has averaged 20% higher, cheese, 33%, and butter 30% higher.

Records show 6,139 cattle sold outside of Wisconsin during the month of November. The State of Iowa leads, taking 1,825 head, Illinois next with 1,002, Minnesota third with 740 head. Canada, Central America, Chili and Mexico represent the foreign buyers, taking 216 head, most of which were purebreds. The following states in the order named were the ten high buyers of Wisconsin cattle: Iowa, Illinois, Minnesota, Nebraska, New York, South Dakota, North Dakota, Georgia, Connecticut and Kansas.

A check-up on purebred sales held during the month shows buyers patronizing liberally where quality stock predominated. Spirited bidding characterized a few sales with top prices reaching \$2,000 for bulls, with cows topping at \$530. The buyer is discriminating against off-type stock, especially when he pays over \$200. The averages of recent auction sales indicate also that the buyer has shown a decided preference for record stock, which is encouraging to those doing official testing.

Prices on grade stock remained rather constant, with cow stuff a little higher, due to increased prices prevailing on dairy products. High cow reported for the month was \$177.50, she had a cow testing association record of 490 lb.

Choice springing cows of good size and type (with cow testing association records of 300-400 lb. fat) .. \$125-177.50

Good grade springing cows (without records, but of good type) 100-150
Grade cows, milkers 85-110
Ordinary cows (milk), last spring freshening 75-90
Cows slightly blemished 45-70
Choice heifers, two-years-old, springing, record dams 75-125
Heifers, two-years-old, springing 60-80
Heifers, 1-2-years-old, bred and open 40-75
Heifers, undersized and thin 30-60
Last spring calves 30-45
Fall calves 2-6 weeks old (crated) 15-25

EDWARDS SELLING STOCK

A brisk demand for good registered Holsteins is reported by M. J. and B. A. Edwards of Escalon, California. L. E. Chandler of Lathrop purchased two cows from this farm one of which was a daughter of Sir Skylark Ormsby Korn-dyke, a former grand champion of the San Joaquin County Fair. The other cow was sired by Nudine Butter Boy, formerly at the head of the Charles Miller herd. This heifer as a junior three-year-old produced nearly 500 lb. of butter in ten months. Mr. Chandler has a good grade herd which he is gradually replacing by purebreds.

Model Korndyke Hengerveld Hartog, junior champion at the San Joaquin County Fair last fall, has been sold by the Edwards Brothers to R. Ballance of Escalon, who has placed this good bull at the head of his herd.

The man that bets may not be a good man, but a man that doesn't bet is no better.

PUREBRED TURKEY FARM

The raising of purebred poultry combines well with the keeping of purebred dairy cattle and many of our Holstein breeders have flocks of purebred turkeys, ducks, geese, chickens and other birds. Turkeys are always in good demand at Thanksgiving and Christmas time and no one appreciates this bird better than an American, possibly because the original home of the turkey was Northern America and the residents of that territory always associate this bird with festivals. History records that turkeys formed part of the feast at the first celebration of Thanksgiving Day by the Pilgrim Fathers and their Indian friends.

THE SEED FOR THANKSGIVING AND CHRISTMAS FESTIVALS
A corner of the Mammoth Turkey Farm owned by J. J. Cummings of Plymouth, New Hampshire

The raising of these magnificent birds may well be a profitable side line upon many of our farms. As with cattle, it is important to secure good foundation stock and then to give both the stock and its progeny good care. The turkey differs from most of our domesticated fowls. They were associated with man in the earliest days of which we have record but turkeys were not domesticated until after the white man made his home in America. As a matter of fact they have not been fully domesticated. They require a wide range and unlimited exercise to attain full development and no

one should think of starting a flock unless the foundation stock has been raised under conditions that assure good health and full development and this means, raised where they had an opportunity to roam and take adequate exercise by hunting their own food.

James J. Cummings of Plymouth, New Hampshire, has devoted his farm of sixty-five acres to the raising of turkeys. His breeding and rearing pens are well scattered and summer or winter his birds have opportunity to roam and get the exercise and fresh air that seems necessary. We were interested in Mr. Cummings' plant because of his patronage of our classified advertising columns in

which he advertises Mammoth Bronze Turkeys. In order to see that our patrons receive full value for any money they care to invest we requested Mr. Cummings to send us particulars of his turkey ranch. He favored us with a number of pictures which show that he has an establishment for breeding splendid birds. Space forbids us showing all these pictures at this time and therefore we are only using one which depicts three of his houses and a few of the birds from which, however, readers of the BREEDER AND DAIRYMAN may obtain some idea of the scope of this Mammoth Turkey breeding establishment.

SPECIAL OFFERINGS FROM TITUSDALE

C. H. Titus of Tunkhannock, Pennsylvania, whose elevation to the treasurer-ship of Wyoming County renders it imperative that his herd be reduced, has made a number of special offerings to readers of the BREEDER AND DAIRYMAN. His latest special consists of two daughters of Napol Sir Keystone Beauty, son of the famous Keystone Beauty Plum Johanna, 1,294.71 lb. butter, 25,787.5 lb. milk in a year as a senior four-year-old in strictly official test. Her milk and her butter records were both world's records in class at time of making and her butter record has never been exceeded in strictly official test by any animal in her class and you can count on the fingers of one hand the mature cows that have ever produced more butter in a year in strictly official work.

The two cows Mr. Titus is offering are both from A. R. O. dams, one is a six-

year-old and the other has just past her fifth birthday. The Titus herd is under State and Federal Supervision, has passed two clean tests and the owner proudly states that he has never yet owned a reactor.

MEXICO BUYING STOCK

Wisconsin does not have a monopoly of the business of supplying Mexico with milk cows, for Lee Bell of El Paso, Texas, inspector for the Texas and Southwestern Cattle Raisers' Association, reports that five carloads of Holstein and Jersey cows were shipped by J. Vallina from Wichita, Kansas and passed through El Paso enroute to Mexico City. A number of carloads of beef cattle were shipped for breeding purposes by other parties to various large ranches in Mexico.

Experience is an alarm clock that calls our bluff.

SLICED TOO THIN

Have you noticed the ever thinning thinness of the butter slice served in the ordinary restaurant? Our memory pictures the good old days when they placed a dish of butter on the table and everyone dipped in and helped himself. Alas! those days have gone forever. Now we look upon the butter plate and see only a thin glittering spot that reminds one of a poker chip.

The public has protested in a mild, long-suffering way by remarking occasionally that the butter service is pretty slim; or, as I heard one hearty individual say, "he would like to have the whole deck rather than one card placed on the butter plate." In restaurants where tipping is practiced we can readily see why butter is served in sections that require no spreading. Frequent calls for butter insure a liberal tip, and since drinking has gone out of style the "fill 'em up again" refers to the butter plate.

What a chance for a competitor. Fancy how the public would flock to the restaurant keeper who would pass the butter around so you could help yourself. I would suggest for the "Things That Never Happen" column a picture of a waitress handing a plate of butter to a customer with the invitation, "help yourself."

We admit there is need for economy in business, but to make a pound of butter serve one hundred people is spreading it too thin. The public likes to know what side of its bread is buttered, and the price of a meal is supposed to include a generous portion of the golden spread.

If restaurant keepers would advertise that they served a slice of butter one inch thick it would bring many more patrons than putting a live lobster and a few grapefruit in the window. We as patrons could improve this painful state of affairs if we would take it upon ourselves to insist on a larger and more visible portion.

We have great need for butter. We are told by scientists that it contains more vitamins than any other food, and it is vitamins that give us health, pep and happiness. Aside from this, we like it. What would dry toast, flapjacks or hot corn bread be without their coating of butter? In truth how can we enjoy life and keep our health without a liberal supply three times a day?—A. L. Haacker.

Hon. Herbert Hoover, Secretary of Commerce, says the world is over-producing bread grains and under-producing feed for the dairy, both grains and other feeds that are milk and butter promoters.

As far as the United States is concerned the farmers seem to have followed Mr. Hoover's own recommendations.

Doctor: "My dear sir, nothing but an operation will save your life."
Patient: "What will it cost?"
"About five hundred dollars."
"But I have only a hundred dollars."
"In that case, let's try what pills will do."

BRAHMAN CATTLE

Brahman cattle have been seen during the past year at a number of leading exhibitions including the National Dairy Show and their peculiar shape has interested the thousands who have seen them. A number of herds of this Indian breed have been established in the Gulf Coast region of the United States, particularly in Texas. They are especially adapted to a hot climate, are able to withstand drought better than our ordinary cattle and are not very much affected by the Texas fever tick.

The United States Department of Agriculture considers this species of cattle valuable for use in crossing on native cattle in such regions and has recently prepared Farm Bulletin, No. 1361, entitled, "Brahman or Zebu Cattle" which describes the different types of the humped cattle, discusses their various qualities and compares them with our well-known beef and dairy breeds.

Experience with this breed of cattle in Texas has shown that the heat troubles them very little and that they are extremely hardy. In the southwestern section of the State, in spite of periodic drought which made it necessary to ship many cattle to other regions where feed was available, they have stood up well and in scant pastures during these hot times they are kept in good flesh when cows of other breeds were in poor condition.

Many cattlemen in that region believe that the best plan for utilizing the hardiness of the Brahman is to maintain this blood in the breeding cows to the extent of one-half or more and use good beef bulls of other breeds. The range men reason that they can better afford to feed bulls during drought rather than to ship breeding cows to other ranges. There are two phases of the business in this country—the raising of purebreds and the production of grade Brahman beef cattle.

Among the immediate needs of the breeders of purebred stock, says the bulletin, is an organization for the purpose of fixing a standard of excellence and a system for recording the animals that conform to the standard. Breed improvement will greatly influence the future of these cattle in this country, and it can be brought about best, according to the department, through an organization which would discourage the use of low-grade Brahman bulls and further the distribution of a species whose good qualities merit perpetuation.

"Johnny," said the Sunday school teacher at the annual picnic, "do you know what to eat and what to drink and what to avoid?"

"Sure I know," said Johnny. "Eat all you can, drink all you can and avoid bursting."

Paying Teller: Rastus, you'll have to endorse this check.

Rastus: Endorse it? Say boss, I'll eulogize dat check if you'll jess give me dat good old money.

A HUSKY PAIR

Very few high class Holstein sales are held in central or northern Pennsylvania without the presence of A. H. Erdman of Elizabethtown. Mr. Erdman is building a producing herd. He is a capital judge of cattle and is ever on the alert to pick up a good one.

The Erdman herd is headed by King Korndyke Crown De Kol, a splendidly proportioned bull, weighing well over a ton although he is only three years old. The dam of this bull, Sadie Crown De Kol, has an official seven-day record of 34.32 lb. butter, 562.9 lb. milk and she was from a cow that made 23 lb. butter in a week from 644.7 lb. milk.

KING KORNDYKE CROWN DE KOL
Together with his owner, A. H. Erdman of Elizabethtown, Pa.

The Erdman herdsire is by King Korndyke Sadie Vale Jr., a bull of royal breeding. His dam, Aaggie Cornucopia Paul, is a daughter of the great show sire Aaggie Cornucopia Johanna Lad Jr. As a ten-year-old she produced 31.03 lb. butter, 624 lb. milk in seven days. She has four good record A. R. O. daughters. One of her daughters, Aaggie Cornucopia Paul 2d, is the only cow to have four daughters that each produced over 20,000 lb. milk and over 1,000 lb. butter in yearly test.

The sire of King Korndyke Sadie Vale Jr., has a long list of high record daughters and a number of sons that have sired big producers. He is the only bull to have a 40-lb. daughter, a 40-lb. sister and a 40-lb. dam. He was from Sadie Vale Concordia 4th, 41.06 lb. butter in seven days as a mature cow, 30.55 lb. butter in seven days as a senior three-year-old world's record in class at time of making and she was from the first cow that ever made a 30-lb. seven-day butter record. King Korndyke Sadie Vale was by King Segis De Kol Korndyke, that good son of Pontiac Clothilde De Kol 2d the first cow to make an official seven-day butter record above 37 lb., or to produce over 1,000 lb. butterfat in a year, or to make over 30 lb. butter in seven-day official test at three consecutive freshenings.

As his picture shows King Korndyke Crown De Kol is a remarkable individual. He is light in color, handsome, active and vigorous. The Erdman herd includes daughters of Traverse Echo Sylvia King a son of Echo Sylvia King Model and of Traverse Inka Johanna, 33.27 lb. butter, 736.4 lb. milk in a week,

dam of five splendid A. R. O. daughters and daughter of a cow that made 29.71 lb. butter in seven days. There are a number of other good ones at the Erdman establishment; for instance, there are several descendants of the famous Keystone Beauty Plum Johanna, the noted cow owned by the former vice-president of the Holstein-Friesian Association of America, George E. Stevenson. The influence of this cow can be seen in many Pennsylvania herds. Her wonderful power of production, her splendid individuality, and her characteristic of hornlessness have been transmitted with a degree of certainty truly remarkable to her descendants. Napol

Imperial Maid De Kol Beauty, a granddaughter of this famous old cow shows in her head, body and udder a likeness to her granddam. Daughters of King Sadie Vale Hengerveld and King Colantha Clothilde 2d are also to be found in this herd.

Besides being a breeder of purebred Holsteins, Mr. Erdman has purebred Duroc Jerseys and he is an extensive potato grower. In fact, he is a real expert. On five acres, Mr. Erdman last year raised twelve hundred bushels of Irish Cobblers and Russets. To insure such crops is a matter of planning several years ahead. When representatives of the BREEDER AND DAIRYMAN visited this establishment, Mr. Erdman was liming for wheat which would be sown with clover and then in due time the clover sod would be plowed under and potatoes would be grown. The bumper crop of 1923 was sprayed seven times.

Mr. Erdman is a member of the Pennsylvania Federation of Holstein-Friesian Clubs and is one of the directors of the Dauphin County Holstein Breeder's Club. Last October he was a member of Pennsylvania's delegation to the National Dairy Show.

TOO SHORT A NOTICE

Father (To Sammy, coming home in a bedraggled condition): Great Scot! how you look!

Sammy: Yes, Pa, I fell in a mud hole.

Father: What! and with your new pants on.

Sammy: Yes, I didn't have time to take them off.

The Breeder and Dairyman Exchange

Copy must reach us by the 1st or 15th of each month to appear in the current issue.

Advertisements for this department set up without display type or illustration, accepted at the rate of five cents per word, one insertion, minimum of twenty words. Three insertions, ten cents per word. Every word or abbreviation in name and address must be counted as a word.

In all cases, cash must accompany order. Other rates on application.

LIVE STOCK

PREPARE TO HARVEST ICE

In these sections of the country where natural ice can be harvested, every dairyman should make preparations to store an abundant supply for next summer. Ice is extremely desirable, in fact almost necessary, in the production and marketing of high-quality milk and cream. Proper cooling and cold storage on the farm is the greatest single factor influencing the bacterial content of milk between the time it leaves the cow and the time it reaches the consumer.

During December when work is not pressing on the farm, is a favorable period in which to prepare for the time when ice will be ready to cut.

If the old ice house is in bad repair, it may be patched up and cleaned out ready for new usefulness. Some useful hints can be obtained from *Farmer's Bulletin No. 1078* which can be secured without charge as long as the supply lasts from the United States Department of Agriculture at Washington, D. C. This bulletin deals with "Harvesting and Storing Ice on the Farm" and is full of useful information.

At least one and one-half tons of ice per cow should be stored. This will cool the milk, allow for meltage, and provide a margin for household use.

Ice ponds should be built if no river or lake is available. Water used for ice making should be of unquestionable purity. Old ice ponds should be cleared of vegetable matter and refuse, in preparation for the coming harvest.

The market for milk is gradually and steadily changing and the change is in the direction of better, purer and cleaner milk. The medical authorities, the civic bodies and the consumer's organizations are all united on this point. Keeping the milk clean to prevent contamination and keeping it cool to prevent bacterial growth and the formation of lactic acid will result in less loss to the farmer, better milk in the city and less friction regarding bacterial counts.

DID NOT REGISTER

Had the animals eligible to registry owned by the State Asylum Hospital at Fulton, Fulton, Missouri, been registered continuously since the founding of the herd thirty-five years ago, it is very possible that the Pontiac Asylum would have had a serious rival in the dairy world for it is one of excellent quality.

BREED LONGEVITY

Three breeders of British Friesians each own three great old breeding matrons. Two of these cattlemen each own three cows with an average age of twenty years, while another firm has one cow born in 1905 and two born in 1906. All three of these great old producers are due to freshen early in 1924.

"See here, waiter, I found a collar button in this pie."
"Didn't see nothin' of an umbrella, did you, boss? Dar was one lost heah last night."

DEMAND FOR MAPLE GROVE STOCK

Satisfied customers are always the best advertisements and purchasers of animals from the Maple Grove Stock Farm of Centerville, Pa., have returned time and time again for other animals, a sure sign that they were treated right and that the animals they purchased were giving satisfaction. A short time ago we reported that W. B. McGinnett & Sons also of Centerville, had purchased from this Crawford County establishment, a good animal for one of the sons. A recent purchase was a fine heifer calf to be transferred to Mrs. Martha McGinnett. It appears as though Mr. McGinnett is giving all the members of his family an interest in the herd of registered cattle which is being built by W. B. McGinnett & Sons. Mr. McGinnett is evidently using good judgment in this effort to interest every member of the family in the success of the herd.

The heifer that is now owned by Mrs. McGinnett is sired by Clever Model Glista from Maple Grove Hengerveld Queen, a good A. R. O. daughter of King Pontiac Jupiter. Clever Model Glista is by the show bull Model King Segis Konigen and was from Glista Coreva, one of the greatest cows in the Cornell University herd. Two different years this cow has produced over 31 lb. butter in seven days averaging 84 lb. milk per day and testing well over 4% fat. As a six-year-old she produced 34.08 lb. butter in a week and the next year, in 305 days, produced 13,310.5 lb. milk, 607.3 lb. butter. This record represents her everyday work in the Cornell University herd.

H. W. Judd of Tryonville, Pa., purchased a fine young herdsire born June 5, 1922. This bull was also by Clever Model Glista and was from Maple Grove Pontiac Genevieve, a daughter of King Pontiac Jupiter with a seven-day record of 471.9 lb. milk and over 20 lb. butter. King Pontiac Jupiter was by King of the Pontiacs from Pontiac Hesseltje Hengerveld, one of the many good daughters of the first century sire Hengerveld De Kol.

The young calves now coming in the Maple Grove herd have royal breeding. Some of them will be sired by Clever Model Glista, others by a good son of King Pontiac Jupiter and yet others by Maple Grove Ybma Glista, a son of Model Daniel Glista, from a 27-lb. cow. Model Daniel Glista is a three-fourths brother to Clever Model Glista, as he was also sired by Model King Segis Konigen and was from Glista Dinah, 556.4 lb. milk, 25.70 lb. butter in a week and 16,138.5 lb. milk, 745.93 lb. butter in a year. This too, is the every day work of this cow in the Cornell University herd. She is a daughter of the two times 31-lb. cow, Glista Coreva, who is closely related to Glista Ernestine, the only cow to make a thirty-pound seven-day official butter record seven different years.

A critic is a man who wastes most of his time pricking bubbles.

FAILURE TO BREED, ABORTION, Etc.

in all animals Guaranteed Cured. The following Testimonials are a proof of our reliability.

Fond du Lac, Wis.
August 10

Mr. Boardman:

Dear Sir: Your abortion cure is great. It has stopped the disease after the heifer had started to spring, reduced her udder to normal size, and she carried her calf until due, which was strong and healthy.

Very truly,
E. C. Peebles.

Seymour, Conn.
Aug. 14, 1923

Breed-O Remedy Co.
Bristol, Conn.

Gentlemen: Inclosed please find order and payment for one bottle of Haboriri and Mediator. Back in 1890 I used Haboriri on a pedigreed two-year-old Jersey Cow, that for some time failed to breed. She "got with calf" and bred without trouble until old age. Address of Maker was lost or I should have tried to get more in later years.

Yours truly,
Smith Holbrook.

Be Reasonable

YOU would not expect your Holsteins to produce the maximum yield of butterfat if you did not provide them with a proper balanced ration.

Is It Reasonable

to expect your soil to produce a maximum yield from year to year without the same attention and feeding?

Your Soil Needs A Balanced Ration

For every element taken from the soil by growing plants a like amount must be returned thru the agencies of manures, fertilizers, legumes, etc.

Baynes' Soil Improver

will help you settle your soil problems and will be sent to any address in the United States for 25 cents a year or 5 years for \$1.00 with the valuable 74 page booklet "FEEDING DAIRY COWS" as a premium.

Wm. D. Lenker—Dr. Jesse L. Lenker

KING MEAD SEGIS PONTIAC

has the right to sire producers. Close up in his pedigree occur the names of a number of famous cows, including Three former World Champions:

Pietertje Maid Ormsby;

Maker of two World's Records for 30 day Butter Production:

Pontiac Clothilde De Kol 2d.

First cow to produce 1,000 lb. butterfat in a year, first to make a 30-lb. official seven-day butter record at three successive freshenings and the first cow to make 37 lb. butter in 7 day official test:

Aaggie Cornucopia Pauline,

The first 30 lb. heifer and the first cow to make 34 lb. butter in seven days.

The herds headed by King Mead Segis Pontiac are Accredited.

Let us price you one of his sons.

R. D. 4

Harrisburg, Pa.

Three Successive Herdsires

that have headed the herd at

Silverwood Stock Farm

are

WALKER KORNDYKE COPIA. Daughters of this bull have made splendid records. His sire is one of the best sons of King Segis, his dam and granddam both made world's records.

KING PONTIAC ALCARTRA PIETJE, show bull and sire of show stock. His dam and sires' dam were both world's record cows, his offspring have won high honors in the show ring and are real producers.

DUTCHLAND KONIGEN CREAMELLE BOY, a son of King Segis Pontiac Konigen and Dutchland Creamelle Colantha Vale 881.21 lb. butter, 21,701.5 lb. milk in a year—her dam 27,625 lb. milk in a year—her dam 29,591.4 lb. milk. The ten nearest dams of his dam have year records that average over 27,000 lb. of milk, 1,145 lb. butter.

The present herd, which is under State and Federal Supervision, is the result and is bound to please you.

HE COMBINES THE BLOOD OF WORLD CHAMPIONS

Onaco Sir Lucille Jolie Beauty STANDS AT THE HEAD OF THE DENNINGTON HERD

His dam, *Lucille Jolie Pontiac*, became the World Champion senior four-year-old by producing 1,173.15 lb. butter in 365 days, her milk averaging 3.94% fat. Then, as a seven-year-old she made a seven-day record of 33.29 lb. butter, 665.5 lb. milk.

His sire's dam, *Keystone Beauty Plum Johanna*, became the World Champion senior four-year-old by producing 1,294.71 lb. butter in 365 days. This was made in strictly official test in which she produced 25,787.5 lb. milk that averaged 4.02% fat. She made a seven-day record of 665.5 lb. milk, 32.88 lb. butter in the early part of that lactation period while as a junior three-year-old she produced 1,108.08 lb. butter in 365 days, her milk averaging 3.94% fat.

The year records of these two great cows, tested as senior four-year-olds, average 1,233.93 lb. butter,—more than a *hundred pounds a month*. Then consider the average percentage of Butterfat in their milk and that both were splendid individuals.

A VISIT TO CRAIGE HILL FARM

The Home of Big-Milking Holsteins

SHOULD you take a trip around Susquehanna County in the summer time you will find the pastures everywhere dotted with black and white cows and very rarely will you find a cow of any other color. Should you ask a dozen well-informed men to list the owners of the three best producing dairy herds of the County we are safe in predicting that at least ten of the lists will contain the name of Ellis Ellsworth.

DICHTER PIETERTJE SPINKER
17,306.7 lb. milk, 586 lb. butter in a year as
a senior two-year-old, former State cham-
pion of her class.

E. D. Ellsworth, generally known as Ellis, commenced breeding purebred Holsteins eighteen years ago starting with some heifer calves and the bull, Voliska Pietertje Lilith De Kol, No. 36557. This bull was a grandson of Lilith Pauline De Kol's Count and was bred by F. S. Wells of South Montrose. In our stories of the Susquehanna County Holstein establishments we find that many of the best ones trace back to the Wells herd. Mr. Ellsworth kept this bull a number of years

the celebrated sire, Homestead Girl De Kol Sarcastic Lad and from the imported cow, Uilkje. This bull sired a number of splendid daughters but unfortunately he and a bunch of his heifers were burned twelve years ago in a fire which destroyed the barn, a lot of farm machinery and eighteen head of purebred Holsteins. This was a serious set back to the growing herd.

The third herdsire was Dichter Calamity Segis De Kol, No. 59219, a son of Pledge Spofford Calamity Paul and Segis De Kol Korndyke Queen, she a good record daughter of Korndyke Queen De Kol Prince. The current volume of the *Blue Book* gives Dichter Calamity Segis De Kol twenty-four tested daughters and seven daughters with long time records. Dichter Pietertje Spinker in the Ellsworth herd, tested as a senior two-year-old, produced 17,306.7 lb. milk, 586.06 lb. butter, becoming the Pennsylvania State champion of her class. She won association money prizes for both her milk and butterfat production being awarded seventh prize for milk and twelfth for butterfat. Other daughters of this bull include Dichter Segis Elena De Kol 15,180.1 lb. milk, 621.42 lb. butter in a year as a senior three-year-old, Dichter Lilith Bellade 15,691.9 lb. milk, 648.50 lb. butter in 357 days as a five-year-old and Dichter Segis Uilkje De Kol, 15,900.8 lb. milk, 618.23 lb. butter in 323 days as a four-year-old.

THE ELLSWORTH HOMESTEAD
Reading from left to right, Mrs. Ellsworth, Ellis Ellsworth, their daughter Mabel and Ellis Dunlap, a Holstein breeder and a cousin to Mr. Ellsworth.

and sold some of his daughters and tested others. Voliska Henrietta Pietertje was put in year test by Mr. Ellsworth when the animal was past ten years old and she produced in 365 days 16,823.1 lb. milk, 716.2 lb. butter. Another daughter, De Kol Eeke 2d, bred in the Ellsworth herd but tested by Wm. Robinson of Wilkes-Barre, produced in seven day official test no less than 35.71 lb. butter, 600.9 lb. milk. As far as we know none of the cows to whom Voliska Lilith Pietertje De Kol was bred were ever given official records but his daughters certainly made good.

The second bull was Uilkje Son, No. 58315, he by

SHROPSHIRE SHEEP IN THE ELLSWORTH PASTURE

Prince Segis Korndyke Jr., No. 74094, then headed the Ellsworth herd. The sire of this bull was a maternal brother to the famous King Segis and has a number of good record daughters. Prince Segis Korndyke Jr., was from Beauty Rauwerd De Kol, a daughter of

the noted old-time sire, Pietertje Hengerveld's Count De Kol. This cow produced 30.54 lb. butter, 709.9 lb. milk in seven days and has a number of other large records.

Prince Segis Korndyke Jr., has two daughters that have each made over 30 lb. butter in seven day official test. It is interesting to note these two 30 lb. cows are full sisters, both being from Uilkje Jennie Major, a daughter of Uilkje Son. There are four full sisters sired by this Korndyke bull from this daughter of Uilkje Son and all four have creditable records. Korndyke Uilkje Jennie Segis as a five-year-old produced 30.74 lb. butter in seven days averaging practically 70 lb. milk a day; Korndyke Jennie Segis as a senior four-year-old produced 523.3 lb. milk, 30.45 lb. butter in a week and in 194 days is credited with 11,537.6 lb. milk, 543.28 lb. butter; the junior three-year-old, Korndyke Jennie Uilkje Segis, was in test 299 days during which she produced 15,992.7 lb. milk, 685.11 lb. butter carrying calf 201 days of this time. The younger member of the family, Uilkje Jennie Major 2d, as a senior two-year-old made a seven day official record of 561.2 lb. milk, 21.54 lb. butter and she produced 2,203.2 lb. milk, 88.01 lb. butter in thirty days. Better than 80 lb. milk a day is quite a showing for a two-year-old heifer. Mr. Ellsworth is proud of the fact that this family of producers were developed in his herd as they were all show animals, which desirable characteristic was transmitted to their offspring. A daughter and son of the 30 lb. cow won first two different years at the National Dairy Show when it was held at Chicago. Prince Segis Korndyke Jr., sired a number of other daughters that

J. D. ELLSWORTH, FATHER OF E. D. Although eighty-four years of age he is always ready to keep up his end.

Creamelle Sir Concordia. This bull has a remarkable pedigree. His dam, Princess Concordia Pontiac 2d, as a two-year-old produced 825.46 lb. butter, 18,745.5 lb. milk in a year. Tested as a senior three-year-old she produced 25.58 lb. butter, 588.5 lb. milk in seven days, and 105.77 lb. butter, 2,322.2 lb. milk in thirty days. Her sire was King Segis Pontiac Konigen and her dam, Princess Concordia Pontiac, had a seven day record of 27.62 lb. butter averaging well over eighty lb. milk a

A SELECT QUARTET Owned by Ellis Ellsworth, Meshoppen, Pennsylvania.

day and was by King Pontiac Konigen a son of King of the Pontiacs from the thirty-seven lb. cow, Diona Konigen Pietertje. The sire of Dutchland Creamelle Sir Concordia, is Dutchland Creamelle Korndyke Lad, whose three direct descendent dams have year records averaging over 27,000 lb. milk and 1,100 lb. butter and have each produced 750 or more pounds of milk in seven days. He was a grandson of Creamelle Vale, former world's champion for milk production in yearly work, and of the great sires Pontiac Korndyke and Colantha Johanna Lad.

The present herdsire is The Potentate, No. 237685. This bull was from Leafy Veeman De Kol with 40.10 lb. butter, 589.7 lb. milk in seven days, her dam, Leafy Dawn De Kol, 655.1 lb. milk, 43.19 lb. butter in a week

FUTURE MILKERS A snapshot taken in a corner of the heifer pasture.

made fine records. In the Ellsworth herd Korndyke Uilkje Voliska Segis tested as a senior three-year-old produced 15,107.7 lb. milk, 654.26 lb. butter in 305 days carrying calf 168 days of the ten months. Freshening when she was only two years, five days old, Plum Johanna Korndyke made 13,190.3 lb. milk, 625.25 lb. butter in a year.

For a short time King Korndyke Hengerveld Veeman was used in the herd. This sire was by Sir Korn-

dyke Pontiac Artis, and was from Victoria De Kol Hengerveld Veeman 30.61 lb. butter, 601.7 lb. milk in seven days. She was by Sir Veeman Hengerveld from the twenty-five lb. cow, Kate De Kol Wayne and has full sisters with 30.92 lb. and 29.27 lb. respectively, both tested as four-year-olds.

For a time Craig Hill De Kol Pontiac was in service here. This bull, dropped the property of Mr. Ellsworth, is a son of Friend Pontiac Korndyke and Flora Rena De Kol Clothilde, 25.9 lb. butter, 543.3 lb. milk in a week. This bull sired a number of good record daughters and his full sister was sold last October in the Quick dispersal for \$400 which is a very good indication of her quality.

In the present herd there are thirty or more daughters of Dutchland

and dam of several high record daughters. The Potentate was by the well-known sire, Cornucopia Korndyke Pontiac, he by Pontiac Korndyke from Ada Cornucopia Posch, 33.20 lb. butter, 593.9 lb. milk in a week. The three nearest dams of The Potentate have seven day records that average 38.83 lb. butter, 612.9 lb. milk. There are a half dozen daughters of this sire in the herd and all of the present cows are being bred to him.

Mr. Ellsworth attends most of the Holstein sales in his vicinity and he rarely leaves without making a pur-

A VIEW OF THE ELLIS ELLSWORTH HOMESTEAD

chase. A capital judge of a cow, he never bids except on good ones. When the herd of B. F. Jones & Son was dispersed last October, Mr. Ellsworth purchased the two highest record daughters of King Tweede Spring Farm. These were Tobe Tweede Pontiac Lass, a twenty-eight lb. junior three-year-old and Wynola Tweede Pontiac Lass thirty-two lb. butter, 696.6 lb. milk in a week as a junior four-year-old. This cow brought \$505, the top price of the sale. This is not an isolated instance, at a number of sales Mr. Ellsworth has purchased the top price animal and he can always be depended upon to bid on something real good.

If you visit Craige Hill, the name Mr. Ellsworth has given his establishment, you must not expect to see fancy barns or equipment but you will see serviceable buildings, comfortable barns and a large herd of real producers. Every morning the truck or sleigh carries a number of cans to a near-by shipping point and at one time this herd was producing eighteen cans of milk daily. Mr. Ellsworth and his wife are tremendous workers, in fact the whole family works. At one time Ellis said that for several months Mrs. Ellsworth and himself together with a Polish hired man did all the feeding of the cattle, the work on the farm and incidentally milked fourteen cows four times a day. But owing to conditions in the Holstein industry and the cost of labor no testing for records has been done during the past two years.

Mr. Ellsworth's career in the Holstein business has not been one of uninterrupted success, he has had his losses. We have spoken of the loss of eighteen cows and a valuable herd bull by fire. There has been a number of losses by animals reacting to

the tuberculin test and a large majority of these have been animals purchased at public sales. We are glad to say, however, that the females of the herd have passed three clean tuberculin tests without showing any reactors or even suspicious cases.

The present Ellsworth farm consists of 550 acres. It has all been purchased from the results of hard work and dairying with purebred Holsteins. When Mr. Ellsworth purchased his first farm of 211 acres he was to pay \$3,800 for it and he confesses to borrowing the money for the first payment. The present comfortable house has been built largely by himself and according to his own designs and for that matter so have most of the other buildings. The house is equipped with modern conveniences including bathroom, a pipeless furnace and an acetylene lighting plant.

Mr. Ellsworth is a breeder of purebred Shropshires

FOUR OF A KIND This shows the type, size and individuality of the members of the Craige Hill herd.

and is very proud of his large flock, which is headed by a valuable ram. All the members of the family are interested in livestock, especially the younger members of which there are four. After they come from school Catherine and her brother bed, feed and care for the calves and seem to have just as much fun as some children have playing with expensive toys. The older girl attends High School and frequently delivers the milk at the near-by shipping station as she drives to school with a Ford truck.

At one time Mr. Ellsworth taught school and his wife was also a former school teacher. Naturally, they are well informed on doings of the day and keep right up to date. They believe in cutting out the middleman as much as possible and buy a large proportion of their needs at wholesale. For instance, when flour was away down in price, they purchased eight barrels of flour. They employ a number of hired men at different seasons of the year, and board nearly all of the help, they need lots to eat and, take it from us, they set a real table. If anyone, visitor or anyone else, leaves the table hungry, it is no fault of the lady of the house. Ellis himself is no mean trencherman and his appetite is a standing joke among his friends.

Should you visit the Ellsworth home you are bound to be interested

CATHARINE HAD A LITTLE LAMB The youngest member of the Ellsworth family and one of her pets.

in the robes and table coverings which are made from skins of animals, each having a history. Some little bit of sentiment attached to the animals has induced Mr. Ellsworth to have the skins made into such coverings. He also told us of having a hide made into harness leather and cutting reins from the finished product which cost him less than half the amount such reins would have cost at the store or local harness maker. This example could, with profit, be followed by many

others who complain of the low price they receive for hides and skins and of the high price they have to pay for manufactured articles.

The fame of the Ellsworth herd is not confined to their native state. Animals from this herd have been purchased by the managers of some of the largest breeding establishments of this country and, in their new homes, competing with animals backed by generations of record makers, have more than held their own from the standpoints of production and profitability.

New York Association Annual Meeting

CHARLES F. BIGLER was reelected president for his fourth term of the New York Holstein-Friesian Association at the annual meeting held January 9th, at Syracuse, New York. There were less than seventy members present.

Stripping the Treasurer's report of the non-essentials it showed \$4,262.59 was received for memberships and \$7,121.50 was received from the National Association as rebate on the \$1.50 transfer fee with an estimated amount of \$525 yet to come for December. There was a gross profit of \$911.16 from sales managed by the Association. Salaries, office and traveling expenses amounted to \$8,272.05 and the membership fee rebate to County Clubs was \$1,646.21. The cash on hand is \$1,340.25 but as there are a number of accounts unpaid the books show a deficit of \$976.32.

Resolutions were passed deploring the death of E. R. Zimmer, former Secretary and F. C. Overton, prominent member of the Association. A resolution was passed recommending that the legislature appropriate funds for a Horticultural Building on the State Fair grounds. A resolution offered by the Erie County Club requesting the National Association to raise the registration fee for bulls to \$25 for the purpose of eliminating "scrub-purebred-sires" was laid on the table.

The following resolution to change the membership fees caused a spirited discussion:

"We, the members of the Oswego County Holstein Club, do hereby recommend to the New York Holstein Association that a flat membership fee of five dollars should be made to cover both State and County membership, one dollar of this money to be placed in the county treasury and the other four dollars to be forwarded to the State Association."

After a long discussion Carl Amos offered a motion to lay the resolution on the table but this was defeated by a rising vote. On the roll call there were 353 votes in favor and 191 against the resolution. This failed of the three-fourths vote necessary to amend the Constitution, and so the resolution was lost.

The following directors were elected, they being recommended by their local Clubs: Harry Yates, Orchard Park; R. E. Chapin, Batavia; George W. Smith, Alfred; Maynard Smith, Elmira; C. F. Bigler, Syracuse; George N. Smith, Watertown; H. F. Farrington, Lowville; A. W. Brown, West Winfield; E. J. Chaffee, Wassauc; H. V. Bump, Cambridge; Eugene West, Wellsboro; and C. B. Marshall, Morrisville.

The following were recommended as delegate nominees to the National Convention: Harry Yates, Or-

chard Park; D. M. White, Bath; H. H. Wing, Ithaca; W. W. Stevens, Liverpool; Harvey F. Farrington, Lowville; A. W. Brown, West Winfield; Carl Schmid, Montgomery; N. G. Ellis, Fort Edward; O. H. Johnson, Ticonderoga; R. E. Chapin, Batavia; Robert Austin, Chittenango; Geo. N. Smith.

A nominating committee consisting of Dr. Armstrong, Harry Yates and Harvey Farrington recommended as delegates at large the following:

D. B. Armstrong, Watertown; A. A. Hartshorn, Hamilton; C. F. Bigler, Syracuse; W. D. Robens, Poland; John M. Hamm, Poughkeepsie; Carl Amos, Syracuse; John M. Dewey, Turin; R. M. Thompson, Heuvelton; John R. Waite, Auburn; Frank T. Price, Syracuse, and George A. Abbott, Cortland.

The new Board of Directors met and elected as officers: President, C. F. Bigler; First Vice-President, Maynard Smith; Second Vice-President, R. E. Chapin; Treasurer, Geo. N. Smith; Executive Committee, Messrs. Yates, Chapin and Farrington, and the Secretary and President. Field Secretary M. C. Bond was reengaged for the coming year.

The banquet was well attended. Professor G. Carl Alverson was chairman and C. F. Bigler Toastmaster. Director T. E. Elder gave a talk on his recent trip to South America. Mr. Elder was judge of Holsteins at the National Chilean Exposition at Santiago where he represented the Holstein-Friesian Association of America. Secretary Bond urged the breeders to cooperate to build up and insure the success of the State Association. The veteran Holstein breeder, E. A. Powell, spoke of a trip to Washington during the Civil War and gave personal recollections of President Lincoln. Chas. H. Tuck of the Dairymen's League Educational Department spoke on cooperation and discussed the recent cuts in the price of milk. R. S. Quackenbush, Railroad Agricultural Agent, said that economic production was even more essential to the farmers than cooperative marketing. Commissioner Byrne A. Pyke of the State Department of Farms and Markets briefly said that the best way to aid the farmers was to materially cut down the general property tax.

The Onondaga County Holstein Club entertained the visiting breeders at a "Smoker" Thursday evening. There was good music and the play or mock trial of "Jacob Cornstassel" caused much amusement.

Professor H. H. Wing was assisted by Professor T. E. Elder in judging the County consignments to the State sales. Jefferson County was placed first, Chenango second, Onondaga third, and Tompkins, fourth.

INJUNCTION PROCEEDINGS

To Reduce Fees, Protect the Reserve Fund and Check Extravagance

WE ARE printing the Injunction Proceeding brought against the Directors of The Holstein-Friesian Association in the Supreme Court of the State of New York on Jan. 8, 1924. This Injunction Proceeding is an action restraining the Directors from further Encroachment on the Association's Reserve Fund, and collecting Excessive transfer fees; checking Extravagance in the management of the Association and is brought by Mr. George E. Stevenson, former Vice-President of the Association and nineteen other breeders living in four different states.

The Injunction was verified on January 8th, and the case is set for January 24th, at 10 o'clock. This matter is of supreme importance to members of The Holstein-Friesian Association and breeders of Holstein cattle everywhere and we are publishing it in full so that our readers can see the entire claims as set forth in the petition.

In the Matter of the Application
of

GEORGE E. STEVENSON, JOSEPH J. JERMYN, FRANK W. KEHL, CHARLES H. NEWMAN, CHARLES ELDRIDGE, GEORGE DERRER, A. PEASLEY, W. H. STEVENSON, JAMES METER, C. A. SNOW, JONAS DERRER, W. K. TABER, JACOB C. WEIL, WILLIAM H. HIGGINS, ARTHUR J. HIGGINS, F. F. RESSEGUIE, H. B. MILLER, A. J. MILLER, EDWARD GRAHAM CARPENTER, H. M. ROWE, pursuant to Section 32 of the General Corporation Law, to set aside election of directors of HOLSTEIN FRIESIAN ASSOCIATION OF AMERICA.

To the Supreme Court:

The undersigned, petitioners, namely, George E. Stevenson, of Clarks Summit, Pa.; Joseph J. Jermy, of Scranton, Pa.; Frank W. Kehl, of Strykersville, New York; Charles H. Newman, of Sandusky, New York; Charles Eldridge, of Porterville, N. Y.; George Derrer and Jonas Derrer of Camp Chase, Ohio; A. Peasley, Columbus, Ohio; W. H. Stevenson, Worthington, Ohio; James Meter, Columbus, Ohio; C. A. Snow, Columbus, Ohio; W. K. Taber, Alden, N. Y.; Jacob C. Weil, Town Line, N. Y.; William Higgins, Akron, N. Y.; Arthur J. Higgins, Akron, N. Y.; F. F. Resseguie, South Gibson, Pa.; H. B. Miller, A. J. Miller, Edward Graham Carpenter, Clarks Summit, Pa.; H. M. Rowe, Baltimore, Maryland, each over the age of twenty-one years, and each a citizen of the United States, respectfully make application for a show cause order in a proceeding pursuant to Section 32, General Corporation Law, against the Holstein Friesian Association of America, and the following named persons as directors of said Association De Lancy B. Armstrong, Thomas E. Elder, Fred Pabst, James A. Reynolds, Horace W. Norton, Jr., Fred F. Field, W. S. Moscrip, E. A. Stuart, H. V. Noyes, W. H. Mott, R. E. Chapin, George A. Fox,

John A. Bell, F. M. Peasley, G. Watson French, R. J. Schaefer.

FIRST: That the Holstein Friesian Association is a domestic corporation created by Chapter 333 of the Laws of 1885, reincorporated in the year 1914, pursuant to the membership Corporation Laws of the State of New York, the certificate of such reincorporation being filed in the office of the Secretary of State January 2nd, 1914.

SECOND: That each of your petitioners became a member of said association has since remained in good standing, entitled to all the rights, privileges, and advantages of such membership.

THIRD: That Section 3 of Chapter 333 incorporating the said Association provides as follows:

"Said corporation shall issue its certificate of membership signed by its president and secretary and sealed with its corporate seal, to each of its lawful members, which certificate shall not be transferable and shall be evidence of membership and shall entitle its owner while a member of good standing to vote personally, or by proxy, at its meetings, and to all the privileges and advantages of such membership. But said corporation may cancel any certificate and forfeit and terminate any membership and all rights and privileges arising therefrom, for his wilful disobedience or evasion of its by-laws or other rules and regulations, and for any wrongs committed by him against said corporation or its property, interests or rights which forfeiture and eviction shall be cumulative to any other legal remedy said corporation may have against said evicted member."

FOURTH: That Section 23 of the General Corporation Law provides as follows:

"Section 23. Qualification of members as voters. Unless otherwise provided in the certificate of incorporation, every stockholder of record of a stock corporation shall be entitled at every meeting of the corporation to one vote for every share of stock standing in his name on the books of the corporation; and at every meeting of a non stock corporation, every member, unless disqualified by the by-laws, shall be entitled to one vote. The stockholders of a stock corporation by a by-law adopted by a vote at any annual meeting, or at any special meeting duly called for such purpose, may prescribe a period, not exceeding forty days prior to meetings of the stockholders, during which no transfers of stock on the books of the corporation may be made. Except in cases of express trust, or in which other provision shall have been made by written agreement between the parties, the record holder of stock which shall be held by him as security, or which shall actually belong to another, upon demand therefor and payment of necessary expenses thereof, shall issue to such pledgor or to such actual owner of such stock, a proxy to vote thereon. No member of corporation shall sell his vote or issue a proxy to vote to any person for any sum of money or any thing of value. The

Accredited Females for Sale

Nine cows and a few good heifers.

Daughters of the 30-lb. sire, **King Korndyke Hengerveld Veeman**.

Daughters of **Napol Prince**, whose dam is a 1,052 lb. year record daughter of a 1,056 lb. year record cow.

Granddaughters of the former World's champion four-year-old **Keystone Beauty Plum Johanna**, 1-294.71 lb. butter in a year in strict official test.

Bred to **King Ormsby Veeman Korndyke** whose seven nearest dams have A. R. O. records averaging 30.89 lb. butter.

Some due right away. Others springing.

This is your chance to secure something good at reasonable prices as I must sell.

CLAUDE A. BROWN

Brown Hill Farm,

Tunkhannock, R. D. 2, Wyoming Co., Pa.

Don't forget—this herd is Fully Accredited.

YOUR CHOICE

OF SONS OF

King Johanna Korndyke Cornucopia

No. 1. Dam, **Johanna Cornucopia Colantha 3d**, 21.08 lb. butter, 522.4 lb. milk in 7 days A.R.O. During December this cow produced 1,869.3 lb. milk. Calf born November 2, 1923. Is more black than white and is a nice one.

No. 2. Dam, **Clover Johanna of Riverview**, 343.3 lb. milk, 18.25 lb. butter in seven days as a two-year-old. Since freshening as a four-year-old, she has averaged 1,700 lb. milk per month. Calf is more white than black and bound to please.

These cows are sisters and from the same dam and both are nice individuals as well as big producers. Will also sell **KING** himself, to avoid inbreeding. He is five years old, royally bred, and will be priced reasonable.

FRED B. KEENEY

Herd Accredited

books and papers containing the record of membership of the corporation shall be produced at any meeting of its members upon request of any member. If the right to vote at any such meeting be challenged, the inspectors of election or other persons presiding thereat, shall require such books, if they can be had, to be produced as evidence of the right of the person challenged to vote at such meeting, and all persons who may appear from such books, to be members of the corporation may vote at such meeting in person or by proxy, subject to the provisions of this chapter."

That Section 26 of the General Corporation Law of this State provides as follows:

"Section 26—Proxies: Every member of a corporation, except a religious corporation, entitled to vote at any meeting thereof, may so vote by proxy. No officer, Clerk, Teller, or Bookkeeper of the corporation formed under or subject to the banking law, shall act as proxy for any stockholder at any meeting of any such corporation. Every proxy must be executed in writing by the member himself, or by his duly authorized attorney. No proxy hereafter made, shall be valid after the expiration of eleven months from the date of its execution unless the member executing it shall have specified therein the length of time it is to continue in force, which shall be for some limited period. Every proxy shall be revocable at the pleasure of the person executing it, but a corporation having no capital stock, may prescribe in its by-laws, the persons who may act as proxies for members and the length of time for which proxies may be executed."

FIFTH: That until and during October, 1921, the by-laws of said Association provided for voting in person or by proxy and that up to and including the month of June, 1921, at all meetings of the Association, all voting was in person or by proxy. That the annual meeting for 1921 was held at Syracuse, N. Y., in the month of June.

SIXTH: That in the month of October, 1921, a special meeting of the Association was held at the City of St. Paul, Minnesota, at which meeting a delegate system was adopted and that from and after said St. Paul meeting, all voting has been done, pursuant to such delegate system and no voting has been done by proxy. That no special meeting of the Association can be held without the State, and that such action so taken as to a delegate voting system was null and void.

SEVENTH: That there are now over twenty thousand members of the Association, some of whom reside in each state of the Union, and also in some parts of Canada and that there are upwards of 1,200,000 of registered Holsteins in the United States.

EIGHTH: That the annual meeting in June, 1922, was held at Kansas City, Missouri, and upon information, your petitioners allege that no delegates or members were present from Alabama, Florida, Georgia, Idaho, Kentucky, Louisiana, Tennessee, or Utah, and that one John F. McCarthy, a member of the Association from Texas, was present and that he was given a seat among the delegates without the right to vote. That there were elected to attend such annual meeting 136 delegates and that there were present and voting

at such convention 75 delegates. That in 27 districts no nomination of delegates was made, and that these 27 districts under the rules were entitled to 31 representatives.

That the annual meeting of the Association for the year 1923 was held at the City of Cleveland, Ohio, on the 6th day of June, 1923. That by the delegate system so adopted, as aforesaid, at St. Paul, 136 delegates were to be elected. As a matter of fact only 120 were elected and but 84 were present.

No nominations having been made, the following states were not represented: Alabama, Arizona, Arkansas, Colorado, Florida, Georgia, Idaho, Louisiana, Montana, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia and Wyoming.

NINTH: Upon information and belief that prior to May 5th, 1921, no meetings of the Association could be held outside of the State of New York. That on that day, Chapter 577 of the Laws of this State, went into effect, providing that meetings of the Association could be held without the State of New York. That on the 3rd day of May, 1923, Chapter 327 of the Laws of New York went into effect, and telegraphic notice thereof was immediately and on that day given Secretary Houghton of the Association, and your petitioners allege that from and after May 3rd, 1923, the Association could not legally meet outside the State of New York.

TENTH: Your petitioners further allege that upon a call of the officers of the Association the annual meeting of the year 1923 was held at Cleveland, Ohio, on or about June 6th, and that all proceedings of the meeting held in Cleveland, Ohio, in June, 1923, including the election of directors, were without the State of New York, and the same were illegal and void.

ELEVENTH: That the selection at such Cleveland meeting of Richmond, Virginia, as the place of meeting of the Association in June, 1924, was without warrant, illegal and void.

TWELFTH: Your petitioners allege upon information and belief that the adoption of the delegate system at the special meeting at St. Paul was without the State of New York, was in contravention of the Laws of this State, and that such system deprives members of the Association of the right to attend the annual convention and vote either in person or by proxy and was illegal and void.

THIRTEENTH: Your petitioners further allege upon information and belief that all acts and proceedings of the annual meeting held at Kansas City in June, 1922, were because of the operation of the delegate system and because of the deprivation of the right of any member to vote in person or by proxy, illegal and void.

FOURTEENTH: Your petitioners allege that the meeting at Cleveland, Ohio, in June, 1923, was illegal and void, because of the operation of the delegate system at such meeting, it was a deprivation of the right of the members of the Association to vote either in person or by proxy.

BUY A SHOW BULL

for your herdsire. FOR \$200 YOU CAN BUY

TOBE ECHO SYLVIA KORNDYKE

now past a year old. Straight and right in every way. His sire is Woodmont Echo Sylvia Champion, 1st prize three-year-old at the 1922 New York State Fair, a son of the 1921 Grand Champion, Butter Boy Empress, 30.27 lb. butter, 600 lb. milk in 7 days.

His dam, as a three-year-old, produced 19.73 lb. butter in 7 days, averaging 60 lb. milk a day. She has a good long-time record made as a two-year-old—is from a 25-lb. daughter of a 22-lb. cow and has a 28-lb. three-year-old and a 20-lb. two-year-old daughter, both juniors.

Individuality, transmitting ability, production, and a wealth of good breeding are all wrapped up in this one animal.

AND he is from an Accredited Herd.

GEORGE LIGHTBODY—Ever Breeze Farm
Lackawanna Co., Dalton, Penna.

We Breed Holsteins

That will pay a handsome profit in any man's herd.

ECHO BELLE MODEL KING

Stands at the head of our herd.

He is a son of CHAMPION ECHO SYLVIA PONTIAC and of BELLE MODEL PIETJE 2d, 28.18 lb. butter in 7 days, her dam 36.13 and three times over 33 lb., and the granddam twice over 37 lb. ECHO BELLE MODEL KING has 87½% of the same blood as the new 41 lb. four-year-old ECO-SYLV BELLE PIETJE.

We offer some exceptionally nice heifer calves for sale at \$100 each.

Herd numbers 85 head and is under State and Federal Supervision. ::

WARD D. LOOMIS

Bainbridge, R. D. 4. Chenango Co., N. Y.

A specimen member of my herd. Cows of her individuality and producing capacity are being mated with my herdsire

King Pontiac Ormsby Pietje

a son of the noted show bull and show sire, King Pontiac Alcartra Pietje. His dam was by Ormsby Korndyke Lad, while her dam was by Nannettson and from a daughter of Paul Beets De Kol.

The resulting calves, animals of royal breeding, are offered at reasonable prices.

Herd under Supervision and Clean.

A. CONRAD SILFER

Lewisburg, R. D. 3, Union County, Pa.

Idyllwilde Korndyke Dionagen

my junior herdsire, is backed by cows that have made remarkable records in official seven-day work.

His dam, the junior four-year-old BONNY DEAN PRINCESS KORNDYKE made 480.9 lb. milk, 31.36 lb. butter; her dam, PRINCESS OF OAKDALE 2d, made 536.5 lb. milk, 31.30 lb. butter and she is from PRINCESS OF OAKDALE, 565 lb. milk, 30.50 lb. butter. This ability to produce is being transmitted to his offspring, and he is being bred to daughters of my senior sire, KING PONTIAC ALCARTRA PIETJE. You will be pleased with the results.

Let me price a sample to you.

A. E. ROBINSON

Susquehanna Co.

Montrose, Pa.

FIFTEENTH: Your petitioners further allege that such delegate system and plan of voting deprives members of the Association of their rights and privileges, deprives a member from voting direct or executing a proxy which could be voted. That a member who attended personally could only vote if he had given the committee on credentials of the Association ten days' notice of his intention to attend and that the operation of such delegate system amounts to disfranchisement of a majority of the members of the Association.

SIXTEENTH: Your petitioners further show that up to and on or about June, 1919, the fees to be paid the Secretary of the Association on the sale and transfer of any animal, for a transfer certificate was the sum of twenty-five cents, and that under the careful and prudent management of the Secretary and Superintendent of Advanced Official Registry, the surplus fund of the Association had grown to upwards of \$340,000; that at that time, the fees for such transfer were increased to one dollar, which at once became a grievous and oppressive burden upon the small farmer or practical dairyman. That previous to and at the annual meeting at Syracuse, New York, in June, 1921, a determined effort among the entire membership was made against such excessive fee, with the result that by an overwhelming majority by membership and proxy vote, such fee was reduced to fifty cents. That thereafter and on or about the month of June, 1922, at the Kansas City meeting, for the purpose of creating a so-called extension service, and entrenching and perpetuating themselves in the management and control of the affairs of the Association, the then board of directors by and through a vote of the delegates present again raised such transfer fees to one dollar and a half.

Your petitioners further allege upon information and belief that over twenty thousand members of the Association are plain, every day practical farmers, who live on their own farms, do a part, if not all of the actual labor thereon. That there are some of the members of the Association who are men of great wealth, prominent politically and socially in business enterprises and circles, and it is from this class of the membership that the present board of directors and some of the officers are made up. That by and through the so-called extension service, state associations in several of the states were formed, each of which associations have been placed in charge of a man who for a paid salary has looked after such extension service, and managed the same in such a manner, as to safeguard and protect the interests of the said Board of Directors, in a political way, to the end that their management and control has been perpetuated and entrenched. That because of the great expense attendant upon such extension service, or propaganda, it became not only necessary to increase such transfer from fifty cents to one dollar and a half, but also the same coterie of gentlemen farmers composed of wealthy politicians and business men who are owners of Holstein Friesian cattle merely because of a hobby or fad, and not because it was necessary for their livelihood, from their viewpoint of self preservation, decided that it was necessary to encroach upon the surplus funds of the

Association, which on the first day of June, 1923, amounted to \$459,749.54 and they served notice upon the secretary and he, as in duty bound, served notice upon the membership, that a motion would be made at the annual meeting in Cleveland, to take \$93,000 out of such surplus fund, and expend it in said so-called extension service, with the result that \$47,000 or more was actually taken from said surplus fund, and was devoted to the ostensible purpose of benefiting the breed through the so-called extension service. That through the operation of the so-called extension service a certain portion of said one dollar and fifty cents transfer fees and the accumulations therefrom, namely, fifty cents on each transfer, are made payable to organizations formed in various states for the purpose of the so-called extension service, with the result that a half-dozen of the states which have greater membership than others received a very large proportion or one-third of such fees, which are again used in an effort to perpetuate this same coterie of gentlemen farmers, in their control of the association. Your petitioners allege that no benefit whatever accrues to any member of the association from this so-called extension service, except these few "Gentlemen Farmers, politicians and business men," above noted.

SEVENTEENTH: Your petitioners further allege that the increase of the transfer fee to one dollar and fifty cents and the diversion of a one-third part thereof from the treasury of this association into the hands of these so-called state associations to expend as they see fit, is in contravention of the letter and spirit of the articles of the Association or charter of this association and in contravention of the laws of this state and are *ultra vires*, illegal and irregular.

That showing how easily the affairs of the Association are controlled it is only necessary to point to the attendance of the 1922 meeting at Kansas City, when only 75 delegates were in attendance and to the 1923 meeting in Cleveland, when only 84 delegates were in attendance; these delegates each year were selected by these state organizations of this so-called extension service, the leaders of which are always selected and approved by the executive committee of this same political board of directors and in this connection, your petitioners allege that in the final analysis of the action of the board of directors, with reference to these transfer fees, and the treasury surplus, it amounts practically to a looting of the treasury and is not in the best interests of the association nor the great membership thereof, scattered throughout the United States and your petitioners further allege that the increase of such transfer fee to one dollar and fifty cents was illegal, and that such transfer fee is of right and should be at the rate of fifty cents for each transfer as fixed and determined at the Syracuse meeting in June, 1921.

EIGHTEENTH: That attached hereto and marked Exhibit "A" is a copy of section 48 of the Membership Corporation Law of this State as it existed prior to May 5th, 1921 and attached hereto and marked Exhibit "B" is a copy of the same section as amended by Chapter 577 of the laws of 1921, which became effective May 5th, 1921, and attached hereto and marked Exhibit "C" is a copy of the same section

Origin Sir Napol Cornucopia

MY JUNIOR HERDSIRE

Calving at 25 months old she produced 21.62 lb. butter in seven days and has just closed a year record of 21,194.9 lb. milk, 805.04 lb. butter. She is from a cow that made 27.87 lb. butter, 605.1 lb. milk in a week.

He is handsome, straight, nicely colored and a dandy.

WM. BENNING

Kingsley, :: Susquehanna Co., Pa.

as amended by Chapter 327 of the laws of 1923, which became effective May 3rd, 1923, and attached hereto and marked Exhibit "D" is a copy of the act of the legislature of the State of New York, passed May 25th, 1885, incorporating the Holstein-Friesian Association of America, and attached hereto and marked Exhibit "E" is a copy of the certificate of reincorporation of the Holstein-Friesian Association of America, said exhibits are hereby referred to and made a part of this petition.

NINETEENTH: That your petitioners are aggrieved by and complain of said election of Directors at Cleveland, Ohio, in June, 1923, and all other acts or proceedings at such meeting. Also of the acts and proceedings of the meeting at Kansas City in 1922 and at St. Paul, Minnesota, in October, 1921; the establishment of the delegate system and the dissipation of the funds of the association by and through the so-called extension work or system and the selection of Richmond, Virginia, as the place of meeting in June, 1924, and the increase in transfer fees.

TWENTIETH: At present there are acting as directors of said Association the following named persons whose places of residence and expiration of term of office are as follows:

NAME	STATE	EXPIRATION OF TERM
E. A. Stuart	Seattle, Washington	1924
W. H. Mott	Herington, Kansas	1924
H. V. Noyes	Kenwood, N. Y.	1924
R. E. Chapin	Batavia, N. Y.	1924
De Lancy B. Armstrong	Watertown, N. Y.	1925
Fred Pabst	Oconomowoc, Wis.	1925
George A. Fox	Chicago, Illinois	1925
T. E. Elder	Mt. Hermon, Mass.	1925
W. S. Moscrip	Lake Elmo, Minn.	1926
John A. Bell, Jr.	Pittsburg, Pa.	1926
Horace W. Norton, Jr.	Lansing, Mich.	1926
F. M. Peasley	Cheshire, Conn.	1926
G. Watson French	Davenport, Iowa	1927
Fred F. Field	Brocton, Mass.	1927
James A. Reynolds	Cleveland, Ohio	1927
R. J. Schaefer	Appleton, Wis.	1927

TWENTY-FIRST: That your petitioners and applicants are advised by counsel that there is no provision of law by which a notice of motion may be served upon non-residents of the State of New York, in a proceeding commenced under Section 32 of the General Corporations Law, which will be sufficient to bind such persons to comply with any order made by the Court on this application or to compel attendance of non-residents or to enjoin or restrain such non-residents and that there is no provision made by law for the service of a notice of motion upon such non-residents and that deponent is also advised by counsel that it is necessary to procure an order from the Court directing the manner of such service upon such non-residents. Deponent is further advised by counsel that an order to show cause should be obtained in order that the temporary restraining order asked for hereon may be made.

TWENTY-SECOND: Upon information and belief that the principal place of business of the Holstein-

Friesian Association is at Syracuse, New York, and that Wing R. Smith of Syracuse, New York, is the Treasurer of the Association.

TWENTY-THIRD: That no previous application has been made by your petitioners and applicants to any Court or judge for the relief asked for herein.

WHEREFORE, your petitioners and applicants pray that an order to show cause be made herein directing the Holstein-Friesian Association of America, De Lancy B. Armstrong, W. S. Moscrip, Horace W. Norton, Jr., Thomas E. Elder, W. H. Mott, H. V. Noyes, James A. Reynolds, Fred Pabst, Fred F. Field, R. E. Chapin, George A. Fox, John A. Bell, Jr., F. M. Peasley, G. Watson French, R. J. Schaefer, and requiring them and each of them to show cause why the proceedings of the special meeting in St. Paul, Minnesota, in October, 1921, and all of the acts at said meeting should not be declared null and void and why the meeting held at Kansas City, Missouri, in June, 1922, should not be declared illegal, irregular, void, and of no effect because all of the proceedings of said Kansas City meeting was held by and through the operation of the delegate system illegally adopted at the St. Paul meeting in October, 1921, and because such delegate system is in contravention of the law of this State, and the charter of the Association providing for the system of voting, also to show cause why the meeting held in Cleveland, Ohio, in June, 1923, should not be declared null and void because held without the State of New York, and also under the delegate system, also to show cause why the officers and board of directors of the Association should not be permanently restrained and enjoined from encroaching upon the reserve funds of the association for the purpose of exploiting the so-called extension service; also to show cause why the fee to be paid the secretary of the association on the sale and transfer of any animal and for the transfer certificate should not be reduced from one dollar and fifty cents to fifty cents and why a new election for the said officers of director of said association which were illegally elected at the meeting in Cleveland, Ohio, in June, 1923, should not be ordered by this Court to be held within the State of New York, under the supervision of this Court, and why all of the said persons now assuming to act as directors of the Association, should not be enjoined and restrained from taking any action or performing any function of said office until the order and determination of this Court of the application herein made, and the holding of said election under the supervision of this Court and why your petitioners and applicants should not have such other and further relief as right and justice may require and your applicants further ask that said order contain a provision enjoining and restraining said persons as directors as aforesaid, from acting as such until the order and determination of the application and the further order of the Court made upon such order to show cause.

EXHIBIT "A."

As it stood prior to May 5, 1921.

Section 48. Annual meetings of certain corporations organized for benevolent, charitable, or missionary purposes, when may be held without the State. A membership corporation, organized for benevolent, charitable or missionary purposes, a part of whose membership consists of delegates chosen by churches, societies or other organizations, which are located in other states and which contribute to the funds of such corporation, may hold its annual meeting without the state.

EXHIBIT "B."

As it stood from May 5, 1921, to May 3, 1923.

Section 48. Annual meetings of certain corporations may be held without the state. A membership corporation, organized for benevolent, charitable or missionary purposes, a part of whose membership consists of delegates chosen by churches, societies or other organizations, which are located in other states and which contribute to the funds of such corporations, may hold its annual meeting without the state. A membership corporation created under or by a general or special law, which has a membership of at least one thousand members may hold its annual meeting without the state in any state or territory of the United States in which any of its members reside, provided that such corporation shall make and file with the secretary of state, a written designation under its corporate seal, and the signature of its president, vice-president, or other acting head, of some person being a resident of the state upon whom process may be served within the state. The designation must specify the residence of the person so designated and if it is within a city, the street and number, if any, or other suitable designation of the particular locality. Such designation.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

January 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Stop Extravagance and Law Violation

IN our issue of January 8th, under the head of "WASTING MONEY AND SPOILING THE MARKET," we endeavored to call the attention of our readers to the extravagance of the Board of Directors of the Holstein Friesian Association in the handling of the funds of the Association through the so-called Extension Department.

Without a doubt, the only responsible head of the Association is now the Executive Committee. To it is left the formulating of the business plans of the Association and the execution of them as well. The Association has a President, Vice President, and a Board of Directors, but the situation of the affairs of the Association has so resolved itself that its officers and directors are merely automatons or figure heads in the hands of the Executive Committee.

This is the natural result of the policy of the leading spirits of the Association during the last four or five years. As we pointed out in the article referred to, the Association has, in truth and in fact, notwithstanding the great increase in transfer fees, been operated at a loss, and this ruinous policy is chargeable to the Executive Committee mainly, and if persisted in, the Association will soon be wrecked upon the shoals of disaster. We are glad to know, however, that members of the Association throughout the United States have been roused into action and that proceedings have been instituted to stop this reckless extravagance, and put an end to this "wheel within a wheel" perpetuation of its bleeding system of the funds of the Association.

The action is brought against The Holstein-Friesian Association and those who are now assuming to act as

Directors, to Stop Further Encroachments on the Reserve Fund; to Check Extravagance and place the Association in a position where it can Function Legally, Economically and as a Breed Association; to serve the breeders and the best interests of dairymen; and to cease being operated as a Tax-Levying Organization in order to keep a corp of Politicians and Gentlemen Farmers in control, and their Paid Political Lackeys in FAT jobs, FAT salaries and Spending Money.

THIS ACTION IS NOT the result of difference between the Big or Wealthy Breeder and the Plain Breeder and Dairyman, but is an action brought by Honest, Upright, Clean-thinking men belonging to both classes of breeders who realize that a great Injustice is being committed against members of The Holstein-Friesian Association and the Dairy Interests at large.

The men who have brought the action are opposed to Dishonesty, Deception and LAW-VIOLATION in any form. They are men of Strong Character and Firm Conviction who dare take a stand for Right and against Wrong-doing, fully realizing that they are placing themselves in a position to receive Jeers and Abuse from those who seemingly are guilty of Exploiting the Association's Finances, including the Reserve Fund.

The Holstein-Friesian World no doubt will be responsible for inflicting their share of Jeers and Abuse and will drag out the "old Skeleton" once more.

It is a foregone conclusion that it will do this and make all manner of False Accusations against the men who have brought the action or any Group of men who would bring a similar action. The breeders know that the "World" has been sharing in the monies derived from increased fees and taken from the Reserve Fund.

We are not in a position to make a prediction as to the outcome of this litigation, but it is our deliberate judgment that seven out of ten of the members of the Association, no matter where they are situated, are in full accord with these individuals who have started this effort in the New York Courts to clean out the stables of the Association and purify the management of its affairs.

Reduce Propaganda and Benefit Producers

JUST how much can one eat seems to be a question of more importance to some than the question of how much should one eat. The mails are full of propaganda on the question of eating more. We are asked to eat more wheat, eat more meat, more rice, more butter, more eggs and to drink more milk. There seems to be no end of the things we are asked to eat more of. To comply with the numerous requests to eat more, one would have to be equipped with a rubber stomach, a cast-iron constitution and an unlimited bank account. If all the money spent in hiring publicity men, in printing and in postage used in the "eat more" campaigns, was distributed among the producers of products of which there is a surplus, those producers would receive more real benefit than they will from any results the campaign may bring forth.

The above apt paragraph is from *Farm and Ranch*. The sentiment agrees exactly with those so often ex-

Junior Breeder and Dairyman

Maryland Boy Is a Comer

Norman E. Pennington is evidently destined to be one of the leading Holstein breeders of Kent County, Maryland. At the present time he owns three fine Holsteins and each one has won honors in the show ring.

In May, 1921, Norman purchased the heifer, Bess Clothilde Pontiac Burke, then a seven-months' old calf, for \$65. He raised the \$65 by growing tomatoes. In the fall of 1921, he showed Bess in the club class at the Maryland State fair and she won the first premium of \$40 as well as an additional \$25 donated for that purpose by the Maryland State Holstein Association, so that he got his money back in less than six months.

The following year, Norman again exhibited his heifer at Timonium where, as a senior heifer in the boy's club class, she won the blue ribbon and in the open competition she was awarded second prize. Her total winnings this year amounted to \$110.

In the early spring of 1923, Bess Clothilde Pontiac Burke freshened, giving Norman a nice heifer calf. She was placed in official test and, as a junior two-year-old, made an A. R. O. record of 20.25 lb. butter and 460 lb. milk. Last fall Norman exhibited the calf at the Maryland State Fair where she duplicated the performance of her mother by capturing the blue ribbon in the club class. She was chosen one of the herd to represent Maryland at the National Dairy Show held in Syracuse last October and was placed seventh in the calf club class. Bess was exhibited at the Timonium Fair and although she had been in milk about a year, stood sixth in a class of sixteen splendid heifers.

During the time that Norman had these heifers he also purchased another one, Countess Heeringa Vee-man, paying \$65 for her in May, 1922. She was awarded fifth prize in the junior Holstein heifer class that fall at Timonium. With three Holstein heifers, all of them show animals that are able to hold their own against strong competition, with plenty of enthusiasm and willingness to work, who can say how far Norman is going to go as a Holstein breeder?

The reason for the popularity of the Holstein cow is her ability to make a profit over the cost of her feed and care. She is the dairyman's cow.

PLEASE STOP

On page 21 of the January 8 issue of the *Holstein Breeder and Dairyman* we advertised for a copy of "Testing for Records," by Charles Cole, a bulletin given some time ago by the *Holstein-Friesian World* as a subscription premium.

Advertising in the *Holstein Breeder and Dairyman* certainly brings results. We have already received a number of copies of this booklet, and hereby give notice that the offer is cancelled.

pressed by the BREEDER AND DAIRYMAN. If all the money expended by the Holstein-Friesian Association of America in so-called extension activities as at present conducted—appeals to men who already own purebred black-and-whites,—was divided among the men who register and transfer registered Holsteins, they would be much better off than they are at present. The proper way to divide this money is not to take it from them. If the transfer fees were lowered to a reasonable charge for the certificates, and that is one-third or less of what it is now, everyone would be better off except a few young fellows now holding down well-paying jobs who would have to go to work.

Dissatisfaction in Breed Associations

DISSATISFACTION with the inside group that has been controlling the breed association is not confined to the membership of the Holstein-Friesian Association of America. During the week of the Chicago International Livestock Show, a number of breed associations held meetings and conventions. Some of these were merely conventions where the reflection of the officers and the endorsement of the politics of the ruling group were foregone conclusions. In others, the rank and file of the membership had some say.

At least four associations had stormy meetings. In two cases rival sets of officers were elected and both sides have appealed to the courts. The American Hampshire Swine Record Association and the American Berkshire Association changed secretaries and officers. The affairs and doings of the American Poland China Record Association and the American Aberdeen-Angus Breeders' Association will go before the courts. At the present writing it looks as if two of the organizations will be each split in twain. On December 24th, at Chicago, Superior Judge, Dennis E. Sullivan issued an order enjoining the newly elected president of the American Aberdeen-Angus Association from taking office.

While we have read of the troubles and disputes in these associations we do not consider that we are well enough informed to give an opinion as to which sides are right and which sides are wrong. We know, however, that not only in the four associations mentioned and in our own breed organization, but also in other livestock associations there is wide spread dissatisfaction with the men who confuse extravagance with progress; substitute flamboyant speeches for steady everyday work; and use membership funds to maintain agents whose main purpose seems to be to create propaganda favorable to the regime of their friends and bosses.

Prizes for Calf Clubs

There will be a class for boys and girls calf club exhibits at the Southeast Colorado Stock Show held 7, 8 and 9 of February. Valuable prizes will be given besides a number of ribbons.

The Holstein breed is the only dairy breed that does not have to depend upon importations from its native home in order to keep up its type and quality.

Berylwood Prince Aaggie Chicago

combines individuality of the highest order with remarkable Production and Presidency, as shown by the performance of his dam and female ancestry.

His dam is a beautiful cow that produced 31.05 lb. butter, 701.9 lb. milk in 7 days, more than 100 lb. milk a day. She produced 1126.89 lb. butter in a year averaging 73 lb. milk a day for the entire time and is again in test promising to make an even greater long time record.

He is by the greatest show bull of California, is backed by wonderful producers and heads our Accredited Herd.

L. L. ALLIS,

Rummerfield, Pa.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman

BOX 110, HARRISBURG, PA.

Injunction Proceedings

(Continued from page 59.)

tion shall be accompanied with the written consent of the person designated and shall continue in force until revoked by an instrument in writing designating in like manner some other person upon whom process against the corporation may be served in this state, or until the filing in the same office of a written revocation of said consent executed by the person so designated. If the person so designated dies, or ceases to be a resident of the state, or files such revocation of his consent, and the corporation does not, within thirty days after such death, or the ceasing of such person to be a resident of the state, or the revocation of consent, designate in like manner, another person upon whom process against it may be served within the state, process may be served upon the secretary of state. At the time of such service the party making the same shall pay to the secretary of state, two dollars, to be included in his taxable costs and disbursements, and the secretary of state shall forthwith mail a copy of such process to such corporation if its address, or the address of any officer thereof is known to him. Service of summons or any process or other paper for the commencement of a civil special proceeding against such corporation, in any court, or before any officer if made as herein provided, shall be of the same effect as if made upon such corporation. Authority is hereby conferred upon the board of directors or an executive committee of such board of any such corporation, to choose the person to be designated as herein provided.

EXHIBIT "C."

In effect since May 3, 1923.

Section 48. Annual meetings of corporations organized for benevolent, charitable or missionary purposes; when may be held without the state. A membership corporation, organized for benevolent, charitable or missionary purposes, a part of whose membership consists of delegates chosen by churches, societies or other organizations, which are located in other states and which contribute to the funds of such corporation, may hold its annual meeting without the state.

The Order of the Court

Upon the petition and application of Greenleaf S. Van Gorder, attorney for the plaintiffs, the Court granted an order calling on the acting directors of the Association to show cause at a Special Term of the Supreme Court, appointed to be held at the City and County Hall in the City of Buffalo, New York on the 24th day of January 1924 or as soon thereafter as counsel can be heard when an order should not be granted:

1. Declaring the proceedings of the special meeting at St. Paul, Minnesota, in October, 1921, and all of the acts at said special meeting, illegal, irregular, null and void.
2. Declaring the meeting held at Kansas City, Missouri, in June, 1922, illegal, irregular, null and void.
3. Declaring the meeting held at Cleveland, Ohio, in June, 1923, illegal, irregular, null and void.

4. Declaring the delegate system of voting adopted at the special meeting held at St. Paul, Minnesota, in October, 1921, illegal, irregular, null and void.

5. Restraining and enjoining the Association and directors from enroaching upon the reserve fund of the Association for the purpose of promoting or exploiting the extension service.

6. Declaring the raise of the fee of the Secretary of the Association from fifty cents to one dollar and fifty cents for the issuance of a transfer certificate on the sale and transfer of any animal, irregular, illegal, null and void.

7. Declaring the selection of Richmond, Virginia, as the place of meeting in June, 1924, as illegal, null and void.

8. Ordering a new election for the offices of director of said Association to be held within this State under the supervision of the court.

9. Awarding your petitioners herein such other and further relief as right and justice may require or to which they may be entitled.

It further presumptively appearing that the persons who are assuming to act as directors of said Association are dissipating the funds of the Association by enroaching upon the reserve funds of the Association which will result in the waste and dissipation of the funds of said Association, the applicants having provided a surety company bond in the penal sum of two hundred fifty dollars, which amount is deemed sufficient and hereby approved, and said bond being attached to the application herein, it is

ORDERED that De Lancy B. Armstrong, Thomas E. Elder, Fred Pabst, James A. Reynolds, Horace W. Norton, Jr., Fred F. Field, W. S. Moscrip, E. A. Stuart, H. V. Noyes, W. H. Mott, R. E. Chapin, George A. Fox, John A. Bell, Jr., F. M. Peasley, G. Watson French, R. J. Schaefer, be and they hereby are restrained and enjoined from taking any action or performing any function of the office of director of said Holstein Friesian Association until the hearing and determination of this application and the further order of this court, made upon this order. This order will not be deemed to forbid or prevent the transaction of the usual, ordinary and accustomed business of the Association, including the receipt and disbursements of moneys of the Association by the officers thereof.

Dated, January 8th, 1924.

CHAS. A. POOLEY,
Justice Supreme Court.

The first step toward a change is dissatisfaction with existing standards. Agitation, education and sometimes irritation are the means to stir up desire for better things.—*Maryland Farmer*.

Professor T. E. Elder reports that the grand champions at the Chilean National Exposition held at Santiago, Chili, were both American bred. There were 261 purebred Holsteins at the show.

Century Ella Pontiac

Pretty nice, isn't she?

But there are dozens just as good among my herd of 75 choice producers.

They are bred to bulls whose dams are show cows noted for large production.

Let me supply your foundation stock.

HARRISBURG MECHANICAL SCHOOL
2217 Derry Street, P. O. Box 433 Harrisburg, Pa.

A Minnesota school child declared that the two most important breeds of dairy cattle are the Holsteins and the Philistines. Maybe the latter name is reserved for the red and white offshoots of the great Friesian breed.

THE HOLLINS COLLEGE HERD

One of the Greatest Producing Holstein Herds of the South

FROM the standpoint of everyday production without a doubt the greatest Holstein herd in Virginia is that owned at the Hollins College in Roanoke County. The herd was started about the commencement of the present century and the first herdsire was Sir Henry Netherland of Hollins No. 30674, a Virginia bred bull sired by Clothilde Monk's Count 2d and from Lily Netherland Veeman, she a daughter of Sir Netherland of Maples and Clara Reynolds. At first the female herd consisted of grades but from time to time one or two purebreds were added. The last purchase of purebred females was made in 1907 and there were only fourteen purchased in all. The grades were gradually eliminated and to-day the entire female herd are descendants of two of the purchased purebred cows.

One of the two original purchased females was Oxford Vinetta No. 55515, born April 26, 1900, and bred by John M. Drennen of Oxford, Pa. She was sired by Woodland Comus from Tacka, a cow registered as No. 750 in the only herd book of the Western Holstein-Friesian Association. Oxford Vinetta or as she was called at the college, "Old Net," milked continuously for ten years and her annual production for that period was 11,046 lb. milk, an average of about 3½ gallons a day. Although she produced eleven calves unfortunately only three of them were heifers but these were splendid producers. This great old cow broke her leg and had to be destroyed. In speaking of Oxford Vinetta, Mr. Joseph A. Turner, who for twenty-five years has been general manager of the Hollins

JOSEPH A. TURNER
Manager of the Hollins College herd,
Hollins, Va.

Sir Henry Netherland of Hollins and was named Lady Oxford Netherland of Hollins.

"Lady" milked continuously for fifteen years and seven months and her average annual production was 9,550 lb. milk. This is better than a 26 lb. daily average. This cow was given a semi-official record and at the time she freshened preliminary to starting her test she lacked just six days of being ten years old. She is credited with 15,284.8 lb. milk, 580.55 lb. butter in the three hundred and sixty-five days. Lady has three daughters in the Advanced Register: Hollins Heelbracht, producing 16,130.4 lb. milk, 680.56 lb. butter in a year as a five-year-old; Hollins Harari, having a record of 16,546.9 lb. milk, 664.43 lb. butter as a senior two-year-old, while Hollins Herlin, calving at twenty-five months of age, is credited with 10,629.1 lb. milk, 513.38 lb.

butter in a year. Hollins Herlin is the dam of Hollins Hongeningen, who, as a senior four-year-old, made a semi-official record of 16,475.6 lb. milk, 784.53 lb. butter.

The other purchased cow whose descendants are in the herd to-day was Miss Clay Lick Bonheur, No. 97280. She was born January, 1907. Her sire was Lord Bonheur and her dam was Miss Clay Lick 4th's De Kol while her breeder was C. A. Snow of Athens, Ohio. She was the dam of Hollins Hydrangea, who was sired by Sir Henry Netherland of Hollins. Hollins Hydrangea milked continuously for eight years and four months and during that period averaged 11,373 lb. yearly. When she was still in her prime, she was kicked by a colt and died from the injury. She was

COLONEL PIETERTJE ORMSBY
Present herdsire at Hollins College. His twelve nearest dams have year records averaging 918.79 lb. butter.

herd, says: "Net" taught me the possibilities of a cow, the value of a cow taught me to love and respect a cow. She gave me an ideal and standard to work for."

The first daughter of Oxford Vinetta was sired by

HOLLINS HERMINE
17,618.1 lb. milk, 744.57 lb. butter in a year as a seven-year-old.
13,509.7 lb. milk, 633.28 lb. butter in a year as a junior two-year-old.

given a semi-official record when she was a junior three-year-old and is credited with 14,270.1 lb. milk, 593.40 lb. butter in 365 days. She is the dam of Hollins Hasselaer, who, as a junior three-year-old, produced

422.96 lb. butter, 9,490.6 lb. milk in a year and as a seven-year-old produced 18,092 lb. milk, 732.22 lb. butter. She, in turn, has several daughters in milk.

As said before, the first herdsire was Sir Henry Netherland of Hollins. When he was purchased, Mr. Turner confesses that he knew nothing whatever of Holstein blood lines or families but, fortunately for the Hollins herd, he was a high class sire and an excellent individual. Without a single exception the daughters of this bull, both grade and purebred, proved to be splendid producers and of excellent type. One of his grade daughters, Junie, freshened when about twenty-eight months of age. She was in the producing dairy for fourteen years and seven months and during this time her average yearly production was 12,760 lb.

Junie was a Holstein grade,
Just as fine as silk,
Her name's not in the Blue Book,
But she surely gave the milk!

Sir Henry Netherland of Hollins is credited with seven daughters that have made advanced registry

records and with one exception they all have long time records. Hollins Heatherbloom leads for size of record. She is credited with 25.05 lb. butter in seven days and 714 lb. butter, 16,110.5 lb. milk in a year while Hollins Hulda, a daughter of Oxford Vinetta, has a year record of 711.45 lb. butter from 17,758.9 lb. milk.

The second sire was Pontiac Arcas, a son of Hengerveld De Kol. This bull has four daughters with long time records, the largest of which was made by Hollins Hemlock. Tested as a ten-year-old, she produced 19,947.4 lb. milk, 677.56 lb. butter. Her dam was a daughter of Sir Henry Netherland of Hollins and Oxford Vinetta.

Another herdsire whose daughters have made good was Paul Cornucopia Mercedes Aaggie, whose breeding is represented in his name. He has six daughters all with year records. Hollins Hermine, calving when nearly eight years old, produced 17,618.1 lb. milk, 744.57 lb. butter in 365 days while as a junior two-year-old she is credited with 13,509.7 lb. milk, 633.28 lb. butter. Hollins Hermine is from the same dam as Hollins Hemlock.

Later herdsires have been strong in the blood of King Segis. Sir Segis Mutual Walker, who has a number of good tested daughters, was a grandson of King Segis; Sir Woodland Lyons, who was by King Lyons a great-grandson of King Segis and King Joh Pieter, was a great-great-grandson of King Segis. All three of these bulls were purchased from the well-known Holstein breeder, H. A. Moyer of Syracuse, N. Y. Mr. Turner is a great admirer of Mr. Moyer and of King Segis and so the King Segis blood is intensified in the college herd.

The present herdsire is Colonel Pietertje Ormsby. He was sired by Sir Pietertje Skylark Ormsby from Queen Pietertje Mercedes Ormsby, a two-year-old that

produced 673.12 lb. butter, 15,540.2 lb. milk in a year. The year records of the twelve nearest dams of Colonel Pietertje Ormsby average 918.79 lb. butter and his seven nearest dams average 963 lb. butter.

Starting in 1902 complete barn records have been kept on every animal in the herd. In the winter of 1905, Mr. Turner purchased a carload of Union Grains and since that time it has been his main dependence as a herd grain feed and is supplemented by all the roughage the animals will eat clean. This consists of high grade ensilage and legume hay. The fiscal year at the college ends in September. For the year 1905-06 the herd average was 6,867 lb. and for the year ending September 30, 1922, the average was 11,854 lb.; from 1905 to 1922, the entire herd, purebreds and grades, averaged 8,906 lb. and the purebreds in the herd averaged 9,469 lb. This includes every cow and every heifer, good, bad, or indifferent.

The following A. R. S. O. records have been made in the Hollins herd:

Twenty-five two-year-olds averaged 501 lb. butter from 11,533 lb. milk; the best two-year-old record is 664 lb. butter from 16,547 lb. milk; nine three-year-olds averaged 539 lb. butter from 12,539 lb. milk; the best three-year-old record is 661 lb. butter from 15,686 lb. milk, and another three-year-old record is 631 lb. butter from 16,041 lb. milk; nineteen four-year-olds and full aged cows averaged 638 lb. butter from 15,113 lb. milk; the best full aged record is 784 lb. butter from 16,746 lb. milk; eight

cows in this group have produced from 16,000 to 20,000 lb. milk in a year. These 53 records average 537 lb. butter from 13,000 lb. milk.

The cows have never been given any extraordinary attention when making records either official or private. The barns are not even equipped with box stalls nor are there any special test barns. All the records have been made under normal herd conditions and nearly all of them are on twice a day milking. During the past year a few of the heaviest milkers have been milked three times a day for part of the year. Another point to be kept in mind is that Mr. Turner did not select the cows for test purposes but they have been tested as they freshened and as it was convenient to test them and at all times he has been limited as to the number that could be on test at one time. During the war, testing was temporarily stopped, yet all the cows in the college herd and practically all the heifers either have yearly records or are now on test.

The Hollins herd has been under federal supervision since 1912 and for a number of years has been accredited. Hollins College is situated in south-western Virginia in the beautiful Roanoke Valley, which is a continuation of the Shenandoah Valley. The college was founded in 1842. In 1846, Chas. L. Cocke became principal and he held this position until his death in 1901. He was succeeded by his daughter, Miss

HOLLINS HASSELAER
18,092 lb. milk, 732.22 lb. butter in a year on twice a day milking.

Mattie L. Cocke, who is the present president. Joseph A. Turner, general manager of the institution, and who is in direct charge of the herd, is a grandson of Mr. Cocke and has been connected with the business department of the college since 1898.

At the present time there are forty-four officers and teachers and 325 students. These students come from all sections of the United States and a number have attended the college from foreign countries.

Joseph A. Turner, or Joe, as he is called by everyone connected with the dairy industry in the "Old Dominion" state, is one of the greatest authorities in the entire south on dairying and purebred Holsteins. He is an enthusiastic Holstein breeder and believes that the black and white cow is destined to be the leading dairy cow of the south and that there is no limit to her possibilities. Mr. Turner has a deep rooted opinion that the Holstein business properly conducted, is not merely a business but a profession—a profession that calls for a high standard of business ethics. The purebred breeding business is largely conducted on honor and the men who engage in that business should ever keep this fact in mind. Mr. Turner is not by any means a preacher but is a jolly good fellow and an entertaining speaker, who is thoroughly posted on dairying from all angles. To him is due most of the credit for the building of the Hollins herd. He has met with the usual amount of hard luck and disappointments and knows that the development of a high class herd is not by any means a bed of roses. He is just as ready to tell of his failures as he is of his success and the story of his work is an inspiration to everyone who is engaged in the business, or rather profession, of breeding and developing a purebred herd.

A Mystery Dispelled

GET-TOGETHER meetings are of great value to those who attend, listen to the addresses and exchange views and so are able to gain ideas that may be of use to them in business. This is entirely aside from the social value of getting better acquainted with others in the same line of business as yourself. Seldom, however, does a get-together meeting result in the clearing up of a mystery and the possible saving of thousands of dollars to men who own livestock. But read the following story of an international meeting of professional men, the coming together of distinguished scientists from such widely scattered points as Southern Texas and South Africa, and the far-reaching results of an exchange of ideas and knowledge. Then say that romance is dead.

Southern Texas cattlemen have been seriously troubled the past few years by a mysterious ailment which affected many of their animals while on pasture. The first symptoms noticed would be a stiffness in the front legs. The animal would go down and be unable to rise, the back being apparently paralyzed, the head would be doubled back on the shoulder for a time and then the animal would turn over on its side with the head stretched out. Usually the afflicted animal would remain sensitive to pricks but unable to rise and if lifted to its feet would go down at once. In its acute

form the disease is fatal in a very few days while chronic cases last from ten days to four weeks.

In a herd in which this disease is noted the cattle will eat rubbish, preferably bones. When animals died and the body was left in the pasture the cattle would attempt to eat the dead animals. This trouble went by the name of "down-in-the-back" or "loin" disease.

Veterinarians and the scientists at the Texas State College were unable to find a remedy for this trouble until Dr. R. P. Marsteller, Professor of Veterinary Medicine at the College, attended the meeting of the International Veterinary Medical Association at Montreal, Canada. There he heard Sir Arnold Theiler tell of a disease that at one time threatened the livestock industry in Southern Africa. The symptoms described by Sir Arnold agreed perfectly with the symptoms as noted by the Texas scientists and on talking over this matter both Sir Arnold and Dr. Marsteller agreed that the Texas disease was identical with the one prevalent in South Africa which there went by the name of "Lamsickte." On his return, Dr. Marsteller with Dr. B. Youngblood, director of the Texas College Experiment Station, immediately interviewed J. E. Boog-Scott, chairman of the Texas Livestock Sanitary Commission, and they brought Sir Arnold Theiler to College Station.

The Experiment Station veterinarian, Dr. H. Schmidt, had been working three years in the Houston territory and so was able to give Sir Arnold a perfect description of the disease in all its aspects. In fact, Dr. Schmidt had found out that the disease was toxic as with the single animal he had been given to use in his experiments he had actually produced the disease by feeding it bones taken from the carcass of an animal that had died from it.

Sir Arnold, by similar experiments in South Africa, had produced the disease in hitherto healthy animals. He had found that the carcass of an animal which had died developed a toxin which permeated the bones. So virulent was this toxin that a few drops under the skin or one teaspoonful of it through the mouth produced the disease. With this toxin Sir Arnold produced the disease in other ruminants but was unable to do so in hogs, dogs, and rats.

It had been noticed in Texas that animals before they were afflicted with this trouble seemed to have a craving for some food or element that they were not getting. The pasture grasses were analyzed at various stages of growth. It was found that as the grass matured it contained less phosphorus, and as it matured the disease became more prevalent. The unusual and depraved appetite was produced by feeding grasses low in phosphate or by feeding synthetic food that contained little phosphorus but otherwise supplied everything necessary for nutrition. Sir Arnold had been able to stop the craving for bones and other rubbish by feeding phosphate in soluble form. He had found that a regular supply of three ounces of bone meal per animal daily entirely overcame the difficulty in Africa and that the animals so fed made a much larger growth. This remedy will save thousands of dollars yearly for the cattle owners of Southern Texas, and the expense will be very small in proportions to the losses averted.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

January 23.—Harrisburg, Pa., Pennsylvania Federation Holstein-Friesian Clubs Annual banquet.

January 24.—Harrisburg, Pa., Pennsylvania Federation Holstein-Friesian Clubs Annual Meeting.

January 24.—Wausau, Wis., Wausau Holstein Club Get Together Meeting.

February 4.—Lansing, Mich., Annual Banquet of the Michigan Holstein-Friesian Association.

February 5.—Lansing, Mich., Michigan State Holstein-Friesian Meeting.

February 7.—Toronto, Canada, Annual Meeting Holstein-Friesian Association of Canada.

February 11-16.—Ithaca, N. Y., Farmers' Week at Cornell University.

February 13.—Eau Claire, Wis., Thirty-second Annual meeting of the Wisconsin Holstein-Friesian Association.

IN SAUK COUNTY

At the annual meeting of the Sauk County Holstein Breeders' Association held at Reedsburg, Wis., a few days before Christmas, the following officers were elected: Halsey Sedgwick, Lime Ridge, president; Ed. Koenecke, Reedsburg, vice-president; H. A. Turgasen, Reedsburg, secretary and treasurer.

TO REVIVE COUNTY CLUB

The Chamber of Commerce of Ladysmith, Wis., are endeavoring to reorganize the Rusk County Holstein Breeders' Association. There are a number of owners of purebred herds in Rusk County and many of the grade herds are headed by purebred Holstein bulls.

NEW CLUB FORMED

A purebred Holstein Association has been formed in Lawrence County, Pa., announces Farm Bureau Agent Norman Dale. The organization is divided into five sections and it is planned to purchase a number of purebreds.

The officers are: President, Floyd Alford; vice-president, R. J. Drake; secretary and treasurer, W. W. McMillin. C. M. Hartzell and J. B. Elder are directors of the association.

DAIRYMEN'S LEAGUE NEWS

The annual meetings of all excepting a few of the 897 locals of the New York Dairymen's League Coöperative Association, Inc., will take place in their respective home towns on Saturday, January 26th. Each local will elect a president, vice-president, and secretary-treasurer for the ensuing year. Membership lists will be revised, those who have retired from dairying being removed and new names added.

JEFFERSON COUNTY CLUB

At a meeting held at the Hotel Woodruff, Watertown, New York, January 3d, Eli B. Johnson of Chaumont was elected president of the Jefferson County Holstein-Friesian Breeders' Club succeeding the late Floyd C. Overton. J. R. Kilborn, Cape Vincent, was elected vice-president; Dr. Delancy B. Armstrong of Watertown, secretary; Lornezo Johnson of Chaumont, assistant secretary, and F. M. Mather of Bellsville, treasurer. President Johnson was named delegate to the state convention with George N. Smith as alternate.

A resolution was passed endorsing the work of George N. Smith as director of the New York State Holstein-Friesian Association, for the northern district which embraces Jefferson and St. Lawrence Counties, and urging his reelection.

Because of the recent death of President Overton, the club did not hold its annual dinner nor was there any entertainment at the meeting. A resolution was passed eulogizing Mr. Overton and deploring his loss.

HAVE THE RIGHT START

A recent survey of the dairy herds of Glenn County California, disclosed the fact that more than 90% of the grade herds are headed by purebred registered bulls. Many of these bulls have come from the J. S. Gibson Company herd in the adjoining county of Colusa. In Glenn County there are now in service no less than six sons of cows that have made records of more than 1,000 lb. butter in a year and they head herds that each contain a few registered females.

A Holstein club has recently been organized in Glenn County. J. N. Cook was chosen president; W. C. Saxton, secretary, B. J. Bills, R. J. Bender, Wellington Smith, Ed Bell and J. M. Alvares as directors.

GREEN LAKE BREEDERS MEET

The Green Lake County Holstein Breeders' Association met at the Court House, Green Lake, Wis., December 20th. There are seventy members of the Association and nearly all of them were present together with a number of their friends. V. S. Kutchin, Green Lake, Wis., president of the association, introduced the speakers, J. P. Riordan, manager of the Harvest Farms, Mayville, and State Veterinarian Dr. V. S. Larsen.

Mr. Riordan spoke on desirable characters in Holsteins, classifying his talk under the heads of individuality, production and reproduction. He urged his listeners to choose animals that pleased the eye as they are readily salable. Only when animals are of good individuality is the top price received. One of the most remunerative side lines in the dairy business is the sale of surplus stock. Mr. Riordan laid particular stress on straight top line, strong constitution and a well-shaped, well-placed udder. He spoke of the value of official records as an indication of production and stated that although he impressed the value of individuality he did not intend to minimize the production records. Individuality and production combined is the great aim of the constructive breeder, and reproduction and the ability to transmit to the offspring the desirable traits of the breed coupled with these two great qualities constitutes the real aim of the progressive dairy cattle breeder.

Dr. Larsen told of the progress of the bovine eradication campaign in Wisconsin. By means of a map, he showed his audience the rapidly growing clean area where testing has been done by counties. He devoted the greater part of his time to an informal discussion of indemnities, methods of testing, accuracy of the tuberculin test and similar details.

BREEDERS LISTEN TO VETERINARIANS

Under the auspices of the Lancaster County Breeders' Association, a general meeting for breeders of purebred dairy cattle of Lancaster County was held in the Farm Bureau rooms, Lancaster, Pa., December 12th. John L. Shirk, president of the County Holstein Association, was in the chair.

The speakers were Dr. T. E. Munce, state veterinarian, and Dr. M. F. Barnes, of the State Bureau of Animal Industry. Dr. Barnes spoke on abortion and said that more than ninety per cent of the cases occurring in the average herds are due to infection rather than to mechanical or other causes. One successful breeder estimated that each abortion meant an individual loss of approximately \$200 regardless of the value of the calf. This was figured on the loss in production of milk at the average prevailing prices. He arrives at this figure by estimating the cost of feeding the cow for milk production at \$200 and said that an aborting cow would produce only one-half the normal average of milk and consequently there would be a feeding loss of forty dollars. Adding this actual loss to the value of the two thousand quarts of milk that the cow would fail to produce the loss of \$200 was reached. There is an additional loss because cows that abort often become sterile and therefore limit the number of valuable offspring that would

be secured. Dr. Barnes declared that the spread of large numbers of abortion germs could be overcome if breeding establishments were equipped with maternity stalls. Such stalls should be thoroughly disinfected before other cows are placed in them. It is also important that only non-infected bulls be used for breeding purposes.

In the opinion of the doctor, contagious abortion can be controlled only through a proper system of sanitation and herd management in conjunction with blood tests or other tests which may be devised. In almost every case where the exact history of abortion in a herd has been obtained, the source of the infection has been traced to the introduction of outside animals without precautions being used against the disease.

Dr. Munce showed a chart illustrating the progress of the statewide tuberculosis eradication campaign. Two counties in Pennsylvania are now clean and a strict quarantine is in force to prevent reintroduction of the disease. Statistics show that approximately one-third of the area of the state is comparatively clean, the disease existing to the extent of from one to five per cent. The fact that there are 11,000 applications for test in the hands of the Bureau of Animal Industry proves that owners in the state are taking up the work of eradication in earnest. The distinguished doctor does not recommend the county wide area plan for the Keystone State owing to the methods of farming and the existence of many small herds in every community but believes that certain communities should start the work on an area basis thus creating disease-free areas within the county. He gave some figures relating only to Lancaster County in which he said there are nineteen fully accredited herds. The talk was followed by open discussion.

PITTSBURGH NOW OWNS A DAIRYLEA

Following up their advertising stunt of presenting a Holstein cow to New York City, the Dairymen's League Coöperative Association, Inc., recently presented the city of Pittsburgh, Pa., with a purebred Holstein female. She, like the New York cow, is named Dairylea, the name borne by the dairy products manufactured by the League. Several weeks ago the city council passed a resolution to provide a cow for the Highland Park Zoo. It was said that there was thousands of kiddies in Pittsburgh that had never seen a cow. The management of the Dairymen's League seized the opportunity and made the presentation. On January 4, Councilman James F. Malone, in front of the County-City Building, officially received the present. It is reported that the Councilman was challenged to milk the animal but was unable to do so. We do not know whether she was dry or not but from the picture furnished us we would imagine that she was. She was taken to the Highland Park Zoo the same afternoon.

The Pittsburgh Dairylea is a daughter of Colantha Johanna Vera Mercena. She was born July 29, 1919, and as a four-year-old made official records of 548 lb. milk, 25½ lb. butter in a week; 2,171 lb. milk and 100 lb. butter in thirty days.

COLLEGE COW MAKES BIG RECORD

I am pleased to announce that the Holstein-Friesian cow Countess Chloe 280618 has just closed a long time test, and is credited with 29,803.6 lb. milk containing 1,022.15 lb. fat, thus showing an average of 3.43 per cent fat in the milk. She freshened at the age of 8 years, 1 day. Her sire is Beauty Pietertje Prince 4th 83353; her dam is Chloe Hengerveld Fayne 2089999. She was bred by Mr. Henry C. Beyer, Jr., Portland, Me., and is now owned by Massachusetts Agricultural College, Amherst, Mass. Her first test began at the age of 2 years, 9 months, 11 days, and during that lactation period she showed a production of 12,037.4 lb. milk containing 400.91 lb. fat in 365 days. She was not tested again until 8 years of age. Her best seven day official production, made during this lactation period, is 604.3 lb. milk containing 21.818 lb. fat, the test begun 25 days from freshening. She had twelve test periods during the year, one of which was eight days in length. Eleven different supervisors were employed in the conduct of the test. With this production above mentioned, she becomes the 4th cow owned by a college or university to obtain a place in the list of Holstein-Friesian cows producing above 1,000 lb. fat in one year. Computed on the 80 per cent basis, the equivalent butter for Countess Chloe amounts to 1,277.68 lb. Delevan, Wis. MALCOLM H. GARDNER, Supt. A.R.

THE BLOOD OF OUR GREAT COW Cornucopia Plum Johanna

HAS BEEN INTENSIFIED IN THIS HERD

She produced 1056.78 lb. butter in a year, has two daughters each above 1,000 lb. and she, with her five tested daughters averaged 18,723.1 lb. milk, 918.35 lb. butter in long time test with a 4% fat test.

THE FIRST BULL ASSOCIATION IN NEW MEXICO

The first bull association in New Mexico has been formed in the Mesilla Valley by County Agricultural Agent R. C. Stockdale of Las Cruces. There are to be five blocks each containing forty or more cows. The money to purchase the bulls has been secured by the members voting to pay \$12.00 per cow. A purchasing committee consisting of Professor O. C. Cunningham and Mr. W. P. Thorpe was chosen to make the selection.

The officers of the Mesilla Valley Holstein Bull Association are: O. K. Kull, president; W. E. A. Watson, vice-president, W. P. Thorpe, secretary-treasurer; and Seth Berrier, L. Kuhnley and L. Hovegard, directors.

KANSAS TO HAVE DAIRY CONGRESS

At the Kansas Free Fair which will be held at Topeka in September 1924 they plan to have the first Kansas Dairy Congress. Phil Eastman, the fair secretary, has been in communication with the United States Department of Agriculture and the National Dairy Council and has secured the coöperation of the Kansas Dairymen's Association in an endeavor to make the event a decided success.

The Kansas State Dairymen's Association has appointed a committee to have general charge of the congress. An Ayrshire breeder is chairman of this committee and the Holstein representative is C. W. McCoy of Valley Falls. The Jersey representative R. A. Gilliland is also a Holstein owner.

BEECHURST RESERVED

Beechurst is the prefix name reserved by the Holstein-Friesian Association of America for the exclusive use of H. J. Merrill of Burlington, Vermont. For the future all animals raised by Mr. Merrill will have their names begin with this word.

BACKED BY RECORD MAKERS

The well-bred bull Sir Ornetta Ormsby Bess Beets, No. 409265, has been purchased by Ernest Koepsel of Elgin, Minnesota, from L. Lynard of Owatonna. The new bull is a double grandson of Sir Pietertje Ormsby Mercedes 37th. His dam has a year record of 823 lb. butter and is from a cow that has twice made 28 lb. butter in a week and over 904 lb. butter in a year.

327 So. LaSalle St., Dept. H Chicago, Illinois

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

OMWAKE AND SPECK HERD TO BE DISPERSED

The news that the accredited herd of Omwake & Speck is to be dispersed will be received with regret by Holstein breeders of Franklin and adjoining counties of both Pennsylvania and Maryland. This herd has been established more than at least 15 years. It was originally owned by "Sam" Speck and has been under its present management for the last five years. One family alone should bring breeders from long distances and this is the descendants of Lady Maud Hendrik De Kol No. 163749. This cow was born July 7, 1910, the property of Mr. Speck, is still a producer and

Daughters of Sir Colantha Pietertje Korndyke in the herd of Omwake and Speck, Greencastle, Pa.

her daughters and granddaughters form a considerable portion of the present herd of 45 animals.

A number of good sires have headed this herd. One of these was Sir Colantha Pietertje Korndyke, a son of Pontiac Korndyke and the 30 lb. cow, Colantha Pietertje Korndyke. In the Omwake & Speck herd there are granddaughters of Pontiac Korndyke that are only a few months old. There are very few herds in the entire United States of which this statement can be truthfully made. This accredited herd contains nearly 20 granddaughters of Pontiac Korndyke only three of which are as yet in milk.

Following this son of Pontiac Korndyke the herd was headed by Champion Valdessa Jetta. This very handsome, stylish sire has several young daughters and their individuality rivals that of the bull himself and that is saying a great deal. He was by King Valdessa Champion, a well-bred son of the noted sire, King Valdessa Pontiac.

SALE CATALOGS

PEDIGREE EXPERT

Get our R. Austin Backus for your sale—in the box at more sales during the past six months than any other pedigree man. Book your date before it is too late.

BACKUS PEDIGREE CO., MEXICO, N. Y.

Most of the cows in the herd are in calf by Ormsby Clothilde Lad, a very handsome sire who has a large number of offspring scattered through the best herds of southern Pennsylvania. He was by Ormsby Korndyke Lad and his dam, Clothilde Dot 2d, has an official seven-day butter record of 29.73 lb. made when she was only three years, twenty-six days old. Clothilde Dot 2d was by Pontiac Aesula De Kol, a son of Hengerveld De Kol from a daughter of Pontiac Korndyke. Thus Ormsby Clothilde Lad combines the blood of Ormsby Korndyke Lad, Hengerveld De Kol, and Pontiac Korndyke, sires whose daughters and granddaughters have made tremendous records both on long time and official test.

Owing to a combination of circumstances neither of the owners of this herd are able to devote any time to its management. The entire herd will be sold on the farm at Greencastle, Pa., March 12th. The horses, hogs, farm implements, and other property will be sold on the day previous. As the farm is already rented, the new tenant will take possession right away after the sale. The opportunity to purchase animals from this good aggregation of Holstein producers is one that should not be overlooked.

POLK STATE SCHOOL TO SELL 101 HEAD

Purchasers from far and near will be expected to attend the sale of 101 purebred Holsteins to be held at Polk, Venango County, Pa., February 26-27. These animals will be offered by the Polk State School, owners of the largest Pennsylvania Holstein herd and we also believe the largest accredited herd in the Keystone state. This herd has been built up by many years of painstaking work during which strict attention has been paid to producing capacity. The result is a herd that is a credit to all who have had anything to do with it. The story of the Polk State School herd was carried in the December 8th issue of the BREEDER AND DAIRYMAN. From this we learn that the herd has been in existence nearly twenty-five years, being started April, 1899, by the purchase of six cows and a herdsire. With the possible exception of the herdsires all animals in the herd are descendants of the original cows. An inventory was taken of the Polk herd in early September, 1923, and at that time the herd numbered 329 purebred Holsteins. The breeding and production records of the herd have been kept ever since the first six cows were received away back in April, 1899. During May, 1922, the 140 cows and heifers in milk averaged 4.567 lb. daily and for an entire year ending May 31, 1922, the average daily production was 3.308 lb. while for that calendar year 36 cows and heifers each produced over 10,000 lb. milk. A number of good records have been made in the herd although less attention has been paid to making records than to insuring productive capacity as the milk was required for the inmates and their attendants and so a steady amount was required the year round.

A number of splendid sires have headed this herd. One was King Champion Jannek, No. 72,882, who has around eighty daughters in the Advanced Registry and several of whose daughters have made state records. Another sire was King Pontiac Dean Korndyke, who was full brother to King Pontiac Beryl Korndyke, whose daughters have made great records during the past two years. The junior sire to whom many of the offerings will be bred is Brookside Waldorf Prince Abbecker, whose dam Vinnie Abbecker 2d, averaged 70 lb. milk a day and produced 25.65 lb. butter in seven days. She was by Spring Farm King Pontiac and from a 26-lb. daughter of Tidy Abbecker Prince. The junior sire was by Sir Pontiac Waldorf Pietje whose dam has made three seven day butter records above 32 lb. and has a 36 lb. four-year-old daughter.

The animals in the Polk State School herd are noted for their size as well as for breeding and production. The mature cows average between 1,500 and 1,600 lb. and they are remarkable for their long rumps, straight top lines and deep barrels. The dates selected for the sale are February 26 and 27.

THE VALUE OF A HOLSTEIN SIRE

A dairy farmer named Peter Koelsh living near Standish, Michigan, has in his herd a couple of cows that are half-sisters. The mother "Snow" is a grade Holstein. Her daughter Bess was sired by a purebred Holstein bull but the other daughter Dolly was sired by a scrub bull of Shorthorn type. During the three months beginning with March 1923, Dolly now three years old, produced 1,224 lb. of milk and 58.4 lb. butterfat, and she earned for her owner \$24.76. Bess, the daughter of the purebred Holstein bull, was seven years old and during the same period she produced 5,528 lb. milk and 101 lb. butterfat. In other words she produced four times as much milk as did her half-sister and nearly twice as much butterfat. The record of Bess for the

six months shows a profit of \$63.78. Of course Bess had the advantage of age but yet even then it is evident that the daughter of the purebred Holstein bull was considerably the better cow.

HOLSTEINS PROMINENT

Charles Hocking, tester for the White-water, Wisconsin, Cow Testing Association, reports 331 cows under test for November, 37 of which made better than 40 lb. of butter. Nine of the ten leaders were "Black and White." The highest cow was a grade owned by Hamilton-Krause, she produced 1,389 lb. milk, 61.1 lb. fat. The herd of purebred and grade Holsteins owned by Mrs. A. Tessene stood highest with an average of 925 lb. milk, 35 lb. butterfat. Harold Nelson's herd averaged 997 lb. milk and 33 lb. of butterfat.

Pontiac Korndyke

was one of the greatest bulls that ever lived. He stands at the head of the only combination of three direct generations of Century Sires.

Our senior sire, King Rag Apple Plum Copia, carries 34 1/4% of the blood of this noted sire.

How would you like to own a son of "King" from one of our high bred cows? They are priced to sell. Our herd is under State and Federal Supervision and our last test was 100% CLEAN.

Cow Testing Association Reports

SOUTH CAROLINA TESTS

Mildred Korndyke Cornucopia owned by V. M. Montgomery of Spartanburg led all the purebred cows tested in South Carolina during the month of December by a production of 93.7 lb. fat, 2,402 lb. milk as a senior four-year-old. Her stable mate, Reverkale Johanna, a senior two-year-old stood in sixth place with a production of 72.5 lb. fat, 2,130 lb. milk. Next to her came Helen Queen Ona owned by the Clemson College with 67.3 lb. fat, 2,217 lb. milk as a two-year-old. Sigsby Farm Mildred owned by Kai Schwensen of Spartanburg was next with 65.5 lb. fat, 1,829 lb. milk while in tenth place was Wellsland Mildred Johanna with 2,139 lb. milk, 67.7 lb. fat. Princess Ona Magician, the great Clemson College junior two-year-old produced 1,705 lb. milk, 50.7 lb. fat. This is the last month of her lactation year. The Montgomery herd was represented by eight cows that produced 40 or more pounds of fat in the month and nine of the honor roll cows were owned by J. T. Willard also of Spartanburg. A registered Jersey cow was in second place and registered Guernseys were third and fourth, all exceeding 80 lb. of fat in the month.

A number of creditable official records are reported, the most noteworthy being that made by O. K. L. Katie Paul, a daughter of Ormsby Korndyke Lad owned by V. M. Montgomery. The Clemson College news letter credits her with 452.6 lb. milk, 26.18 lb. butterfat or 32.73 lb. butter, this as a junior three-year-old.

HOW ONE ASSOCIATION OPERATES

Merwin Doughty, tester for Cono Township, Oelwein, Ia. reports the standing of the herds in the Cow Testing Association under his charge. During December 24 herds containing 244 cows were tested. The high herd consisted of eleven Holsteins owned by Guy Stoddard and their average was 1,375.6 lb. milk, 46.1 lb. fat. A ten cow Holstein dairy, owned by Fred Pieplow of Aurora, was second with an average of 1,515.5 lb. milk, 39.6 lb. fat. The average production for all the herds was 744 lb. milk, 30.1 lb. fat. Fifteen cows each produced over 50 lb. fat in the month and 41 over 40 lb. There are twenty-four purebred bulls in the herds enrolled in this association. The members of this association meet periodically for business and social reasons and are talking over the advisability of having a regular meeting night every month. This will be voted upon at the next gathering.

On Friday evening, December 28, they listened to a talk on the Hawaiian Islands given by Louie Thomas, who has just returned from Uncle Sam's Island possessions. Mr. Thomas told of agricul-

ture in the Islands and farming methods. The members were greatly interested in his talk of how the two principal crops, bananas and pineapples are grown.

COLUMBIA COUNTY HOLSTEINS PRODUCE

The Columbia County Cow Testing Association has completed its second full month of the present testing year. During December there were twenty-five herds with a total of 250 cows tested. The average daily production of the cows in milk was 22.9 lb. milk, thirty-four of them being dry when the test supervisor visited the farm. The average fat percentage for the month was 4.2%. During December 35 cows produced 40 or more pounds butterfat while 13 exceeded 50 lb.; 40 cows gave over 1,000 lb. milk and 21 exceeded 1,200 lb.

The high cow was Plum Aaggie, a purebred Holstein owned by J. A. Patterson. She produced 2,077 lb. milk with an average test of 4% thus making 83.1 lb. fat in the month. A Guernsey-Holstein grade produced 80.4 lb. fat and a three-year-old Holstein owned by Henry Eves made 1,634 lb. milk, 78.4 lb. fat. Other Holstein owners listed on the honor roll were W. J. Fairchild, Berwick, Pa., and Clarence Reece, also of Berwick who each had four while J. A. Patterson had seven in the list.

WIN ALL HONORS

All the honors in the Weyauwega-Baldwin Mills Wisconsin Testing Association were taken by black and white cows during December. Seven grade Holsteins, owned by Peter Hansen, carried off high herd average with 52.5 lb. fat from 1,520 lb. milk. A member of this herd was the leader for butterfat production with 81.5 lb. fat, 2,263 lb. milk to her credit. Second for fat production but first for milk was a purebred Holstein owned by Geo. Lindsay & Sons, of Manawa, with 2,399 lb. milk, 74.4 lb. fat.

BUILDING A PROFITABLE HERD

A registered Holstein two-year-old heifer, owned by Clifford Smith of Elsinore, California, and enrolled in the Riverside County Testing Association is averaging 30 lb. butterfat per month. Among the rules governing this association is one that requires all enrolled herds to be headed by a purebred sire. Part of the milk of the Smith dairy herd is sold by the Elsinore Dairy and the balance is shipped to Los Angeles.

During the two years that Mr. Smith has been a member of the Association he has increased the average production of his cows from 30 lb. to 36 lb. fat. Mr. Smith states that when he engaged in the dairy business he had very little knowledge of the industry. The first test was made by supervisor Mark Butterfield in October, 1921. Cows that did not come up to a certain standard were sold at beef prices. Mr. Smith intends to increase his production standard and cull his herd until it consists of only cows that have butterfat records of 350 lb. or more in a year.

HOLSTEINS DO WELL IN WASHINGTON

The average milk production during November in the Grays Harbor Cow Testing Association was 652 lb. and the average fat production was 27.2 lb. There were 511 cows tested in forty-one herds, 143 cows being dry. Eleven cows produced more than 50 lb. butterfat and 50 more than 40 lb. In the division for herds containing less than fifteen cows an Ayrshire herd was first with an average of 892 lb. milk, 36.4 lb. fat but they were closely pressed by a Holstein herd owned by Ed Cavett of Oakville, with an average of 1,059 lb. milk, 36.1 lb. fat. In the herds containing fifteen or more the leaders were seventeen Holsteins owned by C. F. Brittain, Montesano, Wash., with an average of 1,130 lb. milk, 37.7 lb. fat.

OUR SIXTEEN COW DAIRY

PRODUCED 880 LB. MILK IN A DAY, TEST SUPERVISOR'S FIGURES. THIS IS AN AVERAGE OF 55 LB. FOR ANIMALS OF ALL AGES.

COME AND LOOK 'EM OVER.

PRICES REASONABLE.

BRADFORD COUNTY

WYALUSING, PA.

JEFFRIS HAS GOOD COWS

The highest producing herd in the Tomahawk Testing Association for the month of December consisted of nine registered Holsteins with an average of 1,110 lb. milk, 36.3 lb. butterfat. This number included one stripper and was owned by M. R. Jeffris, of Jeffris, Wis. Each cow in the Jeffris herd was fed a balanced ration according to the amount of her butter production. The average returns above cost of feed was \$9.63 per cow for the month. A grade Guernsey owned by a new member of the Association was the leader of the 416 cows. She produced 68 lb. butterfat, 1,236 lb. milk. Jeffris cows were second, third, fourth, and fifth and purebred Holsteins owned by the Lincoln County Home were in the next two places. Inka Pauline De Kol, a four-year-old registered Holstein was in second place with 1,629 lb. milk, 55.4 lb. fat. Lady Hilda Mercedes 2d, a three-year-old of the Jeffris herd produced 1,409 lb. milk, 50.7 lb. butterfat in twenty-six days.

HOLSTEINS LEAD IN WISCONSIN

During December, 306 cows were tested in the Milton-Edgerton Wis., Cow Testing Association. Forty-eight cows produced between 40 and 50 lb. fat and fourteen exceeded 50 lb. The leader was a purebred Holstein, Flora, owned by J. W. Jones, Milton Junction, with a production of 1,587 lb. milk, 79.4 lb. butterfat. Second was another purebred Holstein, Marie, owned by E. P. Coon, also of Milton Junction, with 1,407 lb. milk, 67.5 lb. fat to her credit. Grade Holsteins were third and fourth and purebred Holsteins in the next three positions. Nine herds averaged over 30 lb. fat for the month, the high herd consisting of grade Jerseys with an average of 975 lb. milk, 44.5 lb. fat for ten cows. The grade and purebred Holstein herd of G. S. Rice of Milton was second with an average of 1,171 lb. milk, 42.3 lb. fat reports tester F. W. Daebel.

CAN YOU SEE THIS

Joseph See had the high cows for both milk and butterfat production in the Marshfield Cow Testing Association for December, reports W. Wust, Tester. The leader for fat production was a grade Holstein with 1,822 lb. milk, 74.7 lb. fat to her credit while the milk leader, also a grade Holstein, produced 73.2 lb. fat from 1,928 lb. milk. The nine registered and grade Holsteins in Mr. See's herd averaged 1,175 lb. milk, 44.6 lb. butterfat, and were in second place in the association.

BLACK-AND-WHITES FIRST

Five black and white cows, grade and purebred, owned by Chris Weller, led the Buena Vista Wisconsin Cow Testing Association for December, reports W. F. Belter, tester. This herd is credited with 1,025 lb. milk, 37.6 lb. fat. A grade Guernsey herd was second with 36 lb. butterfat and ten grade Holsteins owned by Welch Brothers, was third with 929 lb. milk, 31.6 lb. fat.

BARRON BREEDERS BUSY

Barron County, Wisconsin, will soon have eight active cow testing associations. The latest to be organized is the Barron County Testing Association No. 2 and this is necessary because of the great demand for membership in the Barron Associations.

One of the first men to sign up is Richard Peters, who recently purchased a large farm near this city and renamed it the Barron Holstein Farm. Mr. Peters purchased the herd of purebred Holsteins formerly owned by J. M. Hulbert of Turtle Lake.

Mr. Hulbert, who sold his entire herd to Mr. Peters, is again starting in the business and recently purchased twenty head of purebred Holsteins from around Lakeville, Minnesota. His new herd will be headed by King Segis Pontiac Major, recently acquired from Drs. G. W. and Clark C. Post.

HOLSTEINS LEAD EATON ASSOCIATIONS

Holsteins enrolled in the three cow testing associations of Eaton County, Michigan, made great records during December. The herd of C. E. Burke, a member of the South Eaton Association averaged 1,774 lb. milk, 58.3 lb. fat. One registered cow produced 2,064 lb. milk and 82.6 lb. butterfat while another cow made 2,469 lb. milk and just 79 lb. butterfat.

A registered Holstein owned by G. Vern Ripley enrolled in the West Eaton Association gave 2,517 lb. milk, 88.1 lb. butterfat. A registered Holstein owned by Clare Figg of this Association produced 1,406 lb. milk which averaged 5.7 per cent equal to 80.1 lb. butterfat.

HOLSTEIN LEADS COLORADO

Parthena Nudine, owned by the Modern Woodmen Sanitarium at Colorado Springs, was the leading milker of Colorado during November with a production of 2,823 lb. milk. The high herd for the state was owned by Geo. T. Sinton of Colorado Springs. This herd of purebred Holsteins averaged 1,487 lb. milk, 81.2 lb. fat and the feed cost per pound of fat was 36 cents. The Sinton herd ranked fourth in the herds numbering fifteen or less cows in the ten states under the supervision of the United States Western Dairy Division Office located at Salt Lake City.

SECOND AND THIRD

Ten registered Holsteins owned by Wm. Meisegeier, Barron, Wisconsin, formed the dairy that took second place in the Almena Cow Testing Association for the month ending December 8th. They averaged 852.1 lb. milk, testing 1.53% and they averaged 30.1 lb. butterfat. Buttercup, a member of the herd made 1,732 lb. milk, 61.1 lb. butterfat. Third place was taken by the dairy of W. D. Moore, whose twenty-four registered and grade Holsteins averaged 787.1 lb. milk, 28.3 lb. butterfat, their average test being 3.6%.

We Don't Keep Holsteins

They keep us
so our 125 head
are bred for every-
day and all the year
'round production.
Oh! Boy!

How they do milk!
They are good indi-
viduals too, that
straight-backed,
big-barrelled kind,
carrying large, square
udders, with a teat on
each corner.

You won't have
to hide any stock
you get from

HOLSTEIN TOPS ASSOCIATION

The Columbia County Association of New York State has ended its second month of its present year, reports the tester, Ralph Russell. All previous records for milk and butterfat have been broken by Ruth Dutchland Colantha, a purebred Holstein owned by W. S. Crandell of Valatie. This cow had a number of large association records but this year is doing better than ever and recently produced 2,161 lb. milk, 86.4 lb. butterfat in the month. The highest previous record was held by Sylvia, a purebred Holstein owned by H. J. Mills of Kinderhook with 1,828 lb. Dutchland is now eight and one-half years old and was milked but twice a day.

Mr. Russell gives credit to the Dairy-men's League for the agitation in Albany for better milk which resulted in many herds being tuberculin tested and has stimulated dairymen to qualify for Grade A rating.

HOLSTEINS LEAD IN VIRGINIA

The Northern Valley Cow Testing Association, an organization which comprises dairies in Frederick, Warren, Clarke and Shenandoah Counties, Virginia, was formed in November. It had twenty herds containing over 800 cows enrolled. The best average during November and December was made by a purebred Holstein herd owned by George K. Logan, of Woodstock. Second place went to a herd of grade Holsteins owned by Harry Hottell, of Strasburg and third place went to the purebred herd of W. L. Golliday, of Woodstock.

The leading producer for the month of December was a purebred Holstein of the Logan herd. The second cow was a grade Holstein owned by R. S. Joliffe, of Winchester, while grade Holsteins were third and fourth.

HOLSTEINS LEAD BYRON ASSOCIATION

Nineteen registered Holsteins owned by Fred Backhaus of Oakfield, Wis., led the Byron Cow Testing Association for the month of December. This herd averaged 1,222 lb. milk, 40.4 lb. butterfat, reports A. C. Cowles, secretary of the association. A member of this herd was high milk producer, she being credited with 2,114 lb. milk, 57 lb. butterfat. The leader for butterfat production was a registered Holstein in the herd of Meadow Springs Stock Farm with 1,860 lb. milk, 76.2 lb. fat. Another purebred black and white in the same herd is second with 72.3 lb. fat from 1,903 lb. milk, the second high milk production. The tester is R. G. Thurman.

AAGGIE AGAIN IN FRONT

Aaggie, the famous grade Holstein owned by Sam W. Barber of Scottsburg, again led the Dairy Improvement Associations of New York State during the month of October. Aaggie produced 107.7 lb. fat, 2,833 lb. milk. A Holstein owned by the Kenotin Farm, New Hartford, led

the Oneida Association with 84.5 lb. fat, 1,760.8 lb. milk. Shay, a grade Holstein, owned by F. Culbertson & Sons of Dansville, was second in the Livingston Association and third in the state with the production of 1,751.5 lb. milk, 84.1 lb. fat. Kenotin Farm's Holsteins occupy fourth and fifth places, one producing 82.1 lb. fat, 1,745.3 lb. milk and the other 79.5 lb. fat, 1,767 lb. milk.

THE USUAL IN WISCONSIN

No less than 86 of the Wisconsin Cow Testing Associations reported for December production were headed by black and white cows, there being 36 registered Holstein leaders and 50 grade Holsteins in first place. There were 22 grade Guernseys and 5 registered Guernsey leaders. Two native cows were in first place and three Jerseys.

The leading producer was a registered Holstein owned by J. C. Miller of Pickett and enrolled in the Rosendale Association. She produced 96.8 lb. fat. She was followed by another registered Holstein owned by R. L. Ray of Eau Claire with 95.2 lb. fat. A registered Holstein owned by Leo Kuhl & Son of Hazel Green is third with 92.2 lb. fat. Grade Holsteins occupy fourth and fifth places.

The high herd consisted of thirty cows owned by C. A. Rick and enrolled in the Connersville Association. They averaged 77.4 lb. fat. A five cow dairy of registered Holsteins, owned by L. R. Shanger averaged 62.5 lb. fat. Nine grade Holsteins owned by G. Werning averaged 58.7 lb. fat; the twelve cow dairy of Leo Kuhl & Son averaged 56.9 lb. fat and the registered Holstein herd of fifteen cows owned by R. L. Ray stood in fifth place with an average of 56.6 lb.

VIRGINIA HOLSTEINS PRODUCE

Five hundred and ninety cows enrolled in the Henrico Cow Testing Association which operates in Henrico County, Virginia, produced an average of 628 lb. milk during December. The tester, Sterling Simpson, reports that the three high herds produced just about twice as much milk as the three low herds in the association. Princess Aaggie, a purebred Holstein, owned by H. W. Gills was the leader with 1,473 lb. milk, 73.6 lb. butterfat to her credit. Purebred Black and Whites occupied second and third positions and were owned by the Minniberya Farms, one producing 73 lb. butterfat from 2,325 lb. milk and the other 61.5 lb. fat from 2,117 lb. milk. A herd of thirteen Guernseys carried off high herd honors and the second high herd consisted of thirty-two registered Holsteins, owned by R. N. Pemberton, of Richmond, Va.

When the best of your dreams are punctured and you limp in on the rims,

When your tank of ideals is empty and trouble your vision dims;

When you're miles from the goal you're seeking and to reach it your heart despairs,

That's not the time to give up, but to get out and make repairs.

Westov. Changeling Magnolia

a daughter of the 40 lb. sire, King Korndyke Dekol Changeling, and from a 20.5 lb. four-year-old daughter of Tidy Abbecker Prince.

We offer a fine bull calf from this beautiful heifer. He is sired by a son of Sir Aaggie Mead De Kol and is backed by a wealth of long distance records and breeding.

Herd established 1901 and under State and Federal Supervision.

ARIZONA BUYS FROM IDAHO

Idaho Matador Conqueror, No. 384967, has been purchased by the University of Arizona from the University of Idaho. The young herdsire is now twenty-two months of age. He is of good type and well grown. He was sired by Matador Violet Idaho, the great show bull that stood at the head of the University of Idaho herd for two years and was then leased by the University of Nebraska. This bull is a son of King Segis Matador Walker, the oldest son of Matador Segis Walker. King Segis Matador Walker had only twelve daughters but these daughters have made a splendid showing in the University herd. One has made over 30,000 lb. milk and three have exceeded 1,000 lb. butter in a year and all were under mature age at the time of making these great records. Four daughters of this bull have made over 30 lb. butter in seven days.

The dam of Matador Violet Idaho is Idaho Violet Posch Ormsby a cow that three different years has made over 1,000 lb. butter and a cow that has a year record of 26,812.5 lb. milk, 1,259.26 lb. butter. Old Violet, as she is generally called, has made a number of state records and is the best known cow in the state.

The dam of the University of Arizona's new herdsire was Idaho Segis Ormsby Girl, a cow that has made a number of records. She produced 24,057.1 lb. milk, 1,019.48 lb. butter in a year commencing the test when only four years, three days old. After completing the record she freshened with her third calf and made 634.7 lb. milk, 34.8 lb. butter in seven days. She is now in long-time test and is expected to beat her record of last year. She is a daughter of King Segis Matador Walker and Ormsby Girl 2d, a cow that has a year record of 776.48 lb. butter, 16,724.6 lb. milk made as a four-year-old and with very ordinary care. This cow has three good record daughters in the University of Idaho herd.

The two nearest dams of Idaho Matador Conqueror have year records that average 25,434.8 lb. milk, 1,139.37 lb. butter and his three nearest dams average 22,531.4 lb. milk, 1,018.41 lb. butter. Both his dam and sire's dam have each milked over 105 lb. in a day on strictly official test and have seven-day records that average 666.2 lb. milk, 33.5 lb. butter. Idaho Matador Conqueror is the third bull bred in the University of Idaho herd to stand at the head of a state University herd. This herd consists of 37 animals and is on the accredited list. In fact, this is the fourth consecutive year this herd has been accredited.

OWNS ONE HUNDRED MILKERS

J. E. Dresel of Helena, Montana, recently purchased thirty young Holsteins around Whitehall and now has one hundred milkers. The animals were between two and three years of age and originally formed part of the Levensworth herd at Twin Bridges. Richard Ringling of White Sulphur Springs recently purchased part of this herd.

FERN STANDS IN FRONT

Fern Pietertje Cornucopia De Kol, bred, owned and developed by Charles E. Hay of Meadow Brook Farm, Findlay, Ohio, recently completed a year of test work. She is credited with 25,176.9 lb. milk, 987.5 lb. butter, which is said to be the highest record made by any cow in the district between Columbus and Toledo. She was milking 40 lb. a day at the end of her year's work. Fern's highest day was 104.6 lb. milk and 3.3 lb. butter. Her best week was 649.5 lb. milk and her best month was 2,949 lb. milk. Another member of the Meadow Brook Dairy finished a year record at the same time and is credited with 19,387 lb. of milk and 831 lb. butter. Two cows recently finished ten months records, one making 15,283 lb. milk, 716 lb. butter and the other 15,680 lb. milk and 635 lb. butter. Three two-year-old heifers are now on test and at the end of the first eight months each one has produced about 10,000 lb. of milk and more than 400 lb. butter.

Two Yearling Heifers from an Accredited Herd. Sired by our son of Model Daniel Glista and a 27-lb. cow that averaged 91½ lb. milk daily. Dams are of record backing. \$150 takes the pair. MAPLE GROVE STOCK FARM, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

How About a Nice Bull Calf

from one of our great cows for your next sire?

Our herd includes daughters of such famous sires as King Segis Pontiac Konigen, Dutchland Cream-elle Korndyke Lad and King Hengerveld Hartje. Nearly all have A.R.O. records and this includes 20 lb. two-year-olds.

Our herd is under State and Federal Supervision and the last test was clean.

FAILURE TO BREED, ABORTION, Etc.

in all animals Guaranteed Cured. The following Testimonials are a proof of our reliability.

Fond du Lac, Wis.
August 10
Mr. Boardman:
Dear Sir: Your abortion cure is great. It has stopped the disease after the heifer had started to spring, reduced her udder to normal size, and she carried her calf until due, which was strong and healthy.

Very truly,
E. C. Peebles.

Seymour, Conn.
Aug. 14, 1923

Breed-O Remedy Co.
Bristol, Conn.
Gentlemen: Inclosed please find order and payment for one bottle of Haboriri and Mediator. Back in 1890 I used Haboriri on a pedigree two-year-old Jersey Cow, that for some time failed to breed. She "got with calf" and bred without trouble until old age. Address of Maker was lost or I should have tried to get more in later years.

Yours truly,
Smith Holbrook.

CANADIAN HOLSTEIN EXPORTATION

During the recently ended year the first shipment was made of Canadian dairy cattle from Canada to Hong Kong, China. At the request of authorities in that far eastern station, the Canadian livestock commissioner collected thirty-two purebred Holsteins from dairy farms on the Pacific Coast and sent them to the island as foundation stock.

Canadian Holstein men pride themselves on the extent of their foreign trade. Last summer Sir Romeo Fayne, one of the greatest show bulls of recent years and a prize winner at many great Canadian livestock shows, went from a farm at Sault Ste. Marie to Japan being purchased by representatives of the Japanese Government. In 1922 at the request of the Japanese Consul General, the Dominion Department of Agriculture assembled a shipment of six high-class young Holstein cows each with a splendid production record and shipped them from Vancouver to Tokio.

A regular export business has been developed between the Dominion of Canada and the Dominion of Australia and only recently an Australian buyer selected five splendid show animals from Ontario herds and personally shipped them across the Pacific. A New Zealand buyer who bought a number in this country last June made a number of Canadian purchases.

Canadian cattle men claim that the Hawaiian Islands obtained their first purebred dairy stock from that country when a consignment of Holsteins and Jerseys were shipped to stockmen living around Kahalui, on the Island of Maui. They did so well that since that time there has been a number of other shipments.

But the United States is counted as Canada's best customer for purebred stock. Buyers from south of the line are to be seen at nearly every important Canadian sale of dairy stock and there is a fairly steady movement of purebred cattle southward across the border.

The total number of purebred cattle exported from Canada for breeding purposes, during the past year, was 542 all of which were dairy cattle. The value of these was \$128,072 of which 498 worth \$117,422 went to the United States. The previous year the number of cattle purchased by United States breeders were 667 worth \$272,085 while during 1921 the figures were 1,342 worth \$635,085 and during 1920 there were 1,270 animals worth \$616,337. These are simply the figures for purebred animals purchased for breeding purposes.

BACKED BY LARGE RECORDS

George Roberts & Son of Deansboro, N. Y. recently purchased King Homestead Segis De Kol, whose dam has a seven day official record of 630 lb. milk, 30.48 lb. butter made as a senior four-year-old. The six nearest dams of this bull have seven day official butter records that average better than 34 lb.

Near Milking Time!

THE ORIGINAL MILKING HERD AT DENNINGTON

Animals in this herd have milked above 75 lb. a day on two milkings and done this right along.

To these desirable animals have been added choice bunches of purebred Holsteins purchased at private and public sales. They were selected for individuality and type as well as for capacity for production. No reason-

able expense has been spared to get real good stock, animals that will, by their work at the pail, **PAY A PROFIT OVER THE COST OF THEIR FEED AND CARE.** They are being bred to

Onaco Sir Lucille Jolie Beauty

whose dam and sire's dam each made **World Records** for year butter production as four-year-olds. This pair of great cows averaged 1,233.93 lb. butter, 24,808.85 lb. milk in their year test, the milk of the dam aver-

aging 3.94% fat and the sire's dam averaging 4.02%. In seven-day test his dam produced 33.29 lb. butter and the sire's dam 32.88 lb. Each produced 665.5 lb. milk in the week, or better than 95 lb. per day.

We have a few young bulls that we are pricing at figures so low that they will surprise you. Keep this in mind—**WE STAND SQUARELY BACK OF ANYTHING WE SELL.**

Pennsylvania Breeders Banquet at Harrisburg

THE chief social event of Farm Products Show week is what agriculturalists call the annual banquet of the Pennsylvania Federation of Holstein-Friesian Clubs. The recent event was only one of a successful series. Nearly 170 sat down to a sumptuous feed and then listened to instructive and inspiring addresses.

Dr. John M. Thomas, president of the Pennsylvania State College, was toastmaster and kept his audience amused by his drives on the speakers and his friends. After being introduced by President John A. Bell, Jr., Dr. Thomas opened with a few brief remarks in which he quoted from the biography of that grand old Holstein man, Solomon Hoxie, the father of the Advanced Registry system. Incidentally, Dr. Thomas requested his audience to use their efforts to secure more funds for higher education in the State of Pennsylvania, especially from the agricultural standpoint. He said that Pennsylvania, the greatest manufacturing state of the Union, a state which was in many respects the richest of all, paid per capita only 17 cents per year for higher education and that practically every other state in the Union appropriated more per head for this purpose.

The Susquehanna Holstein Quartet favored the audience with a number of selections which were heartily applauded and Mrs. Elizabeth C. Reinhold's songs pleased her many friends.

Secretary Frank P. Willits spoke on "Dairy Product Marketing." His speech is given in full in another part of the paper.

Joseph A. Turner, business manager of Hollins College, Hollins, Va., spoke on "Holstein Business in the Southern States, and Ethics of the Holstein Industry." Mr. Turner said that, while he was a Virginian, he acknowledged North Carolina was the most progressive southern state and in many respects the most progressive state in the entire Union. This progressivism is not confined to one thing but extended to education, manufacturing and agriculture.

In many respects the south is favored from an agricultural standpoint. Many parts of the south are underlaid with limestone. This has a beneficial effect on the stock raised on such land for some gifted writer had said that "The course of civilization has followed the course of carbonate of lime." He quoted the practice of some of the cattle feeders there. They would buy beef cattle in the fall, maintain them through the winter and when they were turned out into pasture in spring, say from April 15th to May 1st, they would weigh no more than when they were purchased in the fall. Yet with four months on grass alone they would

gain 500 lb. in weight. Such land has great dairy possibilities.

The per capita use of dairy products in the south is very low and on the contrary the consumption of dairy substitutes is very large, many of these substitutes masqueraded under false or misleading names, yet, when given an opportunity, residents of the south would buy generously of high-class dairy products. A Shreveport, Miss., creamery man manufactured a high quality of ice cream and put it on the market using a generous amount of advertising calling attention to the purity and quality of his product with the result that ice cream consumption in Shreveport tripled in eight months.

Mr. Turner got hearty applause when he said he read Plato and quoted from that old-time philosopher, "There were three classes of people, the first class never thought, the middle and greater class had only opinions and the third and smaller class thought and got somewhere."

Mr. Turner also caused much amusement and hearty applause when he said, "He would take his hat off anytime to a good dairy cow but he would kiss a Holstein."

The great trouble with the breeding industry was that too many of us wanted to exploit our markets. Many folks in the south had been stung on dairy cattle shipped from the northern states and they were discouraged from going into dairying—the most profitable branch of agriculture, one that builds the land and at the same time returns the owner a monthly milk check. He warned against the idea of "cashing in" at a National Sale rather than educating by means of a National meeting.

The speaker stressed the idea of service. The purebred livestock industry was a profession rather than a business, yet, if his audience were asked to name the four leading professions they would immediately think of medicine, law, teaching and theology. Although there were shysters in each yet these professions were noted for the service they gave. Many breeders, especially in the southern states, regarded themselves as traders rather than professional men, yet farmers are the servants of mankind. Mr. Turner quoted President Lowden, "It is to the advantage of the buyer, the seller, and the breed, that every buyer have a square deal." He advised his audience to be honest and to be friendly. Most men are honest or think they are. Two things held Associations as well as Nations together—Force and Friendliness. For thousands of years the world had been trying Force and it was time to try Friendliness. Business would have to adopt the Golden Rule.

The South is the greatest undeveloped dairy market in the United States. We are all demonstration agents, our actions are noted by those around us and in many instances copied, consciously or unconsciously. Animals should be well grown and well taken care of. It did not pay to let improved livestock "rough it" and this was one of the troubles of southern livestock owners. In his opinion, it paid to feed high-class dairy animals grain every day in the year.

Dr. R. R. Graves spoke briefly on the lessons being derived from the experiments conducted at the Government Breeding Farm, Beltsville, Md. Mr. Graves originally came from Manhattan, Kansas, and for a time was at the head of the Dairy Husbandry Department of the Oregon Agricultural College. In 1917 he took up the duties of his present position. The Government owns about 450 purebred dairy cattle, Holsteins, Jerseys and Guernseys. These are divided in herds kept in Maryland, Louisiana, Oklahoma, South Dakota and Montana while the Dairy Division was also interested in a coöperative experiment with over 200 purebred Ayrshires in West Virginia and other coöperative experiments are being conducted in Washington and Idaho.

The doctor spoke without notes. He said that breeders should select for type, production, breeding ability or reproduction and constitution. These were the four fundamental points. To explain to his hearers why animals and persons of the same family varied so greatly in appearance and capacity, he gave an explanation of the laws of inheritance as discovered by the Austrian Monk, Gregor Johann Mendel, the meaning of dominant and recessive characters. The scientists were trying to learn from the animal breeding experiments conducted by the Government. They had found there was a tremendous variation in inherited producing capacity. They have found in their Holstein-Friesian experiments that milk flow and fat tests were not correlated. It was the opinion among the public that, if by the introduction of fresh breeding stock, the milk

flow was increased that there was usually a corresponding decrease in the fat percentage, but they had found that this was not the case, that quite often there would be an increase in the milk flow as well as a slight increase in the percentage of fat, which, of course, would result in a much greater production of fat. The percentage of fat in the milk followed more closely the percentage of fat in the milk of the dam than it did the percentage of fat in the milk of the sire's dam but the sire seemed more capable of increasing the milk flow.

Experiments had been conducted in an endeavor to find out the relation of heart girth to constitution. The usual opinion was that the larger the heart girth the stronger the constitution. Scientists from the Department had measured a large number of cattle at the Chicago Stock Yards to find out if there was a correlation between the girth of the animal and the size of its internal organs. The data obtained has not yet been fully classified but they have found great variations even as much as 50%. He thought in the future there would be considerable change from our present ideas of how to estimate the value of breeding animals; we have, in the past, been giving too much weight to pedigrees in our breeding operations and in view of the results so far known he even doubted if the scoring of animals by score cards was really worthwhile.

Professor A. A. Borland, of the Dairy Husbandry Division of State College, showed a number of lantern slides illustrative of the dairy industry and the purebred industry of Pennsylvania. There are twice as many purebred Holsteins in the state as there are purebred animals of all other dairy breeds combined. Pennsylvania ranks seventh in the number of dairy cows, and fourth in the amount of milk produced, third in the number of purebreds, third in the value of condensed milk produced, third in amount of factory cheese produced, second in amount of farm cheese, second in the consumption of milk, and first both in the manufacture and consumption of ice cream.

The Omwake and Speck Herd

CLOSE to the Mason and Dixon Line on the Pennsylvania side is the progressive village of Greencastle. A short distance from the village is the breeding establishment of Omwake & Speck, home of one of the best accredited herds in Franklin County, Pa. Animals from this herd, which consists of around forty-five head, have been exhibited at near-by fairs with a considerable degree of success. One member of the show herd, Lady Westtown Segis No. 611856 has not yet reached her fourth birthday but she has been exhibited three different years and has yet to suffer her first defeat. She is a nicely marked heifer and has every indication of making a great cow. Some indication of her quality can be ascertained when we say that she headed a class of thirty at the great fair held annually at Hagerstown, Maryland. She is a daughter of Westtown Major Korndyke, a bull that traces a number of times to the great old sire, Pontiac Korndyke, and her dam, Lady De Kol Segis Pietertje, is in the herd together with two other daughters as

well as their granddam Lady Maud Hendrik De Kol, No. 163749.

The patriarch of the herd is this same Lady Maud Hendrik De Kol. Although this cow is only thirteen years old, a considerable portion of the herd consists of her descendants through the female line. She has at least four daughters in the Omwake and Speck herd. Two more of her daughters that are not now members of the herd are dams of young cows that are still there and an older daughter, Lady Maud Hendrik De Kol 2d, has left two daughters both of which in turn have heifers to their credit. Besides the old foundation cow, there are four of her daughters, six granddaughters and a number of great-granddaughters, all descended through the female line. Besides these, there are collateral relatives descended from a sister of Lady Maud Hendrik De Kol. This family of cows possess high class individuality and while perhaps Lady Westtown Segis would be given the most points if scored by a competent and critical judge yet a number of her

relatives would come very near the number of points totaled. Another cow of outstanding individuality although not related to this family is Briar Vale Jewel 2d, a daughter of Sir Tirania Segis Echo. This cow would weigh at least 1,600 lb. in her present condition and is due to freshen early in March.

The herd has been established fifteen years. The original owner was Sam Speck, who still has a partnership interest in the establishment. At a sale at Hagerstown, Md., Mr. Speck purchased from a consignment of Charles B. Nigh, of Hagerstown, Maud Hendrik De Kol 3d, then a heifer. She dropped two or three heifers for her new owner, one of which was Lady Maud Hendrik De Kol and another Queen Inka Hendrik, to whom a number of the animals now in the herd trace.

LADY WESTTOWN SEGIS
Three-year-old heifer that has been extensively shown for three years and has yet to meet her first defeat.

A number of splendid sires have headed this herd. The one that has made the most impression is Sir Colantha Pietertje Korndyke No. 108015. This bull was a splendid individual, an animal that could go in almost any show ring in the country and win high honors. This desirable characteristic has been transmitted with a remarkable degree of certainty to his descendants. His pedigree combines lines of breeding noted for production. His sire was Pontiac Korndyke and his dam was a daughter of that famous sire, so that he was a three-fourths brother to Pontiac Lady Korndyke, the first cow that ever made 38 lb. butter in seven-day official test. Colantha Pietertje Korndyke, the dam of this bull, is credited with an official record of 30.80 lb. butter, 529.9 lb. milk and she is from a 23½ lb. cow that has four tested daughters, two of which are credited with over 30 lb. butter in seven days.

There are sixteen daughters of Sir Colantha Pietertje Korndyke still in the herd and at least half of these are not yet old enough to milk. We do not know of any other herd in the country in which there are so many young granddaughters of Pontiac Korndyke.

The herd contains considerable Korndyke blood. There are several daughters of Sir Jessie Pontiac Korndyke, a son of Pontiac Korndyke from the 30 lb. cow, Fairview Jessie Korndyke and there are daughters of Westtown Major Korndyke, another strongly bred Korndyke bull. There are daughters of Tobe Veeman Pontiac Hengerveld, whose dam, Christmas Tobe 5th, has a 25 lb. seven-day butter record with nearly 600 lb. milk and who was a maternal sister to the 31-lb. cow, Christmas Tobe 2d. Tobe Veeman Pontiac Hengerveld was by King Veeman Pontiac Hengerveld, son of

King Segis Pontiac Alcartra from a 29-lb. daughter of Sir Veeman Hengerveld.

There are two sires at present in use in this herd. The older one was purchased some time ago and the majority of the cows in the herd are in calf to him. This is Ormsby Clothilde Lad, a light-colored bull of good individuality who has many daughters in southern Pennsylvania. This bull is a son of Ormsby Korndyke Lad, considered by many students of the Holstein industry to be the greatest sire of the Holstein breed. His daughters and granddaughters are not only of a high order of individuality but they have made records, both in short time and long time tests that challenge competition with those of any other family. Nor has their good work been confined to the making of records. In cow testing association work, daughters and granddaughters of Ormsby Korndyke Lad have made splendid records not only in the state of their birth but also in other districts. The dam of Ormsby Clothilde Lad is Clothilde Dot 2d, 29.73 lb. butter in a week, dam of three good record daughters. Clothilde Dot 2d was sired by Pontiac Aesula De Kol, a son of Henger-

A STUDY IN TOPLINES
Three of the big producing cows in the Omwake and Speck accredited Holstein herd.

veld De Kol from a good daughter of Pontiac Korndyke. Thus the pedigree of Ormsby Clothilde Lad carries a combination of producing blood lines bound to attract attention anywhere.

The junior sire is Champion Valdessa Jetta, a real show bull. His dam is a good record daughter of Sir Jessie Pontiac Korndyke, his sire is King Valdessa Champion whose dam is a 21-lb. three-year-old daughter of King Segis Champion and a 28-lb. cow. King Valdessa Champion is a son of King Valdessa Pontiac and so is brother to a number of young cows that have made state and world records and to the great bunch of young cows that won first prize as "get of sire" at the recent National Dairy Show.

The Omwake and Speck herd has a splendid reputation in their own neighborhood for producing ability. When the Waynesboro calf club was organized the young animals selected for the foundation stock were purchased from this herd, a sure indication of the opinion Franklin County farmers have of this establishment. Too often when calf clubs are organized the managers send away to distant points for foundation stock and so are unable to acquire the intimate knowledge of the ancestry that it is possible to acquire when the stuff is obtained from a local herd, especially when the owners are men who stand back of every animal they sell.

C. P. Omwake, partner in the firm of Omwake &

Speck, is one of the leading business men of Greencastle. He and a brother do business under the name of Omwake Bros. and deal in lumber, feed, coal, building materials, etc. Some time ago, Mr. Omwake was placed on the agricultural committee of the Greencastle Board of Trade. A study of the situation convinced him that the merchants of the town derived more business from the agricultural community surrounding Greencastle than they ever could hope to obtain from any factory that could be brought to the district, and the agricultural community was already there. So carefully did he compile the data and so convincing were his arguments that it was only a short time before the agricultural committee was by far the most important of any connected with the Board of Trade. In connection with State College authorities and the local Farm Bureau they held a Farm and Garden Products Show in November, 1922. The results were so good that another was held late in November, 1923. This time the local committee was assisted by seventeen subcommittees, each one of which was solely responsible for the work they had to do. The show had seventy-nine exhibits of corn; forty-five exhibits of potatoes; 165 plates, two barrels and 33 half bushel baskets of apples; 123 exhibits of farm products; 489 exhibits of canned goods; 976 exhibits of fancy work; 455 exhibits of poultry—all shown by 542 exhibitors. Mr. McDowell, of State College, highly commended the

enterprise of the managers and exhibitors as well as the show. The farmers coöperated with the Board of Trade, some thirty-five becoming members and there are now 189 members of the Board of Trade when two years ago there were only 30. The show was held in the public school building which was crowded to its capacity. In connection with the Farm Products Show a Farmer's Institute was held with speakers from the State Department at Harrisburg and the Pennsylvania State College.

In comparison with many noted Holstein establishments the Omwake & Speck herd is not large nor has it ever been but it has exerted an influence in Southern Pennsylvania and Northern Maryland entirely out of proportion to its size. A number of good herds were started by foundation stock secured from here. Ten head were sold in one bunch to Ursinus College, Collegeville, Pennsylvania. Mr. Omwake said he had some hesitation in selling to the representatives of the college, of which one of his brothers is president, but it was one of the best things in the history of the herd for the animals sold to the college have been a standing advertisement for them in the college herd.

The history of the Omwake & Speck herd, as well as that of the Greencastle Farm Products show, indicate the influence one high class herd and a few high class men can have on a community. This herd has been an inspiration for health as well as production, and is on the accredited herd list.

Fancher Farm Maxie

FANCHER FARM MAXIE is dead. The record of Fancher Farm Maxie No. 186389 stands at the head of the Blue Book list for seven-day butter production. The record credited to this cow is 46.84 lb. butter, 579.1 lb. milk made as a senior four-year-old away back in early January, 1917. We know of no later record of this cow but she was tested as a senior three-year-old and as a senior two-year-old, there being only two years and eleven days between the three calving dates starting the lactation periods during which her records were made.

Fancher Farm Maxie was born March 14, 1912. She was bred by and was dropped the property of Senator A. T. Fancher, of Salamanca, N. Y., and she never changed owners. Her dam was Mapledale Maxie De Kol and her sire was King Aaggie Segis, a son of King Segis and Segis Aaggie De Kol Beets, a former champion of the mature class for seven-day butter production.

Maxie first freshened at 2 years, 9 months, 11 days old. She was started in official test as soon as possible and in seven days made a record of 435 lb. milk, 21.10 lb. butter while in fourteen days she is credited with 832 lb. milk, 39.54 lb. butter. During her best seven days, which started ten days after she freshened, the average test of her milk was 3.88%, while for the fourteen days her milk averaged 3.80%, this test starting six days from freshening. Her second freshening was at the age of 3 years, 9 months, 6 days. Her records this time were 553.1 lb. milk, 33.127 lb. butter and

for a fourteen-day period the amounts credited to her were 1,108.5 lb. milk, 57.997 lb. butter. Her average test for the seven-day period at this age was 4.79% fat, and for fourteen days the average was 4.18%.

Just one year and sixteen days later Fancher Farm Maxie freshened again. In seven days she is credited with 579.1 lb. milk, 46.84 lb. butter which was the largest record in the senior four-year-old class at the time it was made. This time her average fat percentage was 6.47%. The books do not indicate that she was run more than the seven days. For purposes of comparison, the official figures of her milk and butter-fat totals, the percentage of fat in the milk and the age at the time the record was commenced are herewith given:

Age at freshening.	Length of record.	Days after calving.	Lb. milk.	% fat.	Lb. butter.
4-9-22	7 da.	6 da.	579.1	6.47	46.84
3-9-6	7 da.	7 da.	553.1	4.79	33.127
3-9-6	14 da.	6 da.	1,108.5	4.18	57.997
2-9-11	7 da.	10 da.	435.0	3.88	21.10
2-9-11	14 da.	6 da.	832.0	3.80	39.54

A few poor cows may do little permanent harm to a dairy herd but a poor sire will do untold damage. One thousand pounds of milk per year is a conservative estimate of the improvement of the daughter's production to credit of a good sire.—Prof. W. J. Frazer, University of Illinois.

Improved Markets for Dairy Products

Speech Delivered by Hon. Frank P. Willets, at the Banquet of the Pennsylvania Holstein-Friesian Federation

PHILADELPHIA is noted for the high quality of butter which it demands, higher than that of any other great market of this country. A representative of one of the largest city distributors making a specialty of ninety-two score butter, states that it sells four to five pounds of this high score butter to one of the lower grade. The increased value to the farmers marketing milk as ninety-two score rather than eighty-nine, is about fifteen cents per hundred pounds of 4% milk at the present time. I understand less than one-third of all the butter in the United States is graded as high as ninety-two, while in Denmark over 90% of all the butter sold scores ninety-two or better due to the care exercised in the production of the milk and manufacture of the product.

The City of Reading put into effect a bottling and pasteurizing ordinance. Following the passage of this ordinance, a pavement quick lunch counter in the city, catering to working men, in which the sales of milk had previously been negligible, immediately developed a trade in half-pint bottles of milk for men's lunches of several hundred bottles per day. The bottled milk was in attractive form, cooled and with an even amount of cream.

The increased consumption of all dairy products in Pittsburgh and Philadelphia is certainly traceable in large part to the Quality Control work of the Dairy Councils in both ends of the state. The work of the Pittsburgh District Dairy Council is estimated to have caused an improvement in the quality of the milk delivered at the plants in the Pittsburgh area of 25% the past year, as shown by careful records of sediment test taken regularly at the plants supplying the city.

The Inter-State Milk Producers' Association at its annual meeting in December, agreed unanimously to a proposition to set sanitary standards for the production and distribution of milk for markets within the Inter-State territory. These standards have since been approved by the majority of the Philadelphia dealers. By resolution of the Inter-State Milk Producers' Association and representatives of large distributing firms they have been referred to the Philadelphia Inter-State Dairy Council to be administered. These standards voluntarily outlined by the producers and agreed to by all branches of the industry, mean a distinct step in advance in the marketing of dairy products, supplying a much needed link in the chain which will guarantee stable and satisfactory markets for dairy products in

HON. FRANK P. WILLETS
Pennsylvania State Secretary of Agriculture.

the southeastern part of Pennsylvania.

Philadelphia was the first city in the country to manufacture ice cream from milk products alone without adding mixtures of any kind. As a consequence, the sale of ice cream in Philadelphia is the greatest per capita of any city in this country, and "Philadelphia Ice Cream" became well known in many cities as a special brand.

SOUND METHODS OF MARKETING AND ECONOMIC DISTRIBUTION

The work of the Inter-State Milk Producers' Association, The Dairy-men's League Coöperative Association and the Dairymen's Coöperative Sales Company, has been very largely responsible for the advantageous market conditions for milk in Pennsylvania as compared with the market for other farm products.

The effect of this last comparison is best shown by a chart in the January copy of the Federal Reserve Bank's monthly "Business Review." This shows that during 1921, '22 and '23 the average price of all farm products in the Philadelphia market has been as low as 120% and never above 145% of the 1913 average price, while the price of milk to farmers supplying Philadelphia through the Inter-State Milk Producers' Association, has at no time been less than 155% of the 1913 price for milk, while for months at a time it has been 200% of the 1913 price, and has averaged 175% of pre-war prices.

Similarly, if you compare the price of milk to the farmers supplying Philadelphia with that of the average of all commodities as computed by the U. S. Bureau of Labor it can be shown that, while the price of milk to farmers was much under average commodity prices during the years 1915, '16 and until July of 1917, when the Inter-State Milk Producers' Association became thoroughly organized, from that time until the present the farmers' price for milk in the Philadelphia market has averaged practically the same as the general commodity price index. During the last part of 1923 it was 20% above the general commodity price average.

It might also be noted in passing that during this same period the price of milk to consumers, due to the policies outlined by Dr. Clyde L. King, Secretary of the Commonwealth, and agreed to and put in practice by the Inter-State Milk Producers' Association and the Distributors in Philadelphia, has averaged considerably less than the general commodity price, during cer-

tain periods as much as 60% less. This last situation is due to the economic organization of milk distribution in Philadelphia with the heaviest tonnage per wagon in the country.

One of the greatest improvements in marketing methods has been in the handling of surplus milk through by-products. The skimming is now done in the country and the skimmed milk, as far as possible, used up in some profitable way, the cream being sold very largely as table cream and for ice cream. Almost no surplus milk is now shipped to Philadelphia there to be skimmed and worked up after a high freight charge has been paid on the total product. I understand the same situation holds true in Pittsburgh.

Good roads and automobile trucks have also helped in making the market conditions better in many sections.

Tuberculosis eradication by the Department of Agriculture will certainly help improve the market for dairy products in a number of ways.

EDUCATIONAL WORK FEATURING THE FOOD AND HEALTH VALUE OF MILK AND ITS PRODUCTS

Dairy Councils maintain nutrition departments which put the public in a receptive frame of mind in regard to the drinking of milk by keeping before them in different ways the food value of milk and milk products. This work is carried on through health campaigns in the public schools and by direct contact with the parents of the school children and with the mothers of the pre-school child.

Dramatic departments emphasize the work of the nutrition departments dramatizing the health principles, laying particular emphasis on the important food elements in milk. We saw an example of this dramatic work at last night's meeting in the "Health Circus" given by the boys of the Edison Junior High School of Harrisburg under the direction of the Philadelphia Inter-State Dairy Council.

Educational work in Harrisburg last year, made by the City Department of Education, State College Home Economics Extension Department, the local Farm Bureau and the Philadelphia Inter-State Dairy Council, was very largely responsible for the increased consumption in the city which was estimated by the Farm Bureau to be about 24%.

A survey of the use of dairy products and the nutritional situation of Dauphin County, conducted in connection with the same coöperative project, shows most emphatically the need of a greater consumption of dairy products on our Pennsylvania farms. The percentage of undernourishment in the country is shown to be much greater than in the city, and the number of milk-drinking children correspondingly lower. Apparently too many dairy farmers do not believe in our own products and do not realize that milk, as well as being a nutritious food, is a protective food, helping to insure against disease. I wish it were possible to duplicate in our country districts the intensive work being done to increase the consumption of milk in our large centers.

You may be interested to know that Dr. Garwood, Superintendent of the Department of Education in Harrisburg, recommends the sale of milk at recess time to all his principals and practically all the schools have

Accredited Holstein Sale

AT THE

Polk State School Farm, Polk, Penna.

FEBRUARY 26th and 27th.

101 ACCREDITED, PUREBRED, HOLSTEINS,
94 under three years old.

Ten two-year-olds; 7 Cows; 34 yearling Heifers; 33 Senior and 10 Junior heifer calves; 3 Yearling and 4 Young Bulls under a year old.

Twenty-three daughters and 42 granddaughters of KING CHAMPION JANNEK, who has two 31-lb. daughters each over 700 lb. milk in a week.

A Son of this bull from a 26-lb. cow.

Twenty-one Daughters and 25 granddaughters of KING PONTIAC DEAN KORNDYKE, a grandly bred son of the great King of the Pontiacs.

A Son of this bull from a 31-lb daughter of King Champion Jannek.

Nineteen Daughters of the royally bred young sire, BROOKSIDE WALDORF PRINCE ABBEKERK, also a Son of this bull from a 31-lb. Daughter of KING CHAMPION JANNEK.

The 7 Bulls are from cows with A. R. O. records from 21-lb. to 31-lb. butter in a week, and there are 30 heifers from A. R. O. cows up to 31 lb.

established this service. On the other hand, in our country districts, very few children have milk as a part of their school lunch and very many of them are never taught to drink milk in connection with their home meals in preference to tea or coffee. Much can be done in this connection in our local communities. Parent-Teacher Associations and local farmer groups such as Granges, Farmers' Clubs, and locals of the Inter-State Milk Producers' Association have in many cases helped the local school authorities in establishing milk service or school lunches of which milk dishes form a large component part.

I want to call attention to one thing that the Inter-State Milk Producers' Association and the Quality Control Department of the Dairy Council have done. Three years ago a survey made in one of our milk producing counties within fifty miles of Philadelphia disclosed the fact that for every thousand pounds of butter consumed by farmers in that county there were 1,038 pounds of butter substitutes consumed by farmers. As an intensive education campaign was launched to convert farmers to the use of butter in place of butter substitutes, it was pointed out to them that they owed it to the industry to consume butter if they expected to receive a reasonable price for the milk which they themselves were selling. They were also told of the greater value of butter to the health of their families.

Among the membership of the Inter-State Milk Producers' Association, which now numbers something over 19,000 members, a farmer now feels ashamed to go into a store and buy a pound of butter substitute and he will not do it if there is any chance of his being detected by his neighbors.

IMPORTANCE OF ORGANIZATION

Efforts to improve the markets as outlined above, all presuppose active interested coöperation on the part of all those engaged in the industry. This is particularly important on the part of the breeders of purebred livestock because the markets for their animals are always dependent on somebody selling the product and these breeders should be actively interested in all movements which will improve the markets for all kinds of dairy products, regardless of where produced, or regardless of what breed they may feel best adapted to their own use or that of their community.

The breeders of purebred cattle are almost always—and should be—leaders of thought in their home communities. They become most useful members of the various Milk Producers' organizations of the state and in many cases are elected to fill important offices in those organizations.

Markets for dairy products are nation wide and even international in character. In spite of the high tariff on butter, it has been coming in to the United States at the rate of several million pounds per year, being shipped from countries which are perfectly willing to pay the tariff to get the attractive prices for which butter has been selling in this country during the past few months. This tariff of eight cents per pound has undoubtedly been worth just that much in price to all dairy farmers.

Pennsylvania, through soil, climate, and typography of the land, was intended to be a dairy state. We have

at our doors and in our midst a vast army of consumers who are engaged in mining, manufacturing and marketing the coal, iron and other products for which Pennsylvania is famous. We should endeavor to market the milk of our farms to these people in such forms as they most need it, and in such forms as it cannot be readily or economically shipped long distances. I mean that we should endeavor to promote very largely the use of fluid milk, ice cream, soft cheeses and like perishable products which it is expensive to ship long distances, and should make every effort to supply the demand so created. Pennsylvania cannot begin to supply all the dairy products needed, so we will leave other products—such as butter, cheese and condensed milk to be largely shipped in from other large dairy sections of our country. From what I know of the policies which have been pursued during the past few years by our organized dairymen I feel that much has been accomplished along this line—perhaps as much as was possible during the disturbed market conditions during and since the war.

The only way in which markets can be improved is through coöperation and organization, as exemplified by what has been done in the past. The possibilities for the future are limited chiefly by the amount of organized effort that is put into the work.

Postpone Hearing in Litigation

AT the instance of Mr. Louis L. Babcock, Attorney for those who are represented as being Directors of The Holstein-Friesian Association, a hearing on the petition brought by Mr. George E. Stevenson, former Vice-President of the Association and nineteen other members was postponed from Jan. 24 and is scheduled to take place on Thursday, Feb. 14, at 10 o'clock.

Mr. Babcock served upon Mr. Van Gorder, Attorney for the breeders, a notice of Motion Returnable before Judge Pooley at the same hour to strike out Section 16 and Section 17 of the Petition. We are printing herewith Sections 16 and Section 17.

SIXTEENTH: Your petitioners further show that up to and on or about June, 1919, the fees to be paid the Secretary of the Association on the sale and transfer of any animal, for a transfer certificate was the sum of twenty-five cents, and that under the careful and prudent management of the Secretary and Superintendent of Advanced Official Registry, the surplus fund of the Association had grown to upwards of \$340,000; that at that time, the fees for such transfer were increased to one dollar, which at once became a grievous and oppressive burden upon the small farmer or practical dairyman. That previous to and at the annual meeting at Syracuse, New York, in June, 1921, a determined effort among the entire membership was made against such excessive fee, with the result that by an overwhelming majority by membership and proxy vote, such fee was reduced to fifty cents. That thereafter and on or about the month of June, 1922, at the Kansas City meeting, for the purpose of creating a so-called extension service, and entrenching and perpetuating themselves in the management and control of the affairs of the Association, the

Accredited Females for Sale

Nine cows and a few good heifers.

Daughters of the 30-lb. sire, **King Korndyke Hengerveld Veeman**.

Daughters of **Napol Prince**, whose dam is a 1,052 lb. year record daughter of a 1,056 lb. year record cow.

Granddaughters of the former World's champion four-year-old **Keystone Beauty Plum Johanna**, 1,294.71 lb. butter in a year in strict official test.

Bred to **King Ormsby Veeman Korndyke** whose seven nearest dams have A. R. O. records averaging 30.89 lb. butter.

Some due right away. Others springing.

This is your chance to secure something good at reasonable prices as I must sell.

Scranton, Penna.

Herd Under State and Federal Supervision.

then board of directors by and through a vote of the delegates present again raised such transfer fees to one dollar and a half.

Your petitioners further allege upon information and belief that over twenty thousand members of the Association are plain, every day practical farmers, who live on their own farms, do a part, if not all of the actual labor thereon. That there are some of the members of the Association who are men of great wealth, prominent politically and socially in business enterprises and circles, and it is from this class of the membership that the present board of directors and some of the officers are made up. That by and through the so-called extension service, state associations in several of the states were formed, each of which associations have been placed in charge of a man who for a paid salary has looked after such extension service, and managed the same in such a manner, as to safeguard and protect the interests of the said Board of Directors, in a political way, to the end that their management and control has been perpetuated and entrenched. That because of the great expense attendant upon such extension service, or propaganda, it became not only necessary to increase such transfer from fifty cents to one dollar and a half, but also the same coterie of gentlemen farmers composed of wealthy politicians and business men who are owners of Holstein Friesian cattle merely because of a hobby or fad, and not because it was necessary for their livelihood, from their viewpoint of self preservation, decided that it was necessary to encroach upon the surplus funds of the Association, which on the first day of June, 1923, amounted to \$459,749.54 and they served notice upon the secretary and he, as in duty bound, served notice upon the membership, that a motion would be made at the annual meeting in Cleveland, to take \$93,000 out of such surplus fund, and expend it in said so-called extension service, with the result that \$47,000 or more was actually taken from said surplus fund, and was devoted to the ostensible purpose of benefiting the breed through the so-called extension service. That through the operation of the so-called extension service a certain portion of said one dollar and fifty cents transfer fees and the accumulations therefrom, namely, fifty cents on each transfer, are made payable to organizations formed in various states for the purpose of the so-called extension service, with the result that a half-dozen of the states which have greater membership than others received a very large proportion or one-third of such fees, which are again used in an effort to perpetuate this same coterie of gentlemen farmers, in their control of the association. Your petitioners allege that no benefit whatever accrues to any member of the association from this so-called extension service, except these few "Gentlemen Farmers, politicians and business men," above noted.

SEVENTEENTH: Your petitioners further allege that the increase of the transfer fee to one dollar and fifty cents and the diversion of a one-third part thereof from the treasury of this association into the hands of these so-called state associations to expend as they see fit, is in contravention of the letter and spirit of the articles of the Association or charter of this association and in contravention of the laws of this state and are *ultra vires*, illegal and irregular.

That showing how easily the affairs of the Association are controlled it is only necessary to point to the attendance of the 1922 meeting at Kansas City, when only 75 delegates were in attendance and to the 1923 meeting in Cleveland, when only 84 delegates were in attendance; these delegates each year were selected by these state organizations of this so-called extension service, the leaders of which are always selected and approved by the executive committee of this same political board of directors and in this connection, your petitioners allege that in the final analysis of the action of the board of directors, with reference to these transfer fees, and the treasury surplus, it amounts practically to a looting of the treasury and is not in the best interests of the association nor the great membership thereof, scattered throughout the United States and your petitioners further allege that the increase of such transfer fee to one dollar and fifty cents was illegal, and that such transfer fee is of right and should be at the rate of fifty cents for each transfer as fixed and determined at the Syracuse meeting in June, 1921.

The above sections, as long as they are in effect, will stop the Misappropriation of the breeders' money and the Association's funds and it is quite natural that the Directors, the State-Paid Secretaries and *The Holstein-Friesian World* will want these sections stricken out of the Petition.

We do not wish to be placed in a position as predicting what action the Court will take in this matter, but we believe the best interests of the breeders will be served and 90 per cent of the members will be pleased if Section 16 and Section 17 are allowed to stand.

Seventeen farmers are members of the New Salem, N. D. Breeding Circuit and only one has a mortgage on his place, in spite of six years of poor grain crops. The circuit was organized in 1910 and that year they had 32 purebred cows on the circuit. Now they have 254. Since they started they have sold purebred Holsteins into the States of Oregon, Montana, Wyoming, and Minnesota, and into 51 counties in North Dakota.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

February 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Waking Up

STANLEY COMBS, of the North Carolina Agricultural Experiment Station, has been appointed by the Holstein-Friesian Association of America as fieldman in the southern states. The appointment was announced from Chicago, January 12th.

Mr. Combs is a graduate of the Kansas State Agricultural College. For the past nine years he has been engaged in experimental work in North Carolina and has put in considerable of his time in dairy cattle extension work.

For more than two years the HOLSTEIN BREEDER AND DAIRYMAN has endeavored to point out to those who are in charge of the Extension work of the Association, that the field in which their time and efforts could most profitably be spent was the southern states, the great undeveloped dairy area of this country. Until now no attention has been paid to what should have been apparent from the very start. The work has been centered on these states which have the largest number of breeders of purebred Holstein cattle where every owner of a purebred Holstein is really an extension agent. Does the appointment of Mr. Combs mean that those who have been spending the breeders' money have at last seen the light?

Taxation of Purebreds

LOCAL assessors in rural communities are confronted with the problem of placing a taxable value on purebred livestock. Notwithstanding any increased value that purebred cattle might possess, the assessor, in fixing his appraisement, should not overlook the great asset that purebred livestock are to

a community other than their taxable value. A purebred bull may be the means of adding materially to the wealth of a community and so it would seem unreasonable to place a heavy tax upon such an animal. If bulls are to be taxed we believe that a double tax should be placed on scrub animals for they are detrimental to the community.

The Secretary of a Connecticut Assessment Commission wrote the United States Department of Agriculture asking their opinion on assessing purebred cattle and also for information on the policy of the United States Government with regard to encouraging farmers to keep purebred animals.

The reply of the Government is certainly satisfactory to owners of purebred livestock for it says that reasonable effort should be made to encourage the production of purebreds and that the Department encourages farmers to keep purebred cattle. The exact words follow:

"Purebred cattle should be assessed little, if any, higher than grade cattle for the purpose of local taxation, lest someone be discouraged in keeping good cattle, which are of considerable value to a community on account of their ability, in most cases, to improve the common stock and thus increase the wealth of the community. The Department of Agriculture is trying to encourage farmers to keep good purebred cattle. Regardless of their market value as purebreds, their value for improving the common stock of the country is being gradually increased as improvements are being made by selective breeding. Consequently, every reasonable effort should be made to encourage their production."

An Ever Present Menace

DANGER to the livestock industry of the United States from foot-and-mouth disease is ever present. While there are no cases in this country nor in the neighboring countries of Canada and Mexico, yet during the past year there has been cases in Jamaica and there is always possibility of infection from Europe and parts of South America where the disease is prevalent. Despite rigid enforcement of quarantine and the slaughter of infecting animals, Great Britain reports 2,166 outbreaks in a little more than four months. The total number of cattle slaughtered to prevent spread of the disease was 74,100 while 26,375 sheep and 35,202 hogs were also killed in an effort to stamp out the trouble.

There is always a possibility of infected material being used as packing for glass, crockery and similar articles imported into this country. In eight months no less than thirty-six shipments of crockery shipped from Europe and packed in hay or straw have been found by Pennsylvania meat inspection officials. This material was burned immediately but there is always a prospect that some may get by. The memory of past foot-and-mouth outbreaks in this country with the resultant losses to owners and to the livestock industry is sufficient evidence that no effort should be left undone to prevent any reinfection.

It has been proposed that regulations requiring immediate disposal of hay and straw used as packing

material should be enforced either by federal authorities or by local authorities cooperating with them. We would go a step farther and have an embargo placed upon hay and straw coming from countries where foot-and-mouth disease now exists. Other packing material such as excelsior can be used and the enforcement of such a rule would inflict very little hardship upon importers and may save this country hundreds of thousands of dollars.

Too Much Propaganda

HUMAN beings will have to be equipped with rubber stomachs says a western writer, if the public follow the advice so freely given them to eat more and drink more.

Successes in the mercantile and manufacturing worlds as well as the need of having work for themselves has induced writers of advertising to claim that most of the successes achieved in merchandizing were the results of advertising when the facts in the case are that the articles put on the market had intrinsic merit or else appealed to the palate or taste of the public. Almost every conceivable kind of food is being advertised and its qualities and value for nutrition are kept constantly before the public. Fruit, bread, meat and even vegetables are being generously advertised. Now comes the President of the American Poultry School, who urges that poultrymen and all interested in manufacturing poultry supplies get together and advertise the value of eggs as food.

From the President downward the leaders of this country have, during the past few years, preached diversification to the farmers and they have been seconded in their efforts by agricultural college teachers. If every product of the farm is to be advertised and if every producer has to contribute toward the advertising fund, what will become of the man who keeps a few cows, a pig or two, some turkeys, geese, ducks and chickens, grows a little fruit and ships a few potatoes or some other cash crop?

If he has to pay advertising toll every time he or his wife go to market or if he only pays part of the toll and the purchaser pays a portion and if every product of the farm is advertised, who in the end will be better off? Who pays the bill?

Volume Fifty Ready

VOLUME fifty of the Holstein-Friesian Herd Book is being mailed from the office of the Secretary. It contains the registration data of 66,400 animals, bringing the total number of animals registered in the Holstein-Friesian Herd Book to 1,217,200, of which 400,600 are males and 816,600 females.

This volume contains the registration activities of the Secretary's office for a trifle more than one-half year, the period from September 1, 1922, to March 15, 1923. It also contains a condensed report of meetings of the Board of Directors on December 12, 1922, and February 13, 1923, together with a list of the tentative appropriations for 1923. These portions should be read carefully by all members of the National Association for it is the duty of the members to gain as much

knowledge of Association affairs as possible. For the first time the expenditures of the Extension Office have been grouped under that head and not listed with the expenditures of the Secretary's office.

The price of this volume is \$2, and it can be obtained from the office of the secretary, at Brattleboro, Vt.

Needs

What the Holstein Industry needs is not more signboards along the roads but more signs of prosperity on the farms.

What the Holstein Association needs is not a job for every friend of the Extension Director but a real man for every real job that has to be done.

What the Holstein Industry needs is not more young men speaking on the platform but more young men working on the farm.

What the Holstein-Friesian Association needs is not to get more fees from the breeders but for the breeders to get more for the fees they do pay.

What the National Association needs is not more big business men as directors but directors who know more about the business of dairying and Holstein cattle raising.

What the members of the National Association need is not more delegates to attend to their business but more business that they can attend to personally.

What the Holstein Industry needs is not more painted signs but more signs of paint on the old place.

What the owners of purebred Holsteins need is not withdrawals from the Reserve Fund but more funds that they can add to their own Reserves.

What is needed in the present Extension Department of the National Association is less sitting at the desk and more sitting on the milk stool.

What the Holstein Industry needs is not more painted Holsteins on the signboards, but more signs of purebred Holsteins on the farms of the Southern States.

"There are innumerable examples of farmers whose prosperity has been founded on the production of purebred stock. How many farmers do you know whose success is due to scrubs?"—*Edgar County, Illinois, Farm Bureau.*

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

February 9.—Harrisburg, Pa., Dauphin County Holstein Club Annual Banquet.

February 11-16.—Ithaca, N. Y., Farmers' Week at Cornell University.

February 13.—Eau Claire, Wis., Thirty-second Annual meeting of the Wisconsin Holstein-Friesian Association.

ANNUAL MEETING OF PENNSYLVANIA FEDERATION OF HOLSTEIN-FRIESIAN CLUBS

The members of the Pennsylvania Federation of Holstein-Friesian Clubs were called to order by President John A. Bell, Jr., at 9:30 A. M. Thursday, January 24th, at Fahnestock Hall, Harrisburg.

Secretary W. Hugh Jones sent a message regretting his inability to attend on account of illness and Dr. L. M. Thompson acted as secretary in place of Mr. Jones.

The minutes of the last annual meeting were read and approved. The calling of the roll was waived and a resolution was passed instructing the President and acting Secretary to send a telegram to Hugh Jones expressing regret at his absence from the banquet and meeting and of appreciation for his services and friendly wishes to the Federation.

The report of Secretary Jones was read by Dr. L. M. Thompson. The Federation had 299 members during 1923. Two new County Clubs had become affiliated. During the year the State Federation had helped to secure the passage of bills prohibiting the sale of filled milk, prohibiting the sale of ice cream manufactured from filled milk or other dairy substitutes and had also helped to have the funds derived from the dog tax used for the purposes of furthering bovine tuberculosis eradication and indemnity for cattle destroyed. The Secretary's recommendation for the coming year were that an effort should be made to secure reduction of freight and express rates so that the charge for purebreds be no higher than they are for grades. He thought that some work should be done to relieve the tax burden on the farmer. In some counties purebred cattle were taxed but purebred chickens, purebred hogs and other purebred cattle were not taxed. All should be on a same footing and the fact that they were purebred and used for the improvement of stock should exempt them from taxation.

The report of Treasurer Frank A. Keen, which had been duly audited, showed that there was a balance on hand of

\$463.78, although the bank balance showed \$8.00 more, one check for this amount not having been presented for payment. The balance received from former Treasurer Brinton was \$728.07; the net receipts during the year were \$262, making a total of \$990.07. The expenditures during the year were \$526.29.

At a meeting of the Board of Directors held sometime previous to the Farm Products Show a committee consisting of Ivo V. Otto of Carlisle; H. E. Robertson of York; and Dr. H. C. Reynolds of Harrisburg, were instructed to secure a representative exhibit of purebred Holsteins at the Farm Products Show. The directors had assumed that the members of the Federation would be willing to pay the shipping expenses of the exhibited cattle. Dr. Reynolds asked for an indorsement of the directors' attitude and the resolution was passed unanimously.

The Secretary's report had brought out that the Federation had aided in the passage of the bill which provided for the funds derived from the dog tax to be used for the purposes of tuberculosis eradication. The meeting passed a resolution urging the Pennsylvania legislators to continue this policy.

Mr. Geo. E. Stevenson stressed the importance of more knowledge as to the comparative value of the three methods of tuberculin testing, namely, ophthalmic, subcutaneous and intradermic. He thought that the Holstein-Friesian Association of America in conjunction with the other breed associations should investigate or aid in the investigation of these methods and if thought advisable, they should see that the present methods of tuberculin testing be revised. It was brought out that the livestock interests and the State Sanitary Board intended to ask that the next legislature appropriate \$1,200,000 for the purposes of tuberculosis eradication and the Federation went on record as indorsing that policy.

One amendment to the Constitution and three to the By-Laws had been proposed. The first one suggested striking out the provision "That only one officer or director shall be elected from the same county or local club." After a spirited discussion on this and explanations by several members why the provision had been made, the resolution was withdrawn, President Bell explaining that by unanimous consent at a meeting the provision could be waived.

The second amendment proposed that it be the duty of local club secretaries to furnish the Federation secretary with a complete list of their club members and a check covering the amount of dues on or before the day of the annual meeting.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

The present requirements being the "first day of January." The third amendment proposed that only members who have paid their dues before or at the annual meeting or the delegates representing such members, should be entitled to vote. These two amendments were passed unanimously.

The fourth amendment was partly along the same line providing that only local clubs that had filed a list of members on or before the first day of January should be entitled to representation at the annual meeting at the rate of one delegate for each ten members of the local club not present at the meeting. It attempted to clarify the value of the delegate vote by providing that one delegate should represent ten members. After a free discussion this, too, was passed. Mr. Geo. E. Stevenson went on record as being against the passage of this amendment as he was opposed to the delegate system.

A letter to the Federation from the Secretary-Treasurer of the Virginia Holstein-Friesian Club invited Pennsylvania members to be present at the annual convention of the Holstein-Friesian Association of America to be held in Richmond, Virginia, the first week in June and also invited Pennsylvania breeders to consign to the sale held at that time. The Federation was urged to see that only good, reputable cattle came from the State. It was decided to leave these matters to the new Executive Board.

Allan N. Crissey, who has been fieldman for the National Association in the district containing Pennsylvania, New Jersey, and Delaware during the past year, reported on his activities. The first two weeks of January, 1923, was spent around Philadelphia making investigation as to the demand for rich testing milk. Seventeen dealers were visited and it was revealed that the demand for milk high in fat was being fostered by every one of these dealers. The larger part of the work during the past year had been done in the field in an effort to interest breeders in improvement of their dairies and in the building up of better herds of cattle, both from the standard of type and production. He felt there was great need of improvement and also of an effort to cut down the cost of production. The counties had cooperated in good style, forty-one counties having adopted different programs of work, although three counties that adopted such programs were not doing anything. The report covered the entire district. In Delaware there were no County Associations and in New Jersey there were seven. Breeders had been told the value of showing at fairs. He had attended 131 meetings and sixty conferences at which there was a total attendance of 16,491. During the year 260 men had signed up for Cow Testing Association work, 124 boys agreed to join Calf Clubs and 140 men had agreed to go along in a campaign to eradicate tuberculosis. Thirteen new County Holstein Associations had been organized, twelve of these in Pennsylvania.

The Federation had been asked to appoint three representatives to attend the meeting of the State Council of Agricultural Associations to be held the next day. One of these representatives was to be a director on the Council. It was moved that the appointing of these representatives be left to the Executive Committee. Right after this action was taken Morris T. Phillips, president of the Council, came and addressed the members on the importance of being represented.

Mr. Charles Cook of Langhorne, suggested that there should be Holstein milk on the table at future banquets of the Federation. He suggested that members should drink Holstein milk at home and at all gatherings and also should preach Holstein milk. Mr. Geo. E. Stevenson offered a resolution that Mr. Cook interview the Honorable Gifford Pinchot, Governor of the State, and suggest to him that in addition to his requirement that his appointees should not partake of alcoholic drinks during their term of office that he should also require them to take a pledge to drink nothing but milk derived from purebred Holstein-Friesian cows during the holding of their appointment. This caused much amusement and passed without a dissenting vote.

President Bell asked for an expression of an opinion as to the continuance of Mr. Crissey's work as the directors had voted to turn back to the National Association the fifty cents refund on transfer fees for the purpose of maintaining Mr. Crissey. He doubted the advisability of the transfer refund and he wished the members to express their idea as to the value of Mr. Crissey's work as the Allegheny Club had not received any of his services. A representative from Columbia County spoke

in favor of Mr. Crissey's work as did a representative from Lehigh County, who also stated that he believed the Holstein-Friesian Association should attempt to raise the standard of butterfat in Holstein milk and that no cow should be admitted to the Advanced Registry whose record showed a low percentage of butterfat. "You can breed four per cent Holsteins," remarked Mr. Stevenson and he offered a resolution requesting that the National Association see that no record be admitted to the Advanced Registry where the milk showed less than 3.5% fat or more than 4.65% fat. On several members objecting that the minimum was too high Mr. Stevenson agreed to lower the minimum requirement to 3.25% fat. A resolution was passed requesting that no record be accepted by the Advanced Registry Superintendent where the average fat production was less than 3% or more than 5%.

Mr. Chas. Garrett of Chester County spoke in favor of Mr. Crissey's work as did Mr. Cook, who spoke largely from the New Jersey angle. He said that there were larger crowds at meetings to hear a representative of the National Association than would ever come to hear local speakers. He stressed the importance of developing a demand for Holsteins so that inquiries came to the homes of the breeders for cattle instead of having to hold public sales to sell cattle.

Mr. H. C. Reinhold stressed the importance of advertising Holstein milk among the consumers, and said that the people of Philadelphia did not realize the actual value of Holstein milk and that unless they were shown this value they would discriminate against Holstein milk. He thought the Extension Department should make some effort to teach Philadelphians the truth.

There was a general discussion as to the value of Holstein milk and the importance of advertising such milk. Mr. H. E. Robertson told of the organization of Calf Clubs in York County at which Mr. Crissey assisted. He thought that it would be a big mistake to stop this work and also spoke of the importance of clean milk and said that there was no growing demand for milk testing less than 3.5%. Mr. Benninger said that no one had said, "Why Holstein milk was better?" Because of its low percentage of butterfat and be-

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman
BOX 110, HARRISBURG, PA.

cause the butterfat was in small globules it was better for invalids and children for the reason it was more digestible.

David Sloan, Bradford County agent, who is secretary of the Milking Shorthorn Association and not a member of the Pennsylvania Federation, said that the primary function of Extension work is education and he considered it a dangerous policy to stop Extension work.

The State Federation then passed a resolution requesting the National Association to continue for the present the policy of refunding 50 cents on each transfer for the support of Mr. Crissey.

Dr. T. E. Munce was asked to say a few words on tuberculosis eradication and its progress in the State. He said that two-thirds of the Pennsylvania Counties had taken steps to inaugurate this work and that the lack of funds both for the prosecution of the work and indemnity purposes were the only things that was holding them back. He stressed the importance of sanitation and said that the great question of the future was "What are we going to do with dirty dairies?"

Dr. L. M. Thompson spoke of the importance of breeders putting on absolutely straight and clean sales and told of the action of the Susquehanna County Club in insuring that consignors did not bid or have any representative to by-bid on their cattle, thus having an absolutely square deal, for purchasers. It was important for buyers to have complete confidence that they were going to have a square deal. Consignments to the Susquehanna Breeders' Sale were limited to cattle from accredited herds or herds that were under State and Federal supervision. Mr. Stevenson indorsed Dr. Thompson's remarks and said that the Susquehanna County Sale was the cleanest and most honest sale he had ever attended. He was so impressed that, although not previously intending to buy, he had purchased animals there and had urged his friends to do likewise.

It was moved that the President appoint a nominating committee. President Bell appointed Mr. Robertson as chairman together with Mr. Shirey of Williamsport, Dr. Reynolds of Harrisburg and himself, yielding the chair to Dr. Thompson. After deliberation Mr. Robertson reported that the committee suggested for president, Dr. L. M. Thompson of Montrose; for vice-president, W. Hugh Jones of South Montrose; for

secretary, G. H. Truckell of Harrisburg; and for treasurer, Frank A. Keen of West Chester. For the six directors to be elected the committee suggested the reelection of Ivo V. Otto of Carlisle and James M. Paxton of Houston; together with Abner S. Deysher of Reading; John A. Bell, Jr., of Pittsburgh; Dr. Northrup of Danville and Chas. A. Row of Yardley. The report of the committee was accepted and these gentlemen were declared elected. The meeting then adjourned.

The Board of Directors met immediately afterwards and re-appointed Mr. Otto, Mr. Robertson and Dr. Reynolds, as show committee and also appointed Mr. Otto and Mr. Robertson as representatives and the newly elected secretary to act as director of the State Council of Agricultural Associations.

INTERESTING SHOW AT HARRISBURG

The Seventh Annual Pennsylvania Farm Products Show is now a matter of history. Those who have seen it and its predecessors claim that it was the best of a series of successes. The poultry, fruit, vegetables and machinery exhibits were of a high plane. The Extension exhibits under the auspices of the Federal Bureau of Animal Industry and of State College were full of information and attracted the attention of large crowds.

The corn and wool exhibits were of a high order of excellence. This year there were no sheep or hogs on exhibition, cattle being made the leading feature. Space is limited but efforts are being made to have more and better buildings until Pennsylvania acquires a State Fair grounds.

The stock exhibited reflected great credit upon their respective breeds and the breed associations sponsoring the exhibits. The Shorthorns and Herefords received many admiring comments. Holstein men were interested in the Cunningham herd as Mr. Cunningham has an interest in the Cream Rose Dairy

PROF. E. B. FITTS

Dairy Husbandry Department of State College, Superintendent of livestock exhibits Harrisburg Farm Products Show.

at Livermore and the Cream Rose Dairy herd consists entirely of purebred Holsteins. It will be remembered that nearly a year ago, Mr. Cunningham purchased one of the best Kentucky herds of Herefords. One heifer from this herd was exhibited at the Kansas Royal and at the Chicago International winning junior championship at both events. She attracted a lot of attention at Harrisburg. Jersey men only had one cow on exhibition but she was a grand old cow, now twenty-four years of age, that has dropped twenty daughters and one son. As far as outward indications show the old girl looked good for several more years of usefulness. The Ayrshire exhibit was under the care of Henry Fielden, who is well known to Holstein breeders particularly in the states of Illinois, New York and Pennsylvania. The Guernseys were exhibited by the Columbia County Bull Association with County Agent P. G. Niesley in charge. A couple of good Guernsey heifers came from Lenkerbrook Farms near Harrisburg, as did Colantha Napol Pontiac, a naturally hornless lightcolored Holstein heifer with calf at foot. The type and evident producing capacity of this heifer made her one of the centers of attraction. Ivo V. Otto of Carlisle exhibited his great herdsire, Lothian De Kol Korndyke, and a good cow, Westover Madaline Burke. Mr. Otto was kept busy answering questions and both he and Mr. H. E. Robertson were called upon to give short talks on the value of purebreds in general and Holsteins in particular. Mr. Robert-

son exhibited a string of sons and daughters of his fine herd-sire King Piebe of York. Uniformity of type, size and even coloring caused the Robertson Farm exhibit to be one of the features of the show. The livestock department was under the care of Prof. E. B. Fitts, head of the Department of Dairy Husbandry of State College, and Mr. Fitts was certainly right on the job all the time.

It is estimated that more than 50,000 people looked over the stock during the four days it was on exhibition.

As far as we could learn from the members of the breed associations they were pleased with the idea of showing specimens of their favorite breed and each of the state associations made an effort to make their exhibits worth while. At its annual meeting, the members of the Pennsylvania Federation of Holstein-Friesian Clubs passed resolutions thanking the Holstein exhibitors, Mr. Robertson of York, Mr. Otto of Carlisle and Dr. Jesse and Wm. D. Lenker of Harrisburg for their time and trouble in bringing out their animals and also passed a resolution endorsing the idea of livestock exhibits in connection with the Farm Products Show.

Holstein milk won its share of honors. In the certified classes the International Correspondence School won first prize and Lenkerbrook Dairy fourth, and a number of prizes in the other classes went to Holstein establishments.

GREEN COUNTY CLUB

At its annual meeting held in Monroe, Wis., January 12, the Green County Holstein Breeders Association started plans to put on the greatest local show herd ever seen in the county when time comes for the Green County Fair next August. Formerly the organization sponsored the showing of local cattle but have not done so for the past few years. The Association voted to become a member of the Monroe Chamber of Commerce. The following officers were elected: Fred C. Coldren, Juda, president; Albert Babler, Jr., Monroe, first vice-president; Fred C. Marty, Monticello, second vice-president; John W. Keating, Monroe, secretary; and Henry W. Haberman, Monroe, treasurer. The directors are Iver Ellington, Brownston, J. H. Roderick, Brodhead; Theodore Bayr-hoffer, Monroe; Henry C. Elmer, Monticello; C. W. Chambers, Clarno, and Roscoe Smith, Monroe, who was selected in the place of Gilbert P. Hoesly.

Secretary Keating reported that the association had had a prosperous year and has now seventy-five members. Business men of Monroe had earnestly cooperated with the association during the past year.

Mr. Bayr-hoffer, Edward Wolter and Mr. Keating were named as a committee to arrange dates and plans for the annual spring consignment sale.

SHEBOYGAN COUNTY CLUB

The Sheboygan County Holstein Breeders Association at their annual meeting reflected as president, Carl Juve, superintendent of Pinehurst Farms, Sheboygan Falls. The meeting was held in Plymouth, Wis., January 12. E. C. Wipperman of Sheboygan was named vice-president. The new directors are, D. W. Huenink of Cedar Grove, and Otto Baum of Batavia.

The association voted to support the Sheboygan County Calf Club and to continue the campaign to sign up cattle owners for the purpose of tuberculin testing the cattle of the county on the area plan. It was also voted to place signs advertising Holstein milk on the highways of the county.

After a discussion it was decided to hold a spring Holstein sale but the date was not set. A committee to have charge of this will be appointed by President Juve who will also appoint a committee to have charge of the banquet to be held in Plymouth in the spring.

PLAN TO TEST ALL CATTLE

In a speech before the Marinette County, Wis., board of supervisors, M. E. Sibole, County Agent, asked the cooperation of the county executives to create public sentiment favorable to the passage of a statute providing for tuberculin testing of every cow in the county. Mr. Sibole explained that at least 60 per cent of the farmers must consent before the test can be made compulsory. The subject will be taken up by the local Holstein Breeders Association at a meeting in the near future.

BIG TURNOUT IN ILLINOIS

Approximately ninety attended the dinner of the Dairymen's Association of Whiteside County, Illinois, and 135 were in attendance at the afternoon session which was held at the Morrison Club, Morrison, Illinois, January 19th.

The Toastmaster was B. F. Hoover, president of the Whiteside County Holstein Breeders' Association. There was community singing and R. A. Norrish, president of the Whiteside County Farm Bureau, spoke on the money making possibilities of dairy farming and made an especially strong plea for tuberculin testing of all herds.

Harold Gaulrapp of Rock Falls, one of the members of the junior dairy judging team, which won first at the Syracuse National Dairy Show, thanked the Whiteside County Farm Bureau and the dairy interests for what had been done to make possible the team's trip to New York and toward making possible the coming trip of the team to Europe.

W. S. O'Hair of Paris, Illinois, president of the Illinois Dairymen's Association had for his subject, "The Cash of the Country." His advice was "grow into the dairy business; don't buy into it." He said that to make the most money out of a herd it was necessary to own a good bull and illustrated his talk by some of his own experiences.

"If the Government were to pay each farmer a weekly subsidy of \$10.00 it would amount to thousands of dollars in each county per week but the same results can be obtained through a properly managed dairy herd with the by-products such as, calves, separated milk and the manure left on the farm." "As with many of the large manufacturers and packing houses the by-products are the source of the real profits." Mr. O'Hair said that a good bull had increased the butterfat production of his herd over 50% per year. A. A. Brown of Juneau, Wisconsin, who represented the Libby, McNeill and Libby interests supplemented the statements of Mr. O'Hair. He gave a comparative statement relative to the digestible nutrients in 100 lb. of feed and the food value of the products from dairy cattle, steers, sheep, etc., the value of the fertilizer left and the selling values.

E. G. Thiem, who was formerly assistant adviser of the Whiteside County Farm Bureau, discussed dairy marketing. He said that four markets existed for lacteal fluid, one being the whole milk or bottle trade, and the other three being condensaries, butterfat and cheese markets. Specialized cheese is the best market of the last three at the present time, condensaries second and the butter market a close third. Mr. Thiem reported a number of incidents relative to the recent milk strike in Chicago. Mr. Thiem, who is now assistant editor of the *Prairie Farmer*, was for a few months fieldman or State Secretary of the Illinois Holstein-Friesian Association.

Other speakers included Dr. B. L. Lake, county veterinarian, who spoke on "Tuberculosis Eradication"; A. L. Goodenough, whose subject was "Buying and Selling of Dairy Cattle," and Leo M. Knox, who gave some figures on "The Cost of Raising a Bull to Twelve Months of Age."

PLAN WORK IN MERCER COUNTY

The Mercer County Holstein-Friesian Association held a meeting at the court house, Trenton, New Jersey, early in January. The members plan to continue the work of last year, promote calf clubs, boost eradication of tuberculosis, and join in a scrub bull campaign and the introduction of better cattle in Mercer County. Meetings will be held at Titusville, February 12th, and at Lanning School March 12th, while on May 8th at Crosswicks, the association will put on a scrub bull drive. The annual dairy tour of Mercer County in cooperation with the Extension Service will be held August 8th. A number of other meetings will be held during the year.

OFFICERS OF TRUMBULL CLUB

T. A. Fell, Kinsman, Ohio, was elected president of the Holstein Breeders' of Trumbull County at a recent meeting of that association. Other officers elected were as follows: Vice-President, E. H. Partridge, Cortland; Secretary, Harold H. Allen, Greene; Treasurer, F. V. Millikin of Mecca.

L. W. Pierce has been chosen to represent the county at the annual meeting of the Ohio Holstein Association during Farmers' Week at Columbus. A second delegate is to be named by the president.

We Breed Holsteins

That will pay a handsome profit in any man's herd.

ECHO BELLE MODEL KING

Stands at the head of our herd.

He is a son of CHAMPION ECHO SYLVIA PONTIAC and of BELLE MODEL PIETJE 2d, 28.18 lb. butter in 7 days, her dam 36.13 and three times over 33 lb., and the granddam twice over 37 lb. ECHO BELLE MODEL KING has 87½% of the same blood as the new 41 lb. four-year-old ECO-SYLV BELLE PIETJE.

We offer some exceptionally nice heifer calves for sale at \$100 each.

Herd numbers 85 head and is under State and Federal Supervision. ::

WARD D. LOOMIS

Bainbridge, R. D. 4. Chenango Co., N. Y.

SUSQUEHANNA BREEDERS HOLD BUSY MEETING

The mid-winter meeting of the Susquehanna County Holstein Breeders' Association was held at the Hotel Donovan, Montrose, Pa., Saturday evening, December 29th, with President Thompson in the chair. F. E. Mack of Montrose, C. B. Dayton of South Montrose and Dr. L. M. Thompson of Montrose were appointed a committee to arrange for a Dairy Day at the Montrose Anniversary Celebration. G. B. Miller, Dr. Thompson, Geo. B. Finn and J. Terrence Sheen were appointed delegates to represent the Club at the annual meeting of the Pennsylvania Federation of Holstein-Friesian Clubs. The association voted approval of the action of the officers in purchasing a tent to be used for public meetings and sales. This tent can be hired by other Clubs or by breeders desiring to hold a sale. Those responsible for the purchase figured that the Susquehanna Club could save money and even derive a revenue by renting the tent at a lower figure than a similar tent could be rented from outside parties.

Charles B. Dayton and Giles P. Miller were appointed to audit the accounts of the Susquehanna County Breeders' Sale which was held August 30, 1923. A committee of three were appointed to draft resolutions which are to be presented to the County Commissioners requesting them to make an appropriation for the support of the Susquehanna County Agricultural Extension Service. The committee consists of A. R. Bush, J. Terrence Sheen and L. N. Mack. The president of the Susquehanna Club is Dr. L. M. Thompson of Montrose and J. Terrence Sheen of South Montrose is secretary.

BUSY IN MARATHON COUNTY

The Marathon County Holstein Breeders' Association held an Executive Board meeting at Edgar, Wisconsin, January 12th. Resolutions were adopted recommending that the Clubs encourage the exhibiting of Holstein calves at the local calf club shows and at the Wisconsin Valley Fair and Exposition. The principal speaker was Merton L. Wright, County Club leader.

The following officers were elected: President, Harry Keller, of Stratford; Vice-President, J. Bergs, of Edgar; Secretary, Al Spindler, of Stratford; Treasurer, Ed. Brehm of Colby.

A committee was appointed to ascertain the possibility of having a spring sale. Mr. Robert A. Rietzew of Edgar, was voted \$15.00 for his services on the sales committee and a similar sum was voted to Mr. Wipperman, who came to Marathon County last fall in the interest of dairying.

Dues for the coming year were fixed at ten cents for each grade and twenty cents for each purebred with a maximum fee of \$5.00 and a minimum fee of \$1.00.

It was reported that over \$20,000 worth of grade and purebred Holsteins were sold during the past year through the County Association to out-of-state buyers.

The Club will endeavor to have the 1925 convention of the Wisconsin Holstein Breeders Association in Wausau.

CALF CLUB WORK IN NEW JERSEY

Calf Club work in Salem County has met with better success than the poultry or swine projects in spite of the fact that the initial cost is usually somewhat greater. Practically all the calves are Holsteins and the local Holstein-Friesian Association is a strong booster of Club work. There are six members whose heifers have freshened and they are making butterfat tests and keeping the records required by the Dairy Extension Department at New Brunswick.

Calf Club work has done a good deal to improve the general dairy situation of the county. Breeders are taking pains to have their herds accredited and tested and are anxious to put out only the best of stock. On the other hand the registered animal, through the contrast it makes in a grade herd, inspires the father toward having better stock. In more and more cases the scrub bull is being eliminated from service and improved breeding and management results.

One of the encouraging aspects of Calf Club work is the genuine interest that the Holstein-Friesian association, both as a body and the individual members, take in the work. They are always willing to make sacrifices of time and money to increase the number of Calf Club members and help along those

already engaged in the work. As a general thing, club members appreciate this attitude and are carrying out their part.

It is a source of much encouragement to note the increasing number of farmers who are running their business and especially the dairy business on a basis of arithmetic. Club members are taught to do the same thing. Cooperation is becoming closer and the junior and senior breeding work is raised to a high plane of efficiency thereby. **FREDERICK J. GOGGIN,**
County Club Agent.

ORGANIZE AT LAPORTE

Fred H. Stroud of Walkerton, Indiana, was elected president of the Laporte County Holstein Breeders' Association which was organized January 19th at Laporte, Indiana, by a group of Laporte and St. Joseph County cattle breeders. C. G. Lindborg of Laporte was named Secretary of the Association.

At a rally held at the court house seven purebred Holstein-Friesian bull calves were sold at auction for a total of \$167.50. Calves were donated by Charles Weidler and H. A. Kring, of South Bend; John MacDonald, of Galien, Mich., and Jacob Berger of Lakeville. Those to whom calves were sold included C. G. Lindborg, J. H. Kollar, Fred A. Stroud, J. K. Fail, Albert F. Glassman and C. L. Rhoads.

STARTING CLUB IN NORTH DAKOTA

Preliminary steps were taken January 26th at Grafton, North Dakota, to form a Northeastern North Dakota Holstein Breeders' Association. Albert Midgarden was elected chairman of the temporary organization which will take in the Holstein breeders of Walsh, Pembina, Cavalier, Nelson, Ramsey and Grand Forks Counties. Every breeder who has one or more purebred Holstein cows or uses a purebred Holstein sire is eligible to membership. The purpose of the organization is to promote the dairy business in general and the Holstein breed in particular. Ira Montgomery, teacher of agriculture in the Grafton High School, is active in the work of organizing.

SKAGIT COUNTY CLUB

At the annual meeting of the Skagit County Holstein Breeders' Association held in the Commercial Club Rooms at Mount Vernon, Wash., January 8, Thos. Lockhart of Mt. Vernon was reelected president; A. J. Lawson of Blanchard, vice-president; Peter A. Lee, Mt. Vernon, secretary, and Peter M. Omdal, Bow, treasurer. Ben Otterstead and R. E. Waugh of Burlington were elected directors.

Committees to arrange for the entertainment of the state Holstein Association which convenes here February 4 and 5, were named and the local Holstein men will make every effort to royally entertain their guests.

IN OTTAWA COUNTY, OHIO

The Ottawa County Holstein Association at its annual meeting in the Farm Bureau offices at Oak Harbor, Ohio, on January 16th, elected as President, F. H. Allen of Oak Harbor; Vice-President, C. H. Babione; and Secretary-Treasurer, Harry McRitchie.

The subject of holding a Holstein sale somewhere in Ottawa County sometime next fall was discussed pro and con. Eighteen head were promised but efforts will be made to secure more.

The Ottawa County Holstein Bull Club at its meeting re-elected Charles Biehler as president and Dr. R. D. Heller, as secretary-treasurer.

DUNN COUNTY CLUB KEEP OFFICERS

All officers were reelected at the annual meeting of the Dunn County Holstein Association held January 12th at Menomonie, Wis. William Millar, president; Ed. Hoffland, vice-president; D. P. Hughes, secretary, and Gust Kappel, treasurer.

A committee was appointed to have charge of the annual sale which will probably be held in May. It was voted that all consignors to the sale must be members of the County Association. A membership committee was appointed and the members voted to donate \$20.00 to Calf Club work and \$20.00 for prizes in the open Holstein classes at the Dunn County Fair next fall.

NOW HEADS RANSOM HERD

A well bred bull changed hands when representatives of the Ransom Home, Ransom, Pa., purchased Hillside Ormsby Lad Pietje, the young bull advertised by Hillside and Springbook Farms in recent issues of the Holstein Breeder and Dairyman.

Hillside Ormsby Lad Pietje was sired by King Pontiac Maple Knoll Ormsby, whose daughters have made a number of good records and who was by King of the Pontiacs from Maple Knoll Helen. King of the Pontiacs leads the Holstein breed in the number of daughters that have made 30 lbs. or more butter in seven days official test as well as in the number of tested daughters. In every division daughters of this great sire have made world's records and his granddaughters are also noted for tremendous production. Maple Knoll Helen, as a four-year-old and as a six-year-old, made over 30 lb. butter in seven days, her milk each time testing above 5 per cent butterfat. As a junior four-year-old she made 30.97 lb. butter in seven days and as a six-year-old, produced 33.16 lb. butter in seven days, 126.37 lb. butter in thirty days. She was from a 22-lb. cow and was by King Korndyke Hengerveld Ormsby son of the former world's champion for butter production, Pietertje Maid Ormsby, and brother to Sir Pietertje Ormsby Mercedes, possibly the greatest sire ever developed in the west.

The dam of the new Ransom Home herdsire is Hillside Rhododendron. This cow has been tested several years and has made a number of splendid records. As a four-year-old, she averaged 90 lb. milk a day in seven day test and as a six-year-old produced 35.14 lb. butter, 543.8 lb. milk in seven days and 147.95 lb. butter, 2,959.7 lb. milk in 30 days. Her milk during her seven day test averaged 5.17 per cent fat and it will be seen that she averaged practically 92 lb. milk a day for the month. She is from a good record daughter of Woodcrest Pietje, a son of the famous imported cow Pietje 22nd, the only imported cow that ever made a 30-lb. seven day official butter record. Hillside Rhododendron was by Dutchland Sir Lyons Hengerveld, a bull with a number of good record daughters who was by Colantha Johanna Lad from Blanche De Kol Hengerveld, a 33-lb. daughter of Pietertje Hengerveld's Count De Kol. Hillside Rhododendron at one time was the champion of Pennsylvania for butter production in the thirty day official test. She is a very handsome cow and Senator Joyce and Superintendent Bohn have the right to expect that the daughters of Hillside Ormsby Lad Pietje will resemble both in individuality and production capacity, their noted granddam.

The seven day records of the two nearest dams of Hillside Ormsby Lad Pietje average 34.15 lb. butter, 527.45 lb. milk. The seven day records of his ten nearest dams without a skip average 29.48 lb. butter. His sisters are making nice official records; one junior two-year-old produced, 25.24 lb. butter in seven days and another junior two-year-old made 22.75 lb. while yet another sister made 20.35 lb. butter in seven days as a yearling.

PIEBE HAS ANOTHER IN LIST

I am pleased to announce that the Holstein-Friesian cow Piebe Laura Veeman Artis, No. 300040, has just closed a long time test and is credited with 30,753.4 lb. milk containing 1,062.50 lb. fat in 365 days, thus showing an average of 3.45 per cent fat in the milk. She freshened at the age of seven years, seven months, three days. Her sire is Piebe Laura Ollie Homestead King, No. 110474; her dam is Grace Veeman Artis, No. 175549. She was bred by Mr. J. M. Hackney, St. Paul, Minn., and is now owned by Minnesota Holstein Company, Austin, Minn. Previous to the time she was seven years old, she is credited with four ten months' tests and three short time official tests. The best of these ten months' tests was made at the age of six years, five months, twenty-three days, she being credited with 16,748.6 lb. milk containing 590.31 lb. fat in 305 days, carrying a calf 187 days of the test. Her best seven-day official test was made during the lactation period just completed, and shows 827.3 lb. milk containing 30.488 lb. fat, the test begun twenty-five days from freshening. During the year she had sixteen official test periods, of which four were retests and one a sixteen-day official test. Fifteen different supervisors

were employed in the conduct of the test. Her 365 day production of 1,062.50 lb. fat, equivalent to 1,328.12 lb. butter on the eighty per cent basis, gives Piebe Laura Veeman Artis 25th place among cows producing above 1,000 lb. fat, she being the 75th cow to gain the honor of producing above 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, Supt. A. R.

BONALEVO QUALITY WALKER PIETERTJE

I am pleased to announce that the Holstein-Friesian cow Bonalevo Quality Walker Pietertje, No. 204893, has just closed a long-time test and is credited with 27,508.2 lb. milk containing 1,064.12 lb. fat, thus showing an average of 3.87 per cent fat in the milk. She freshened at the age of ten years, one month, twenty-seven days. Her sire is King Quality, No. 88237; her dam is Walker Pietertje Pamela, No. 142683. She was bred by Mr. R. E. Chapin, Batavia, N. Y.; and is now owned by R. E. Chapin & Son. While tested several times previous to her eighth year, the best seven-day production shown was at five years, two months, seven days, when she was credited with 560.5 lb. milk containing 23.628 lb. fat. When tested at eight years of age, she was credited with 22.023 lb. fat in seven days, 90.866 lb. fat in thirty days; and then continued on semi-official test she is credited with 23,371.5 lb. milk containing 888.83 lb. fat in 365 days. For the lactation period just closed she is credited with a seven-day record showing 28.177 lb. fat, and a thirty-day record showing 108.430 lb. fat. During this test in addition to a thirty-six-day strictly official period she had fourteen other test periods of which three were retests. Eleven different supervisors were employed in the conduct of the test. Her 365 day production of 1,064.12 lb. fat, equivalent to 1,330.15 lb. butter on the eighty per cent basis, gives her twenty-fourth place among cows producing above 1,000 lb. fat, she being the seventy-fourth cow to gain the honor of producing above 1,000 lb. fat in 365 days.

January 24, 1924. MALCOLM H. GARDNER, Supt. A. R.

WHO IS NEEDED AROUND CHICAGO

The Chicago Milk strike ended in a partial compromise but was practically a victory for the milk producers. January 1st, the dealers offered to pay \$2.60 a hundred for milk and the producers went on strike in an effort to obtain \$2.75 per 100 lb. After more than two weeks an agreement was reached whereby the producers will receive \$2.675 per 100 lb. The strike was marked by considerable violence. We understand that it has left in its wake a lot of hard feelings. Wonder why the Illinois and Wisconsin dairymen do not get John M. Kelley to talk to the dealers and show them how they can make money for themselves and the producers as well. Why make the New York and Philadelphia producers the goat by advertising Wisconsin dairy products in those cities when there is a big market close home? The owners of eastern dairies have troubles of their own.

CATTLE TO AID NEEDY STUDENTS

Corey J. Spencer of Jackson, Michigan, has offered ten purebred Holstein cows to be selected by representatives of the state association and to be sold at the fourth annual sale at the Michigan Agricultural College on February 4th, the proceeds to be used to finance Michigan Agricultural students who otherwise would be forced to leave school. The receipts of this sale will form a perpetual fund which will be placed in the trust of the secretary and treasurer of the college and is to be used for necessary loans to students.

WAUPACA CLUB RETAINS OFFICERS

The Waupaca County Holstein Breeders' Association at its recent meeting elected as president Dave Jennings of New London; as vice-president, A. E. Smith of Waupaca; F. A. Nace of Iola secretary-treasurer; and John Erickson of Waupaca, Arthur Rowe and O. F. Peterson of Scandinavia and Steward Lindsay of Manawa, as directors.

KEEPING HAEGER BUSY

R. E. Haeger was scheduled to judge the Holstein-Friesians exhibited at the Western Livestock National which was held at Denver, Colorado, the latter part of January. "Bob" is also in demand at the Judging schools which are being held at the great fairs in the far western states.

NON-POOLERS JANUARY PRICES

A special meeting of the group members representing the dairymen marketing their milk through the Sheffield Farms Company was held in New York City January 11th. Representatives of the sixteen routes in New York, Pennsylvania, Vermont and Connecticut were present as well as four representatives of the Sheffield Farms Company, Inc.

After the milk situation had been thoroughly discussed the president appointed the following price committee: F. A. Mather, Ulster, Penn., representing route 2; C. W. Halliday, North Chatham, New York, representing route 4; H. E. Hebbard, Davenport, New York, representing route 9; John H. McCarty, Cambridge, New York, representing route 16.

After retiring the committee recommended the price for 3% milk in the 200-210 mile zone be \$2.63 from January 1st to 15th and \$2.35 from January 16th to the 31st inclusive, with the usual freight and butterfat differentials.

The report of Secretary Halliday states that the Dairywomen's League Cooperative Association, Inc., on January 7th cut their price for Class 1 milk to \$2.33, a drop of 47 cents per hundred pounds or 1 cent per quart. The Sheffield Farms Company had to meet this cut and have lowered their retail price 1 cent a quart. The Company claims that the repeated cuts on the part of the League will take the very life out of the dairy business but in order to protect their producers are paying more than the League Class 1 price.

According to Secretary Halliday the Sheffield Farms Company producers have received more than a cent a quart above what the League producers received for their milk despite the fact that there is a surplus and the Sheffield Farms Company cannot be expected to pay as much for milk that has to be manufactured into butter and cheese as their competitors pay for milk used only for fluid consumption.

NEW YORK STATE DAIRYMEN MEET

The New York Dairymen's Association at their meeting in the coliseum on the state fair grounds, Syracuse, January 8th, reelected as president, Professor W. A. Stocking of the State College of Agriculture. Chas. F. Bigler of Syracuse, was elected vice-president in place of the late Floyd C. Overton. Thomas E. Tiquin of Albany was reelected secretary; R. R. Kirkland of Philadelphia, treasurer; W. E. Davis of Auburn, manager of the New York State Guernsey Breeders' Association was elected director with C. A. Brown, Watertown. H. S. Sweetland, South Dayton; H. C. Lange, New York; Dorr W. McLaury, Milford and A. S. Chaplin, Wolcott.

Dr. W. I. Meyers of the State College said there was imperative need of intermediate credit for New York farmers, to finance individual operation and rapidly growing work through collective marketing organizations. Banks were equipped to handle business and industrial loans and not agricultural credits with a result that farmers had been more or less handicapped. Passage, last year, by Congress of an intermediate credit act has made it possible for farm organizations to establish credit corporations for this purpose.

Assistant commissioner of farms and markets, C. P. Norford who came from Wisconsin to take charge of his present duties to supervise testing in eradicating bovine tuberculosis told of what was being done in this work. He emphasized the value of State Institutions for the farmers and urged that good use be made of them.

MEETING OF SARATOGA CLUB

The annual meeting of the Saratoga County Holstein Club was held at the Eagle Hotel, Ballston Spa, N. Y. on Saturday, January 5. It was well attended and the business meeting was preceded by a banquet.

Changes were made in the by-laws, one of them limiting membership in the club to residents of Saratoga County. The meeting commended the action of the Board of Supervisors in its attempt to stamp out bovine tuberculosis in the county.

Charles L. Merchant of Ballston was elected president; Howard Knapp, Round Lake, vice president; Charles V. Dake, Middle Grove, secretary; Wm. B. Perry, Wilton, treasurer; Archie Cleveland, Timothy Sullivan and Wm. S. Devoe were appointed on the executive committee, Mr. Cleveland being chairman. Charles L. Merchant was chosen delegate to the annual state meeting.

ROCK COUNTY CLUB MEETING

Mr. J. A. Craig of Janesville, Wis., was reelected president of the Rock County Holstein Association at a meeting held in the Court House, Janesville, January 2. E. L. Benedict of Beloit was chosen vice president; John W. Jones, Milton Junction, secretary; and Archie Reid, Jr., Janesville, was made treasurer. L. T. Williams of Clinton was elected to the Board of Directors to succeed W. H. Latta of the same town, who resigned. Standing committees were appointed for membership finance, entertainment, calf club work, cow testing, fair exhibits and private and public sales.

The date for the annual spring sale was set for May 6. It is expected to sell sixty head of purebred and 35 high grade cows with Cow Testing Association records. The requirements are that the heifers must be of breeding age and the bulls old enough for service. If any calves are offered they must be sold with their mothers and listed as one number.

PORTER COUNTY CLUB MEETING

The Porter County Holstein-Friesian Breeders' Association held its annual meeting January 4th at the Hotel Lembke, Valparaiso, Indiana. There were twenty members in attendance and five members of the Lake County Association.

After dinner Tom Keene reported on the meeting between the committees of the Marketing Company and the Milk Producers' Company. He stated that at the present there was a good prospect that the two organizations would unite.

John Froberg was reelected chairman, Abe Lowenstine, vice-president, and S. B. Sink, secretary. John Froberg, Arthur Hanrahan, Francis Bushore and Herman Homfeld were named directors.

The delegates to the State meeting were Abe Lowenstine, Tom Keene, Charles Ohlfest and Francis Bushore. A committee was appointed to look into the proposition of bringing the State sale to either Valparaiso or Crown Point.

QUITE A SHOW RECORD

Nineteen championships, seventy blue ribbons, five premier breeder and exhibitors' banners, forty seconds, twenty-five thirds, and sixty other prize ribbons were won by the Carnation Stock Farm show herd last fall. This herd journeyed from British Columbia to Kentucky, and from New York to Oregon, traveling over 8,000 miles in all and showing in the States of Wisconsin, Kentucky, Illinois, New Jersey, New York, Oregon, and British Columbia. The full sisters, Tillamook Daisy Butter King De Kol and Tillamook Lola May De Kol, were unbeaten for "produce of dam." Nearly four months elapsed between the time the herd left home in August until it returned after the show at Portland.

MURPHY AGAIN PRESIDENT

The Holstein Breeders' Association of Onondaga County, New York, met at the Chamber of Commerce, Syracuse, New York, January 4th. They plan to hold a picnic for junior project members on Decoration Day on the farm of Charles F. Bigler at Liverpool.

T. J. Murphy was elected president of the county association; S. C. Pendergast of West Phoenix, vice-president; R. E. Deuel of Manlius, secretary and treasurer, and Leroy Munro of Elbridge and Earl Fowler of Baldwinsville, directors.

LEAGUE DECEMBER POOL PRICE

Farmers belonging to the Dairymen's League Cooperative Association Inc., will receive a net pool price of \$2.15 per 100 pounds for their December milk according to a recent announcement made by the Association. The gross pool price for December is announced as \$2.23. A deduction of 8 cents for expenses makes the net pool price \$2.15. Five cents of this is reserved for certificates of indebtedness so that the actual cash payment is \$2.10. These figures are for 100 pounds of 3% milk at the 200-210 mile zone.

Mother—"There, now, I've read you the whole story of the ark and you must go to sleep."

Tommy—"But what would have happened if Noah had sent out a seagull?"

Cow Testing Association Reports

MAY LEADS MONTANA ASSOCIATION

May Adair Korndyke, a purebred Holstein, was the leader in the Bitter Root Valley Testing Association during December. She is credited with seventy-six lb. fat in the second month of her lactation period. May Adair Korndyke is a daughter of Imperial Valley View Korndyke from Oakwood Maid and is a member of the large purebred Holstein herd consisting of sixty-one animals, owned by Ford and Hollister of Darby, Montana. Another member of this herd Mary Rag Apple Korndyke, was second high producer with 75 lb. fat; Pauline Homestead Cascade, another member of the same herd, was third, with 66 lb. fat, while Montana Folly was fourth with 57 lb. This herd averaged 33 lb. fat for the month.

There were 350 cows in 25 herds tested in this association during the month, their average being 619 lb. milk, 26 lb. fat. The Ford and Hollister herd consists of 61 registered animals.

TESTING IN THE WESTERN STATES

Holsteins carried off all the honors during December in the eight states under the jurisdiction of the Western Office of the United States Dairy Division. First place in the herds composed of more than fifteen cows was held by the Holstein establishment of F. F. Pellissier of Whittier, California. This seventeen cow dairy consists of registered Holsteins and averaged 1,819 lb. milk, 60.1 lb. fat. The ten leaders in the list of herds consisting of fifteen cows or less were held by Holstein cows either grades or purebreds. First position in this list went to the four purebreds owned by the Rev. N. L. Browning of Riverside, Cal., with an average of 1,755 lb. milk, 67.7 lb. fat. Idaho had six registered Holsteins owned by T. J. Killen of Boise in second place with 1,522 lb. milk, 59.9 lb. fat with the seven Holsteins of T. D. Raffetto of Fallon, Nev., in third place with an average of 1,541 lb. milk, 58 lb. fat.

Even more sweeping is the victory in

the individual production lists for the first fourteen animals are black and whites and twenty of the twenty-one leaders are either registered or grade Holsteins.

The leader for production is a registered Holstein of the Pellissier herd. She is credited with 3,075 lb. milk, 120 lb. fat. A registered cow of the Helm Farms, Concoran, Cal. is second with 2,238 lb. milk, 116.3 lb. fat. Aurelia, a registered Holstein owned by J. L. Sebastian of Wasco, Cal. is third with 3,360 lb. milk, 107.5 lb. butterfat while Jewel, owned by H. F. Hinciad of Chino, Cal. is fourth with 1,884 lb. milk, 96 lb. fat.

First position for state average is held by Idaho, the 1,598 cows enrolled in the six Idaho associations averaging 30.37 lb. fat with Washington a close second with an average of 30.33 lb. fat for 2,627 cows. California has seventeen associations in which are enrolled 555 herds consisting of 22,912 cows and these averaged 29.53 lb. fat. Colorado and Nevada averages are over 27 lb.; Arizona and Montana over 26 lb. with Oregon a long way in the rear with an average of 21.15 lb. fat for 2,574 cows. In the 43 associations there are enrolled 1,246 herds consisting of 32,994 cows of which 5,383 made over 40 lb. fat in the month.

CLOSES TENTH WORKING YEAR

Eau Claire No. 1, Testing Association, has completed its tenth year of testing, having been organized in November, 1913. In 1923, there were twenty-six herds, every one headed by a purebred sire, containing 342 cows and their average production was 6,416 lb. milk, 281.2 lb. butterfat.

The high herd for the year was owned by Olker Bros., Fairchild, Wis. This herd of grade Holsteins consisted of nine mature cows and six heifers with first calf and their average was 9,860 lb. milk, 360 lb. butterfat in twice a day milking.

A seven-year-old registered Holstein, Daisy Acme Johanna, owned by Cook and McDonell was high cow for the year with 15,532 lb. milk, 539.3 lb. fat.

HOLSTEINS PRODUCE ON HOME GROWN FEEDS

Sixteen herds containing 238 cows are enrolled in the Wyandotte County, Kans., Testing Association. This association closed its fourth month of testing with December and the average production for the month was 27.6 lb. fat, 798 lb. milk.

Fifteen grade Holsteins, owned by Carl Peterson held the high herd average with the average production of 837 lb. milk, 37.5 lb. fat. The high individual was a purebred Holstein owned by Wallace Fleming with 1,802 lb. milk, 63 lb. butterfat. Dairymen who are feeding ear corn and corn chop are producing milk at a low cost as home grown grains are selling comparatively low on the Kansas City market.

FINISTER HERD IN FRONT

Countess Jewel Korndyke, a purebred Holstein, owned by Roy N. Finister, Eldorado is the leader in the Hardin County, Iowa, Testing Association for December. She is credited with 2,120 lb. milk, 67.8 lb. fat. Next to her was another purebred Holstein in the Finister herd with 1,618 lb. milk, 58.2 lb. fat. This herd carried off the honors for average production with 1,182 lb. milk, 42.2 lb. fat.

Three hundred and forty-two cows were tested during the month. Fifty-one of these produced more than 40 lb. butterfat while twelve produced more than 50 lb. fat. The average production for all the cows in the association was 676 lb. milk, 26.9 lb. fat.

HOLSTEINS AGAIN IN ILLINOIS

Rawleigh Farm Holsteins carried off the honors in the Illinois Testing Association during the month of December, as cows from this establishment stood in first, second and fourth places and the Rawleigh herd stood in third place for the entire state. One of the Rawleigh purebreds produced 3,091 lb. milk, 145.2 lb. fat, a stablemate produced 2,640 lb. milk, 100.2 lb. fat and another cow in this herd produced 2,635 lb. milk, 92.1 lb. fat. All were purebred Holsteins. A grade

Holstein, owned by George Mohrman of Whiteside County is third with the production of 2,176 lb. milk, 93.6 lb. fat. The Mohrman herd of ten grade Holsteins averaged 1,561 lb. milk, 57.8 lb. fat. They occupied first place. In second place was the twelve cow dairy, grade and purebred Holsteins, owned by J. M. Wassenberg with 1,526 lb. milk, 53 lb. fat; while the seventeen cow purebred dairy, owned by Rawleigh Farm was in third place with an average of 1,383 lb. milk, 48.3 lb. fat.

In thirteen of the eighteen associations reporting, the leading herd for production consisted of black and white cows. A grade Holstein was in third place for individual production with two purebred Holsteins in front of her and the four places behind her filled by purebred Holsteins with another registered Holstein in tenth place.

Nine of the highest average producing herds in the state consisted of black and white cows, ninth place being held by a Brown Swiss herd.

CANADIAN OFFICIAL TESTING

During December, test reports were received for thirty-four Holstein-Friesian cows and heifers by W. A. Clemens, secretary of the Canadian Record of Merit office. Five cows exceeded thirty lb. butter in a week, the leader being Queen Beulah owned by Dr. H. A. Clark of Brockville, Ontario. She is credited with 817.7 lb. milk, 37.30 lb. butter in seven days and 3,241 lb. milk, 142.49 lb. butter in thirty days. Sunnybrook Inka Mercedes produced 755.9 lb. milk, 36.62 lb. butter and her stablemate, Madam Pauline Sylvia, is credited with 532.7 lb. milk, 30.41 lb. butter in a week. Both are owned by Jos. Kilgour of Eglinton, Ontario. Pauline Segis Canary of the Porter Bros. herd of Thornhill, Ontario, is credited with 623.9 lb. milk, 34.15 lb. butter and Aaggie Texal Canary produced 684.7 lb. milk, 33.71 lb. butter in seven days and 2,954.7 lb. milk, 138.21 lb. butter in thirty days. She is owned by W. R. Cummings of Cummings' Bridge, Ontario.

Princess Madoline Pontiac is the only four-year-old reported and is credited with 514.1 lb. milk, 24.08 lb. butter in a week as a junior. Ivy Echo Countess Abbekerk owned by Jas. C. Jenkins of Belmont, Ontario, leads the senior three-year-olds with a record of 493.3 lb. milk, 24.89 lb. butter. Elmwood Alcartra Gano is credited with 655.7 lb. milk but only 24.65 lb. butter.

Kittie Segis Pontiac a senior two-year-old owned by M. McDowell of Oxford Centre, Ontario, leads her class with 534.5 lb. milk, 23.79 lb. butter.

Three aged cows, three four-year-olds and one three-year-old are reported as making over 1,000 lb. butter in year test. Noreen Calamity Posch owned by the Hamilton Health Association of Hamilton, Ontario, heads the list with 24,159 lb. milk, 1,053.75 lb. butter. Wimple Netherland Westport of the Colony Farm, Essondale, B. C., is second with 25,159 lb. milk, 1,042.50 lb. butter. Lily of the Valley De Kol 2d is third with

22,269 lb. milk, 1,011.25 lb. butter. She is owned by W. O. Richards of Ladysmith, B. C.

Topsy Korndyke Segis makes a new Canadian high record in the four-year-old class with a production of 25,404 lb. milk, 1,250 lb. butter. Her owner is Duncan McNaughton of Winchester, Ontario. The British Columbia heifer, Shellybrook Pietje Canary of the Richards herd, is second with 25,705 lb. milk and exactly 1,100 lb. butter, while Segis Alcartra Prescott owned by R. W. E. Burnaby of Jefferson, Ontario, is third with 23,716 lb. milk, 1,015 lb. butter.

The three-year-old class is led by Raymondale Duchess with 21,849 lb. milk, 1,115 lb. butter. She is owned by D. Raymond of Vaudreuil, Quebec, who also owns Raymondale Rita Walker, 19,671 lb. milk, 875 lb. butter as a two-year-old but this heifer is beaten by Epworth Dora Johanna owned by Pat. J. Salley of Lachine Rapids, Quebec, the latter having to her credit 22,519 lb. milk, 933.75 lb. butter.

The leaders in the 305-day division are Ena De Kol, 16,587 lb. milk, 705 lb. butter; in the four-year-old class, Snowball Ormsby with 13,723 lb. milk, 702.50 lb. butter; in the three-year-old class, Nettie Gwyne Wood with 13,152 lb. milk, 571.25 lb. butter; while the two-year-old leader is Mercedes Mutual De Kol with 12,637 lb. milk, 591.25 lb. butter.

Ena is a member of the McNaughton herd. Snowball is owned by the Ontario Hospital at Whitby, Ontario, while the two younger leaders are members of the herd owned by B. Sommerfeld and Son, of Saskatoon, Sask.

NEED HOLSTEIN SIRES

The annual meeting of the Mitchell County, Ia., Testing Association was held at Osage, and C. G. Goplerud of Otranto was elected president. Lloyd Swan of Osage, was chosen vice president while Wilde Reckard, also of Osage, a Holstein breeder, was made secretary-treasurer. The average production of dairy cows in Mitchell County was approximately 138 lb. butterfat for the year. The use of purebred sires and the growing and feeding of legumes are among the recommendations to secure improvement.

GOOD FOR KOLLER

Registered Holsteins owned by C. J. Koller of Yardley carried off the first and second places during December in the Testing Association which operates around Doylestown, Pa. The leader produced 75.5 lb. fat from 2,328 lb. milk and her stablemate produced 61.6 lb. fat from 1,925 lb. milk.

MAGGIE IS GOOD GRADE

Maggie, a grade Holstein led the Southern Dodge County, Minn., Testing Association for the month of December. She is owned by Chris Ditlevson and is credited with 1,950 lb. milk, 67.2 lb. fat. Two hundred and sixty-one cows were tested in the association with an average production of 587.9 lb. milk, 22.3 lb. fat.

Chenango Co. SHERBURNE, N. Y.

SEBASTIAN HAD FIRST AND SECOND

Two purebred Holsteins owned by J. L. Sebastian, of Wasco, Calif., led the Kern County Cow Testing Association during the month of December. The purebred Holstein, Aurelia, topped the list with 3,360 lb. milk, 107.5 lb. fat. Colantha in the same herd produced 3,063 lb. milk, 88.8 lb. fat. Miss Rose, owned by Edwin Booth, produced 2,205 lb. milk, 70.6 lb. fat. There were 736 cows tested and the average milk production was 613.1 lb. and average butterfat production was 25.4 lb. per cow. Sixty-one cows produced over 40 lb. fat in the month.

HOLSTEINS LEAD IN CHICKASAW

Thirty-four of the 270 cows enrolled in the Chickasaw County Iowa, Testing Association produced more than 40 lb. butterfat during December. The average production of all the cows in the association was 674.3 lb. milk, 24.2 lb. fat.

The leader was a purebred Holstein, four years of age, owned by John D. Herrick, Fredericksburg, with a production of 1,815 lb. milk, 76.2 lb. fat. Sixteen purebred and grade Holsteins owned by Guy F. Whitcomb carried off the high herd honors by averaging 1,169 lb. milk, 43.8 lb. fat.

YEIMER CARRIED OFF HONORS

During December 290 cows were tested in the Rockfield, Wis., Testing Association. Of this number 44 produced more than 40 lb. butterfat. The leader was a grade Holstein owned by Paul Yeimer with 1,755 lb. milk, 79 lb. fat. Mrs. Christ Bast, Sr., owned the high herd which consisted of fourteen purebred and grade Holsteins and their average production was 1,286 lb. milk, 43 lb. fat. Mr. Yeimer's purebred and grade dairy consisting of eleven cows averaged 1,135 lb. milk, 41.6 lb. fat.

EIGHT IN TEN HOLSTEINS

Eight of the leading ten cows enrolled in the Ogemaw, Mich., Testing Association were black and whites, either grade or purebred. W. E. Cook owned the first four, all purebreds. Della and McKinley tied for first place, each being credited with 64.3 lb. butterfat. Della produced 1,386 lb. milk while McKinley produced 2,012 lb. Allamuchy, another member of this herd, was third with 1,469 lb. milk, 55.8 lb. fat, and Lady was fourth with 1,375 lb. milk, 54.9 lb. fat.

MONTANA HOLSTEINS IN LEAD

All previous records for both milk and butterfat production in the Flathead, Montana, Testing Association were broken by Johanna Aaggie Homestead, a registered Holstein owned by O. K. Iverson. Her production was 3,192 lb. milk, 79.1 lb. butterfat for December. Johanna Posch Belle Fayne, owned by W. H. Voelker of Kalispell, was second, with 2,364 lb. milk, 78 lb. fat. Ollie Astrea Homestead, owned by Mr. Iverson, was third, with 2,356 lb. milk, 68.3 lb. fat.

OWNER IS SATISFIED

The herd of Enos H. Horst was dispersed at Chambersburg, Penna., January 25th. The owner considered the sale satisfactory, conditions considered. One cow brought \$250 and her small calf \$30. Yearling heifers brought \$85 and \$90 each, and young heifers \$40 and \$45 each.

Mr. Horst, who is a dealer in farm and garden supplies, kept two head, saying that his associations with Holstein cows and Holstein owners had always been so pleasant that he could not think of entirely quitting the black and whites.

KELLER WILL SELL

The purebred Holstein herd of John B. Keller will be dispersed on the Meadow Lane Farm, Chambersburg, Penna., March 14th. The herd includes daughters of Tobe Veeman Pontiac Hengerveld, Waldorf Steele De Kol Pontiac, King Pontiac Flamboro and other good bulls.

Mr. Keller was formerly traveler for a large shoe manufacturing firm and maybe in the near future will resume his old occupation. He has made arrangements to rent his farm, will dispose of his purebred Hampshire and Poland China hogs at a farm sale and is reserving the date of March 14th to dispose of his purebred Holsteins.

BIG CROWD AT AVALON HERD DISPERSAL

A large crowd attended the dispersal of the Avalon herd which was held on the farm at Columbia, Wis., January 9th. The herd contained a large number of good animals and had been built up with much care by the owner, the late W. C. Leitsch.

The top price was \$2,100 which was obtained for the senior herdsire. The Magistrate, a son of King Segis Pontiac Konigen and Dutchland Colantha Denver, 36.25 lb. butter in seven days, 25,431.9 lb. milk, 1,315.15 lb. butter in a year. He was purchased by the Serradella Farms.

The top price for a female was \$540 which Paul A. Kayser bid for a twenty-one lb. two-year-old daughter of Ormsby Korndyke Lad.

Thirty-nine animals were sold for \$10,055, an average of \$257. Twelve heifers under two years of age averaged \$133; eight two-year-old heifers averaged \$193; the only three-year-old brought \$540; the eleven cows above three years averaged \$263 and the seven bulls averaged \$495.

OFFER CHOICE OF 101 ACCREDITED ANIMALS

Something out of the ordinary is promised Holstein breeders in a sale to be held at Polk, Venango County, Pa., on February 26th and 27th. The Polk State School, owners of the largest Holstein herd in Pennsylvania, and we believe the largest accredited herd in the United States, are, on account of crowded stables, offering 101 accredited purebred Holstein-Friesian cattle at public auction. Only seven of the total number will be over two years old. The list shows that there are ten two-year-old heifers; thirty-four yearlings; thirty-three heifer calves over six months of age; and ten younger, together with three yearling bulls and four bull calves between six months and a year old, making one hundred and one head in all.

The senior sire of the Polk herd is King Champion Jannek, a son of King Pontiac Champion and Jannek Albina De Kol 4th, a good record daughter of Aaggie Cornucopia Johnna Lad. King Champion Jannek has the distinction of having, for his three nearest sires, bulls that each have 100 or more daughters in the Advanced Registry. The King himself has seventy-eight in the list, two of which have each made over 31 lb. butter in seven days and each of these daughters averaged over 100 lb. milk a day while making their official marks. This bull is represented by twenty-three daughters and forty-two granddaughters as well as one son whose dam is a 26-lb. daughter of King Korndyke Segis Inka who was by King Korndyke Hengerveld Ormsby. King Korndyke Segis Inka is from K S P Segis Inka, a daughter of King Segis Pontiac and K P Segis Inka whose records of 26.03 lb. butter in seven

HILLSIDE AND SPRINGBROOK
FARMS,
Trucksville, Pennsylvania.

THE OFFSPRING OF

King Alcartra Rag Apple Posch inherit the splendid conformation of their sire who for three successive years won the Grand Championship at the Susquehanna County Fair, the greatest Holstein show of the Keystone State.

Let me price something good to you. Herd ACCREDITED.

A. R. BUSH

Susquehanna Co., Montrose, Pa.

Wm. D. Lenker—Dr. Jesse L. Lenker

BULL CALVES FROM AN ACCREDITED HERD

The great four-year-old heifer, Colantha Napol Pontiac No. 584732 exhibited at the Pennsylvania Farm Products Show at Harrisburg, is a specimen of our herd, showing the individuality and producing capacity of the animals composing it. Let us sell you a good one CHEAP. Herd headed by KING MEAD SEGIS PONTIAC.

**LENKERBROOK DAIRY
FARMS**

R. D. 4 Harrisburg, Pa.

days and 102.97 lb. butter in thirty days were world's records for a two-year-old heifer with first calf at the time they were made. She was by King of the Pontiacs from the famous old foundation cow, Segis Inka, 28 lb. butter in a week.

Another sire whose offspring will be seen in the sale is King Pontiac Dean Korndyke. This bull already has a number of good record daughters and is a son of King of the Pontiacs from Princess Korndyke Beryl De Kol, 27.96 lb. butter in seven days as a junior four-year-old. This bull is full brother to King Pontiac Beryl Korndyke whose daughters have made remarkable records during the past two years and whose offspring are noted for size and individuality as well as production.

There are twenty-one daughters and twenty-five granddaughters of King Pontiac Dean Korndyke in the coming sale as well as a son whose dam, a 31-lb. daughter of King Champion Jannek, averaged over 100 lb. milk a day during the week of her official test.

The junior sire in the Polk herd is Brookside Waldorf Prince Abbecker. Daughters of this bull are as yet not in milk but he certainly has the right to transmit producing ability to his offspring. He was sired by Sir Pontiac Waldorf Pietje, who has many good daughters in New York State and northern Pennsylvania, and was from Lady Waldorf Pietje, 36.31 lb. butter, 736.7 lb. milk in seven days as a four-year-old; a cow that made 32 lb. butter in a week as a three-year-old; 36 lb. as a four-year-old; and 35.39 as a five-year-old and is dam of a four-year-old heifer that has produced 36 lb. butter in seven-day official test. Intending purchasers will be offered nineteen daughters and a son of Brookside Waldorf Prince Abbecker. This son is from a cow that made 31 lb. butter and over 700 lb. milk in a week and she is a daughter of King Champion Jannek. No less than thirty heifers in this sale are from cows with good official records ranging up to 31 lb. butter in a week and the seven young bulls that will be offered are from dams that have averaged 3 lb. butter or more day for seven days and, as said before, two of them are from 31-lb. cows.

The well-known auctioneer, "Bob" Haeger, has been secured for the occasion and his many friends in Pennsylvania and other eastern points will be pleased to hear him again. The fact that the herd has been in existence for nearly a quarter of a century and that the animals, their dams and granddams were bred in the School herd makes this sale of even more importance to intending purchasers who are bound to realize that they have the opportunity to secure animals from a herd with a clean bill of health in which production and breeding records have been kept ever since the herd was started back in April, 1899.

MUCH BETTER THAN HER DAM

A number of daughters of King Korndyke Pontiac Mead are in semi-official test and are making nice records. One of these K. K. P. M. Bright Promise, was doing so well that when another group of animals were ready for official test, she was placed with them for testing, although it was six months after she freshened. In seven days she produced 17.89 lb. butter, this as a junior two-year-old, a fine showing especially in comparison with her dam's record at maturity of 17.63 lb.

The daughters of King Korndyke Pontiac Mead are showing remarkable persistency and uniformly excellent udders, two prominent characteristics of his own dam, De Kol of Valley Mead 2d. His sire, King Korndyke Pontiac 20th, the leading Honor-Roll sire for the past year, is out of the best daughter of De Kol of Valley Mead 2d, intensifying this remarkable producing strain. Sons of King Korndyke Pontiac Mead are proving extremely popular with dairymen and

purebred breeders from the Sacramento Valley to the Mexican line.

Official testing is still in progress at the County Farm, reports Superintendent Wm. R. Harriman. Carnation Gelsche Segis, No. 383968, has recently freshened as a six-year-old and is going at a thirty lb. rate. She is a daughter of Johanna McKinley Segis from a daughter of Beauty Pietertje Prince and is thus bred close to the lines that produced Segis Pietertje Prospect.

GOOD WORK IN CALIFORNIA

Another dairy bull campaign has been held in the western ends of Stanislaus and Merced Counties, California. Bankers and other businessmen have co-operated and the last day of the year thirty-five bulls had been sold all of which were purebred Holsteins. These animals have been obtained from good herds in the vicinity covering a stretch of territory from Colusa County on the north to Los Angeles County on the south.

GOOD RECORDS MADE AT RETREAT

As reported in an earlier issue of THE BREEDER AND DAIRYMAN, so many of the cattle owned by the Central Poor District of Luzerne County, Pa., were due to freshen early this fall that it was decided not to exhibit but to officially test as many as possible of the milkers. This was somewhat of a disappointment as the Retreat herd made a good showing at the fairs of 1922 and won many valuable prizes besides gaining a lot of advertising. A number of good records have been made as reported earlier and a number more animals have recently finished test.

Fairmont Mead Polkadot, a daughter of Sir Aaggie Mead De Kol freshened at 26 months of age and produced 476.1 lb. milk, 23.42 lb. butter in seven days. She is being continued on test and is still milking 75 lb. a day, quite a showing for a junior two-year-old.

Princess Prilly Dressie Pontiac freshened as a three-year-old and made a seven day official record of 403.9 lb. milk, 22.57 lb. butter. This daughter of King Tweede Spring Farm had considerable trouble at calving and the record she made is not a true indication of her capacity.

Bloomingtondale Segis Fayne, a daughter of Bloomingtondale, King Fayne and Lady Hengerveld Daisy Segis, produced 365.7 lb. milk, 21.03 lb. butter as a two-year-old.

K. P. A. P. Prilly, daughter of the well-known Pennsylvania sire, King Pontiac Alcartra Pietje, closed her test with records of 477.2 lb. milk, 23 lb. butter in a week and 1,741.5 lb. milk, 93.08 lb. butter in thirty days. As this heifer milked from only two quarters, she certainly made a remarkable showing.

Prilly Aaggie Pontiac as a ten-year-old cow produced 418 lb. milk, 24.09 lb. butter. She is a daughter of Sir Prilly Walker Johanna.

Hillside Pontiac Jean, as a three-year-old, produced 411.2 lb. milk, 25.72 lb. butter in a week and 1,759.6 lb. milk, 102.29 lb. butter in thirty days. Her sire is King Pontiac Maple Knoll Ormsby a son of King of the Pontiacs and the twice 30-lb. cow, Maple Knoll Helen. This cow made a seven day butter record of 33.16 lb. and was by King Korndyke Hengerveld Ormsby, son of Pietertje Maid Ormsby and therefore maternal brother to Sir Pietertje Ormsby Merced.

Retreat Clothilde a three-year-old, made 740.4 lb. milk, 26.47 lb. butter and the four-year-old Champion Lilith Segis, produced 435.2 lb. milk, 25.65 lb. butter in seven days. This heifer is a daughter of Grand Champion Segis 2d, the good sire now standing at the head of the herds owned by Floyd Mack and L. N. Mack & Sons, Montrose, Pa.

There are a number of other good ones now on test and it is expected that some more fine records will be made by these cows under the care of herdsman J. O. Vaughan, who certainly knows how to keep his "pets" in fine shape.

HOLSTEIN HEIFERS

from an

Accredited Herd

Get your orders in NOW, also for SONS of the great young sire, CONCORDIA SIR CREAMELLE, who combines the blood of the Segis, Creamelle, Korndyke and Pontiac families—None better.

Dutchland Konigen Creamelle Boy is the sire of our herd bull, Creamelle Korndyke Konigen. There is a wealth of good breeding on both sides of his pedigree. We offer a few choice Females from a Fully Accredited Herd.

A. L. BOWELL & Son

Susquehanna Co. THOMPSON, PA.

Choice Females for Sale!

Our herd is made up of granddaughters of Napol Sir Keystone Beauty, a son of Keystone Beauty Plum Johanna, the world's champion yearly butter producer as a four-year-old on strictly official test; and granddaughters of King Korndyke Hengerveld Veeman, a 30 lb. son of Sir Veeman Hengerveld.

They are bred to HARKWIN RAG APPLE PLUM COPIA KING, he by a 33 lb. bull from a 20 lb. junior three-year-old that gave 524 lb. of milk in seven days.

S. R. ELLSWORTH

R. D. 5, Meshoppen, Pa.
Wyoming County
Herd Under State and Federal Supervision.

RECORDS AT LATHROP FARM

A number of very creditable official records have been made recently in the Lathrop herd, South Montrose, Pa., reports Dr. L. M. Thompson, manager. Bell Farm Kayewood, a daughter of Echo King Sylvia and the Pennsylvania state champion, Kayewood Joyce Korndyke, at thirty-two months of age produced 493.2 lb. milk, 25.116 lb. butter. Mr. Thompson purchased this animal from the Bell Farm consignment to the National Dairy Show Sale held at Syracuse, last October. She is backed by large producers, her two nearest dams having official seven-day records that average 40.2 lb. butter.

Korndyke Abbekerk Alice Burke, bred by C. A. Stark, Springville, but raised at Lathrop Farm, produced 28.17 lb. butter, 573.3 lb. milk in seven days as a senior three-year-old. This is her second lactation period. She is a daughter of Sir Burke and Korndyke Abbekerk Alice.

Echo Sylvia Pontiac Tobe, a daughter of Woodmont Echo Sylvia Champion and Tobe Tweede Pontiac Lass, as a yearling heifer produced 19.01 lb. butter, 419.5 lb. milk in a week. This heifer was bred and developed by B. F. Jones & Son. The dam of this heifer as a junior three-year-old produced 28.29 lb. butter, 532.6 lb. milk in seven days. She is one of the very best daughters of King Tweede Spring Farm.

ILLINOIS BUYING BULLS

The purebred bull campaign conducted in Illinois is meeting with a considerable degree of success. A. C. Horneman of the Sugar Creek Creamery Company of Danville, Illinois, has been deputized to select a dozen purebred Holstein bulls and intimated that he would obtain them in Fond du Lac County, Wisconsin. All these bulls will be placed at the head of grade herds.

Mr. Horneman is president of the Illinois Allied Dairy Interests which is all the name indicates, being an organization in which membership is held by practically every agricultural and educational organization in Illinois. It is planned to have a bull campaign in every one of the 102 counties of the State. At Danville during the Illinois Dairymen's Association's fiftieth annual convention, thirty-five dairy sires will be distributed in Vermilion County and the community surrounding Danville.

ON THREE MILKINGS A DAY

Eva De Kol Segis, owned by the Bridgford Holstein Company of Patterson, California, recently closed a year test during which she made 1,032.3 lb. butter from 23,316 lb. milk. She is a daughter of Prince Beauty Pietertje Segis, who was by Beauty Pietertje Prince from Belle Segis, 31.87 lb. butter in a week as a senior four-year-old, one of the highest record daughters of the famous sire, King Segis. Eva was milked only three times a day and formed part of the regular milking dairy while she was on test.

NEW SIRE AT PURDUE HERD

King Pietertje Ormsby Piebe 33d has been purchased by the Dairy Department of Purdue University, Lafayette, Indiana, and will head their good Holstein herd. This bull, as his name indicates, is a son of King Pietertje Ormsby Piebe, whose offspring during the past five years have won 254 first prizes and 91 championships at State Fairs and National Shows in this country and in Canada.

The dam of King Pietertje Ormsby Piebe 33d is Fobes Hengerveld Colantha 2d with a record of 31.05 lb. butter, 515 lb. milk in a week as a junior three-year-old. In her test at that age she produced in a year and then in ten months as a senior four-year-old produced 813.58 lb. butter, 16,351.9 lb. milk. Her dam produced 920 lb. butter in a year as a ten-year-old and is the dam of three good record daughters. King Pietertje Ormsby Piebe 33d will be used as junior herdsire in the Purdue herd and will be bred to daughters of Paul Fobes Butter Girl.

CHEROKEE BREEDERS MEET

The Cherokee Holstein Club held its annual meeting January 4th in Cherokee Hall, Wausau, Wis. There were about forty members present with Ed. Brehm in the chair.

Secretary William Wurthman reported the Association in good condition and many cattle sold in the past year. Dues for 1924 were set at 20 cents for each purebred and 10 cents for each grade cow.

Club leader Merton L. Wright spoke on Club activities. A general discussion followed. The members favored giving the boys and girls clubs every assistance possible and appointed a junior club committee consisting of A. B. Stall, Henry Aderolt and William Wurthman.

The members elected Ed. Brehm as president and William Wurthman as secretary-treasurer for the ensuing year.

BATES BARN BURNT

Fire destroyed the barns and most of the livestock on the farm owned by Geo. Bates veteran Holstein breeder of Waldo, Wis. Only two cows and a bull were saved and all of the harvested crops were destroyed.

Mr. Bates who lives alone with his ninety-year-old mother had leased his farm to Joseph Wisse who lives in an adjoining house. The Wisse family including the hiredman were away when the fire broke out. The buildings were partially insured in the recently organized Farmers' Mutual Insurance Company of Plymouth.

Two Yearling Heifers from an Accredited Herd. Sired by our son of Model Daniel Glista and a 27-lb. cow that averaged 91½ lb. milk daily. Dams are of record backing. \$150 takes the pair. MAPLE GROVE STOCK FARM, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

Our New Herdsire

King Piebe of York 14th, is a REAL Show Bull and then his dam is JESSIE MAIDA RUTH, 742.5 lb. milk, 29.76 lb. butter in a week, 3,118.8 lb. milk, 121.48 lb. butter in thirty days.

She is now in long-time test in which she averaged over 100 lb.

milk a day for the first 140 days. During the first eight months she produced 21,134.8 lb. milk, 839 lb. butter. And she, too, is a great show cow.

WM. S. GRIMM & SON
York Co., Red Lion, R. D. 1, Pa.

Grandsons of

Clara Clothilde Lyons, 639.8 lb. milk in seven days, 4,872.8 lb. in sixty days, 20,771.2 lb. milk, 723.40 lb. butter in 10 months as a two-year-old.

No. 1. Dam, Johanna Cornucopia Colantha 3d, 21.08 lb. butter, 522.4 lb. milk in 7 days A. R. O. During December this cow produced 1,869.3 lb. milk. Calf born November 2, 1923. Is more black than white and is a nice one.

No. 2. Dam, Clover Johanna of Riverview, 343.3 lb. milk, 18.25 lb. butter in seven days as a two-year-old. Since freshening as a four-year-old, she has averaged 1,700 lb. milk per month. Calf is more white than black and bound to please.

These cows are sisters and from the same dam and both are nice individuals as well as big producers.

CHANCE TO SECURE ACCREDITED FEMALES

Owing to the scarcity of competent help, Claude A. Brown of Brown Hill Farm, Tunkhannock, Penna., is reducing his herd. The Brown Hill herd is accredited and the animals composing it are of a high order of individuality. This herd contains a number of daughters of Napol Prince who was by the 30 lb. bull, Prince Segis Korndyke, Jr., and was from Keystone Plum Johanna 1052.96 lb. butter, 20,190.7 lb. milk in a year. This cow is a daughter of Cornucopia Plum Johanna 1056.79 lb. butter in a year and is sister to Keystone Beauty Plum Johanna 25,787.5 lb. milk, 1,294.71 lb. butter in a year as a four-year-old in strictly official test.

In the Brown Hill herd there are a number of daughters of King Korndyke Hengerveld Veeman, whose daughters have made good both in test work and in the every day work of the dairy, and who was by Sir Korndyke Pontiac Artis from Victoria De Kol Hengerveld Veeman 30.61 lb. butter in seven days as a four-year-old with more than 600 lb. milk. She was a daughter of Sir Veeman Hengerveld, was from a 25 lb. cow and has 30 lb. and 29 lb. four-year-old full sisters.

This herd includes a number of heifers sired by Napol Prince Keystone Tritomia. He was from Korndyke Tritomia Bonnie Meade 608.4 lb. milk, 26.64 lb. butter in a week and 794.60 lb. butter in a year. The sire of this bull was Napol Sir

Keystone Beauty, a son of the former world's champion senior four-year-old, Keystone Beauty Plum Johanna, the only cow that ever produced 1,294 lb. butter in a year in strict official test as a four-year-old.

The sire in service at Brown Hill Farm is King Ormsby Veeman Korndyke No. 365430. The seven nearest dams of this bull have official seven day records that average 30.89 lb. butter, a remarkable showing as his dam was tested as a junior two-year-old. She is full sister to K. K. S. V. Kate Pontiac 31.18 lb. butter in seven days as a senior three-year-old. They were by King Korndyke Sadie Vale and from a 28 lb. daughter of a 30 lb. four-year-old.

The sire of King Ormsby Veeman Korndyke is King Ormsby Ideal, whose daughters are just coming into milk and making very nice records. King Ormsby Ideal was by King of the Ormsbys from Emeretta Korndyke De Kol 34.37 lb. butter, 693.7 lb. milk in a week and 1,346.93 lb. butter, 28,035.7 lb. milk in a year.

King of the Ormsbys was by Sir Pietertje Ormsby Mercedes and from the famous 38 lb. cow, Spring Brook Bess Burke 2nd, 1,290.94 lb. butter in a year and dam of the 40 lb. four-year-old, Bess Johanna Ormsby.

Mr. Brown informs us that a number of his cows are due to freshen in early February and so will come into profit right away. The prospect of having so much more work and the fact that he now

Be Reasonable

YOU would not expect your Holsteins to produce the maximum yield of butterfat if you did not provide them with a proper balanced ration.

Is It Reasonable

to expect your soil to produce a maximum yield from year to year without the same attention and feeding?

Your Soil Needs A Balanced Ration

For every element taken from the soil by growing plants a like amount must be returned thru the agencies of manures, fertilizers, legumes, etc.

Baynes' Soil Improver

will help you settle your soil problems and will be sent to any address in the United States for 25 cents a year or 5 years for \$1.00 with the valuable 74 page booklet "FEEDING DAIRY COWS" as a premium.

ADDRESS

BAYNES' SOIL IMPROVER,
327 So. LaSalle St., Dept. H Chicago, Illinois

has all he can attend to is the only reason that these animals are offered for sale. As mentioned above the herd is fully accredited and inspection is invited. Brown Hill Farm is about 1½ miles east of Lemon Station although it is on a rural route operating from Tunkhannock, Penna.

ON TWICE A DAY MILKING

It has not been necessary for Murray A. Miller, owner of the oldest Holstein herd in Northumberland County, to hire expert cow handlers to milk his cows four times a day in order to make large year records. At Sunny Lawn Stock Farm they milk their animals just twice a day, weigh every milking and have made records that rival those made at establishments where no money or time is spared to make large records and where the cost of the record is lost sight of.

The owner of Sunny Lawn Stock Farm is dependent upon his dairy to provide for himself and family. Yet his heifers have made remarkable records. Pearl Topsy Lilith De Kol as a senior two-year old milked 11,000 lb. in nine months. This was her second lactation period and was done on two milkings a day. One of her sisters, Aaggie May Fayne De Kol, as a three-year-old heifer milked 14,476 lb. in eleven months. Another sister, Fayne Pontiac Pet Lady, produced 12,380 lb. milk in eleven months, freshening as a yearling heifer. This great producer made an official record of 16 lb. butter from 419 lb. of milk in a week, practically 60 lb. of milk a day, quite a showing for yearling. Another sister, Edna Lilith Pauline De Kol, in December, 1923 produced 2,047 lb. milk. She is a senior three-year-old and like her sisters was milked just twice a day.

This splendid bunch of heifers are bred to Susquehanna Judge Segis Leoraline. This handsome bull is from a show cow that had the misfortune to be poisoned before she made the official record of which she was capable. As a three-year-old she produced 23.71 lb. butter, 476 lb. milk in a week. She was by Oakland Sethje Mooie and from Leoraline Pontiac, 31.44 lb. butter, 592.5 lb. milk in seven days. This cow was an animal of extraordinary individuality. She was from the 25 lb. cow, Leora, Netherland De Kol Colanthis and has a 30 lb. four-year-old full sister.

The sire of Susquehanna Judge Segis Leoraline is Sir Yankee Segis, a son of King Aaggie Segis, and therefore a brother to Fancher Farm Maxie, whose record of 46.84 lb. butter in seven days as a four-year-old heads the list of official records as reported by the present Blue Book.

The dam of Sir Yankee Segis is Tirania Yankee Colantha Maid, a daughter of Dutchland Colantha Sir Inka with a seven day record of 529.6 lb. milk, 31.78 lb. butter. As a senior two-year-old this cow produced 486.1 lb. milk, 28.67 lb. butter in a week.

The four nearest dams of Susquehanna Judge Segis Leoraline have seven day butter records that average 29.75 lb. His six nearest dams have records aver-

aging 29.48 lb. butter in seven days. The seven day records of his two granddams average 31.61 lb. butter, 561 lb. milk or a little over 80 lb. milk a day.

The herd at Sunny Lawn Stock Farm is under State and Federal Supervision and passed its first test 100% clean. It is a producing herd, yet individuality has been kept in mind. Sunny Lawn Stock Farm is located near Milton, Pa., on the Susquehanna Trail. Mr. Miller invites inspection of his herd and we feel sure that anyone who accepts his invitation will feel well repaid for their time and trouble.

HE BOUGHT GOOD ONES

Two years ago F. W. Averill and W. A. Peddy of Batavia, Illinois, visited Marathon County, Wisconsin and obtained a carload of Holsteins. Mr. Averill recently wrote to C. W. Symons of Edgar, secretary of the County Holstein Association telling what his cows had produced in the Batavia Cow Testing Association.

The Averill herd ranked third in all the cow testing associations of Illinois during the past year and several times during the year the herd was first. Nancy, a two-year-old heifer purchased from Gustav Pilgrim, produced 13,553 lb. milk, 414 lb. fat and made a profit over the cost of feed of \$219.96. Pearl, another two-year-old Holstein purchased from Harry Keller, produced 12,821 lb. milk, 433 lb. fat and made a profit of \$216.67. Eight cows and heifers purchased from members of the Edgar Club produced 105,434 lb. milk, 3,437 lb. butterfat and made a total profit over feed cost of \$1,814.64.

Last summer Mr. Averill sent his father, who is superintendent of the Kane County Asylum, to Edgar and Mr. Averill, Sr., with the assistance of Mr. Symons purchased a carload of heifers and cows. Frank with a neighbor came up last fall and bought a carload and said that he is coming back again in the near future. He is well satisfied with Marathon County Holsteins.

HENRY IS CHANGEABLE

Henry Ford, who became a member of the Holstein-Friesian Association of America in 1912 recently purchased 100 head of purebred Ayrshires which will be placed on his 9,000 acre farm at Dearborn, Michigan. The milk will be used by the patients of the Ford General Hospital. The cattle were obtained from the Gossard Breeding Estate at Martinsville, Indiana. It is reported that Mr. Ford also has a number of purebred Shorthorns.

CHOICE HEIFER CALVES

strong in the blood of the Konigen, Pontiac, Creamelle, Segis and Colantha Johanna Lad strains. Prices reasonable for high quality of stock.

Herd under State and Federal Supervision.

VALLEY VIEW FARM

O. P. Walker & Sons, Props.
SUSQUEHANNA COUNTY
THOMPSON PENNA.

How About a Nice Bull Calf

from one of our great cows for your next sire?

Our herd includes daughters of such famous sires as King Segis Pontiac Konigen, Dutchland Creamelle Korndyke Lad and King Hengerveld Hartje. Nearly all have A.R.O. records and this includes 20 lb. two-year-olds.

Our herd is under State and Federal Supervision and the last test was clean.

Raymond B. Strickland
Susquehanna County,
R. D. Nicholson, Pa.

Pontiac Korndyke

was one of the greatest bulls that ever lived. He stands at the head of the only combination of three direct generations of Century Sires.

Our senior sire, **King Rag Apple Plum Copia**, carries 34¼% of the blood of this noted sire.

How would you like to own a son of "King" from one of our high bred cows? They are priced to sell. Our herd is under State and Federal Supervision and our last test was 100% CLEAN.

Maple Ridge Farm
J. S. and F. R. Howard, Proprietors.
Susquehanna County, Springville, Pa.

Waldron Farm Holsteins

Are noted for their fine individuality, size and producing ability

KING SYLVIA PONTIAC PIETJE 292881

stands at the head of our herd of 60 head of top-notch Holsteins. He is a son of Champion Echo Sylvia Pontiac (You all know about him), from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in a week as a junior four-year-old, she by Woodcrest Sir Clyde and from the best bred daughter of the famous May Echo Sylvia.

Owing to our herd being made up chiefly of his daughters, we offer this great four-year-old sire for sale, or we will take in exchange clean, T. B. tested heifers or young cows.

Herd under State and Federal Supervision, last test CLEAN.

MRS. MAUD DWIGHT

Chenango County South Otselic, New York

A specimen member of my herd. Cows of her individuality and producing capacity are being mated with my herdsire

King Pontiac Ormsby Pietje

a son of the noted show bull and show sire, King Pontiac Alcartra Pietje. His dam was by Ormsby Korndyke Lad, while her dam was by Nannettson and from a daughter of Paul Beets De Kol.

The resulting calves, animals of royal breeding, are offered at reasonable prices.

Herd under Supervision and Clean.

A. CONRAD SILFER

Lewisburg, R. D. 3, Union County, Pa.

Chenango Valley Stock Farm

PRINCE RAG APPLE KORNDYKE 73415

our foundation herd sire, was a son of the noted Pontiac Korndyke from a 21.67 lb. three-year-old daughter of Dutchland Sir Pontiac Rag Apple.

We have been breeding Holsteins for 18 years, and our present herd is headed by a young bull whose 15 nearest dams average 31.88 lb. butter and over 600 lb. milk in seven days.

When in need of good females or a young bull, write us your wants.

Herd under State and Federal Supervision.

WHITMAN A. FOLLETT

Chenango County North Norwich, N. Y.

Others as Good in the Herd!

Ruth Russell Vale De Kol Colantha

This grand old cow, now in her 15th year, produced 14,625 lb. milk, 512 lb. fat in a year of cow testing association work as a 13-year-old cow. She is just one of a dairy that averaged 12,000 lb. milk in C. T. A. work.

Such magnificent producers are being bred to

MEADOWSIDE INKA DE KOL COUNT

whose dam produced 30.42 lb. butter in 7 days, averaging 80 lb. of 4.34 per cent. milk per day.

Herd Accredited. Let me supply you with some REAL GOOD Holsteins.

The Entire Ac-
credited Herd of
Omwake & Speck

INCLUDED IN THE OFFERINGS ARE

The noted show heifer, LADY WESTTOWN SEGIS, shown three different years and still unbeaten.

Sixteen daughters of SIR COLANTHA PIETERTJE KORNDYKE, a 30-lb son of the famous old sire, PONTIAC KORNDYKE. Most of these are not yet in milk. This is probably YOUR LAST OPPORTUNITY to obtain young granddaughters of PONTIAC KORNDYKE.

The 1,600-lb cow, BRIAR VALE JEWEL 2d, due to freshen at sale time.

The grand old foundation cow, LADY MAUD HENDRIK DE KOL, four of her daughters, six granddaughters, and a number of great-granddaughters, together with several descendants of one of her sisters. You will like this splendid family.

With the exception of six head, all are under seven years old and, with the exception of 11 head, all are under FIVE years old.

Also the senior herdsire, ORMSBY CLOTHILDE LAD, a son of the famous ORMSBY KORNDYKE LAD, from a 29.73-lb. granddaughter of Hengerveld De Kol, record made as a three-year-old. You know that this is the best producing blood of the breed. Nearly all the older females are bred to this great bull.

The junior herdsire, CHAMPION VALDESSA JETTA, a showy, stylish fellow, he from a good granddaughter of PONTIAC KORNDYKE and sired by a well bred son of KING VALDESSA PONTIAC. Real quality in this fellow.

Sale Manager: S. R. MILLER.

Everything goes. The previous day all the other stock and the farm machinery will be sold and the farm is rented.

Published Semi-Monthly. Price, 75c. Per Year

A COOL PLACE ON A HOT DAY

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922 at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

Near Milking Time!

THE ORIGINAL MILKING HERD AT DENNINGTON

Animals in this herd have milked above 75 lb. a day on two milkings and done this right along.

To these desirable animals have been added choice bunches of purebred Holsteins purchased at private and public sales. They were selected for individuality and type as well as for capacity for production. No reason-

able expense has been spared to get real good stock, animals that will, by their work at the pail, **PAY A PROFIT OVER THE COST OF THEIR FEED AND CARE.** They are being bred to

Onaco Sir Lucille Jolie Beauty

whose dam and sire's dam each made **World Records** for year butter production as four-year-olds. This pair of great cows averaged 1,233.93 lb. butter, 24,808.85 lb. milk in their year test, the milk of the dam aver-

aging 3.94% fat and the sire's dam averaging 4.02%. In seven-day test his dam produced 33.29 lb. butter and the sire's dam 32.88 lb. Each produced 665.5 lb. milk in the week, or better than 95 lb. per day.

We have a few young bulls that we are pricing at figures so low that they will surprise you. Keep this in mind—**WE STAND SQUARELY BACK OF ANYTHING WE SELL.**

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

CLEAR SPRING FARM SALE

55—Registered Holstein-Friesians—55

Thursday, March 6th, 1924, at 12 o'clock

Sheridan, Pa., Lebanon Co.

My Dear Sir:

You are invited to attend the sale at Clear Spring Dairy Farm, Sheridan, Penna., Lebanon Co., of 55 head of Registered Holstein-Friesian Cattle, all ages—cows, heifers, bulls and calves.

All have been federally tested and are sold with the privilege of a 60-day retest, subject to the usual restrictions.

The junior herdsire, **BERKS ORMSBY POSCH**, No. 389574, is a grandson of Spring Farm King, whose daughters are making wonderful records and who was by King of the Pontiacs from the 34-lb. cow, Tweede De Kol Lass. Spring Farm King is full brother to K. P. Pontiac Lass, the first cow to make 44 lb. butter in seven days, former world's champion for both seven- and thirty-day butter production.

The dam of **BERKS ORMSBY POSCH** is **HAZELWOOD ORMSBY POSCH** ad, 24.93 lb. butter, 654 lb. milk in seven days, 16,399 lb. milk, 666.69 lb. butter in 305 days as a four-year-old, one of the greatest show cows of the breed. She was shown several years, and each year won high honors, winning first as a calf, and junior championship at the National Dairy Show in 1912, and being grand champion of the Oregon and Washington State Fairs in 1920. She produced 106 lb. milk in a day.

The senior herdsire, **KING PIEBE OF YORK** 7th, No. 361089, is to be sold. He is by Mr. Robertson's great herdsire, **KING PIEBE OF YORK**, son of **PIEBE LAURA OLLIE HOMESTEAD KING**, sire of two daughters that have each made over 30,000 lb. milk in a year, including May Walker Ollie Homestead, 1,523.23 lb. butter, the United States Champion for yearly butter production. **KING PIEBE OF YORK** is from a daughter of **KING SEGIS PONTIAC COUNT**, the only sire with three 30,000 lb. daughters. She has a year record of 20,546.4 lb. milk, 1,032.41 lb. butter, and made 27.15 lb. butter in seven days, averaging 79.9 lb. milk per day, all as a junior three-year-old.

The dam of **KING PIEBE OF YORK** 7th has a year record of 800 lb. butter, 19,038 lb. milk. She is a granddaughter of King of the Pontiacs.

A fine lot of sons and daughters of **KING PIEBE OF YORK** 7th are in the sale and they are a great bunch. Many of the good cows and heifers are bred to him.

Many of the cows and heifers are bred to the junior herdsire, **BERKS ORMSBY POSCH**, a grandly bred bull whose sisters are making splendid records.

The herd contains a fine bunch of granddaughters of the great **KING KORN-DYKE SADIE VALE**, the only bull with a 40-lb. daughter, a 40-lb. sister, and a 40-lb. dam. This is your best buy if you want the best of the breed.

This herd is strong in the blood of many of the greatest bulls of the breed. Remember, what we are all looking for is the best. We have it in this fine bunch of Holsteins—the blood of King of the Pontiacs, the premier sire of the breed—King Segis, one of the very greatest—King Korndyke Sadie Vale, another real producer—Piebe Laura Ollie Homestead King, wonderful sire of producers and show animals—King Segis Pontiac Count, "the marvel of all sires"—and a long list of other great producing sires.

Here is a wonderful chance to buy royal blood. All are tested and sold subject to the usual 60-day retest.

Our farm is close to Sheridan, Lebanon Co., Penna. We will meet all trains at Sheridan. Send for catalogue to

REMEMBER THE DATE
MARCH 6, 1924.

Holsteins Do Well on Limestone Soil

The Story of a Cumberland County Herd

CLOSE by the Carlisle pike, not far from the village of Hogestown, Pennsylvania, is the cozy farmhouse of David Gible. Mr. Gible and his son, Paul, own a herd of Holsteins that are making history in the Cumberland County Cow Testing Association. During the month of January, 1924, this herd averaged, 1,394 lb. milk, and 45.9 lb. butter and led for high herd average. Despite the fact that three of the milking herd were fresh in April, 1923, and that six

to exceed 12,000 lb. milk. As Mr. Gible says, "It takes lots of grading and culling to build up such a herd."

A noted authority in the cattle industry said, "It is a good thing to place your best cow next to the door so that everyone entering the stable can see her." Perhaps this is the reason that the place of honor is occupied by Adeline Sunshine Mechthilde, No. 201388, a daughter of Clintonia Fayne De Kol and Crescent Farm Sunshine. This cow was born March 1, 1913, and so is nearly eleven years of age. Last year she produced 17,799 lb. milk, 544.7 lb. butterfat in cow testing association work. She has an official record made as a seven-year-old of 505.7 lb. milk, 21.46 lb. butter. During January of this year she produced 2,186 lb. milk, 65.6 lb. butterfat.

Adeline has a two-year-old son and several daugh-

ADELINE SUNSHINE MECHTHILDE
17,799 lb. milk, 680.9 lb. butter in a year of cow testing association work. A. R. O. record, 21.46 lb. butter, 505.7 lb. milk.

milkers are two-year-olds that were fresh in September and October, there are nineteen animals that produced over 1,000 lb. milk and thirteen that produced over 1,200 lb. milk in January. Five different cows each produced over 60 lb. fat, seven exceeded 50 lb. and fifteen made over 40 lb. In each instance the Gible herd led the Association which is one of the best in the state.

At the time of the official visit of A. A. Raudabaugh, tester for the Association, which was the 7th of February, the seventeen purebreds in milk were averaging 853 lb. milk daily, or in other words, these seventeen purebred Holsteins were each filling a 50 lb. can of milk every day.

The Gible herd was started early in 1919, by the purchase of a couple of good cows at a sale held in Carlisle. So well did these cows do that a number of others have since been purchased, the grade dairy has gradually been replaced by purebreds, and now both Mr. Gible and his son, Paul, are Holstein enthusiasts.

Last year was the first this herd had been enrolled in the Cumberland County Association and the fourteen milkers averaged 11,180 lb. milk, 385.7 lb. butterfat. They are doing even better this year for they promise

PANSY KORNDYKE ABBEKERK
13,631 lb. milk, 644.13 lb. butter in a year. With David and Paul Gible.

ters in the herd, one of which is Permelia Walker Clothilde, No. 314253, who has quite a record to her credit, for, besides producing 9,400 lb. milk in a lactation period, she also produced four heifer calves within one calendar year, dropping two pair of twins. Both Adeline and her daughter Permelia are large cows and first-class dairy animals. The herd is in good working condition and the younger animals well grown and in good flesh.

Another member of this herd, Netherland Butter Boy Velonia, No. 404537, has a young daughter besides a son ready for service. Although this cow was fresh July 22d she is now averaging 57 lb. per day.

Pansy Korndyke Abbekerk, No. 389537, is a six-year-old daughter of Tranquility Pansy Ormsby and Allamuchy K. A. Prince, a well-bred son of the century sire, Korndyke Abbekerk. Pansy has a cow test-

ing Association record of 13,631 lb. milk, 515.3 lb. butterfat and she, too, is a splendid individual, one that it would be hard for a critical judge to fault.

The head of the herd is Boiling Springs Segis Korn-dyke, No. 377919, born August 20, 1921. He is a son of Lothian De Kol Korndyke and Boiling Springs Goldbron Segis. Lothian De Kol Korndyke heads the herd of Ivo V. Otto and has a number of splendid record daughters, several of which have made world's records in the Dairyman's Division. Daughters of this bull stood first and second for milk and second and third for butter in the junior two-year-old class of the Dairyman's Division for the Holstein year ending March 31, 1923. Boiling Springs Segis De Kol produced 13,240.8 lb. milk, 612.57 lb. butter in the 365 days while Boiling Springs Hartog made 14,679.9 lb. milk, 623.49 lb. butter, world's record for both milk and butter in class. Boiling Springs Refina Segis, a senior two-year-old will have her record reported in the 305 days' division of the Dairyman's Division test-

FOUR GOOD ONES

A grandson of Creator and a granddaughter of Adeline. They are held by Paul Gible and A. A. Raudabaugh, tester of the Cumberland County Association.

ing. She produced 9,253.3 lb. milk, 376.59 lb. butter in 272 days, carrying calf 209 days of this testing period. The records made evidently did not hurt these young cows for at their next freshening, Boiling Springs Segis De Kol, as a junior three-year-old, made 635.6 lb. milk, 27.97 lb. butter in seven days official test; Boiling Springs Hartog as a senior three-year-old, made 426.4 lb. milk, 25.11 lb. butter in a week and the junior three-year-old, Boiling Springs Segis Pontiac, made 526 lb. milk, 20.37 lb. butter in seven days.

Lothian De Kol Korndyke is a son of Lothian Mary De Kol 2d, 27.03 lb. butter, 594.7 lb. milk in seven days and 106.82 lb. butter in thirty days averaging well over 90 lb. milk per day for the month and producing 102 lb. milk her best day. She has a year test, also made as a three-year-old, of 983.98 lb. butter, 23,581.1 lb. milk and she is full sister to Lothian Queen Korndyke Pietertje, 30.35 lb. butter in a week; 961 lb. butter, 22,159 lb. milk in a year while another full sister, Lothian Lady De Kol Korndyke produced 690.83 lb. butter in 305 days. The sire of Lothian De Kol Korndyke is by a son of King of the Pontiacs and is from Novelty Fedora Hengerveld, 1,022.21 lb. butter, 22,946.9 lb. milk in a year as a four-year-old while as a senior two-year-old she made 862 lb. butter in a year.

Boiling Springs Goldbron Segis, the dam of the Gible herdsire, as a junior three-year-old produced 12-

321.3 lb. milk, 510.26 lb. butter in 265 days and carried calf 206 days of this time. One of her sisters, Boiling Springs Ormsby, holds the world's record for milk and Pennsylvania state record for butter in the junior four-year-old class, sub-division B. She produced 15,876 lb. milk, 530.73 lb. butter in 235 days, carrying calf 196 days.

The young bull calf that was expected to be the junior sire is from Swandale Pontiac Aaggie Queen, a daughter of Pabst Hengerveld Pontiac, he by King Pontiac Champion. His sire is Dimerie Sir Hengerveld Creator, No. 302119, a son of Creator and Pabst Hengerveld Colanthus, 31.51 lb. butter, 576.4 lb. milk in seven days and 1,057.15 lb. butter, 24,078.3 lb. milk in a year.

Everyone knows that Creator, the Pabst herdsire, has a long list of good record daughters and is a son of the famous Spring Brook Bess Burke 2d, a cow that four different years has made over 30 lb. butter in a week and over 1,000 lb. butter in a year. This cow was tested six different years for both short time and long time test. Her six records averaged 29.44 lb. butter, 612.6 lb. milk for seven days and her year records averaged 914.5 lb. butter, and 19,443 lb. milk. Her highest year record was 1,290.91 lb. butter and her highest seven day record was 38.23 lb. butter, 792.3 lb. milk.

Among her daughters is Bess Johanna Ormsby. As this story is being written a card is received from Malcolm H. Gardner, Superintendent of Advanced Registry, announcing that Bess Johanna Ormsby had just closed a long time test in which she produced 30,143.3 lb. milk, 1,497.61 lb. butter in 365 days. In previous lactations, three different years, she has produced over 1,000 lb. butter in ten months, has a 44 lb. seven day butter record from 836 lb. milk and two different years has made over 40 lb. butter in seven day test. Besides Creator, Spring Brook Bess Burke 2d is the dam of King of the Ormsbys and Sir Pietertje Ormsby Mercedes 37th.

The few grade Holsteins still in the herd are real producers, otherwise they would not be there. One of these produced 71.6 lb. butterfat during the month of January, giving 1,860 lb. milk with an average test of 3.85%.

There are 125 acres in the Gible farm and they consist of the high-class farming land characteristic of Cumberland County. Limestone crops out in many places and it is well-known that such a soil forms good pasture and crop land and the animals raised on it possess both substance and quality. Mr. David Gible, the senior member of the farm, was born on the farm and is right around sixty years old now. He has worked hard all his life and for forty-three years attended market days at Harrisburg to dispose of farm produce. He plans to take life a little easier from now on and so the herd will be dispersed in the near future. The advertising columns will give you full particulars.

"Breeds of livestock cannot be improved without the constant use of good sires. A good sire so impresses his characteristics upon his offspring that they are more like him than like the common herd."—Missouri State Board of Agriculture.

Prize Winners at South Western Fairs

KING PONTIAC PARTHENA CHAMPION

Second prize aged bull at the National Western Stock Show, losing to the grand champion. First prize three-year-old at Wichita. Owned by the Modern Woodmen Sanitorium, Woodmen, Colorado.

TRIUNE ORMSBY PIEBE 4th

First prize yearling bull, junior and grand champion at the Kansas National Livestock Show. Owned by A. J. King, Kansas City, Missouri.

WOODCRAFT PONTIAC CHAMPION STAR

First prize senior bull calf, junior champion and reserve grand champion at the National Western Stock Show at Denver, Colorado. First in his class at Wichita. Owned by the Modern Woodmen.

BOCK DE KOL GERDA GIRL

First prize junior yearling heifer and junior champion at the Kansas National Livestock Show, Wichita, Kansas. Owned by A. J. King, Kansas City, Missouri.

ZWINGARA SEGIS CLOTHILDE

First prize aged cow, senior and grand champion, both at the National Western Stock Show, Denver, Colorado, and the Kansas National Livestock Show, Wichita, Kansas. Owned by the Modern Woodmen.

CHAMPION ECHO SYLVIA PONTIAC 3d

First prize two-year-old and senior champion Holstein bull at the Kansas National Livestock Show at Wichita. Owned by Jack Harlan, Pawhuska, Oklahoma.

A South Carolina Two-Year-Old

"ONE swallow does not make a summer" is an old saying and J. P. LaMaster, Professor of Dairying at Clemson College, South Carolina, intimates that there should be a Holstein proverb to the effect that one good daughter, even if she is a State champion, does not indicate a high-class sire. He is led to this observation by the performance of Princess Ona Magician, a heifer in the Clemson College herd.

Princess Ona Magician, No. 702689, was bred and is owned in the College herd. Her sire was Ohio State Magician, a son of Sir Duke Walker from a daughter of Sir Soldene Wayne De Kol. Ohio State Magician was a complete failure in the Clemson College herd,

PRINCESS ONA MAGICIAN
19,708.1 lb. milk, 682.56 lb. fat or 853.2 lb. butter in 365 days as a junior two-year-old. South Carolina champion for age over all breeds. Bred and owned by Clemson College.

says Mr. LaMaster, both from the standpoint of siring producers or type. With the exception of Princess none of his purebred daughters ever produced enough to make entry requirements in the Advanced Registry. The type and conformation of his heifers was decidedly inferior to that of their dams. He had quite a number of grade daughters and they, too, were low producers, yet he sired one outstanding daughter, Princess Ona Magician.

Mr. LaMaster is of the opinion that this heifer derives her good qualities from the other side of her pedigree. Her dam, Helen Queen Ona, is a daughter of the well-known Ohio bull, King Ona, and was from

Helen Queen Bernardo 2d, a cow that was of very good type but with a tendency to go dry early in her lactation period and also a tendency to use her food for the purposes of putting fat on her back instead of putting it into the milk pail. As a mature cow she made a record of 12,082.5 lb. milk, 380.68 lb. butter-fat in 340 days. Her daughter, Helen Queen Ona, the dam of Princess, made two records, the first made as a junior two-year-old was 8,610.9 lb. milk, 292.98 lb. fat. Her second record was made as a senior three-year-old and was 12,796 lb. milk, 472.23 lb. fat. She is again on test as a mature cow and in the second month of this lactation period produced 2,252 lb. milk, 72.6 lb. fat and, barring accidents, she promises to materially increase her former records. It seems more than probable that Princess and her dam both derive their good qualities from King Ona, who is a son of Ona Button De Kol, 26,761.2 lb. milk, 1,345.55 lb. butter in a year, the Ohio breed champion for year butter production.

Princess Ona Magician freshened December 23, 1922, when she was two years, one month, eleven days old and she was started on her test December 26th. She was milked three times a day throughout the entire year by Taylor Henderson, who is depicted holding her in the picture. The heifer ran very steadily throughout the year. Her highest month for milk production was March during which she produced 1,819.8 lb. milk, although she actually averaged more per day during April, for, as she produced 1,800.05 lb. milk during that thirty-day month, an average of a trifle over 60 lb. daily. For the first six days of her test in December, 1922, she averaged 40.5 lb. and for the thirty-one days of January her average is a trifle over 52.5 lb. while for the twenty-five days in December, 1923, she averaged 53.2 lb. milk daily, or more than she was when she started on her year's work. Her record of 19,708.1 lb. milk and 682.56 lb. fat, equivalent to 853.2 lb. butter on the 80 per cent basis, makes Princess Ona Magician the South Carolina junior two-year-old champion over all breeds.

The accompanying sheet shows the monthly totals for milk and fat as well as the average test for each month. It also shows the feed the heifer received. During most of the year this ration consisted of one part cotton seed meal, one part oil meal, one part ground oats, two parts bran, three parts corn meal. Most

dairymen, particularly in the Northern States, would consider this a very heavy grain ration and lacking in bulk but this South Carolina heifer certainly did remarkably well on it. She was 183 days on pasture and all the time she received a supplementary grain ration. She was fed hay and beet pulp every month in the year and during the time she was not on pasture she was fed silage. In addition during nice days in January, February and March, she grazed on some patches of rye. To each 100 lb. of grain mixture one pound of ground limestone was added until November, when the limestone was replaced with one pound of finely ground raw bone meal for each 100 lb. of grain.

Loomis is Dairy Federation Secretary

A. M. LOOMIS of Washington, D. C., has been selected by the Executive Committee of the American Dairy Federation to be the Federation Secretary with offices in Washington. Mr. Loomis is Secretary of the National Dairy Union and, for five years past, has been assistant to the National Grange representative at Washington.

All the national dairy breeders' associations as well as a number of other national dairy product associations, including the National Dairy Council, are members of the new Federation.

The initial activities of the Federation will be to oppose all efforts to reduce the tariff on dairy products and vegetable oils, and to secure the raising of the Dairy Division of the Bureau of Animal Industry in the Department of Agriculture, to the full rank of a Bureau in that Department. In a hearing before the House Committee on Agriculture, February 14th, representatives of the Federation pointed out that the dairy industry now produces two and a half billion dollars worth of dairy products, which when they reach consumption cost consumers about four billion dollars. There are more than twenty-four million dairy cows in the United States, and all interests dependent on the products of these cattle to the last analysis have unanimously approved the request for the establishment of a Bureau of Dairy Industry.

Miller Brothers' Champion

FOR more than forty years the Miller herd has been in existence and is, we believe, the oldest herd in Pennsylvania. It was started in 1880 by John Miller, father of the present owners. Mr. Miller, with John L. Stone, now of the New York State College of Agriculture at Cornell University and Edward Carpenter of Wilkes-Barre, formed the Lackawanna Breeders' Association. Mr. Stone, representing this Association, went to Holland and bought a number of good cattle there which were imported into this country and some of the present members of the herd trace back to these early importations.

The Miller herd at the present time contains about fifty head of purebred Holsteins. Some of the animals were exhibited at the Lackawanna County Fair last fall and Mapleway Eeke Lyons No. 370407 carried off the first prize. As her picture shows, she is an animal of superior individuality, deep of body, has a straight

back and carries out well. She is an animal that could be shown in almost any company with a reasonable prospect of carrying off her share of the honors. She was born October 12, 1916. Her sire, Hillside Sir Lyons, is from Hillside Dodo, 31.94 lb. butter, 582.6 lb. milk in seven days and was sired by Dutchland Sir Lyons Hengerveld, he by Colantha Johanna Lad from a 33-lb. daughter of Pietertje Hengerveld's Count De Kol.

The dam of Mapleway Eeke Lyons is Pietje Eeke, 478.9 lb. milk, 21.19 lb. butter in a week. She was by Pietje Pender, who has a number of good record daughters and who was full brother to Hillside Della Pender Pietje, who has three daughters tested as three-year-olds that averaged 33 lb. butter in seven days.

The Millers have always been true breeders and dairymen and are in the dairy business with purebred Holsteins because they believe that they are the most

MAPLEWAY EEKE LYONS
First prize cow at the 1923 Lackawanna County Fair. Owned by Miller Brothers—Arthur J. and Harry B.—Clarks Summit, Pa.

profitable dairy animals. They have never been engaged in Holstein breeding from a speculative standpoint so it is not at all surprising to find these two men, who have spent a lifetime around purebred Holsteins, firmly opposed to the speculative element that has crept into control of the Holstein-Friesian Association.

The present firm consists of Arthur J. and Harry B. Miller. They have about fifty head of purebreds on their 175 acres located near Clarks Summit, Lackawanna County, Pennsylvania.

Washington News

AGRICULTURAL organizations are objecting to omission from the Mellon taxation plan of any reduction in the taxes on automobiles, motor trucks and repair parts. It is claimed that one-third of the automobiles now in use are owned by farmers and that the light truck is becoming indispensable to agriculture. The Grange, in particular, asked for a reduction in the taxes on the sales price of trucks, automobiles and repair parts.

The bill extending for another nine months the time limit on the operations of the War Finance Corporation, has passed both House and Senate and is in the hands of the President for signature. Other agricultural relief matters have not been making much progress.

The United States Tariff Commission has given notice of a public hearing, investigating the tariff on vegetable, animal and fish oils. This will be held on

March 7th. The hearing will be preliminary to determine the scope of an investigation which the President has ordered. The Commission will investigate the whole question of the rate of duty on imported vegetable oils, the interchangeability of these oils, their place and importance in American industry and the rates of duty which ought to be charged upon the products in the manufacture of which they enter.

This investigation will affect more agricultural interests than any other subject which the President could have placed before the Tariff Commission. Plans are already being made for representation at this hearing by the flaxseed growers, cottonseed producers, peanut producers, hog raisers, corn growers, dairy interests, fish oil producers and the beef cattle interests as represented by the packinghouse and oleo stock producers.

The immigration bill has been reported out of Committee and is on the House Calendar. The bill now changes the quota basis of the present law to the Census of 1890. Large industrial interests seeking new supplies of labor are opposing its passage.

The suggested constitutional amendment, providing any further issuing of tax exempt securities and permitting Congress and the States to tax Government, state and municipal bonds, failed of passage February 8th but only lacked seven votes of the required two-thirds. There were 247 votes for against 133 against but 254 votes were required to start the amendment on its way.

The bill providing for the sale of the Muscle Shoals property to Henry Ford has been reported favorably by the House Committee on Military Affairs. It has been given a preferred place on the House Calendar to be considered immediately after taxation measures are disposed of.

Dairying and the South

THE Southern States are well adapted for the development of a prosperous livestock and dairy industry but in many parts this has been held back by the animals suffering or dying from Texas or splenic fever carried by the cattle fever tick. The systematic drive for the eradication of cattle fever ticks, is to a great degree, responsible for the present rapid growth of the industry.

Recent reports to the United States Department of Agriculture show that dairying is fast becoming prominent and profitable in many sections of the South.

South Carolina reports that many small farmers are finding a good source of revenue in the dairy business and are selling milk and cream to creameries established there.

Mississippi likewise is becoming a dairy State. A few years ago there was an inadequate milk supply for local consumption in some Mississippi cities, and milk had to be shipped in from other States.

Through systematic dipping, cattle ticks have been largely eradicated. In regions entirely free from ticks, herds of well-bred dairy cattle are now found and are meeting the local demand for milk and dairy products. In fact, considerable quantities of milk are shipped to New Orleans and other distant markets.

Southern dairymen are showing a keen interest in livestock improvement. There are a few purebred herds. Others are breeding common herds up to high-class stock by using purebred bulls. The establishment of high-class dairies is being encouraged and assisted by various educational and commercial agencies.

The Southern States have ranked low in the consumption of dairy products and high in the consumption of dairy product substitutes. Gradually and surely this condition is changing. We trust that Holstein breeders will reap even more than their full share of this growing business which calls for more high-class dairy cattle and pledge themselves at all times to do all they can to further the legitimate growth of the Holstein breed in the South, the greatest undeveloped dairy market in the United States.

Listening in at Washington

THE Washington representative of the National Grange on January 18th sent a letter to the Ways and Means Committee of the House of Representatives, stating the position of the Grange on contemplated legislative action. This statement indicated that the Grange was against any lowering of the surtax on large incomes; urged economy in the cost of Government, national, state and local; favored a constitutional amendment forbidding the issuance of tax-exempt securities and urged the repeal of the tax on telephone messages on the grounds that the tax was excessive, being from 10% to 33 1/3% of the business and on the

Don't forget—this herd is Fully Accredited.

grounds that similar business taxes have already been removed.

The Norbeck Bill, which proposes to form a revolving fund to provide aid for farmers in the wheat belt in order to enable them to purchase livestock, was reported favorably by the Agricultural Committee of the Senate. This, in our opinion, has been practically killed by an amendment which provides that its provisions should also extend to cotton farmers, although the appropriation was increased from \$50,000,000 to \$75,000,000.

The United States Tariff Commission has postponed the hearing on the linseed oil tariff from February 5th to March 5th. Representatives of a number of agricultural and other oil producing interests have reached an agreement to cooperate in the defense of existing schedules on all vegetable, animal and fish oils.

A food loan to Germany is being seriously considered in Government circles, but before this loan can become a lien upon German national assets it would require the approval of the Reparations Commission and the fact that it would be stipulated that the money advanced should be spent in the United States might not meet the approval of the representatives of other nations who sit upon the Reparations Commission.

In writing his indorsement of the "Better Sires—Better Stock" movement the proprietor of a Holstein dairy near Amboy, Ill., states that because of his adherence to the breeding principles advocated in this crusade, the butterfat average for his dairy is higher than that of any other herd in the cow-testing association of which he is a member. His animals also have been very successful in the show ring.

FOR \$1.00

You can read *The Duroc Journal* for a year and learn about the farmers' favorite hog, the Duroc-Jersey. For efficient pork production, the Duroc-Jerseys lead, and for disseminating knowledge pertaining to this great breed of swine

Junior Department

Iowa Club Forming

Boys and girls of Lowell Township will organize a purebred Holstein calf club under the supervision of County Agent Paul N. Smith. All calves will be shown at the Monticello Fair this fall and the Montecello County, Iowa, fair association announces that valuable premiums will be awarded the winners.

John Likes Cattle Best

John Fleming of Gresham, Oregon, was the highest scoring calf club members at the Pacific Northwest Livestock Exposition, held at Portland, Oregon. For his herdsman'ship and showing in the ring, he won a registered Holstein calf donated by the Hollywood Stock Farm, Seattle, Wash. John has won free trips to both the Carnation and the Hollywood Farms; two trips to the boys' and girls' summer session at the Oregon Agricultural College; the silver loving cup awarded by the Sperry Flour Company of Portland; over \$30 in prize money and a gold watch given by the Holstein-Friesian Association for showmanship and handling.

John, first calf club work was in 1919 when he cared for a grade Holstein and a Poland China pig. He thought calves were more interesting than pigs so he discontinued the pig club work and bought Bessie, a registered Holstein calf. Bessie has been shown at local and state fairs and at the Pacific International Exposition and the first year this calf won \$80 in cash prizes.

Club Members Talk to Business Men

The commercial club of Fargo, N. D., at a meeting in late December listened to a talk by Clark Fredrickson of Davenport, who told how he came to have poultry and exhibited them among the junior exhibits at the annual Red River Valley Fall Show at Casselton, winning a Holstein calf.

Little Vivian Hinschberger of Sanborn, so small that she had to climb on her chair to be seen, told how she started with fifteen pigs, but lost eight of them. However, she raised seven, "and when they got big I sold them," she said, and felt that she had told the whole story.

Must Write Monthly Reports

Boys and girls calf club of Columbia County, Wis., have started the new year with about forty members. Each member will be required to write a letter about their calf every month to the club advisor, Frank E. Bell, of Columbus.

A member of the Cedar Grove Cow-Testing Association, Wisconsin, writes to the United States Department of Agriculture: "Testing showed us that we had sold a registered bull to be slaughtered that had five daughters that averaged over 13,300 lb. milk and 525 lb. butterfat. A lesson like this one will be remembered for a long time."

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

February 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

White Nectar

ALTHOUGH it is nothing like "White mule," the words, "White Nectar" bring up many thoughts. Nectar, according to mythology, was a red wine and was the drink of the fabled gods whose homes were at the top of Mt. Olympus. When these gods were in convention assembled, their drink, nectar, was poured into their cups by an attendant or minor deity. At first this was a beautiful maiden, Hebe, a daughter of the head god, Zeus. Hebe, for a reason which need not be told here, fell under the displeasure of her mighty father who placed in her stead a handsome youth, Ganymede. The story goes that this young man was a mortal and that Zeus appeared to him in the form of an eagle. He was induced to mount on the eagle's back which flew with him to the top of Mt. Olympus where he remained forever afterward.

Musing over the possibilities of "White Nectar," the writer fell asleep. In a dream he saw the President and the sixteen directors of the Holstein-Friesian Association of America, together with the members of the True Type and other committees, gathered in convention. They were discussing the many perplexities of the Holstein-Friesian industry and the Holstein-Friesian Association. Led by Vice-President Kelley, orator after orator gave their views upon what should and what should not be done. Naturally the throats of the speakers grew parched and dry. Refreshments were called for. Extension Director Fred A. Koenig now appeared on the scene. He carried a gigantic milk bottle labeled "White Nectar" and from this bottle he filled the goblets of those sitting around the table. Fred was clothed in the picturesque dress of the ancient Greeks. From his shoulders sprouted a pair of tiny

wings which we were told had been bestowed upon him by the editors of a certain breed publication in return for favors rendered. These wings flapped assiduously as he bustled around the banquet hall. They served a double purpose. They helped cool his heated brow and they assisted him to speed in his journeyings.

Just how much the dignitaries of the National Association appreciated their draughts of "White Nectar" we are unable to say for just then the dream ended—all too soon.

On telling our dream to some of the men who constitute the rank and file of the Holstein-Friesian Association and Holstein-Friesian industry, one of them was so hard hearted as to suggest that, if some modern Zeus would to-day appear at 230 East Ohio St., Chicago, Ill., and carry off the extension director and all of his conferees and assistants to Mt. Olympus or some other mountain in some far distant country, there to stay forever and ever, then "possibly" the Holstein-Friesian industry and the rank and file of the Holstein breeders would be benefited to a much greater degree than they have ever hitherto been benefited by any of the schemes emanating from the present office of the Holstein-Friesian Extension Department.

Extravagance Again Prevails

THE HEARING upon the motion in the matter of Stevenson and nineteen other breeders against those who assume to act as directors of the Holstein-Friesian Association was held Thursday, February 14th, before Mr. Justice Pooley at Buffalo.

Counsel for the Association presented affidavits from four out of the five New York State signers in which they said that they had signed the petition and verified the petition under a misapprehension of facts; that they supposed it was an appeal to the directors for their action.

The Court recognized this as a very thin excuse but said that he felt that he was bound to grant the request of this motion. He suggested to the counsel for the Association that they waive all technicalities and proceed to a discussion of the questions involved upon the merits. This they refused to do. Evidently they did not want to go into the merits of the controversy feeling that they would rather rely upon some underground, underhanded, subterranean methods, than to place any reliance upon the justice of their position.

The Court thereupon suggested to Mr. Van Gorder to eliminate all questions of technicalities and said that he thought it would be wiser to dismiss the motion and Mr. Van Gorder assenting thereto, the motion was therefore dismissed with ten dollars costs.

We do not know whether Mr. Van Gorder has paid the ten dollars costs or not. It was such an enormous sum that it makes one smile to think of it, but if the New York breeders are unable to raise that much money, then we judge the Pennsylvanians will be glad to contribute that amount. We would feel better if the ten dollars were to go into the Treasury of the Association rather than into the pockets of the lawyers.

We understand that Mr. Stevenson and those breeders who "stood hitched" together with a large number of other breeders who have become indignant at the

spectacle of those who assume to be directors running around the country and, practically on their knees, begging petitioners to withdraw from the petition, resent the seemingly crooked methods and are lending their names in increased numbers to replace those who withdrew.

Promise Foot-and-Mouth Remedy

HOPE that a cure for the foot-and-mouth disease which is now ravishing cattle herds in England is at last at hand is held out by the *Daily Express* Utrecht correspondent, who reports that important experiments are being made there by Professor Pfeiler, a German, and a Dutch veterinary.

Professor Pfeiler, who has been working on the subject for years, announced the discovery of the bacillus of the disease.

The professor and the veterinarian are now working out their theories in the neighborhood of a public slaughter-house in Utrecht. The correspondent says the method employed is a subcutaneous injection of a specially prepared serum. Dr. Pfeiler believes it will eventually save Europe the tremendous wastage she now suffers because of the plague of the disease.

The question of treatment of affected animals is being hotly discussed in England, where there is a growing feeling against continued slaughter of herds, although many leading authorities still maintain that the killing of the animals is the only way to check the plague. However, there have been two recent instances of what are alleged to be complete cures and to these the newspapers are giving great prominence. The chief veterinary officer of the minister of agriculture reported that he was satisfied with the results of the treatment.

—*Chicago Tribune*.

Schilling Uses His Head

W. F. SCHILLING, the well-known Holstein breeder of Northfield, Minnesota, is not a firm believer in the value of the Coulter plan of giving farmers who want to diversify \$1,000 each from a \$50,000,000 government loan.

Here are some of the things he says:

"People who grow into a business make a success of it about fifteen per cent of the time. People who go into any business with dad's or the government's money make a success of it 1 per cent of the time. The politicians at Washington spending our taxes to take the 1 per cent risk.

"It is planned to loan \$1,000 per man to get into the cow, sow and hen game. If these men knew anything about a cow they would have her now. If they wanted to milk they would have done it long ago. The poorest combination on the face of the earth is a scrub dairyman and a good cow. The government should provide for having a representative of the Humane Society go with every dairy cow for the first year to see that the anti-cow men treat her right in her new home, where many will expect her to live on snow balls, rabbit tracks and sow thistles.

"But it will do one very helpful thing. It will provide thousands of jobs at good fat salaries to loan or rather

give this money away. The wise statisticians tell us that one in every seven men of the country are at the present time occupying official positions and after this new 'gift' is put over it will create enough new jobs so that the government will have us all on the payroll and we will be paid by the government to milk our own cows and then we will be the grandest nation on earth.

"The farmers of the Northfield community, perhaps the best-known community practicing diversified farming in America, have grown into the dairy game and it has taken twenty-five years of constant teaching and preaching. For the year 1923 they marketed products from their creamery alone valued at \$466,422.78, strictly through their coöperative association.

"I want to suggest right here what will even better their conditions and improve their chances for the coming year:

"Seed more alfalfa on every farm.

"Plant only grains that can be ground for the cows, hogs and hens.

"Plan to have an extra amount of corn fodder to supplement your pasture if the season is dry.

"Have a place to put the fodder and corn in a silo so that you can feed in the barn if the pastures go.

"Weed out your poor cows at the time when milk is plenty, and have good ones to take their places so that every stall will have an efficient machine to make butterfat.

"Keep your skim milk on the farm from your own herd to raise the pigs and calves with when skim milk values are less than feeding values.

"Keep up your community gatherings and farm club work as the getting together makes for a better community in every way."

While grade bulls are considerably better than scrub bulls they are not equal to purebred bulls for herd improvement. The more crosses of purebred blood which they have, the better they are. Although grades may not show it, they have inherited some undesirable characters from their scrub parents. Hence while grade bulls may be equal to purebreds as individuals, they fail as breeders because they transmit to their offspring some of the qualities of their scrub ancestors. Thus, grades lack the prepotency in good characters which years of selection have fixed in purebreds.

By this time next year, so the lipstick makers forecast, it will be possible to recognize a girl by her kiss—by the flavor of it—that is. Perfumers are figuring on flavoring next year's lipsticks with strawberry, cherry, peach, pomegranate, orange, lemon and other flavors. It is up to the bright minds in the Extension Department to devise "White Nectar" lipsticks with the flavor and taste of Holstein milk.

The American Guernsey Cattle Club has caught the True Type fever and has appointed a committee of nine to determine just what is required in an approved purebred Guernsey cow.

Purebred livestock has about 40 per cent greater earning power (apart from its breeding or sale value) than scrub stock.—*U. S. Department of Agriculture*.

CLUB ACTIVITIES

MEET IN WASHINGTON COUNTY

The Washington County Holstein Breeders' Association held its annual meeting at the Farm Bureau office, Stillwater, Minn., January 19th. E. J. Brosius was elected president; Vic Lohmann, vice president; W. E. Cushner, secretary-treasurer; W. S. Moscrip and Oscar Hanson, directors.

A committee was appointed to ascertain the advisability of holding a sale of purebred and grade cattle at some future date. They will report at a meeting which will be called by the president not later than March 1st.

AXEL HANSON GIVES DEMONSTRATION

The North Dakota Holstein Breeders' Association held their annual meeting at the North Dakota Agricultural College, January 22d. Several members of the association are attending the dairy course at the college. Axel Hanson of Minnesota gave a Holstein judging demonstration which was greatly enjoyed by the breeders and the students. The following officers were elected: President, Frank Gaebbe, New Salem; vice president, George Hammond, Beach; secretary, W. F. Reynolds, state dairy commissioner.

TWO-THIRDS PRESENT

The McLeod County Holstein-Friesian Breeders' Association held its annual meeting at the auditorium at Glencoe, Minnesota, January 21st. There were two-thirds of the members present.

The election of officers for the coming year resulted in W. W. Graupman being reelected president; Henry W. Brinkman, vice president; and Joseph W. Uhlis as secretary. Gilbert Phillips, Herman Albers and C. F. Schlauderaff were named as members of the board of directors.

The total membership during the past year had been forty-one and five new members were added. The activities planned include a membership drive and a spring and fall sale.

FORM NEW CLUB

The Grafton Holstein Breeders' Association was formed at Grafton, N. D., January 19th. There were thirteen in attendance. A constitution and by-laws were adopted and officers elected as follows: Albert Midgarden, president; A. B. Thompson, vice president; Ira Montgomery, secretary. The board of

directors is made up of these three officials together with F. A. Welch and H. H. Shaver.

The association voted to accept the offer of Ira Montgomery, agricultural instructor in the local high school, to conduct a short course in the feeding and management of livestock. This course will be given at night and will be open to any person in the community who wants to attend it.

INCREASE HOLSTEIN POPULATION

Through the influence of the Buffalo County Holstein-Friesian Association and the Buffalo County Dairy Calf Club just 103 purebred Holsteins were brought into Buffalo County, Nebraska, during the past year. Practically all the Holsteins shown at the 1923 County Fairs was composed of exhibits by club members and farmers in the Association. The Dairy Calf Club had started their third year with twenty members enrolled. Three of these have been in the club two years and are now making records with their milking heifers. Eight of the boys and girls are second year members and are caring for yearling heifers. The other nine are starting with heifer calves.

Floyd Schroeder, who has been a member of the Club two years was second in the dairy judging contest at the Nebraska State Fair last fall.

SOUTHERN CALIFORNIA MEETING

The Southern California Purebred Livestock Association held its January meeting on the 19th at the Biltmore Hotel in Los Angeles. Nearly one hundred were present.

W. R. Harriman and C. E. Gordon presented reports of the proposed legislation concerning tuberculosis. C. L. Hughes, secretary of the California Holstein Friesian Association, also a member of the legislative committee, explained the work that had been done and what was proposed.

R. J. Werner, director of the agricultural education in the secondary schools, said that last year over 3,000 boys and girls had earned over a quarter million dollars with their projects.

C. B. Hutchinson, of the University farm, at Davis, traced the history of agricultural education from the time of its inception in 1864 under President Lincoln. He explained that the college had two duties: Experimentation—through which first-hand knowledge is gained on problems; and the dissemination of agricultural knowledge through the college itself to its students and through its extension agents to the farmers.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

ELECT COOLEY PRESIDENT

The annual meeting of the Marion County Holstein Association was held at Salem, Oregon, January 19th. H. W. Cooley of Jefferson, Oregon was elected president, Ernest Warner of Siverton, vice president and Eugene Finlay of Jefferson, secretary-treasurer. Members of the board of directors are C. J. Benning, Silverton; B. S. Thurston, Jefferson; A. W. Klein, Mount Angel; and Frank Durbin, Salem. Mr. Durbin was elected delegate to the state convention. Many matters of importance were discussed.

IDAHO ASSOCIATION MEETS

R. T. Davis of Weiser was elected president of the Idaho Holstein Friesian Association at its annual convention held January 15th at Pocatello, Idaho. The next annual meeting will be held at Boise. Other officers elected are Alexander Thompson of Pocatello, vice president; H. A. Padgham, Boise, secretary-treasurer. The Board of Directors are William Parkhurst, Hailey; Herman Wicks, Notus; John P. Nielson, Weston; A. J. Ashley, Montpelier; H. G. Warshaw, Idaho Falls, and G. E. Brinton, Gooding.

RE-ELECT ALL OFFICERS

The annual meeting of the Whatcom County Holstein Breeders' Association was held in the Federal Building, Bellingham, Washington, January 18th. All the officers were reelected. They are: H. J. Evans, president; Claude Graham, vice president; Herbin Benson, secretary-treasurer. The members of the board of directors elected were A. E. Smith, Andrew Benson and H. J. Hutchins. The association had a successful year during 1923. It plans to send a big representation to the state meeting which is to be held in Mt. Vernon, Feb. 4th-5th.

INVESTIGATE GRADE BUSINESS

At a meeting of the Stanislaus County Holstein Breeders' Association held at the Farm Bureau office at Modesto, January 1st, E. W. Looney and L. Georges were appointed a committee to confer with assistant farm advisor B. L. Hagglund concerning the possibility of shipping grade dairy cows, fresh and springers, to the Los Angeles market.

E. M. Morrow was appointed to represent the association at the monthly meetings of the farm bureau dairy department. The county club is planning to put on a drive for new members.

FAVOR COUNTY AGENT SYSTEM

The Holstein Club of Bruce, Wisconsin, met January 26th and a good crowd were present. The following officers were elected: President, H. C. Mohlenbrink; Secretary-Treasurer, Earl S. Groff; Directors, John Kostman, E. C. Briggs and Louis Mattison.

Several new members were signed up and Leo Harder was made an honorary member in appreciation of his efforts to promote the interests of the Club. A resolution was passed in favor of reestablishing the County Agent system in Rusk County.

ASSOCIATIONS JOINTLY PLAN CLUB WORK

The Monroe County Holstein Breeders' Association met January 28th in the Court House, Sparta, Wisconsin. Frank Selbach of Sparta and Ray Rice of Wilton, were appointed a committee to work with the County Agent and the Guernsey Breeders' committee to plan out "Calf Club" work for 1924. The Holstein breeders will hold a sale on March 24th and a picnic some time during the summer.

The following officers were elected: L. M. Compton, Tomah, president; Geo. Weiner, Sparta, secretary; and Chas. Van der Schaaf, sales manager.

BREEDERS HOLD JOINT MEETING

At the Business Men's League rooms, Albert Lea, Minnesota, on January 30th, a joint meeting was held of the Guernsey, Jersey, and Holstein breeders' associations. Addresses were given by C. L. McNelly and C. F. Collisson of the Minneapolis Tribune.

Committees were appointed by Guernsey and Holstein Associations to work out a special type and production class at the County Fair. Junior Club work was endorsed by all three associations and committees appointed to further the work.

Metal signs were purchased by many of the Holstein breeders and the following officers elected: President, Alfred Berglund; Vice-President, John G. Johnson; Secretary, Albert F. Ruble; Treasurer, J. F. McKeown.

INDIAN BOYS AND GIRLS HEAR DAIRY TALKS

The members of the Latah County Holstein Calf Club held a meeting January 19th at the Dairy Building on the University farm, Moscow, Idaho. The students brought samples of milk from their homes. There were forty-two cows in all which were tested by them under the direction of H. A. Stone, district club leader.

Herd records will be kept by the boys and once each month a meeting will be held in the Dairy Building and milk from the home herds will be brought in and tested. The day previous Mr. Stone delivered a talk illustrated with lantern slides to more than 100 boys and girls. Mr. Stone is coöperating with the Indian agent in charge of the Nez Perce agency and his efforts are meeting with much approval. An interpreter conveyed the message to the Indian boys and girls, who gave the closest attention.

MADE MONEY ON SHOW HERD

The annual meeting of the Jefferson County Holstein Breeders' Association was held at the Court House at Jefferson, Wis., January 23d. Nearly one hundred members besides a number of visitors were present. The financial report showed a balance of about \$650 in the treasury. The County Holstein show herd paid all expenses and cleared \$300 in cash.

William Everson, who is now 82 years of age, and the oldest Holstein breeder in the county, would not permit himself to be reelected so he was unanimously elected as honorary president and J. C. Cort, manager of the Milford Meadow Farm, at Fort Atkinson, was elected in his stead. Henry Anthes of Fort

COMPLETE DISPERSAL OF MEADOW LANE HERD

There are FOUR Bulls and 29 females bred for production. All of the females of breeding age are bred to

PIEBE CARNATION MERCEDES WALKER 363770 who is a grandson of the famous sires MATADOR SEGIS WALKER and KING PIETERTJE ORMSBY PIEBE whose daughters and granddaughters have not only made wonderful milk and butter records but have also won highest honors at many great shows and exhibitions.

His dam, as a junior four-year-old, produced 25.88 lb. butter in 7-day official test, her milk averaging 5.97% butterfat. This is a herd of milk producers. It includes daughters of Tobe Veeman Pontiac Hengerveld, a 26 lb. grandson of KING SEGIS PONTIAC ALCARTRA; daughters of KING PONTIAC FLAMBORO, he from a twice 30 lb. cow and by the great King of the Pontiacs; granddaughters of Rag Apple Korndyke Colantha, a 30 lb. son of Pontiac Korndyke; daughters of Waldorf Steele De Kol Pontiac; and daughters of KING PONTIAC PRIDE SEGIS a full brother to IRENE SEGIS PONTIAC, 1,271.55 lb. butter, 30,022.3 lb. milk in a year. EVERYTHING HAS TO BE SOLD AS THE FARM IS RENTED

JOHN B. KELLER, Meadow Lane Farm, Chambersburg, R. D. 7, Penna.

Atkinson was reelected vice president and A. F. Gafke was reelected secretary. The speaker of the afternoon was D. Q. Graybill of Fort Atkinson, who spoke on the value of the county organization to the industry.

DISCUSS SALE ETHICS

On Tuesday, January 15th, at the court house, Denmark, Wisconsin, the annual meeting of the Brown County Holstein Association was held with about twenty present. The report of the sales committee showed a balance of \$77.26 on hand. It was decided to hold an annual sale in May. Mr. John Coenen suggested that the rules in the sale catalogue be made more strict and that, if an animal should not freshen within thirty days of the date set forth in the catalogue, the owner should be held liable. After much discussion they decided to leave this question up to the buyer and the consignor of the animal to settle privately. Joe Hoskins was reelected sale manager and it was decided to hold a banquet at the Beaumont Hotel in February.

L. C. Meulemans was reelected president; J. N. Kavanaugh was reelected secretary, and T. R. McGrath was reelected treasurer. Nick VanDenHeuvel and W. E. Hanson were elected directors. Mr. Robert A. Ryan was selected as delegate to represent the county at the State Convention to be held at Eau Claire February 13th.

HEAR SUGGESTIONS ON CALF RAISING

A number of prominent breeders of Chautauqua County gathered at the Samuels Hotel, Jamestown, N. Y., January 18th, and held an interesting meeting. After dinner they held a business session. James Phelan, president of the county association was unable to be present on account of sickness, and G. N. Brown of Cherry Creek acted as chairman. After a discussion of Holstein affairs, a resolution was passed authorizing the chairman to appoint a number of committees to draft plans for Holstein work in the county. One committee will deal with plans for reorganization of the county association and closer cooperation with the state association. Another com-

mittee will have charge of Holstein exhibits at the county sale while yet another will plan for a calf club in cooperation with the Farm Bureau and county teachers of vocational agriculture. Another meeting will be held about March 1st at which these committees will report.

Professor Hopper of Cornell University, Animal Husbandry Specialist, gave the principal address of the evening. He said that one of the biggest problems of purebred breeding is the production of good quality cows. Purebreds that are poor individuals and low producers are the reason for purebreds selling at low prices. He recommended better breeding; more attention to the raising of calves and growing of young stock.

"Calves under three weeks old should be fed whole milk, at the end of three weeks substituting a pound a day of skim milk or gruel for whole milk. The substitution should be progressive so that in the course of five or six weeks the calf is getting entire skim milk or gruel.

"It is very essential that the calves be kept growing. Careful attention should be given to gain in weight. An average gain in weight of one pound per day or better should be the aim.

"After the first two weeks the calf should have access to all the clover or alfalfa hay that it will eat. Legumes are very essential in the proper growth of young stock. They not only supply the minerals needed for the growth of bone but in more recent investigations, it has been found that well cured legumes supply the vitamins which are essential to the development of all young animals."

Just as the meeting closed a resolution was passed authorizing George Kirkland of Dewittville to revise the constitution to permit officers to be elected at a winter meeting and making the club into a Chautauqua County Holstein Club. He will report at the next meeting early in March.

HANSON AGAIN PRESIDENT

Tri-County Holstein Day was staged at Shakopee, Minnesota, January 24th. About 220 attended the banquet which was given by the Scott County Holstein Breeders' Association as-

HOLSTEIN DISPERSAL SALE

Thursday, March 6, 1924

A Herd of Milk Producers, cows that will make You money.

Our 14 milkers last year averaged 11,180 lb. milk, 385.7 lb. fat or 482.13 lb. butter in cow testing association work.

At present 17 purebreds, of which six are first-calf heifers, are averaging 853 lb. daily or better than a 50-lb. can each.

Several family groups are bound to please you. There is

ADELINE SUNSHINE MECHTHILDE

17,799 lb. milk, 680.9 lb. butter in a year in cow testing association work. She has an official record of 21.46 lb. butter, 505.7 lb. milk. Together with a son, several daughters and a number of granddaughters.

NETHERLAND BUTTER BOY VELONIA

13,925 lb. milk, 546.63 lb. butter in a year. Daughters of this cow, also a son ready for service.

Others just as good, all ready for business.

Bred to BOILING SPRINGS SEGIS KORNDYKE, whose sisters are making WORLD RECORDS and whose dam produced 12,321.3 lb. milk, 510.26 lb. butter in 265 days in the Dairyman's Division, freshening again two months after the test was closed.

A few big producing milky grades and Bulls ready for service.

DAVID GIBBLE AND SON

R.D. 5, Mechanicsburg, Pa.

Farm is between Hogestown and New Kingston, on the Harrisburg-Carlisle pike.

sisted by the Shakopee Businessmen's Bureau and the Scott County Farm Bureau.

The speakers were Dr. H. F. Cole of Shakopee, J. C. Marlow of Mankato and Secretary Robert Geiger. The Hon. Henry Arens told of his experience in meeting President Coolidge at Washington where he went as Farm Bureau representative in favor of the Coulter Plan.

Joseph M. Hackney of St. Paul spoke at a subsequent meeting while C. F. Collison of the *Minnesota Tribune* gave his address "Golden Butter and Golden Dollars." Home talent staged the Holstein play "Moo Cow Moo," which was heartily applauded.

Axel Hanson of Savage was reelected president; Jos. Erkens of Sand Creek, vice-president; J. C. Munsch of Eagle Creek, treasurer; and Edw. J. Leibbrand of St. Lawrence, secretary.

DID GOOD WORK DURING YEAR

At Hillsboro, Oregon, January 12th, the Washington County Holstein Association held its annual meeting. W. N. Hathorn of Laurel was reelected president; A. J. Evers of Verboort, vice president; O. T. McWhorter, Hillsboro, secretary-treasurer; and Mrs. Robt. Warrens of Forest Grove and J. A. Lindlow of Bethany, directors.

During the present year the association has actively promoted Holstein calf club work. John Wolter, Laurel, a calf club member showed a Holstein calf club heifer at the Banks Hog and Dairy Show and won the female grand championship and at the Oregon State Fair, John won in his class in the club division as did Antone Vandecoevever with his senior yearling Holstein heifer. Frank Peters, a Holstein calf club member of the Scholls Community won honors as a member of the Livestock Judging team which competed at the Pacific International.

The next meeting of the club will be held in the Chamber of Commerce rooms at Hillsboro. W. H. Hathorn and A. J. Evers were elected delegates to the state breeders' meeting soon to be held in Portland.

FAVOR COUNTY-WIDE TESTING

The Tuscola County Breeders' Association held its annual meeting at the Court House, Caro, Michigan, January 24th, about seventy-five were present. A resolution was passed favoring the county-wide plan of tuberculin testing.

V. J. Carpenter of Cass City and Charles Schnell of Vassar were appointed deputies to see that the Holstein breeders took advantage of the cow testing associations now being formed in the County. A plan was adopted for members to list surplus animals for sale with a sale manager who will get in touch with prospective purchasers and take them to herds without cost to the purchaser. If sales are made a small percentage of the price will be turned into the treasury to defray expenses. Oscar Wallin was appointed sale manager with Thos. Kimmel as assistant.

Officers for the year were chosen as follows: President, Oscar Wallin, Unionville; vice-president, V. J. Carpenter, Cass City; secretary-treasurer, George Foster, Fostoria; directors, Chas. Schnell, Vassar; E. A. Rohlf, Akron; Elmer Chapman, Deford; Thomas Kimmel, Caro; George Walls, Kingston.

PENNSYLVANIA FEDERATION NEWS

The Pennsylvania Federation of Holstein-Friesian Clubs was represented by H. E. Robertson of York and Secretary Truckell, at the first annual meeting of the State Council of Agricultural Associations which was held in the Senate Caucus room of the Capitol, Harrisburg, on January 25, 1924. M. T. Phillips, well-known Guernsey breeder, was in the chair, while John M. McKee, Deputy Secretary of Agriculture, was Secretary. Seventeen of the twenty-four State Agricultural Associations were represented.

A resolution was passed urging better housing conditions for the Pennsylvania Farm Products Show. There was a discussion of taxation of purebreds and a resolution passed urging cooperation of the Federal and State Governments against the Japanese beetle. Dean Watts of State College explained the Purnell Bill now before Congress. This increases funds available for experiment stations. Beginning with \$15,000 a year to each state, there is an annual increment of \$10,000 each year,

until at maturity the bill authorizes \$85,000 to each state. In other words, beginning with \$720,000 the first year for the entire country, the total appropriation at the end of seven years is \$4,080,000.

The amount of \$85,000 is to remain permanent year by year after this figure is reached. The money is to be used for research work and is necessitated by the decrease in the purchasing power of the dollar since the funds, now available, were granted and also by the number of new insect pests and plant and animal diseases.

During 1920 to 1921 the various states appropriated \$3,697,556 to the Agricultural Experiments Stations while the Federal appropriation was \$1,440,000.

Dr. T. E. Munce, State Veterinarian, said there was danger of foot-and-mouth disease being brought to this country by hay and straw used in packing glass ware and crockery. During a period of eight months thirty-six shipments had been traced by officials of the Pennsylvania Department of Animal Industry and such packing material destroyed. He suggested that Congress be urged to take steps either to see that such material was destroyed immediately after the goods were unpacked in this country or else that an embargo be placed on such packing material for which excelsior or similar material could be substituted.

The members of the Council rather favored an embargo on such packing material and the Secretary was instructed to write to the Pennsylvania representatives at Washington urging either an embargo or else that some steps should be taken to see that such material was destroyed immediately after arrival.

There was an animated discussion on the question of securing an executive secretary who should give all his time to the work of the Council and be paid for his work and who would secure information on general subjects of importance to agriculture. But, as there were no funds on hand or any means of raising funds except by appropriations secured from the various Associations composing the Council, no action was taken.

The following officers were elected for the ensuing year: president, M. T. Phillips of Pomeroy; vice-president, Mrs. Frank B. Black of Somerset; secretary-treasurer, John M. McKee of Harrisburg. Chester A. Tyson and John A. McSparan were elected with these officers to form the executive committee.

The Honorable F. P. Willits, State Secretary of Agriculture, was present through all the meeting and took part in practically every discussion.

OFFICERS OF LEWIS COUNTY CLUB

H. R. Shoultes of Adna, Washington, and A. E. Donaldson of Chehalis, were elected president and secretary-treasurer respectively, of the Lewis County Holstein-Friesian Club at its annual meeting held January 26th at Chehalis. Glenn Roundtree of Klaber was chosen first vice-president; Chris Hendrickson of Onalaska second vice-president. The above officers together with Jess Rector of Hannaford valley and L. L. Goff of Adna constitute the executive committee. E. A. Donaldson, Fred L. Young and Chris Hendrickson were elected delegates to the state association meeting.

PLACING PUREBRED BULLS IN MINNESOTA

During the past ten months purebred bulls valued at \$50,000 have been sold to farmers in eight Minnesota Counties. There have been 490 bulls at an average price of \$120. Forty-seven per cent were Holsteins, 25 per cent Shorthorns, 24 per cent Guernseys, and four per cent other breeds. The counties in which campaigns have been waged are Blue Earth, Mower, Hennepin, Washington, Olmstead, Nicollet, Goodhue and Waseca.

FAYETTE COUNTY CLUB FIXES DUES

The annual meeting of the Fayette County Holstein Breeders' Association was held at Fayette, Iowa, January 24th. Despite bad roads thirty members were present. The meeting was opened by the President, Paul P. Stewart, who suggested projects of work that the breeders should consider.

State Secretary Harry Gleim of Webster City, spoke on the value of pedigrees and of the mistakes made by people in

keeping up herd pedigrees. He outlined the policies of the State Association for the coming year after which the members voted that the Fayette County Association affiliate with the State Association.

A County Holstein Breeders' sale will be held at West Union March 12th if proper arrangements can be made, a committee appointed by the President will be in charge. Fayette County breeders will have a County show herd on the fair circuit next fall. It is planned to have the biggest dairy club showing ever made by Fayette County.

Membership dues were set at \$2.00 a year for the man who keeps grades, not to pay for membership in the County Association but not in the State Association. Dues of \$5.00 were set for the purebred breeders who wish to belong only to the County Association.

The dues for a breeder belonging to both State and County Associations are 50 cents a head per year on all purebreds and 25 cents a head on all grades, the 50 cents on purebreds to go to the State Association. At the close of the meeting seventeen new members joined, five at \$2.00, eight at \$5.00 and four at 50 cents a head.

Paul P. Stewart was reelected president and voting delegate to the State Association; J. F. Wilkinson, vice-president; C. H. Combs, secretary; directors, Fred R. Ross of Oelwein, S. W. corner of county; Fred Pieplow, Aurora, S. E. corner of county; A. L. Eitel of Hawkeye, N. W. corner of county; W. E. Turner, Fayette, N. E. corner of county; A. M. Doughty, Fayette, central; Le Grand Gleim of Arlington and Geo. Sauerbry of Oelwein.

CANNED AND POWDERED MILK EXPORTS

Heavy purchases of evaporated milk for relief purposes during December and part of January served to prevent further accumulation of surplus stock. More buying of this kind is expected but there is considerable uncertainty about it. During the month of December, shipment of evaporated milk exceeding 24,600,000 lb. are reported and about five million pounds of condensed. Germany took 10,500,000 lb. during December, alone, while heavy exports were made to Belgium, France and the Netherlands, and, as for some months, the United Kingdom was one of the heaviest buyers.

The December exports added materially to the figures for 1923, the total exports for the year being 194,264,000 lb. as against 187,496,000 lb. in 1922.

Foreign and domestic trade combined, however, failed to bring about any reduction in the surplus stocks held by manufacturers. Reports as of January 1, show total stocks of 191,019,000 lb. This quantity is but slightly different than the December 1st stocks, but it is significant to note that the January 1, 1923 stocks amounted to less than 70,000,000 lb. As usual, evaporated milk represents the bulk of the surplus.

When the relatively heavy exports are taken into consideration along with the fact that manufacturers have for some time been voluntarily curtailing production, the influence of the heavy current stocks is obvious. This will explain why holders have been inclined to sell freely and why operations have followed a cautious trend. Butter markets struck some soft spots recently, and as January closes are on a downward course, but up to this time have continued to offer relief to condenseries which were equipped to churn.

The milk strike in the Chicago district afforded a temporary outlet for canned milk and during part of the strike some milk was diverted from condenseries into fluid milk channels.

During December there were 199,090 lb. powdered milk exported while a year ago, 286,537 lb. were shipped out of this country during December. There has been a big falling off during the year in the foreign demand for powdered milk, the total exports for 1923 being 2,437,367 lb. while during 1922 the exports totaled 6,190,063 lb.

Japan was by far the heaviest buyer during December, taking 79,345 lb. while 27,122 were exported to Panama and 23,147 lb. to Cuba. Strange to say the next best consumers, Germany and Canada, took 12,432 lb. and 12,206 lb. respectively. Just why Canada should want so much powdered milk is a little hard to understand.

BULL CAMPAIGN IN CONNECTICUT

Approximately forty bulls have already been placed in New London County, Connecticut, during a campaign being carried on by the New London County Farm Bureau with the assistance of representatives of the various breed associations and Professor J. A. Simms of the State Agricultural College.

BESS JOHANNA ORMSBY EXCEEDS 30,000 LB.

I am pleased to announce that the Holstein-Friesian cow, Bess Johanna Ormsby 263431, has just closed a long-time test and is credited with 30,143.3 lb. milk containing 1,198.09 lb. fat in 365 days, thus showing an average of 3.97 per cent fat in the milk. She freshened at the age of 8 years, 1 month, 11 days. Her sire is Sir Pietertje Ormsby Mercedes 44931; her dam is Spring Brook Bess Burke 2d 131387. She was bred by Mr. E. C. Schroeder, Moorhead, Minn., and is now owned by Mr. H. F. duPont, Winterthur, Delaware. Previous to the test just completed she is credited with four 10-months' consecutive tests, the best of these 10-months' tests was made at the age of 4-0-8, she being credited with 21,380.5 lb. milk containing 834.92 lb. fat in 305 days, carrying calf 209 days of the test. Also, at her first freshening she showed 705.57 lb. fat in 365 days. She has twice produced above 32 lb. fat, and the announcement cards have given her large short-time strictly official records. The last of these cards, issued near the beginning of the present

test, showed her credited with 835.4 lb. milk containing 35.340 lb. fat in 7 days; and with that official test continued she showed 3,498.6 lb. milk containing 141.782 lb. fat in 30 days. Producing almost 1,200 lb. fat in 365 days, she has well borne out the promise that she gave in her great seven- and thirty-day tests. During the year she had fifteen official test periods of which four were retests. Her 365-day production of 1,198.09 lb. fat, equivalent to 1,497.61 lb. butter on the 80 per cent basis, gives Bess Johanna Ormsby fifth place among cows producing above 1,000 lb. fat, she being the 77th cow to gain the honor of producing above 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, Supt. A. R. Delavan, Wisconsin, February 11, 1924.

A CORDIAL INVITATION

"You are invited," began a letter received in our office—naturally we were interested and read on. The invitation was to attend a sale of 55 head of purebred Holsteins held at Clear Spring Dairy Farm, Sheridan, Lebanon County, Pennsylvania, and the date was Thursday, March 6th. The invitation was from the well-known Holstein breeder, M. H. Bennetch.

The females in this herd have been bred either to Berks Ormsby Posch or King Piebe of York 7th. Both are splendidly bred bulls. Berks Ormsby Posch is a son of King Tweede Spring Farm who was by Spring Farm King from a 30-lb. daughter of Spring Farm King Pontiac. These two sires are two of the best sons of King of the Pontiacs. The daughters of King Tweede Spring Farm are making splendid records both in short-time and long-time test.

The dam of Berks Ormsby Posch is Hazlewood Ormsby Posch 2d, one of the greatest show cows of the breed. She was shown as a junior heifer calf when she won first prize in her class at the Washington State Fair, the Waterloo Dairy Cattle Congress and the National Dairy Show, being made junior champion at each event. As a four-year-old she was shown at the Washington, Idaho and Oregon State Fairs, winning first in her class at each event and she was grand champion at the Oregon and Washington State Fairs in 1920, also first in her class at the Pacific International Livestock Exposition.

This great cow made a number of official records. As a four-year-old she produced 666.66 lb. butter, 16,390.9 lb. milk in ten

KING TWEDE SPRING FARM

Sire of Berks Ormsby Posch, junior sire at Clear Spring Farm.

months, as an eight-year-old she made 24.88 lb. butter, 655.1 lb. milk which she afterwards increased to 25.48 lb. butter, 717.3 lb. milk, giving 106 lb. milk her best day.

Naturally, with such a sire and such a dam, Berks Ormsby Posch is a real handsome bull. His sire is a show bull and the sire of show stock and both sides of the pedigree show splendid producers.

The senior sire at Clear Spring Farm is King Piebe of York 7th. He is a son of King Piebe of York, who was by Piebe Laura Ollie Homestead King, sire of two daughters that have each made over 30,000 lb. milk in a year as well as a number of other great producers and prize winners. One of his daughters, May Walker Ollie Homestead, produced 1,523.23 lb. butter in a year and is the highest record United States cow. King Piebe of York is from a daughter of King Segis Pontiac Count

that made 20,546.4 lb. milk, 1,032.41 lb. butter in a year as a junior three-year-old. This cow has three sisters that each produced over 30,000 lb. milk in a year. The dam of King Piebe of York 7th has a year record of 800 lb. butter. She is one of the many good granddaughters of King of the Pontiacs.

There are a number of sons as well as daughters of King Piebe of York 7th to be sold and many of the good cows and heifers in Clear Spring Farm herd are bred to him.

The entire herd are descendants of some of the greatest-sires of the Holstein breed. There are granddaughters of King

HAZLEWOOD ORMSBY POSCH 2D

Noted show cow and dam of Berks Ormsby Posch, junior sire at Clear Spring Farm.

Korndyke Sadie Vale, whose dam made over 30 lb. butter in seven days as a three-year-old, a world's record for age, and then made over 41 lb. butter in a week as a mature cow. She has a daughter that made over 38 lb. butter in seven days and she herself was a daughter of Sadie Vale Concordia, the first 30-lb. cow.

The Clear Spring herd is tuberculin tested. All the animals that will be offered have been tested by a veterinarian authorized by the Federal Bureau of Animal Industry. All are sold subject to a 60-day retest.

Mr. Bennetch announces that conveyances will meet all trains at Sheridan. The date is March 6th and we trust that Holstein enthusiasts will turn out "en masse" on this occasion.

GRIMM BUYS KING PIEBE OF YORK 14TH

Wm. S. Grimm of Red Lion, Pa., has placed the splendidly bred bull King Piebe of York 14th at the head of his herd purchasing him from the Robertson Farms of York. King Piebe of York 14th is a very handsome individual and during the past year has been in service in the herd of his breeder. He is a son of King Piebe of York whose offspring have won high honors in the show ring during the past three years. King Piebe of York is from a daughter of King Segis Pontiac Count that made over 1,000 lb. butter in a year as a three-year-old and was sired by Piebe Laura Ollie Homestead King, whose daughters include the United States champion for yearly butter production, May Walker Ollie Homestead, 1,523.23 lb. butter, 31,610 lb. milk. We notice that Superintendent Gardner under date of January 25th, reports that Piebe Laura Veeman Artis, another daughter of this sire has produced 1,328.12 lb. butter from 30,758.4 lb. milk in a year.

The dam of Mr. Grimm's new herdsire is Jessie Maida Ruth the great cow owned by Mr. Robertson, whose records in semi-official test and in cow testing association work has attracted much attention during the past year. Put in official test nearly four months after freshening, Jessie Maida Ruth produced in seven days, 742.5 lb. milk, 29.76 lb. butter and in thirty days she is credited with 3,118.8 lb. milk, 121.48 lb. butter. For the first

Sure, We're Accredited

and our cows produce, too.

For Instance,

Bess De Kol Contest Keyes, as a three-year-old, made in a year of Cow Testing Association work, 16,475.9 lb. milk, 484.3 lb. butter-fat.

The entire herd—old cows, young cows, and heifers—averaged over 12,000 lb. of milk.

If you want stock of this quality, write or, better yet, come and see.

Charles Ace

R. D. 1 Tunkhannock, Pa.
Wyoming County.

Westover Changeling Magnolia

a daughter of the 40 lb. sire, King Korndyke DeKol Changeling, and from a 20.5 lb. four-year-old daughter of Tidy Abbekerk Prince. We offer a fine bull calf from this beautiful heifer. He is sired by a son of Sir Aggie Mead De Kol and is backed by a wealth of long distance records and breeding.

Herd established 1901 and under State and Federal Supervision.

HOMER N. LATHROP

Chenango Co. SHERBURNE, N. Y.

Our New Herdsire

King Piebe of York 14th, is a REAL Show Bull and then his dam is JESSIE MAIDA RUTH, 742.5 lb. milk, 29.76 lb. butter in a week, 3,118.8 lb. milk, 121.48 lb. butter in thirty days.

She is now in long-time test in which she averaged over 100 lb. milk a day for the first 140 days. During the first eight months she produced 21,134.8 lb. milk, 839 lb. butter. And she, too, is a great show cow.

WM. S. GRIMM & SON

York Co., Red Lion, R. D. 1, Pa.

140 days of her year test she averaged over 100 lb. milk a day and in 241 days is credited with 839 lb. butter, 21,134.8 lb. milk. She is a splendid individual and was selected by the State committee to become a member of the show herd to represent her state at the National Dairy show but, as she was in test, her owner was reluctantly compelled to refuse to let her go.

JESSIE MAIDA RUTH

839 lb. butter, 21,134.8 lb. milk in 241 days with the test still in progress. Dam of King Piebe of York 14th, recently purchased by Wm. S. Grimm, Red Lion, Pa.

Mr. Grimm has a large herd of big producing Holsteins and many of his cows possess a high order of individuality. In his herd, King Piebe of York 14th will have an opportunity to show his worth and we believe that his daughters will inherit the producing capacity as well as the type and conformation of their noted granddam.

NEW JUNIOR THREE-YEAR-OLD RECORD IN TEN MONTHS' DIVISION

I am pleased to announce that the Holstein-Friesian cow, Onyx Lilith 541073, has broken the record for fat production in the junior three-year class of the 10-months' division by producing in 305 consecutive days 21,387.2 lb. milk containing 727.51 lb. fat, carrying a calf 167 days of the test. She freshened at the age of 3 years, 4 months, 13 days. Her sire is Ormsby Lilith Clothilde 156881; her dam is Onyx Pledge Dawning 187606. She was bred by Oneida Community, Ltd., Kenwood, N. Y., and is now owned by Miss M. M. Newell, Bedford Hills, N. Y. At the age of 2 years, 2 months, 20 days, her best 7-day official test, begun at 49 days from freshening, shows 536.8 lb. milk containing 17.374 lb. fat, and during that lactation she is

credited in 10-months' test with 17,456.2 lb. milk, containing 580.18 lb. fat in 305 days, carrying calf 171 days of the test. Her best seven-days' official production made during the lactation period just finished, is 699.0 lb. milk containing 24.160 lb. fat; while in thirty days she produced 2,930.4 lb. milk containing 94.767 lb. fat. Her test periods consist of a ten-day test, a thirty-day test, and seven two-day tests. Eleven different supervisors were employed in the conduct of the test. The production of 727.51 lb. fat credited to Onyx Lilith is equivalent to 909.38 lb. butter on the 80 per cent basis. In the junior three-year class of the 10-months' division she displaces Star Segis Pontiac Superior, this latter heifer being credited with 19,291.0 lb. milk containing 725.03 lb. fat in 305 days, carrying her calf 175 days of the test.

MALCOLM H. GARDNER, Supt. A. R.

Delavan, Wisconsin, February 13, 1924.

A CHAMPION FOR A WEEK

I am pleased to announce that the Holstein-Friesian cow Star Segis Pontiac Superior 535629 has just broken the record for fat production in the junior three-year class of the 10-months' division by producing in 305 consecutive days 19,291.0 lb. milk containing 725.03 lb. fat, carrying a calf 175 days of the test. She freshened at the age of 3 years, 5 months, 23 days. Her sire is King Segis Pontiac Superior 121833; her dam is Far Oaks Star Ormsby 309829. She was bred by Mr. V. S. Culver, Stillwater, Minn., and is now owned by Minnesota Holstein Company, Austin, Minn. Her best 7-day official production, made during the early part of the lactation period just completed, is 543.9 lb. milk containing 24.951 lb. fat. Tested at the age of 2-3-26 she is credited with 375.0 lb. milk containing 16.134 lb. fat; and 15,136.5 lb. milk containing 580.76 lb. fat in 305 days, carrying calf 167 days of the test. During the 10-months' test just finished, she had 16 official test periods, of which five were retests and one a test of thirteen days in length. Thirteen different supervisors were employed in the conduct of the test. The production of 725.03 lb. fat credited to Star Segis Pontiac Superior is equivalent to 906.28 lb. butter on the 80 per cent basis. In the junior three-year-class of the 10-months' division Star Segis Pontiac Superior displaces Lyons Sarcastic Korndyke, this latter heifer being credited with 21,016.4 lb. milk containing 702.45 lb. fat in 305 days, carrying her calf 192 days of the test.

Feb. 9, 1924.

MALCOLM H. GARDNER, Supt. A. R.

NEARLY 44 LB. IN NEW JERSEY

I am advised through preliminary reports and by wire that the Holstein-Friesian cow Tranquillity Sadie Vale Wayne 380080 has shown a production of 883.2 lb. milk containing 35.183 lb. fat in seven consecutive days, with the test still in progress. She freshened at the age of 7 years, 8 days. Her

sire is King of the Sadie Vales 163940; her dam is K A Wayne Korndyke 251916. She was bred by Mr. Arthur Danks, Allamuchy, N. J., and is now owned by Mr. Albert Winter, Mahwah, N. J. The production by 24-hour periods is as follows: 126.1 lb. milk, 5.107 lb. fat; 123.6 lb. milk, 5.171 lb. fat; 120.9 lb. milk, 4.768 lb. fat; 124.9 lb. milk, 4.809 lb. fat; 127.5 lb. milk, 4.717 lb. fat; 132.8 lb. milk, 5.351 lb. fat; 127.4 lb. milk, 5.260 lb. fat. The earlier records of this cow were given on her card of slightly over a year ago, at which time she was credited with 727.3 lb. milk containing 33.339 lb. fat. It will be seen that during the present test she has materially increased both the milk and fat production.

The test has been conducted in the strictest manner possible, several different supervisors having been employed, one being from the Pennsylvania Agricultural College, and the cow kept under constant watch for most of the time. Also, Prof. Robbers of the New Jersey Agricultural College himself inspected the conduct of the test. Computed on the 80% basis, the equivalent butter claimed for Tranquillity Sadie Vale Wayne amounts to 43.978 lb. MALCOLM H. GARDNER, Supt. A. R. Feb. 7, 1924.

CHAMPION JUNIOR TWO-YEAR-OLD AT BEAVER DAM

I am pleased to announce that the Holstein-Friesian cow, Ormsby Sensation Abbekerk 635469, has broken the record for fat production in the junior two-year class of the 10-months' division by producing 305 consecutive days 20,564.0 lb. milk containing 682.46 lb. fat, carrying a calf 241 days of the test. This first test of this heifer was begun at the age of 2 years, 3 months, 20 days. Her sire is Ormsby Sensation 274343; her dam is Miss Gerben Abbekerk 393624. She was bred by Mr. A. C. Peterson, Clarks Grove, Minn., and is now owned by Mr. Julius Schmid, Montgomery, N. Y. Her best 7-day official production, begun 8 days from freshening, is 575.2 lb. milk containing 20.205 lb. fat. In addition to her 10-months' test, she is credited with a yearly test of 21,854.5 lb. milk containing 725.58 lb. fat in 344 days. During the 10-months' test, she had thirteen official test periods of which three were retests and two not less than seven days in length. Twelve different supervisors were employed in the conduct of the test. Ormsby Sensation Abbekerk, with her 10-months' production of 682.46 lb. fat equivalent to 853.07 lb. butter on the 80 per cent basis, is the third Holstein-Friesian cow with a yearly and 10-month record in the same lactation period to capture the class record in the 10-months' division.

MALCOLM H. GARDNER, Supt. A. R.

Delavan, Wisconsin, February 14, 1924.

STRONG HOLSTEIN CLUBMEN

Barron County has 262 official members of the Wisconsin Holstein Association. They are divided among eleven local clubs. The other county in the state above the 200 membership mark is Waukesha, with 240 members. Marathon County has 145 members; Brown County has 128; Jefferson has 109, and Calumet has 103 members. No other county has 100 members.

RETREAT TAXPAYER

Retreat Taxpayer is the name of the well bred junior sire owned by the Central Poor District of Luzerne County and kept on the county farm at Retreat, Pa. The dam of this bull is Fairmont Lyndon Alcartra, 21.41 lb. butter in seven days, 1,751.7 lb. milk, 88.826 lb. butter in thirty days as a senior two-year old. She is a daughter of King Segis Pontiac Alcartra and her dam is Lyndon Alcartra Polkadot, 33.03 lb. butter in 7 days, 2,163.2 lb. milk, 131.85 lb. butter in thirty days. Lyndon Alcartra Pontiac is one of the three 30-lb. daughters of the famous old foundation cow, Alcartra Polkadot, who herself has official records of 597 lb. milk, 29.09 lb. butter in a week, 2,605 lb. milk, 120.16 lb. butter in thirty days.

Retreat Taxpayer is a son of King Alcartra Fayne Segis. He was by King Segis Pontiac Alcartra and his dam is Hollywood Floa Wayne Artis, a 32.45 lb. cow that averaged 82½ lb. milk a day during her seven day test. This cow has a very creditably year record made as a junior two-year-old and her dam Pietertje Floa Artis has a record of 38.14 lb. butter in a week.

The fourteen nearest dams of Retreat Taxpayer have seven day official butter records that average over 32 lb. and this includes the record of his dam made as a two-year-old. He traces to a number of noted producers besides those already named. Among his ancestors are: Pontiac Clothilde De Kol 2d the first cow that made 37 lb. butter in seven days or that produced 1,000 lb. butterfat in a year; K P Alcartra, formerly world's record junior two-year-old for year production and former world's champion senior three year old for both seven and thirty days; and Grace Fayne 2d's Homestead, a cow that made world's records for seven and thirty days as a four-year-

RETREAT TAXPAYER

old; made over 30 lb. butter in 7 days as a five-year-old and then made a world's record in seven day test by producing 35.55 lb. butter.

With so many famous animals directly back of him much can be expected from Retreat Taxpayer for a number of these animals were high class individuals as well as big producers. He is a real nice bull, much better than the picture, which was made from a snapshot, indicates. Mr. J. O. Vaughan who is in charge of the Retreat herd says that the first offsprings of this bull show great promise and have every indication of developing into high class animals.

TOO MANY PAID JOBS

The convention of farmers and dairymen meeting in Trenton, N. J., the week of January 17th, unanimously reelected former United States Senator, Joseph S. Frelinghuysen as one of the eight members of the State Board of Agriculture. Dr. Clifford Snyder of Pittstown, was elected to succeed Charles H. Brown of Swedesboro.

Resolutions were adopted by the convention stressing the enormous increase in taxes and the multiplication of official positions since the World War, and urging that no unnecessary offices be created.

A SNAPSHOT, TAKEN IN A SNOW STORM

Some of the choice Poland Chinas at Cloverblossom Farm, York, Pa., W. K. Coxen and Sons, owners. These, with about sixty others, will be sold at auction, March 5th while his Holsteins will be sold March 21st.

AMES HERD DISPERSED

In December, 1917, Dewey and James Ames of Yakima, Wash., purchased thirty head of purebred Holsteins from George Gue, the prices ranging from \$150 to \$250 per head. Within three years the cattle were paid for and they were money makers until one of the brothers decided to leave Washington for Utah, where he purchased land.

The sale was rather disappointing for the forty-one head averaged only \$113. The cause of this low figure is said to be that the sale was for cash. H. C. Davis of Granger secured six young heifers by Sir Midnight Segis, paying only \$345 for the lot. Ruth Parton of Toppenish obtained six producing cows at an average price of \$155. The top price of \$200 was paid by A. L. Blake of Yakima for a fresh cow with an official record.

STROCK HERD TO BE DISPERSED

Nearly 80 head of purebred Holsteins will be sold by G. L. Strock & Son at Mechanicsburg, Cumberland County, Pennsylvania. This herd has always had a splendid reputation for production and is one of the best herds enrolled in the Cumberland County Association, which has always been noted for high average production.

At the head of the herd is the bull, King Aaggie Segis De Yong, nearly six years old. His sire is King Aaggie Segis, also sire of the 46-lb. four-year-old Fancher Farm Maxie.

The dam of King Aaggie Segis De Yong is Yankee Mary De Yong, 30.58 lb. butter in seven days with an average of over 80 lb. milk a day as a four-year-old. She is a double granddaughter of Dutchland Colantha Sir Inka, who needs no introduction to our readers for he stands near the head of the list for the producing capacity of his daughters and granddaughters.

Being by King Aaggie Segis, naturally, King Aaggie Segis De Yong is a grandson of King Segis and Segis Aaggie De Kol Beets, former world's champion in the

mature class and the highest record daughter of Paul Beets De Kol. King Aaggie Segis De Yong, therefore, combines the blood of King Segis, Paul Beets De Kol and Dutchland Colantha Sir Inka.

The daughters in milk are *real* producers and the younger ones show great promise. The records made by his daughters in cow testing association work indicate that he is a *real* sire for several of them in their first lactation periods have approached the 10,000 lb. mark in cow testing association work and the reports of the Cumberland County Association tester show that the daughters of this bull average high in butter-fat production.

The sale is occasioned by dissolution of partnership. It will be held on the farm near Mechanicsburg, March 25th.

HOGS AND CATTLE TO BE SOLD

W. K. Coxen & Sons, York, Pa., have sold Cloverbloom Farm and their valuable herds of Big Type Poland China hogs and purebred Holstein-Friesian cattle will have to be dispersed as they have no place to take them. Mr. Coxen was asked to set a price on Cloverbloom Farm and he did and the purchaser took him up at once.

This establishment is more noted for its Poland Chinas than it is for cattle. The senior member of the firm confesses that he is more of a hog man than he is a cattle man. This herd includes the 800-lb. sow, Clansman Giantess; her sister, Black Giantess, nearly as large; as is Molly Buster, while the head of the herd, Shiloh Giant, was exhibited at the York Fair last fall and tipped the scales at exactly 902 lb.

The editors of the BREEDER AND DAIRYMAN do not profess to be expert judges of hogs, but one could not look over the Cloverbloom Farm without being struck by the excellent quality of the hogs of all ages. We had the pleasure of seeing thirty-five young pigs weighing about 50 lb. lined up to feed from the troughs. They looked like peas in a pod, so closely did they resemble each other. Mr. Coxen said that they were the produce of five sows. In fact, there were forty-one pigs raised from these five sows but six of the young fellows had already been sold. The hogs will be sold on March 5th and the Holstein herd will be dispersed March 21st. We will have more to say about the Holstein herd in our next issue.

F. W. HOAG DISPERSAL SALE

At his farm, located two and one-half miles west of Rome, New York, F. W. Hoag will disperse his splendid bred herd of registered Holstein cattle on March 5th. Mr. Hoag has spent considerable time and money in getting together the founda-

TUBERCULIN ERADICATION

More than two million cattle in over 200,000 herds are on the waiting list to be tuberculin tested. The December report of the Federal Bureau of Animal Industry shows that there are 5,909,377 head contained in nearly 600,000 herds under supervision while the accredited herds now number 35,895 and contain 758,376 animals. Iowa is making quite an effort to eradicate tuberculosis and during the month tested 49,626 animals, leading in this respect, her closest competitor being Wisconsin with 43,584 head. New York is third with 30,881 head. The report brings out the health of the cattle in the Southern States as no reactors are reported for Mississippi and New Mexico, only one for Texas, three for Louisiana, eight for South Carolina and ten for Alabama while other Southern States show very few reactors despite the fact that quite a number of animals were subjected to the test.

NEWS FROM CREAM ROSE DAIRY

John Walker is the new herdsman at the Cream Rose Dairy. He has had a long experience with purebred cattle; was formerly in charge of the bull barn at the Bell Farm. Previous to that time he was herdsman for Cornell & Paine of Lincoln, Nebraska. Mr. Walker was with the Bell exhibit at the Syracuse National Dairy Show and had charge of the Miller & Paine exhibit at the 1920 Nebraska State Fair. Incidentally we may mention that Mr. Walker stands six foot, five inches in his stockinged feet.

Mr. Blake Arkcoll, superintendent of the Cream Rose Dairy was a busy man at the Pennsylvania Farm Products Show for he is acquainted with cattlemen of many different breeds and was formerly prominent in Berkshire circles. Mr. J. R. Shepherd, former herdsman at Cream Rose Dairy, was called back to Nebraska by business, much to the regret of his many friends in the east.

DAIRYMAN'S LEAGUE GAINS MILK MARKET

The Dairymen's League Coöperative Association, Inc., recently purchased the entire plant of the Empire State Dairy Company and then sold the city portion of the business to Borden's Farm Products Co. and retained the fifteen country plants. The Empire State Dairy Company was considered to be the third largest concern engaged in milk-retailing in New York City. On April 1, 1922, this company refused to buy milk from the League nor has it purchased any League milk since that time. This brings the number of plants operated by the League to 173, of which 142 are owned. The result of the purchase has been to open up a larger market for League fluid milk and to shut off part of the market for milk from non-pooling sources which will have to secure other channels of distribution.

For Sale.—Carload year and half old high grade Holstein heifers.
Franz Bros., Tomah, Wis.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year. A good investment. Subscribe today.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 139.)

tion for this herd. At the head of the herd to-day stands the bull, Spring Farm King Sylva, whose dam is, without question, one of the very greatest cows of the breed. She made 38.81 lb. butter in seven days. She has twice made over 147 lb. butter in thirty days. She produced 3,458 lb. milk in a month which is an average of 116 lb. milk a day. She has produced two 30-lb. daughters, one of which has in turn produced a 34-lb. four-year-old. This bull is sired by Spring Farm King, who is the greatest young son of the King of the Pontiacs—being full brother to K P Pontiac Lass, the first 44-lb. cow. This bull is desirable from every point of view, being light in color and an excellent individual. His first eight daughters are all beauties.

The 30-lb. cow which has been developed in the herd, with her two daughters and two granddaughters, will also be sold, likewise several other A. R. O. cows and heifers including two daughters of Spring Farm King, one of which made nearly 700 lb. butter in a year as a two-year-old, milking well over 18,000 lb. milk in a year.

The majority of the cows in this herd will be fresh or ready to freshen at the time of the sale.

The sale will be held in comfortable quarters, starting promptly at 12 o'clock, Wednesday, March 5th.

R. AUSTIN BACKUS.

GLENN DAVIS SALE

About five hundred dairymen from all parts of Missouri were present at the sale of purebred cattle in which Glenn G. Davis of Columbia, Mo., offered sixty-one head of purebred Holsteins from his federally accredited herd. The auctioneer was J. E. Mack of Ft. Atkinson, Wis., and the pedigree expert was S. T. Wood of Liverpool, N. Y.

The total realized was \$8,030, an average of \$131.65. Fifty cows and heifer including several under six months of age sold for an average of \$146.30; six young bulls averaged \$101.50. The top price was \$300 which A. J. King of Kansas City, Mo., paid for Bis Halwood Korndyke, a daughter of Halwood Korndyke from Campus Chief Bis.

The animals bringing \$200 or more with names and addresses of their purchasers are:

Belle Halwood Korndyke	Purchased by J. R. Harlin	\$255
Rush Halwood Korndyke	Purchased by State Hospital No. 1, Fulton, Mo.	200

Cow Testing Association Reports

HOLSTEIN HERDS LEAD

The Holstein herd of fourteen milkers owned by Flowers & Eckert of Dublin, Ohio, averaged 1,015 lb. of milk during the month of October and 33.8 lb. of butterfat. They stood highest for milk and second highest for butterfat. One of their cows produced 1,960 lb. milk and 60.4 lb. butterfat which was high record for both milk and butterfat in the Darby Cow Testing Association for the month. Flowers & Eckert are new members of the Darby Association. The high average for butterfat was 34.9 lb. made by ten grade cows owned by Earl Breckenridge.

The high milk average in the Madison Township Cow Testing Association was 783.1 lb. made by thirteen Holstein cows owned by W. V. Turnbull of Gahanna. Their fat average was 29.9 lb. which was second highest for the association. One of the Turnbull cows produced 1,454 lb. of milk while a Holstein owned by Shady Lane Farm produced twelve pounds more. The high cow for butterfat was owned by P. E. Rawn of Reynoldsburg, she producing 54.4 lb.

TESTING IN LAWRENCE COUNTY

During December 28 herds containing 269 cows were tested in the Volant Cow Testing Association, operating in Lawrence County, Pa., reports Paul J. Stonbraker, Tester. Sixty-four of this number produced more than 40 lb. butterfat; twenty more than 50 lb.; while thirty exceeded 1,200 lb. milk.

The leader was a Jersey with 73.5 lb. fat. She was closely followed by a Holstein owned by W. McMillin & Son, of Wampum, with 73.4 lb. fat from 2,038 lb. milk, the highest milk production reported. A Holstein in the herd of T. S.

Minor, was third for fat production but second for milk. She is credited with 69 lb. fat from 1,866 lb. milk.

Nine purebred Holsteins owned by C. L. McMillin carried off the high herd honors with an average of 51.2 lb. fat, 1,394 lb. milk. W. McMillin & Son had the second high herd, their fourteen purebred Holsteins averaging 47.9 lb. fat, 1,351 lb. milk.

In the Westfield Association, also operating in Lawrence County, H. Russell Smith, Tester, reports 25 herds containing 274 cows tested in December. Thirty-four of these exceeded 40 lb. fat; four made better than 40 lb.; while six produced more than 1,200 lb. milk in the month.

Jewel, a black and white, owned by H. A. Freed, was the leader for both milk and butterfat production with 2,348 lb. milk, 101 lb. fat. Beauty, also a black and white, owned by Geo. Augustine, was second for milk production but third for fat. She is credited with 1,457 lb. milk, 58.3 lb. fat.

A SPLENDID SHOWING

Nevada stands near the top of the states in per cent of purebred sires heading dairy herds. E. Palludin, tester for the Newlands Project Association, reports that 80% of the members own registered sires. All the herds enrolled have a clean bill of health as far as tuberculosis is concerned. In this Project last year the number of registered sires increased 34% and high class dairy heifers increased 62 per cent.

Merchant (to applicant for job)—
"Sorry, but I only employ married men."
Applicant—"Do you happen to have a daughter, sir?"

MEASURED BY A STANDARD

C. A. Nutt of Ripon, Wis. has an exceptionally good dairy consisting of thirteen grade Holstein cows and a purebred bull. Twelve of these animals finished a full year and their average milk production was 9,763.4 lb. and their average fat production, 406.4 lb., their average test being 4.16%. Beauty was the best cow in Mr. Nutt's dairy and she has 12,975 lb. milk, 491.2 lb. fat to her credit for eleven months. The lowest producer in the herd is credited with 8,099 lb. milk, 282.4 lb. fat. This is below the standard set by Mr. Nutt and she will be sold.

BUY FROM STATE COLLEGE

E. R. Ford, tester of the Flathead, Montana, Association reports that two members of his association have just purchased purebred Holstein bulls from the Montana State College. One of these animals is from a full sister to College Elvira, 21,970.8 lb. milk, 1,098.5 lb. butter, the junior four-year-old champion of the state. Another member of the association has purchased the mother of this bull.

MOST PROFITABLE IN HER COUNTY

A grade Holstein owned by Herman Kielman, Sioux Falls, S. D. and enrolled in the newly organized Sioux Falls Testing Association produced 1,410 lb. milk at a profit of \$24.52 above feed cost. The average test was 4.2% and butterfat was 59.2 lb. Goodwin Rogness, tester, says that she is the most profitable cow in Minnehaha County.

Five hundred cows were tested with sixty-two passing the forty pound mark.

GEORGE LIGHTBODY
Lackawanna Co. Dalton, Pa.

SIMS IN FRONT

Sims is the name of the best cow owned by Leo Kotary of Boonville, New York and the Kotary herd was the best in the Boonville Dairy Improvement Association during the year 1923. In the twelve months the cows in this herd averaged 11,304.1 lb. milk, 396.9 lb. butterfat. The average value of product was \$314.22 while the feed cost was \$107.77 leaving \$206.45 as value of produce above cost of feed. Labor, interest, and depreciation was estimated at around \$75 per cow which would leave a net profit of \$131.45 per animal. Sims is credited with 16,409.5 lb. milk, 564.3 lb. fat. In producing this she consumed 3,595 lb. silage, 3,465 lb. mixed hay and 4,114 lb. grain, the total cost of her feed was \$127.58 and the value of her production above the cost of feed was \$331.34.

One herd in this association averaged 5,007.6 lb. milk, 174.9 lb. butterfat. The value of the product above cost of feed was \$60.09 and when interest and depreciation are paid there will be only a small wage for the owner.

STRICT SUPERVISION GIVEN

Six hundred and forty-two cows were tested in December in the Lewis County, Wash., Association their butterfat average being 29.5 lb. Ninety-five of these produced more than 40 lb. fat and thirty-one more than 50 lb. In this association cows producing more than 80 lb. butterfat are retested and the high cows are given supervision nearly as strict as that given in official testing.

The leader for the month was a purebred Holstein owned by L. F. Rayton. Her production for the month was 2,793 lb. milk, 82.2 lb. fat. Mr. Rayton had five cows on the honor roll. Second high cow was Victory, a grade Holstein, her production being 81.3 lb. fat from 2,334 lb. milk. She is owned by State Training School and there are nine of her stablemates with her on the honor list. Linden Clara Pasma, a registered Holstein, owned by H. Bouchard was third with 1,885 lb. milk, 77.6 lb. fat.

GRADES WIN HONORS

Grade Holsteins carried off all the honors in the Eau Galle, Wis. Association for the past year. The leader was Beauty with 15,127 lb. milk, 482.4 lb. fat. Next to her was Daisy with 11,792 lb. milk, 442.3 lb. fat. They were both owned by Chas. Schultz, and were members of the leading herd which averaged 9,815 lb. milk, 339.8 lb. fat. The second high herd was owned by George Radle, their average production being 8,430 lb. milk, 319.6 lb. fat. Nine of the ten leading herds for the year were black and whites either grade or mixed grade and purebreds, a grade Guernsey herd standing in ninth place.

Two hundred and sixty-one cows completed the year with an average production of 264.1 lb. fat, 7,002 lb. milk.

Her Father—"But, young man, do you think you can make my daughter happy?"

Her Suitor—"Do I? I wish you could have seen her when I proposed!"

LADY OWNS HIGHCLASS HERD

Fourteen purebred and grade Holsteins, owned by Mrs. Christ Bast, Sr. and enrolled in the Rockfield, Wis., Testing Association, won the high herd honors for December with an average production of 1,286 lb. milk, 43 lb. fat. Mrs. Bast had three cows that each produced more than 54 lb. fat. Eleven black and whites, grade and purebreds, owned by Paul Ziemer, had second high herd average with 1,135 lb. milk, 41.6 lb. fat. A grade member of this herd was the leader in the association, she producing 79 lb. fat, 1,755 lb. milk; a purebred in this herd was second with 66.7 lb. fat, 2,151 lb. milk, the highest milk production reported.

During December 290 cows were tested by Elmer L. Peterson, official tester.

WIN HONORS IN OREGON

During December 604 cows were tested in Columbia County, Ore., Association. Forty-four of these produced more than 40 lb. fat. Fifteen boarders were slaughtered. Twenty-two grade Holsteins, owned by F. Uhlman of Scappoose, carried off the honors in the herds containing more than fifteen cows with an average production of 35.7 lb. fat, 988.1 lb. milk. A member of this herd was high individual with 1,655 lb. milk, 74.4 lb. fat to her credit. G. R. Anliker, Globe, had the highest producing herd containing less than fifteen cows, his herd averaging 1,131.3 lb. milk, 42.9 lb. fat.

OWN FIRST AND SECOND

J. Steinhoff & Sons had the two leaders in the Wilton-Norwalk, Wis. Testing Association for December. They were registered Holsteins and produced 2,226 lb. milk, 86.8 lb. fat and 1,907 lb. milk, 82 lb. fat. A grade Holstein was third with 1,401 lb. milk, 71.5 lb. fat. She was owned by Erwin Wruck. Grade Holsteins owned by Ed. McCann carried off high herd honors by averaging 35.2 lb. fat, 975 lb. milk. Frank Noffke's grade Holstein dairy was second with 34.5 lb. fat, 1,020 lb. milk.

A MILKY LITTLE COW

Aaggie Sarcastic Pietje in the Longan herd, Tulare, Calif. has produced her own weight in milk in twelve days. She weighs only 1,100 lb. but her owners believe that she can exceed 3,000 lb. in thirty days. There are thirty-three cows now being milked in the Longan herd of which nine are now under test most of them for a year. The herd averages about five gallons of milk daily with a butterfat test averaging 3.5%.

LEADS FOR THIRD MONTH

For the third consecutive month the nine registered Holsteins, owned by J. A. Black led the Kuna, Idaho, Testing Association. These cows averaged 1,230 lb. milk, 44.3 lb. fat during December. The best cow produced 2,359 lb. milk, 89.6 lb. butterfat and Mr. Black's herd contained four animals that each made over 40 lb. butterfat in the month.

King Ormsby Veeman Korndyke

is by the 1346 lb. year record sire KING ORMSBY IDEAL and was from a good record daughter of KING KORNDYKE SADIE VALE.

Although his dam was tested as a junior two-year-old, his seven nearest dams have A.R.O. records averaging 30.89 lb. butter.

Herd has passed two clean tests, is under State and Federal Supervision and has never had a reactor. We will book your orders now for March and April calves.

CLARENCE H. TITUS

Tunkhannock, R. D. 2, Wyoming Co., Pa.

Berylwood Prince Aaggie Chicago

our young herd bull, has wonderful producing blood in his veins. His dam and sire's dam have records averaging 34.09 lb. butter in seven days, 1,224 lb. butter, 26,978 lb. milk in yearly work.

Then he also inherits the Type and Individuality of his sire who is an undefeated Grand Champion show bull.

There's lots more to tell, but you are invited to come and look him over, also the rest of our herd.

Herd Accredited.

L. L. Allis

Rummerfeld, Bradford Co., Penna.

The Test Supervisor's figures show that our sixteen-cow dairy produced 880 lb. milk in a day—an average of 55 lb. for animals of all ages. :-: :-:

W. B. KENNEDY & SON
Bradford Co. Wyalusing, Pa.

DON WOOD DEAD

It is with regret that we chronicle the death of Don J. Wood of West Winfield, N. Y., a Holstein breeder for more than forty years. This occurred February 5th in a Utica Hospital.

Mr. Wood was born July 17, 1861, on the farm where he spent his entire life. He was a member of the old Holstein Breeders' Association and when that Association was merged with the Dutch-Friesian Association in 1885, his membership was transferred to the Holstein-Friesian Association of America.

Mr. Wood was highly regarded as a man and as a cattle breeder. He worked along the same lines of breeding as his brother-in-law, A. W. Brown, who joined the Holstein-Friesian Association about the same time. These two men, working farmers, raised some splendid cows. Twenty years ago this month, Professor H. H. Wing, Head of the Dairy Husbandry Department at Cornell University, in a lecture to his students said that these two men had probably developed more real cows, that is, cows that combined great producing capacity with type and conformation, than any other two men he could think of. Both herds have always been noted for the splendid quality of the cattle raised therein.

Mr. Wood is survived by his wife, a son and a daughter, together with two brothers and a sister, Mrs. Bradley Fuller of Utica.

MONTANA GOVERNOR OWNS HOLSTEIN BULL

The Governor of Montana is Joseph M. Dixon, who owns a fine herd at Polson, Montana. Last summer while inspecting the herd owned by the Montana State College, he was interested in College Elvira and bought her son to head his herd. College Elvira recently completed a record of 21,970.8 lb. milk, 1,008.5 lb. butter as a junior four-year-old. This is the highest record made in her class in Montana and is the highest record for this age made by a cow owned by a state institution. College Elvira is said to have weighed 1,860 lb. when she started her record which is certainly some size for a junior four-year-old. She is a daughter of Oak Fobes Beets of Shadynook and her dam is a daughter of Wisconsin Bess Chief, who is also sire of Spring Brook Bess Burke.

Another animal to complete a year record in the Montana State College herd was Grace Koningen and she produced 29,647 lb. milk, 1,164.26 lb. butter. She, too, is from a daughter of Wisconsin Bess Chief. The records of Grace Koningen were state records at time of making but have since been beaten for both milk and butter by Mutual Clothilde De Kol 3d.

Edwin—There, there! Don't cry, dear. Angelina—You do feel sorry for me, don't you, sweetheart?

Edwin—I was thinking that I can brush the dry powder off, but if it's mixed with tears this coat goes to the cleaner's.

NOTED EDITOR PASSES

James Baynes, one of the oldest agricultural editors, died January 24th in his home at Chicago from Angina Pectoris.

Mr. Baynes was born November 30, 1840, on a farm at Valley Forge, Pa. The family moved to Southern Indiana, and Mr. Baynes, when twenty-one, joined the 5th Indiana Cavalry and served for two years, being honorably discharged because of physical incapacity caused by a prolonged attack of typhoid fever.

He was admitted to the bar but about 1881 moved with his family to Dakota where he established and edited the *Dakota Farmer*. This paper he sold and established the *American Swineherd* in 1885. In 1890 he moved to Chicago and remained there until disposing of his interest in the *American Swineherd* in March, 1923.

Despite his 82 years, he could not give up the editorial desk and he started *Baynes Soil Improver*, a paper designed to teach farmers how to build up and improve the fertility of the land, a subject in which Mr. Baynes had always been greatly interested.

He is survived by his widow, one son and one daughter.

FOR MILK AND BUTTERFAT

The highest producing cow in the Douglas County, Nebr., Coöperative Cow Testing Association was a purebred Holstein owned by H. C. Williams, Station B, Omaha. This cow made 67.9 lb. butter, 1,996 lb. milk and her profit above feed cost was \$48.40. The highest milk production was also made by a purebred Holstein owned by Chris. Spanggaard with 2,024 lb. milk, 60.7 lb. butter to her credit and a profit above feed cost of \$38.95. The five highest producing cows for the past six months were Holsteins owned by Mr. Spanggaard, their returns were \$195.61 above feed cost.

\$120 Gets Fine Pair of Baby Holsteins

Bull Calf, born Jan. 22, 1924, from a 19.75 lb. junior three-year-old. Sired by Maple Grove Clever Koningen Glista, whose 14 nearest dams average 24 lb. butter in seven days.

Heifer Calf, born Aug. 22, 1923, sired by a grandson of the great bull, Finderne Pride Johanna Korndyke, and from a heavy producing dam.

Both nicely marked and splendid individuals. Priced f. o. b. Centerville. They will please you.

IN THE BANKER'S OFFICE

Young Man (careworn and seemingly a nervous wreck)—How are you? Do you recognize me?

Banker—No; I don't seem to.

Young Man—I am the one who eloped with your daughter two years ago. For heaven's sake take her back and all shall be forgiven.

FLORIDA HOLSTEIN HERD

J. C. Debevoise has been in the dairy business in Jacksonville, Florida, for twenty-two years. He has one of the best herds of Holsteins in this State. Several of his animals have won prizes at high-class cattle shows, including grand championship at the Florida State Fair. His herdsire is Walcowis Ollie Walker, a 2,200 lb. bull, who was grand champion at the two last Florida State Fairs.

The buildings on the farm are of modern type and sanitary throughout. A large artesian well furnishes water as well as power to run an electric light plant. The milk produced is bottled on the premises and retailed to customers in the city.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

POLLED BULL CALF, Born Dec. 26, '23

backed by some of the best blood lines of the breed. The sire is by a son of Dutchland Creamelle Korndyke Lad, from a good tested daughter of Korndyke Abbecker. The dam is an outstanding heifer sired by a 31 lb. son of Colantha Johanna Lad 8th. She is a "pipin" with four generations behind her of good top-lines, good udders and well placed teats. Dam's dam is by a 24th brother to Keystone Beauty Plum Johanna.

R. D. 3, Lewisburg, Pa.

VIRGINIA GRADE MAKES NEW RECORD

"Sadie" that wonderful grade Holstein cow owned by Ben Middleton of Herndon, Va., has just made a new record in the Fairfax County Cow Testing Association No. 1, which established her as the second highest grade cow in the world and the undisputed champion grade cow of the South, her record for her

was run right with the rest of the herd and was not kept under artificial conditions to make a record, the only difference being that she was milked three times daily for part of the year. There is no question if she had been milked three times daily for the whole year and forced at all that she would have made at least 1,000 lbs. butterfat for the year. It might also be added she had a daughter in the herd who made about 11,000

SADIE

Grade Holstein that produced 23,275 lb. milk, 1,144.9 lb. butter in a year. Owned by Ben Middleton, Herndon, Va.

full lactation year being 23,257 lbs. milk and 915.9 lbs. butterfat or 1,144.9 lbs. butter. For her cow test year which includes dry period, she was credited with 21,689 lbs. milk and 847.5 lbs. butterfat. Last year her cow test record was 18,490 lbs. milk and 729.6 lbs. butterfat, so that for the last 24 months she has made over 40,000 lbs. milk and almost 2,000 lbs. butter.

During her cow test year the cost of her roughage, including pasture, was \$67.86 and the cost of her grain \$187.72, making a total feed bill of \$255.58. Her milk was shipped to Washington as fluid milk, bringing an average farm price of \$3.24 per cwt. or a total income of \$702.72 which left a profit over feed cost of \$447.14. She was on pasture 214 days besides which she consumed 5,182 pounds of corn silage, 777 pounds of beet pulp, 2,133 pounds of mixed clover hay and 6,803 pounds of "Larro" Dairy Feed. The remarkable part about her record is that she was run as a strict dairy proposition, to make money on her milk. She

lbs. milk and 400 lbs. butterfat in ten months as a two year old. This record is better than "Sadie's" at the same age. Her monthly record follows:

Month	No. of Days	Milk Prod.	Test	Butterfat Prod.
Jan.	25	1753	4.07	71.3
Feb.	30.5	2516	3.79	95.4
March	30.5	2385	3.92	93.5

LENKERS LOOK UP PEDIGREES

When Dr. Jesse Lenker and his brother Wm. D. Lenker received a card from Superintendent Gardner announcing that Bonalevo Quality Walker Pietertje had, in the Chapin herd, produced 27,508.2 lb. milk, 1,330.15 lb. butter in a year, they immediately started to see what relation she was to their cow, Bonalevo Quality Walker Inez. These two cows have seventy-five per cent the same breeding as both are daughters of King Quality and their dams of both were sired by Admiral Walker Pietertje. Bonalevo Quality Walker Inez does not have the opportunity to make a tremendous year record that has been given her three-fourths sister for it

is her duty to produce milk which is sold to nourish the children and invalids of Pennsylvania's capital city, as the production of the Lenkerbrook dairy is sold as certified milk and is in great demand on account of its purity, flavor and nutritive value.

The Lenkerbrook Dairy is accredited. It is headed by King Mead Segis Pontiac a son of King Korndyke Segis Inka from Mead Vernon Pontiac, 26.52 lb. butter, 539.5 lb. milk in seven days. She by the good sire King Champion Jannek, who has two daughters that have each made over 31 lb. butter in seven-day official test averaging 100 lb. milk a day during the time of the making of their records.

Young Stock For Sale

Waldron Farm Holsteins

KING SYLVIA PONTIAC PIETJE is the sire of a nice bunch of heifers in our herd which consists of 60 head of splendid Holsteins.

He was by CHAMPION ECHO SYLVIA PONTIAC and from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in seven days as a junior four-year-old, her dam a daughter of May Echo Sylvia. We offer his sons and a few good cows and heifers bred to him.

Herd under State and Federal Supervision, last test CLEAN.

MRS. MAUD DWIGHT
Chenango Co. South Otselic, N. Y.

Grandsons of

Clara Clothilde Lyons, 639.8 lb. milk in seven days, 4,872.8 lb. in sixty days, 20,771.2 lb. milk, 723.40 lb. butter in 10 months as a two-year-old.

No. 1. Dam, Johanna Cornucopia Colantha 3d, 21.08 lb. butter, 522.4 lb. milk in 7 days A. R. O. During December this cow produced 1,869.3 lb. milk. Calf born November 2, 1923. Is more black than white and is a nice one.

No. 2. Dam, Clover Johanna of Riverview, 343.3 lb. milk, 18.25 lb. butter in seven days as a two-year-old. Since freshening as a four-year-old, she has averaged 1,700 lb. milk per month. Calf is more white than black and bound to please.

These cows are sisters and from the same dam and both are nice individuals as well as big producers.

Fred B. Keeney
Wyoming Co. Laceyville, Pa.
HERD ACCREDITED

ECHO BELLE MODEL KING
heads our herd. He is by CHAMPION ECHO SYLVIA PONTIAC and from a 28-lb. daughter of 36-lb. cow whose dam made over 37-lb. butter in a week. Our bull has 87 1/4% the same blood as ECHO SYLVIA BELLE PIETJE, 41.27 lb. butter in 7 days as a junior four-year-old. Can spare a few bred or fresh two-year-olds.

Herd numbers 85 head and is under State and Federal Supervision.

Susquehanna Co. THOMPSON, PA.

WHITE COLLIES

Many owners of cattle consider that a well trained dog saves them considerable time in the course of a year. We say "well trained" because a dog that brings the cows in on a dead run will lose more in milk than the value of the time he saves.

White Collies are not only pets but are very intelligent and are capable of making high class cow dogs. There

COMRADE WHITE KING
Famous White Collie owned by Fred Sheckler, Galion, Ohio.

is almost no limit to their accomplishments. The famous explorer, Amundsen, took a number of White Collies with him during his Arctic and Antarctic explorations. One of the best animal acts of Ringling Brothers circus is the performances of seven White Collies. The White Collie is a beautiful animal and his admirers claim that he is the most intelligent of all dogs.

Comrade Farm Kennels of Galion, Ohio have a White Collie breeding establishment and make a specialty of intellectual development as well as the developing of high class physical quality. On their envelopes appears a cut of a white collie, the well-known show dog, Comrade White King and Fred Sheckler, owner of the Kennels claims that he is an intelligent stock driver.

Pages could be used to tell of the faithfulness of man's most faithful companion but Senator Vest's eloquent tribute to a dog is far more truthful and apt than any words we may write. The story is that the Senator delivered this speech in a legal case where one man sought to have another man's dog killed. It is as follows:

"The best friend a man has in the world may turn against him and become his enemy. His son or his daughter that he has reared with loving care may prove ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith. The money a man has he may lose. It flies away from him when he needs it most. A man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall on their knees to do us honor when success is with us may be the first to throw stones of malice when failure settles its clouds upon our heads. The one absolutely un-

selfish friend that a man can have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is his dog.

"A man's dog stands by him in prosperity and in poverty, in health and in sickness. He will sleep on the cold ground where the wintry winds blow and the snow drives fiercely if only he may be near his master's side. He will kiss the hand that has no food to offer, he will lick the sores and wounds that come in encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince. When all other friends desert he remains. When riches take wings and reputation falls to pieces he is as constant in his love as the sun is in its journey through the heavens.

"If fortune drives the master forth an outcast in the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him to guard against danger, to fight against his enemies. And when the last scene of all comes, and death takes the master in its embrace, and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by the graveside will the noble dog be found, his head between his paws, his eyes sad, but open in alert watchfulness, faithful and true to the master he loves, even in death."

BOUGHT UNIVERSITY BULL

California Imperial Juliana Lad has been purchased by the Bear Valley Farm at Olema, California, from the University of California herd. The dam of this young bull, Colantha Juliana Agnes, is one of the three famous Agnes sisters in the University herd. This heifer recently completed a record of 17,044 lb. milk and nearly 800 lb. butter in a year as a junior two-year-old, a record which is said to be the third highest in the class for heifers owned by American Agricultural Colleges.

FARM WAGES DURING THE YEAR

The average wage of farm hands in 1923 is computed to be \$33.18 per month in addition to board and lodging. Day wages for harvest labor, including board and lodging, was \$2.45. In 1914 the average harvest wage was \$1.55 per day and the average monthly wage for general farm labor was \$21.00. Wages during the past year were higher than they were in 1922 or 1921 but not quite so high as during the peak of wages in 1920.

BUYS GOOD SHOW BULL

Sir Pietertje Piebe Mercedes has been sold by Arthur Zutz of Red Lake Falls, Minnesota, to M. E. Nelson of Roseau. Sir Pietertje, who now is four-years-old, weighs 2,120 lb. He is a very handsome bull and three years ago, when exhibited as a yearling, he won the grand championship at the Farm Crops show at Crookston. It is said there were eighty other bulls in competition.

OWNED BY A LADY

One of the handsomest bulls we have had the pleasure of looking over this year is King Sylvia Pontiac Pietje, the handsome fellow heading the Waldron Farm herd. This bull is light in color, very stylish and a real show animal. Through both sire and dam he is a descendant of the famous May Echo Sylvia, the world's champion milk producer and the only cow that ever made 1,000 lb. of milk in seven day official test.

King Sylvia Pontiac Pietje is a son of Champion Echo Sylvia Pontiac, whose daughters and granddaughters are making wonderful records and who was from May Echo Sylvia and was sired by Spring Farm Pontiac Cornucopia, a son of K. P. Pontiac Lass, the first cow that ever made 44 lb. of butter in a week.

The dam of King Sylvia Pontiac Pietje was May Echo Pontiac 2d with records of 659.8 lb. milk, 26.23 lb. butter in a week and 2,548.8 lb. milk, 109.29 lb. butter in thirty days as a junior four-year-old. She was by Woodcrest Sir Clyde and from May Echo Pontiac, whose dam was May Echo Sylvia and whose sire was King Pontiac Artis Canada, son of King of the Pontiacs and Pontiac Artis, the highest year record daughter of Hengerveld De Kol.

Waldron Farm is owned by Mrs. Maud Dwight and is situated at South Otselic, New York, in Chenango County, a district that has always been famous for its Holsteins. The Waldron herd contains 60 head of top-notch Holsteins chiefly daughters of King Sylvia Pontiac Pietje. It is for this reason and for no other that Mrs. Dwight is offering this handsome well-bred sire for sale. The Waldron herd is under State and Federal Supervision and passed its last test without a reactor or even a suspicious case.

THE HAMPSHIRE SQUEAL

Have you ever heard of the Hampshire Squeal? This is a publication sent out by Wickfield Farms, Cantril, Iowa. It is devoted to news of the Hampshire breed, to reports of sales made from Wickfield Farms and to offerings of the Wickfield herd.

The Silver's have a large herd of high-class hogs and some of the best boars exhibited last fall. If you are interested in Hampshires drop a card to Wickfield Farms asking for the Hampshire Squeal, it will be sent free.

We notice that during the past year Wickfield Farms exhibited a show herd at the Iowa, Minnesota and South Dakota State Fairs, the Sioux City International Fair and the National Swine Show. They won 31 first prizes, twenty-two second, eight third prizes, a number of other prizes and eleven championships and grand championships. The cash prizes totaled \$1,006.

At the Chicago International Fat Stock Show two of the first prize pens of boars were from Wickfield Farms, one being shown by this establishment and the other was shown by the University of Oklahoma and had been purchased from the Silver establish-

ment. In the breeding classes Wickfield Farms had the grand champion sow in Alice Longfellow, the junior champion on Whiteway Lady 2d and junior champion boar in Wickware Thoroughbred. The grand champion boar was from a sow which had been sold in a Wickfield Farm bred sow sale.

Mr. Silver says 'that sometime ago he had asked himself "Was the purebred business necessary, wasn't it built on an imaginary foundation?" After looking over the shipments to the Kansas City Stock Yard he now asks, "Can the livestock industry of this country be on a firm foundation without the purebred business?"

HATCH JOINS NEWTON STAFF

L. M. Hatch, of Jefferson, Wisconsin, well known in Holstein circles, has joined the sales organization of L. W. Newton, Milwaukee, Wisconsin, manufacturer of the Dairyman's Best line of dairy rations. Mr. Hatch completed a course in agriculture at the University of Wisconsin and had the distinction of being President of his class. On completing his course he was offered a position as instructor by the University, and later was offered a similar position by the University of Illinois.

Mr. Hatch has been closely identified with Holstein-Friesians for twenty years and was connected with, and had the responsibility of building up the Emglagaard Dairy herd at Big Bay, Michigan, owned by Senator Roberts. He also, for several years, managed Iowa Farms owned by Col. G. Watson French, at Davenport, Iowa, and a brother of Mr. Hatch is still in charge at Iowa. Mr. Hatch is brother-in-law to John S. Murphy of Woodbine, Pennsylvania, a breeder of Holstein-Friesians and producer of high-grade milk. Mr. Hatch has a great and practical knowledge of feeds and feeding and we wish him success in his new venture.

INCREASE IN HOLSTEIN PURCHASE

A carload of seventeen Holsteins left Howell, Michigan, early in the week consigned to the Danforth Holstein-Friesian Association at Escanaba, Michigan, but when the car arrived it held nineteen occupants, twin calves being dropped enroute.

The cows were distributed to the farmer members of the Association by lot. Two other farming communities in the county are planning similar organizations to enable them to start in the purebred dairy business and the movement is being backed by the local Chamber of Commerce.

Glenn Mead's wife was away recently and knowing that a friend of his called him up and desired him to come over for a little game. Glenn said he couldn't come because he was washing.

"Washing what?" asked the friend.

"My B. V. D.'s," said Glenn.

Just then the telephone operator cut in and said, "I'm ringing them."

Handsome, Well Grown, Nicely Marked Bull Calf

Born November 14, 1923. Price \$90

SIRE:—LOTHIAN DE KOL KORNDYKE, whose daughters stood 1st and 2d for Milk and 2d and 3d for Butter in the junior two-year-old class of the Dairyman's Division for the full year, Season 1922-23.

DAM:—ORANGE KORNDYKE SEGIS, 23.43 lb. butter, 565.4 lb. milk in 7 days, 18,102.1 lb. milk, 705.7 lb. butter in TEN MONTHS. FOUR successive years she has averaged 14,901.5 lb. milk, 469.20 lb. butterfat in Cow Testing Association work, making an average annual profit of \$182.92. She is a daughter of ORMSBY KORNDYKE LAD.

C. A. BROWN, MANNSVILLE, N. Y.

GOOD ONES IN ALLEGANY COUNTY

Sadie Butter Girl Spofford, one of the great cows in the herd of Glenn L. Warner, of Cuba, New York, recently finished an official test making 30.54 lb. butter, 700.7 lb. milk in seven days. She was six years, two months, eleven days old at time of freshening. Sadie has a number of other large records. At her previous freshening, when she was exactly a year younger than when she freshened this year, she produced 647.6

SADIE BUTTER GIRL SPOFFORD 30.54 lb. butter, 700.7 lb. milk in seven days. Owned by Glenn L. Warren, Cuba, N. Y.

lb. milk, 29.98 lb. butter in a week while at her previous freshening she made, when she was four years, two months, thirteen days old, a seven day official record of 575.1 lb. milk, 24.52 lb. butter. This cow is certainly a high class producer and reproducer.

Sadie Butter Girl Spofford is from the same dam as Sadie Spofford Johanna Korndyke 745.9 lb. milk, 31.27 lb. butter in a week. Her sire is Butter Boy Korndyke Johanna who has a number of good record daughters and was full brother to Butter Girl Johanna, 588.4 lb. milk, 32.55 lb. butter in seven days. Butter Boy Korndyke Johanna is by Colantha

SIR CHAMPION SYLVIA Herdsire at Sylvdale Farm, Cuba, N. Y.

Johanna Lad 8th and is from May Butter Girl De Kol, 30.92 lb. butter, 690.8 lb. milk in a week, a cow that two different years with only three-quarters has milked over 100 lb. a day and that produced 25,594.2 lb. milk, 1,067.53 lb. butter in a year.

Mr. Warner only has seventeen cows in milk and this is his third cow to produce more than 30 lb. butter in a week, one reaching 34.89 lb. Sadie dropped a heifer calf sired by Sir Champion Sylvia, the present head of Sylvdale Farm, as Mr. Warner's establishment is called.

Sir Champion Sylvia is a son of the noted sire, Champion Echo Sylvia Pontiac and his dam is Belle Model Champion Sylvia, who has a seven day record

of 550.2 lb. milk, 30.29 lb. butter. She in turn is by Champion Echo Sylvia Pontiac and is from Belle Model Johanna 2d, a cow that two different years made over 37 lb. butter in a week and that is dam of a cow that three different years has produced over 33 lb. butter in seven day official test. Champion Echo Sylvia Pontiac has a long list of high record daughters and is one of the best sons of the famous May Echo Sylvia over 41 lb. butter in a week, the only cow in the world that has ever officially produced over 1,000 lb. milk in seven days.

Sir Champion Sylvia, besides being splendidly bred, is making good at Sylvdale Farm as his calves are handsome, straight, and nicely marked. The three nearest dams of Sir Champion Sylvia have seven day records averaging 36.21 lb. butter.

SALES FROM MAPLE GROVE

Maple Grove Stock Farm report a couple of recent sales of purebred Holsteins. Eno. O. Fletcher, Union Grove, N. Y. purchased a nice bull calf by Maple Grove Ybma Glista, a son of Model Daniel Glista and Maple Grove Spofford Princess 641.3 lb. milk and over 27 lb. butter in a week. The dam of the young bull was Maple Grove Glista with an A. R. O. record of 409.8 lb. milk, 18.50 lb. butter.

H. E. Long of Landisville, Pa., purchased a fine two-year-old heifer. She was from Maple Grove Marjorie Spofford with an A. R. O. record of 18.37 lb. butter and practically 70 lb. milk in a day and was sired by King Pontiac Jupiter who has a number of good record daughters and was by King of the Pontiacs from one of the many good daughters of the famous old sire, Hengerveld De Kol. The two-year-old heifer was carrying calf by a well bred son of King Pontiac Jupiter from a 20 lb. cow. The Maple Grove Stock Farm is located at Centerville Crawford County, Penna., and the herd is accredited.

IN THE MAKING

A four-year-old purebred Holstein owned and bred by Charles P. High of Derby, Kansas, is in official test and making a very large record. For two weeks she has averaged ninety lb. milk a day, her best day being ninety-five lb. She has made 30.65 lb. butter in seven days. She was sired by King Pontiac Bellmore Hildale and her dam, Anna Pietertje Pontiac Pet, has a year record of 20,951 lb. milk, 826 lb. butter. Mr. High has two young sisters to the four-year-old who is expected to be the champion of the state.

FOWLER PLANS TO MOVE

Frank T. Fowler, former president of the Illinois Holstein-Friesian Association and one of the leaders of the dairymen in the recent Chicago Milk price war will move his herd to southern California in the near future. Mr. Fowler will be missed by Illinois dairymen and Holstein breeders for he is a persistent and aggressive worker for his ideas of what will benefit the dairy industry.

HAMPSHIRE

FOR 5 YEARS in succession, Hampshires have won grand championship over all breeds at the International Livestock Show in carload lots, 1918-1919-1920-1921-1922.

HAMPSHIREs are the practical farmer's practical hog, because of their meat type—their grazing qualities—their activity—health and vigor—their highly developed mother instinct—their milking qualities—their early maturity and economical gains, and because they are Recognized Market Toppers.

The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

Subscribe for the official breed paper—THE HAMPSHIRE ADVOCATE.

This is a monthly publication, devoted to the interest of the Hampshire breed.

Subscription price \$1.00 per year or \$2.00 for 3 years.

Free Service Department—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

**A SALE WITHOUT A SLOPER
CLOVERBLOOM FARM DISPERSAL
YORK, PENNSYLVANIA**

MARCH 21, 1924

Cloverbloom Farm being sold, the entire herd must also be sold without reserve. It includes:

A NUMBER OF CHOICE FAMILY GROUPS—BETTER BUY ONE OR MORE OF THESE.

Granddaughters of the century sire, KING SEGIS PONTIAC ALCARTRA;

ALBINA PONTIAC NETHERLAND, a yearling heifer that won eleven prizes at the shows last fall; Twenty-nine young females and the herd sire, COLANTHA JOHANNA KING, probably the handsomest son of Colantha Johanna Lad 8th, in turn one of the very best sons of Colantha Johanna Lad.

Colantha Johanna King is five years old. His dam is by King Quality from a daughter of King Walker—There's breeding for you and any amount of big records.

This is a herd of young animals bred for production and possessing choice individuality. They will make good wherever they go.

Sale Manager, S. R. Miller.

Auctioneer, Nelson Henry.

W. K. COXEN & SONS

YORK COUNTY

YORK, PENNSYLVANIA

Cloverbloom Farm is three miles from York on the Carlisle Pike.

Idyllwilde Korndyke Dionagen

my junior herdsire, is backed by cows that have made remarkable records in official seven-day work.

His dam, the junior four-year-old BONNY DEAN PRINCESS KORNDYKE made 480.9 lb. milk, 31.36 lb. butter; her dam, PRINCESS OF OAKDALE 2d, made 536.5 lb. milk, 31.30 lb. butter and she is from PRINCESS OF OAKDALE, 565 lb. milk, 30.50 lb. butter. This ability to produce is being transmitted to his offspring, and he is being bred to daughters of my senior sire, KING PONTIAC ALCARTRA PIETJE. You will be pleased with the results.

Let me price a sample to you.

credited Herd of
Omwake & Speck

INCLUDED IN THE OFFERINGS ARE

The Entire Ac-
credited Herd of
Omwake & Speck

The noted show heifer, LADY WESTTOWN SEGIS, shown three different years and still unbeaten.

Sixteen daughters of SIR COLANTHA PIETERTJE KORNDYKE, a 30-lb son of the famous old sire, PONTIAC KORNDYKE. Most of these are not yet in milk. This is probably YOUR LAST OPPORTUNITY to obtain young granddaughters of PONTIAC KORNDYKE.

BRIAR VALE JEWEL 2d, weight 1600 lb. Due to freshen at sale time.

The grand old foundation cow, LADY MAUD HENDRIK DE KOL, four of her daughters, six granddaughters, and a number of great-granddaughters, together with several descendants of one of her sisters. You will like this splendid family.

With the exception of six head, all are under seven years old and, with the exception of 11 head, all are under FIVE years old.

Also the senior herdsire, ORMSBY CLOTHILDE LAD, a son of the famous ORMSBY KORNDYKE LAD, from a 29.73-lb. granddaughter of Hengerveld De Kol, record made as a three-year-old. You know that this is the best producing blood of the breed. Nearly all the older females are bred to this great bull.

The junior herdsire, CHAMPION VALDESSA JETTA, a showy, stylish fellow, he from a good granddaughter of PONTIAC KORNDYKE and sired by a well bred son of KING VALDESSA PONTIAC. Real quality in this fellow.

Sale Manager: S. R. MILLER.

Remember the herd is ACCREDITED.

Everything goes. The previous day all the other stock and the farm machinery will be sold and the farm is rented.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check placed to the coupon will bring every issue for two years.

Onaco Sir Lucille Jolie Beauty

His dam and sire's dam successively held the World's Championship for butter production in the senior four-year-old class—yearly division.

His dam, Lucille Jolie Pontiac, produced 1,173.15 lb. butter in 365 days, her milk averaging 3.94% fat.

His sire's dam, Keystone Beauty Plum Johanna, produced 1,294.71 lb. butter in 365 days, her milk averaging 4.02% fat in strictly official test.

The dam made 33.29 lb. butter in seven days, and the sire's dam, 32.88 lb., while, curiously enough, each produced 665.5 lb. milk in the seven days.

A bull combining the blood of these two great former World's Champions is BOUND to sire producers. The daughters of Onaco Sir Lucille Jolie Beauty are not yet in milk but they show promise of inheriting the producing capacity of their famous relatives.

You cannot obtain these heifers but you can obtain one of their brothers. Write to-day to

VOL. III

HARRISBURG, PA., MARCH 8, 1924

No. 5

Cloverbloom—A Herd Without a Sloper

MANY years ago a well-known Ohio auctioneer, noted for his wit and volubility, sprung a story at a sale which has been repeated thousands of times by others under similar circumstances.

Briefly, the story is to the effect that a parrot and a bull dog were shut in the same room. The parrot thought it fun to yell "sic' em" and start the bull dog looking for something to "sic." The trick was repeated a number of times until the dog, not finding anyone or anything ceased to pay any attention. Thereupon the parrot descended from his perch and yelled "sic em" by the sleeping bull dog's ears. The dog, opening his eyes and seeing the parrot, immediately proceeded to make things lively for that bird. When the parrot es-

the sows, weighed 800 lb.; her sister, Black Giantess, is nearly as heavy and so is Molly Buster, another great matron of the herd. These three sows are not at all coarse but are smooth and possess great quality. We were shown animals whose litter mates had been slaughtered when just about six months of age and had dressed around 250 lb. at that time. We saw thirty-five young Polands in a row feeding from troughs and they resembled peas in a pod. We were told that they and six others, which had been sold, were the produce of five sows that farrowed a few days apart.

The Holstein herd consists of around thirty animals. There are several family groups and a number of animals in this herd that are real show stock, their top-lines being particularly good. Mr. Coxen must be a real good judge of cattle as his foundation animals were selected from a dairy standpoint without any idea of ever exhibiting them at any fairs.

At the head of the herd is the good bull, Colantha Johanna King, No. 244141. This bull is coming six years old. Mr. Coxen had the opportunity to purchase him a few months ago and while he does not have any

COLANTHA JOHANNA KING
A show bull by Colantha Johanna Lad 8th from a daughter of King Quality.

caped, minus many feathers, he flew back to his perch, looked himself over carefully, and said "The trouble with me is that I talk too much."

W. K. Coxen, owner of Cloverbloom Farm near York, Pa., is in the same state of mind as the parrot in the story. Mr. Coxen, who has been eight years at Cloverbloom Farm had no intention of closing down his business or leaving his home. But just recently, a party in search of a new home came by and asked for a price on Cloverbloom Farm. The owner quoted a figure and was immediately taken up. Now he has to search for a new place for himself and his family and has to dispose of his herds of purebred Poland China hogs and registered Holstein-Friesian cattle, herds that he has built up by years of painstaking work.

Cloverbloom Farm consists of 178 acres and is divided by an improved road running between Carlisle and York, Pa. The Poland China herd is one of high quality and has won honors at near-by fairs. Shiloh Giant, the chief boar, weighed 902 lb. when he was exhibited at the York Fair. Clansman Giantess, one of

ALBINA PONTIAC NETHERLAND
Winner of eleven prizes during the show season of 1923. She is being held by her owner, W. K. Coxen.

of his daughters he has some very handsome grand daughters. A number of the cows have already been bred to this animal, who possesses high-class individuality. As far as we know, he has never been exhibited but he is a real show bull and capable of winning his share of prize money wherever exhibited. He is a son of Colantha Johanna Lad 8th, the Bonalevo herd sire, who is quite a show bull and the sire of show animals. As far as we know, this sire is the only bull that has ever had three different daughters each produce over 800 lb. milk in a week and his daughters and grand-

daughters have made very large records in a number of different herds. He was by Colantha Johanna Lad from a daughter of Pontiac Korndyke, a very desirable combination of blood lines.

The dam of Colantha Johanna King is Bonalevo Quality Duchess, a daughter of King Quality with an official record, made as a junior two-year-old, of 384.4 lb. milk, 17.09 lb. butter. She is by King Quality from

MOTHER AND DAUGHTER
Bess Beauty De Kol Pontiac and her yearling heifer.

Duchess Manor Beets Aaggie De Kol 2d with a year record, made as a senior three-year-old, of 15,952.7 lb. milk, 641.97 lb. butter. It can be seen that the blood lines behind Colantha Johanna King are famous for production and quality.

Mr. Coxen is very proud of the individuality of his animals, although, he says "He likes type and finish but prefers production at a profit." He calls his aggregation of cattle "A Herd without a Sloper" and we failed to find any in our inspection.

A family group that would attract attention anywhere is a number of descendants of Miss Beauty De Kol Baby Girl 2d, a granddaughter of the well-known sire, Korndyke Pontiac Hengerveld. There are three daughters of this cow and a number of granddaughters. The illustrations show these three sisters as well as the older one, Bess Beauty De Kol Pontiac, and one of her daughters.

Bess Beauty De Kol Pontiac is a daughter of Wynd-

THREE SISTERS
Daughters of Miss Beauty De Kol Baby Girl 2d.

ham Sir Pontiac Ormsby and there are a number of daughters of this bull in the herd. Their individuality speaks for them without any comment of ours.

Many owners of purebred Holsteins would be glad to get hold of Albina Pontiac Netherland, now a yearling heifer. She was exhibited last fall at a number of fairs and won eleven prizes and this included first at the Milton Fair in competition with animals that had

been picked up by well-known judges at long prices. This heifer is a daughter of Aaggie Netherland Queen and is a granddaughter of the present herdsire, Colantha Johanna King, and, after looking her over, it is very easy to see why Mr. Coxen seized the opportunity to secure her grandsire.

Space forbids us giving individual mention to many other members of the herd that are deserving of it but we cannot conclude without saying something about Echo Pontiac Alcartra, now a little past four years old. She was by King Segis Pontiac Alcartra 5th and her dam is Echo Netherland Cornucopia with a seven day record, made as a junior four-year-old, of 546.9 lb. milk, 22.76 lb. butter, while as a five-year-old she is credited with 15,012.4 lb. milk, 606.45 lb. butter made in only 338 days. Echo Pontiac Alcartra, besides possessing well-known blood lines is a very showy animal.

The Coxen herd has been headed by a purebred Holstein sire for eleven years and the owner had been breeding purebreds for the eight years he has been on Cloverbloom Farm. His two sons are associated in the business and both boys are enrolled in calf club work.

Mr. Coxen is one of the Trustees of the Poland

CLOVERBLOOM FARM POLAND CHINAS
Right up on their toes and full of quality.

China Advertiser, is very prominent in extension work for the Poland China breed, and is, we believe, the Extension representative for his district. His services are given free to men who are interested in Poland China hogs. Mr. Coxen confesses to be more of a hog breeder than he is a Holstein breeder but keeps purebred Holsteins because he believes they are the most profitable dairy breed for the average farmer, especially if he keeps a large number of hogs, the milk, whether whole or skimmed, being especially adapted for the raising of young stock.

The argument is sometimes advanced that purebred animals put under the same conditions as native cattle will deteriorate into scrubs. That is not true so far as heredity is concerned, for they will transmit the power to respond to feed and will far surpass the scrub if given proper feed and care. In other words, the purebred animal has been developed through long-continued breeding and selection to intensify the quality of responding to plentiful feed and converting it into meat of the most value, and that quality has become a fixed characteristic.—U. S. Department of Agriculture.

Bess Johanna Ormsby and Her Records

UNDER date of February 11th, a card was sent out by Malcolm H. Gardner, Superintendent of Advanced Registry, announcing that Bess Johanna Ormsby, No. 263431, had closed a test of 365 days and was credited with a record of 30,143.3 lb. milk and fat equivalent to 1,497.61 lb. butter, she becoming the fifth cow in the yearly division in order of production. This is the crowning test of a long list of great records. She freshened for the first time when two-years, six months, six days old and after making short time tests completed a year record of 17,801.3 lb. milk, 881.96 lb. butter. She is widely known as being the only cow that has to her credit three records of 1,000 lb. butter or more made in the ten months division and this is in addition to her record completed recently. She is further distinguished by having two seven day records made at different ages of over 40 lb. butter.

Bess Johanna Ormsby was bred in the Minnesota herd owned by E. C. Schroeder but has made practically all of her records at Winterthur Farms, Winterthur, Delaware. She is a daughter of Sir Pietertje Ormsby Mercedes and the famous Spring Brook Bess Burke 2d, who has four seven day records above 30-lb. and four year records above 1,000 lb.

Many of the great cows that have made large records in official tests and have also long time records show a marked discrepancy in the fat percentage, the short time tests averaging much higher than do the records made in longer periods. In going over the work of Bess Johanna Ormsby we find much less of this. In fact, we do not know of a large record cow tested a number of times that shows less variation in fat percentage. It is interesting to study over the chart and see the age at which the records were made, the amount produced and the percentage of fat in the milk.

Age	Days from calving	Length of record	Milk	Butter	Percent of fat
2-6-6	9	7	452.4	25.90	4.58
2-6-6	242	7	259.4	13.38	4.13

8-1-11	7	30	3,498.6	177.23	4.05
8-1-11	not given	365	30,143.3	1,497.61	3.97

While making the recently completed record, Bess Johanna Ormsby, we are informed by J. Russell Danks, superintendent of the cattle department at Winterthur, was kept in a box stall and milked four times daily throughout the year. She had the run of a small paddock for about two hours each morning during the winter months, and was allowed the range of a small pasture field for about six hours daily during the summer season. She was never off feed once during the whole year.

Details of the feed given this great cow is bound to be

interesting. Her ration consisted of bran, oats, hominy, gluten, oil meal and distillers grains and beet pulp. During the five pasture months, she was fed approximately 40 lb. soiling crops daily while during the other months she received beets for succulency. We are reproducing her feed table at the end of this article.

Last October, Bess Johanna Ormsby was bred to King of the Ormsbys. There are three sons of this cow in the Winterthur herd—Winterthur Bess Ormsby Boast (age four years), sired by King of the Ormsbys; another two and one-half years of age, Winterthur Bess Ormsby Donsegis, sired by Sir Inka Prilly Segis; the third is Winterthur Bess Ormsby Eona, born February 3, 1923, sired by Meadow Holm Ona Ormsby who in turn was sired by Sir Pietertje Ormsby Mercedes 40th. The first son of Bess Johanna Ormsby was dropped in the Schroeder herd and was named King Bess Johanna Ormsby. He is now owned by Aitken Bros., Wau-

BESS JOHANNA ORMSBY
The latest 30,000 lb. cow. Owned by Winterthur Farms, Winterthur, Delaware.

kesha, Wis. Her second son, Winterthur Ormsby, was bred in the Schroeder herd but was dropped in Delaware and is now owned by Francis X. Bushore, Valparaiso, Ind. These two bulls were sired by King Korndyke Colantha Ormsby. It is to be regretted that Bess Johanna Ormsby has never had a daughter. Three well known sires are full brothers to this cow, Sir Pietertje Ormsby Mercedes 37th, King of the Ormsbys and Creator.

Since the death of her mother Spring Brook Bess Burke 2d, the heroine of our story, Bess Johanna Ormsby is easily the most noted animal of the Winterthur herd which at the present time consists of over 300 head of registered Holsteins. This herd is under state and federal supervision and is tuberculin tested every six months. The aim of the management is to place this great herd on the accredited list.

Winterthur farms contains about 1,000 acres and is situated in the extreme northern end of the state of Delaware, the state line between Pennsylvania and Delaware being only a short distance from the northern boundary of the farm which has been in the possession of the present owner and his ancestors for several generations.

Winterthur is about six miles from Wilmington, Del., and twenty-seven miles from Philadelphia, seventy-

five miles from Baltimore and one hundred and twenty miles from New York City. It is in a historic neighborhood as the Brandywine Battlefield is within a few miles of the farm and one of the fields of this farm was used as a camp site for American troops during the war of 1812.

It would not be fair to end this article without making a brief mention of the "Winterthur Special Holstein Milk." The product of the dairy is cooled and bottled at the creamery in less than thirty minutes from the time it is drawn from the cows. It is sold un-

teurized and the bottle cap bears the legend printed in red and blue—

Winterthur Special Holstein Milk. Not pasteurized. Produced by cows free from tuberculosis. Bottled daily at Winterthur Farms. Best for Babies and You.

About three years ago Winterthur Farms put on the market this special milk for infant feeding and high class table use. The demand for it has steadily increased each year, showing what can be done by a Holstein breeder when he has access to suitable markets and sells his product for what it is.

*Distillers.

Meadow Lane Dairy

BECAUSE he likes to sell things, John B. Keller of Chambersburg, Pennsylvania, drifted from the farm and became a shoe salesman traveling over a number of States. Although very successful, he became tired of this life and returned to his former occupation becoming a breeder of purebred Holstein-Friesian cattle, and Hampshire and Poland China hogs of which he has some sixty head while he has more than thirty purebred Holstein-Friesians.

Mr. Keller's establishment is known as Meadow Lane Farm and is situated a short distance from Chambersburg. His cattle are housed in a commodious barn and his farm is well adapted to the raising of large quantities of nutritious cow feed. On the barn facing the road is painted a large sign which attracts the attention of every passerby. It gives the name of the establishment and the name of the owner and tells that the farm is the home of purebred Holsteins, another indication of salesmanship.

Practically every member of the herd is below the age of maturity but they are producers as the barn records show. We will mention a few so that our readers can get an idea of the blood lines represented in the herd. Lady Milly Clothilde Pontiac is a very handsome, light colored young cow. She is a daughter of Nonsena Vale and was sired by Cedarshade Pontiac Clothilde. Rosedale Segis Hengerveld is a three-year-old that would attract attention anywhere. Her dam is a daughter of King Hengerveld Small Hopes and her sire, Segis Pontiac Jacoba Canary, is from a daughter of King of the Pontiacs and was sired by a son of King Segis Pontiac from the 30.82 lb. Jacoba Hartog Canary.

A number of daughters of Tobe Veeman Pontiac Hengerveld would attract attention anywhere. This bull was by a son of King Segis Pontiac Alcartra and was from Daisy Veeman Hengerveld, a daughter of Sir Veeman Hengerveld that produced 637.2 lb. milk, 29.14 lb. butter in seven days and 2,666.9 lb. milk, 121.63 lb. butter in thirty days. The Tobe bull is a son of Christmas Tobe 5th, 591.5 lb. milk, 25.04 lb. butter in a week, a maternal sister to Christmas Tobe 2d, a cow that made 31.66 lb. butter in seven days and 129.40 lb. butter in thirty days as a ten-year-old and was dam of the 36 lb. three-year-old, Lady Tobe De Kol.

Bamstead Lady Sarcastic is a daughter of King Pontiac Flamboro. This bull has royal breeding as he is by King of the Pontiacs from Flamboro Witzzyde De Kol, a cow that two different years made over 30 lb. butter in a week and has an official record of 585.8 lb. milk, 32.42 lb. butter.

The herd includes a number of young granddaughters of Rag Apple Koradyke as well as a number of granddaughters of the century sire, King Segis Pontiac Alcartra. There are daughters of King Pontiac Pride Segis, who is full brother to Irene Segis Pontiac, the great cow that was purchased by the Detroit Creamery Company for \$1,450 in the National Dairy Show sale at Syracuse last October. She has a number of wonderful records. As a junior four-year-old she produced 1,008.75 lb. butter, 23,301.3 lb. milk in a year and as a five-year-old she made 33.02 lb. butter, 763.7 lb. milk in seven days and raised her year record to 1,271.55 lb. butter, 30,022.3 lb. milk.

The pride of Meadow Lane Farm is the herd sire, Piebe Carnation Mercedes Walker. This bull is close-

ly related to animals that have made tremendous records in both short time and long time tests and also to animals that have won the highest possible honors in the great show rings of the country. He is a son of Carnation Denver Walker whose dam, Jolie Tillie Denver, produced 28.91 lb. butter in a week, averaging 80 lb. milk a day. Carnation Denver Walker was sired by Matador Segis Walker, the famous sire of the Carnation Milk Farms.

Sons and daughters of this bull have been extensively shown at the great fairs during the past season and have won many prizes and championships. His daugh-

Piebe as well as his grandsons and granddaughters have carried off prizes at a large number of the leading shows and are noted for their splendid individuality.

THREE SHOWY PRODUCERS
A trio of young matrons in the Meadow Lane Dairy.

Practically all the members of Meadow Lane Dairy are young. Even the animals in milk, with a very few exceptions, are in their first or second lactation periods. There are a number of young calves and these are extra good individuals showing that they have had good care and feed.

Meadow Lane Farm contains 150 acres of some of the best land laying out doors in Franklin County. The natural fertility of the soil has been supplemented by manure produced by the livestock and the result has

PIEBE CARNATION MERCEDES WALKER
Grandson of Matador Segis Walker and King Pietertje Ormsby Piebe.

ters have made good in long time tests and have tremendous milk and butter records to their credit.

Piebe Carnation Mercedes Walker is from Queen Piebe Mercedes Lassie, a good young cow in the herd at Rock River Farms, Byron, Illinois, the property of Senator and Mrs. Medill McCormick. This herd has nearly 100 purebred Holsteins and scarcely a month passes without this great establishment ranking close to the top in the Illinois Cow Testing Associations for average as well as aggregate milk and butter production, in fact, we do not know of any other purebred herd of

THE BARN AT MEADOW LANE FARM

its size which has ranked so high for average production in cow testing association work.

Queen Piebe Mercedes Lassie as a junior four-year-old produced 25.88 lb. butter in a week, her average test being 5.97% fat. She is from Bonnie Mead Lassie, 21.78 lb. butter, 497.2 lb. milk in seven days as a senior three-year-old. Queen Piebe Mercedes Lassie is a daughter of King Pietertje Ormsby Piebe, the great show sire of the Hargrove and Arnold herd.

We think it would be only fair to say that this bull and Matador Segis Walker are on a par for the production of stock that produces in test and wins in the show ring. Sons and daughters of King Pietertje Ormsby

TWO OF A KIND
A pair of young heifers in the Keller Herd.

been heavy crops which in turn is responsible for the condition of the animals.

It is a pity that so young and thrifty a herd has to be dispersed but Mr. Keller is planning to return to his former vocation of salesman and has already made arrangements for someone else to manage Meadow Lane Farm.

"It is my opinion that by using carefully selected sires of approved type and breeding, that the livestock resources of the State of Wisconsin could be easily increased 25 per cent or approximately \$69,000,000. The extra liability or expense incurred would not exceed one-fourth of this sum, leaving 75 per cent of the sum to be added to surplus or undivided profits."—Professor George C. Humphrey.

I have noticed that infants which have been fed on good, clean Holstein milk have made much better gains and also had less summer bowel troubles than children fed on other cow's milk.—M. B. Pauller, M. D., Waterloo, Ill.

The Strock Herd

WHEN forty milkers, a number of which are in their first lactation period, average better than 9,400 lb. of milk and 385 lb. of butterfat in a year of cow testing association work, one can count on two things: First, that the herd consists of high-class producing Holsteins. Second, that the animals are given good care and plenty of feed.

This splendid showing was made last year by the herd of G. L. Strock & Son of Mechanicsburg, Penna., and the herd was enrolled in the Cumberland County Cow Testing Association. Several cows exceeded 16,000 lb. milk and one, Daisy Bradford Ormsby Segis, exceeded 17,000 lb.

At the head of the herd stands King Aaggie Segis De Yong No. 221553, now nearly seven years old. He is a son of King Aaggie Segis, whose daughters in-

KING AAGGIE SEGIS DE YONG
Weight 2,400 lb. By King Aaggie Segis from a 30 lb. double grand-daughter of Dutchland Colantha Sir Inka.

clude Fancher Farm Maxie 46.84 lb. butter in seven days as a senior four-year-old. The current volume of the Blue Book not only lists this record at the head of the senior four-year-old class but also ahead of all the records made under American Association Advanced Registry rules. He is a son of King Segis from Segis Aaggie De Kol Beets with 32.06 lb. butter in seven days, a record, which at time of making, was supreme in the mature class.

The dam of King Aaggie Segis De Yong is Yankee Mary De Yong, a double granddaughter of Dutchland Colantha Sir Inka. It can be seen that King Aaggie Segis De Yong combines the blood of sires whose daughters and granddaughters have made remarkable records both in short time and long time test. Yankee Mary De Yong was tested as a senior four-year-old. She produced 30.58 lb. butter and averaged over 80 lb. of milk a day with an average test of 4.33%. Her dam is a 26 lb. daughter of a 22 lb. cow. The three nearest dams of King Aaggie Segis De Yong each average above 4% fat during the week of their official tests.

There are nearly 30 daughters of King Aaggie Segis De Yong in the herd and that he transmits the characteristics of his female ancestors is shown by the fact that those of his daughters that have been in cow testing association work have tested higher than their dams and have also given as much or more milk in their first lactation periods as their dams did at full

age. Evidently, King Aaggie Segis De Yong is a valuable, transmitting, prepotent, Holstein sire.

The Strocks have been breeding purebred Holsteins for ten years and their present herd numbers seventy head. Space forbids individual mention of all the leading animals but we cannot let this opportunity pass without telling something about a few of them. Ruby Beryl De Kol Johanna has an official record of 20.87 lb. butter, an average of better than 80 lb. milk a day. In cow testing association work she has produced 600 lb. fat and 15,408 lb. milk in a year. She is a real show cow, has won a number of blue ribbons and is an animal that would add to the appearance of almost any herd. She is from a cow that has an official record of 21.65 butter, 548.9 lb. milk and was sired by Pietje Hengerveld Ormsby Johanna, a son of Pietje Ormsby Burke and Aaggie Johanna Hengerveld, a 25 lb. daughter of Sir Hengerveld Homestead De Kol with a good long time record.

One of the handsomest young things in the herd is Jessie Korndyke Aaggie Segis, a daughter of the herd sire. Her dam, Jessie Korndyke Segis Tuxill, is a large, handsomely marked cow with a straight top line and large udder. She has an official record made as a

JESSIE KORNDYKE AAGGIE SEGIS
9,923 lb. milk in her first lactation period. A daughter of King Aaggie Segis De Yong.

two-year-old and is a granddaughter of Korndyke Abbekerk. This cow and her daughter make a great pair. In first lactation period the younger Jessie produced 9,923 lb. of milk as shown by the cow testing association records and averaged 3.64% fat. If all the daughters of King Aaggie Segis De Yong develop as this heifer is developing he is destined to be one of the greatest sires of the Holstein breed. If you think these words too strong just look at her picture.

A cow that attracts your attention immediately as you step into the barn is Corliss Farm Josephine Alcartra, now making from 75 to 80 lb. milk a day. This four-year-old heifer is by a grandson of King Segis Pontiac Alcartra. She is a beautiful animal, dark in color with a splendid top line and udder. In cow testing association work she produced 400 lb. fat and 10,020 lb. milk. She has two heifers as well as a young son.

The herd includes several daughters of Tidy Abbekerk Prince Hengerveld, one of the good sons of Tidy Abbekerk Prince. Westover Jo has a habit of pro-

ducing from 8,000 lb. to 10,000 lb. milk in a cow test year. Westover Blanche reached 13,244 lb. one year and the next year went over 14,000 lb. In the two years she gave 1,066 lb. butter. She has an official record of 21.42 lb. made as a junior three-year-old. This cow is just fresh and is producing over 60 lb. a day.

RUBY BERYL DE KOL JOHANNA
20.87 lb. butter, 561.3 lb. milk A. R. O. 600 lb. butter, 15,408 lb. milk in a year of C. T. A. work.

Boiling Springs De Kol Segis as a two-year-old produced 354 lb. fat, 9,035 lb. milk in a year. She is fresh again and is producing 63 lb. milk a day. She is from a 21 lb. cow and is by Lothian De Kol Korndyke, whose daughters are making splendid records both in cow testing association work and in Subdivision B. or the Dairymen's Division. His dam has a record

of 27 lb. butter made as a senior three-year-old, has given 102 lb. milk in a day and produced 23,581.1 lb. milk, 983.98 lb. butter in a year.

Dutch Lyons Aaggie Segis is only a two-year-old but for the first four months of the cow testing association year she averaged 50 lb. milk a day. She is a real showy heifer, is a daughter of the herdsire and is from a cow that has a cow testing association record of 480.8 lb. butter 13,519 lb. milk.

CORLISS FARM JOSEPHINE ALCARTRA
400 lb. butter, 10,020 lb. milk in a year. A real show cow.

The firm of Strock & Son consists of G. L. Strock and G. Weir Strock. The senior member is Prothonotary of Cumberland County. The farm has been operated by the younger member of the firm who was a former State College student.

The farm itself consists of 200 acres of limestone soil and has belonged to its present owners for the past twenty-two years. In point of size and condition this herd will compare favorably with any establishment we have had the privilege of visiting.

The Present Niagara Maid Herd

AT the sale held at the time the Holstein-Friesian Association of America held its annual meeting at Worcester, Mass., the four-year-old heifer Wandermere Belle Hengerveld, then the world's champion of her class was struck off to a comparatively unknown man, that is, unknown as far as Holstein breeders were concerned, for the then record price for a female of \$18,200. This man was J. T. Shanahan of Buffalo and East Aurora, New York. Mr. Shanahan was and still is a Buffalo business man and was interested in the manufacture of "Niagara Maid" silks and hosiery. He knew that the farm was the ideal place on which to live and on which to raise a growing family. East Aurora is within easy commuting distance of Buffalo. It was a very easy matter to travel back and forwards from the farm to the city each day. Being a business man he naturally investigated the merits of the various breeds of dairy cattle and decided that purebred Holsteins offered the greater opportunity for both pleasure and profit.

On the Niagara Maid Farm, a number of good Holsteins were raised. When, owing to the readjustment of post-war business conditions, the owner had to devote his time and energy to his city business the Niagara Maid herd was dispersed and only a few ani-

mals kept in order to furnish milk for the family and the farm help. But Mr. Shanahan had been thoroughly infected with the Holstein fever and has been unable to keep away from the black and whites. He has gradually added to the herd, buying, as he says the very best cattle he could find, selecting them from herds that were accredited or had been tested right along under state and federal supervision. At the present time there are sixty-four animals in the Niagara Maid herd. These have been regularly tuberculin tested and at the last test there was only one reactor and that one was a recently purchased animal which had been obtained from a herd that had been under state and federal supervision and was regularly tested.

The females added to this establishment have not been from uniform lines of breeding. The selection has been made from the standpoints of individuality and milk production and the herd is regarded as one of the best herds in western New York, producing capacity considered. The animals include descendants of King Segis Pontiac, Pontiac Korndyke, King Segis, King Quality and a number of other bulls who were themselves famous and whose descendants are noted for production.

At the head of the herd stands Prince Echo Sylvia

Fayne, a Canadian bred bull, born March 14, 1921, a splendid individual. He is nearing his third birthday and is very large for his age. His sire, Prince Echo Sylvia De Kol, is a son of the noted Champion Echo Sylvia Pontiac, who needs no introduction to our readers. Everyone knows of this son of May Echo Sylvia, the only cow that was ever credited with producing 1,000 lb. milk in seven days. Daughters and granddaughters of Champion Echo Sylvia Pontiac have made tremendous records both in short time and long time tests. Prince Echo Sylvia De Kol is a son of Natoye

ETTA MERCEDES BARONESS
14,159 lb. milk, 560 lb. butter in a year as a two-year-old.

De Kol 4th, a noted Canadian cow that has official records, made when nearly eleven years of age, of 704 lb. milk, 31.13 lb. butter in a week, 2,986.7 lb. milk, 130.27 lb. butter in thirty days. This cow, besides being a wonderful producer, won a number of prizes at high class shows.

Prince Echo Sylvia Fayne is from Queen Fayne Alcartra. This heifer, tested as a junior four-year-old, produced 579.2 lb. milk, 32.09 lb. butter in a week and 2,522.1 lb. milk, 126.09 lb. butter in thirty days. She, too, is a beautiful individual and a tremendous producer. Her dam, Queen B. B. Fayne, has a seven day official record of 27.50 lb. butter while her sire is the

noted Canadian bull, King Segis Alcartra Calamity, who has a long list of high record daughters and is one of the leading Canadian sires. His dam, Fairmont Pontiac Calamity, has a seven day official record of 584.1 lb. milk, 35.37 lb. butter and a 30 day record of 2,497.4 lb. milk, 142.67 lb. butter. She is a daughter of Pledge Spofford Calamity Paul. King Segis Alcartra Calamity was sired by King Segis Pontiac Alcartra, the noted Arfmann herdsire.

It can be seen from the foregoing that Prince Echo Sylvia Fayne has a pedigree which includes many famous animals. His three nearest dams have official seven day butter records that average 30.24 lb. and his five nearest dams average 33.42 lb. butter in seven days. Much to his regret, Mr. Shanahan is compelled to dispose of his stock. The quality of the herd and the personal popularity of the owner should bring a big crowd of interested buyers together when the animals are offered at public auction.

Purebred Sire Movement Growing

THE systematic manner by which thousands of livestock owners in the United States are improving the quality of their animals is shown by a report just made public by the Federal Bureau of Animal Industry. There are now 12,698 persons using purebred sires exclusively for all classes of breeding animals kept.

The widespread operation of the better-sires activity is shown by an outline of progress during the last three months in 1923. Applications for participation in the work were received from 696 livestock owners in twenty-five states and ninety-seven counties. This is an increase of about fifty per cent over enrollments for the previous three months. Persons who thus cooperate with State extension services and with the United States Department of Agriculture by pledging to use purebred sires exclusively, receive helpful publications, a suitable certificate of recognition, and a lithographed sign bearing the legend "Purebred Sires Exclusively Used on This Farm."

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the Spotted Poland China Journal, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland China Record, Fred L. Obenchain, Secy. Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

Dairy Merit Is Based Upon Profitable Production

REASONS why purebred Holsteins are popular is easily found by a study of cow testing association reports. In the association operating in Fairfax County, Virginia, there were fifty-three purebreds that were tested for a year and the average for the fifty-three was 9,706 lb. milk, 360.4 lb. butterfat. The grades in the association averaged 7,603 lb. milk, 313.7 lb. butterfat, despite the fact that the great grade Holstein, Sadie, champion grade cow of the south was among the number. This cow, who carries a considerable percentage of Holstein blood, made in a year of cow testing work 21,689 lb. milk, 847.5 lb. butterfat and in her full lactation year made 23,257 lb. milk, 915.9 lb. butterfat. Despite the fact that this cow was included among the grades the average registered animal exceeded the average grade by more than 2,000 lb. milk and nearly 57 lb. butterfat.

There are very many similar instances, in fact it is the general rule for purebreds to give decidedly more than grades otherwise there would be little reason for preserving purity of blood in the various dairy breeds. The value of dairy purebreds is based upon the fact that they produce more milk and more butterfat on the same amount of feed than do grade and native cows when these are equally well fed. There are unprofitable purebreds; there are a larger percentage of unprofitable grades; there are occasional grades and native cows that challenge the showing made by the best purebreds but the average production of the grades and natives and their average profit making ability is below that of the purebreds.

When Chris Jensen, the present farm superintendent of the St. Louis County Poor Farm which is located near Duluth, Minn., took over the management of the herd it consisted of 34 grade and native cows. He gradually disposed of this herd and purchased some purebred Holsteins. To-day the herd is purebred and they are making more milk from fourteen cows than they did from the 34 head they were milking a few years ago. Such instances do more to establish the popularity of the Holstein breed than do any amount of lectures. Most dairymen are mentally from Missouri—they have to be shown.

"The point I wish to make is that there is such a thing as vitality in milk, and that it is of equal if not greater importance than its chemical composition, especially for the milk supply of cities. There can be no question but that the vitality of milk is closely associated with the vitality of the animal producing it. Strong, vigorous cows, such as the Holsteins, are animals that are bound to be required for this purpose. The physicians recognize the importance of a strong, vital temperament in the human mother, and I do not see why it does not apply with equal force to cows."—Prof. Carlyle of the Wisconsin Experiment Station.

The general relation between the quantities of fat, carbohydrates and protein should be based on the relation found in human milk.—The late Dr. Thomas Morgan Roitch, Harvard University.

Meadow Lane Herd—Complete Dispersal

TO BE HELD AT
MEADOW LANE FARM, Chambersburg, Pa.

Friday, March 14, 1924

All the females of breeding age are bred to

PIENE CARNATION MERCEDES WALKER

a grandson of the famous sires Matador Segis Walker and King Pieterle Ormsby Piene. No two sires have daughters and granddaughters that have made larger milk and butter records, especially in long time test and have won as many prizes at great shows and exhibitions. His dam, as a junior four-year-old, produced 25.88 lb. butter in 7 day official test, her milk averaging 5.97% butterfat. There are four bulls and 20 females. This is a herd of milk producers and many of the greatest sires of the breed are represented by their descendants. This includes the noted bulls, King Segis Pontiac Alcartra, King of the Pontiacs, Pontiac Korndyke and Finnerne Pride Johanna Korndyke. You will be especially interested in the daughters of King Pontiac Pride Segis whose full sister, Irene Segis Pontiac, produced 1,571.55 lb. butter, 30,032.3 lb. milk in a year. Pedigree man, S. R. Miller. EVERYTHING HAS TO GO

JOHN B. KELLER

R. D. 7

CHAMBERSBURG, PA.

HORNLESS HOLSTEINS

Keystone Plum Johanna

is an example of the individuality and producing ability combined in hornless Holsteins. She produced 1,052.9 lb. butter, 22,190.7 lb. milk in a year and in two consecutive years produced 1,938.06 lb. butter, 40,236.9 lb. milk. Her full sister, Keystone Beauty Plum Johanna, was the former world's champion four-year-old for yearly production. This cow, like other members of the family carried a superb udder. It was photographed eight months after freshening by a Pennsylvania State College Professor who lectured upon it as an example of intensive development and perfect shape.

Let us give you a price on a hornless bull.

George E. Stevenson

727 CONNELL BUILDING

Herd under State and Federal Supervision.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, Managing Editor
G. H. TRUCKELL, Associate Editor

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 15th or 27th of each month preceding date of issue.

March 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Ridiculous Spectacle

UNDER the above heading there appeared an editorial in *The Holstein-Friesian World*, a periodical published near Syracuse, New York, which seemingly is devoted chiefly, if not wholly to promoting the speculative side of the purebred Holstein industry.

The editorial refers to the recent action brought against the Association by George E. Stevenson of Pennsylvania, former Vice-President of the Association, and nineteen other breeders. It seems that only five of the petitioners signed the petition. This was deemed sufficient to comply with the law. The other fifteen breeders no doubt would have signed the petition had it been convenient for them to do so and there is no question, with the prevailing sentiment within the Association, that not only the fifteen but fifteen thousand other breeders would have been willing to lend their names to correct the existing wrongs and seeming extravagance that has been going on within the Association's management.

We will not comment on the action of the Chairman of the Executive Committee and others who are handling the case for those who assume to be acting as Directors for the Association. Mr. G. S. Van Gorder, who has the case in charge for the breeders, received a letter from one of the signers which expressed the situation equally as good or better than we, so we are quoting an excerpt from this letter to Mr. Van Gorder: "They turned the trick in precisely the way in which we most expected they would. I even expected them to approach me, but while we are aware of this, what

can there be done about it? Your cause is being impeded by the evil which is common in business to-day and which proves to be the greater factor to contend with.

Our opponents are alert to this condition and are maneuvering for temporary advantage by attempting to discredit our cause on the grounds that our petitioners were ill-advised. These people make no attempt to answer the complaint, but instead they are trying to hold their questionable position by a *continued underhanded procedure*."

The editor tells his readers "The members should be brought to realize that it is a serious matter to drag The Holstein-Friesian Association into court." Yet the editor does not deny that the Law has been Disregarded and the members' Rights Infringed upon, Fees Increased beyond reason and that the management of the Association proposes to expend during the ensuing year all of the money collected through Increased Fees and in ADDITION take \$93,000 from the Reserve Fund.

With such a deplorable condition facing the members of The Holstein-Friesian Association, the editor seemingly would advise the breeders to assume a policy of "Hands-Off."

Is it a matter of money that prompts the editor to assume such an attitude? That *The Holstein-Friesian World* has had a liberal share of the increased fees is unquestioned. Is the editor willing that Law-Violation should be continued in order that his paper may receive the financial support in the future that it has in the past, evidently for no other reason than Championing the Cause of the political management. Does the Editor of *The World* want to continue to take the breeders' money and give them nothing in return but a Display Advertisement, Imploring them to drink more Holstein milk?

We believe that it is a serious matter for those who have the management of the Association in charge to continue to disregard the law and the members' rights. Such an action not only places the Association in a position where court action is invited, but where redress through the court seems Necessary and Imperative, if wrongdoing is to Cease and Justice prevail.

The American public is being stirred by the investigation at Washington into the leasing of the Naval Oil Reserve to private interests. The breeders of Holstein cattle would not have to follow the investigation very closely to be convinced that the possession of Wealth and Political and Social Preferment does not immunize men from promoting Political Intrigue and using Deceptive, Unscrupulous and Questionable methods to further selfish or personal ends.

It is Ridiculous to assume that the rank and file of breeders of Holstein cattle are going to continue to pay increased fees and see the Reserve Fund depleted and their chosen breed of cattle held up before the Public in Ridicule without resenting such conduct.

It is Ridiculous to assume that 90 per cent of the members of the Holstein-Friesian Association, who are Plain Breeders and Dairyman, who depend on the sale of milk and dairy products for a livelihood and are not given to Speculation, Deception and Jockeying, are going to allow their association to be cheapened by having it dragged over the United States to hold its

Annual meeting solely for the purpose of using it as a Side-show to a "Cattle-Swapping" organization.

It is Ridiculous to assume that Honest, Straight-Forward American citizens, such as are most of the breeders of purebred Holstein cattle, are going to sit idly by and see an organization of which they are members and which they should control, pursue a course of Law and By-law violation in its management without resenting such conduct.

A Graceful Action

HARTWOOD NETHERLAND SEGIS, a member of the Berylwood herd at Hueneme, California, recently closed her second year test, making 1,145 lb. butter from 27,018 lb. milk in 365 days. The manager, J. W. Snodgrass, immediately thought of the men who would like to hear about the record. One of these was L. L. Allis of Rummerfield, Pa., who purchased Berylwood Prince Aaggie Chicago, a son of this cow, at the National Sale at Cleveland last June, paying \$3,100 for the young calf then only a few days over four months old. When Mr. Allis bid off the young bull, the dam had a year record of 1,121.62 lb. butter, 26,646 lb. milk commenced when the cow was five years and eleven months old.

She freshened again in less than two months after completing this record and after making 31.05 lb. butter, 701.9 lb. milk in seven-day official test, was again placed on year test so that in two consecutive years she had made records averaging, according to the Berylwood figures, 1,224.42 lb. butter and 26,978 lb. milk.

Nearly every owner would have thought that, after telling Mr. Allis of the increased record of the dam of his bull, that enough had been done but that is not the way "Berylwood" does things. Noticing that Mr. Allis was an advertiser in *THE BREEDER AND DAIRYMAN*, Mr. Snodgrass instructed our advertising department to prepare a half-page advertisement, using pictures of the young bull, the dam, Hartwood Netherland Segis, and of the sire, Prince Aaggie of Berylwood, the wonderful sire and show bull heading the Holstein herd at Berylwood Stock Farm. He further instructed that a picture of Mr. Allis was to be obtained, if it was possible to get one, and the bill for the entire expense was to be sent to Berylwood Stock Farm. This advertisement appears in the present issue just nine months after the transaction.

Few Holstein owners would, three-quarters of a year after the deal was closed, have "dug" down in their pockets and paid for such an acknowledgment of patronage. Too often when a deal is consummated and the check cashed, the purchaser is practically forgotten until he signifies that he is again in the market. Service to the customer is one point that practically all breeders are inclined to overlook.

While acknowledging the graceful action of Berylwood, we do not wish to be understood that we favor all breeders following the example and making a practice of it but we do think that a letter of inquiry from time to time, a little news as to what near relatives of the animals purchased were doing in test work or in the general dairy, and if required, a few words of advice is appreciated by the patron and is evidence of real salesmanship as well as service.

Foot and Mouth in California

FROM time to time editorial comment has been made in this paper warning of the danger of the re-introduction of foot and mouth disease into this country. Our action has met with criticism in various quarters on the ground that we are unduly pessimistic. We are sorry to say our forebodings were only too true. On February 20th, the dread scourge made its appearance in a herd of 350 head in the neighborhood of Oakland, California. The herdsman called in a local veterinarian who reported the case to the county and state veterinarians who in turn notified representatives of the United States Bureau of Animal Industry. The Veterinary Department of the University of California was called in to make scientific tests of the lesions on the mouth, teats and feet of the infected animals. Fifty per cent of the cows showed symptoms. The infection was so acute that lameness developed very rapidly, one cow died on the third day. About the same time the disease appeared in a six cow dairy twenty-five miles away and other cases were found from time to time until at this writing, March 3, the disease has been found on forty-four farms.

In the effort to stamp out the trouble 10,500 animals have already been slaughtered, cattle, sheep, swine and a few goats.

Within an hour of receiving the news at Washington the counties of Alameda, Contra Costa and Solano were quarantined by United States Secretary of Agriculture H. C. Wallace and now nine counties are under quarantine.

The sources of infection have not been determined but it is supposed that the trouble came from abroad by way of San Francisco harbor. The Bureau of Animal Industry has prohibited the virus-serum manufacturers in California from using fresh stock from which to prepare serum and they are also prevented from sending out any unsterilized product, while all serums and viruses in the quarantined region are to be submitted to stringent tests.

The reports we receive indicate that the stockmen, farmers organizations and the state and county officials are coöperating to prevent the spreading of the trouble. Guards have been placed along the boundaries of the infected counties. Congress will be asked to immediately appropriate one million dollars to defray the necessary expenses and to provide indemnities to the owners of the animals. The veterinary departments of the various states are on the alert to detect and stamp out any outbreak occurring within their jurisdiction. Meanwhile, Canada has prohibited shipments into her territory from the states of California, Nevada and Oregon.

When purebred sires are used to improve farm livestock, the offspring is more salable than that of non-purebred sires and brings nearly 50 per cent greater returns.

"I believe Holstein milk best adapted to feeding infants, of any of the breeds of cattle, and advise Mothers accordingly."—N. H. Fuller, M. D., Friendship, N. Y.

CLUB ACTIVITIES

NEW DAKOTA CALF CLUB

At Youngstown, North Dakota, a Holstein Calf Club was recently organized, reports County Agent R. C. Newcomer.

The following officers were elected: G. L. Skogman, local leader; Harold Michaels, president; Helen Kroeger, vice-president; Ervin Klusman, secretary.

MONTANA ASSOCIATION FORMED

The Montana Holstein-Friesian Association came into being on the closing day of Farmers' Week at Montana State College. There are twenty charter members. Membership dues were placed at \$5.00 and the only requirement is the ownership of a purebred Holstein bull.

Dr. Joseph Piedalue, Bozeman, was elected president; F. E. Huddleston of Billings, vice-president; E. J. Haslerud of Montana State College, secretary-treasurer; and C. H. Wight of White Sulphur Springs, J. H. Hofstetter of Lewistown, David Lea of Stevensville, and Miss Louise Maier of Butte were elected as additional members of the board of directors.

HAMILTON COUNTY, IOWA CLUB

The Hamilton County Holstein Breeders Association was organized at Webster City, Iowa, February 8th. The new organization will affiliate with the State organization. Calf Club work, cooperative cow test association work and tuberculosis eradication are the three chief projects for the first year.

Officers were elected as follows: President, Ed. Erickson of Randall; Vice-President, Boyd G. Weidlein of Webster City; Secretary-Treasurer, Howard M. Evans of Webster City; State Director, H. W. Gleim of Webster City. County Directors: Seward L. Smith of Blairsburg; Tom N. Wicks, Radcliffe; C. H. Rowan, Webster City; J. A. Yungas of Webster City.

BROWN REELECTED PRESIDENT

Thirty or more purebred breeders attended the fourth annual meeting of the Stephenson County Purebred Holstein-Friesian Association held February 15th at Freeport, Illinois, with President Wm. F. Brown of Freeport, in the chair.

In the absence of the Secretary the reports of the Secretary and Treasurer were read by W. A. Herrington. They showed

a balance on hand of \$99.69 and an unpaid indebtedness of \$34.96.

One of the subjects of discussion was the advisability of holding a sale in the near future. After talks by C. H. Rosentiel, C. B. Bridge and Oscar Wolfe, it was decided to hold a sale of purebreds and grades on March 26th. The speakers emphasized the importance of consigning only good animals.

There was an interesting discussion on the question of type versus production. Some of the speakers claimed that production was the main thing while others maintained that good dairy type and producing capacity go together.

The election of officers resulted in the reelecting of Wm. F. Brown, president; Oscar Wolfe was elected vice-president; W. A. Herrington, secretary-treasurer; and the directors elected were: C. B. Bridge, Ed. Schleich, Harry Phillips and Wm. Moore.

There are thirty-three Association members this year as compared with sixteen last year.

CONNECTICUT CLUB MEETING

Nearly forty attended the annual meeting of the Connecticut Holstein Breeders Association which was held at the Bridgeport City Farms, Bridgeport, February 9th. The morning was taken up by an inspection of the City Farms and the many great animals in the herd. After lunch the business meeting was held.

Angus P. Thorne of Bridgeport was reelected president and Morton E. Pierpont of Waterbury, treasurer. The Vice-Presidents are: For Hartford County, Thomas Holt of Newington; for Litchfield County, Charles P. Harker of Watertown; for Fairfield County, Lyman Keeler of Danbury; for Middlesex County, H. O. Daniels of Middletown; for Tolland County, R. A. Birdsall of South Willington; for Windham County, William Brown of Central Village; for New London County, Myron Hoxie of Lebanon.

The directors-at-large are Charles Bridges of Hazardville, Hiram Loverin of Talcottville and C. P. Farrand of Washington.

Professor Merrill was given a vote of thanks for his work in selecting the winning State herd for the Eastern States Exposition and was reappointed chairman of a committee which will select the 1924 show herd.

There was an animated discussion which brought out the difference between the rules of the National Dairy Show and

the Eastern States Exposition as to the make up of a state herd. The New England Field Secretary, Myron C. Peabody, was instructed to see the manager of the Eastern States Exposition and try to have the rules amended so that they would be uniform for each event.

A committee consisting of the president, secretary and the county vice-president will cooperate with the agricultural agents in each county in a purebred bull campaign. A successful campaign has been carried on in New Haven County.

An invitation from E. D. Curtis to hold the summer meeting at his farm at Middlebury was accepted. Certified milk for the City of Waterbury is produced here.

BUCHANAN COUNTY, IOWA CLUB

Friends of the Holstein industry organized the Buchanan County Holstein Breeders Association at a meeting held at Independence, Iowa, January 30th.

Field Secretary Harry Gleim and Treasurer Hadley of the Iowa State Breeders Association explained the County-State Constitution and By-Laws, which were accepted. Mr. Gleim also discussed the necessity of keeping herd breeding records.

The following were elected: President, Albert Sloan, Rowley; Vice-President, C. E. Meythaler, Independence; Secretary and Treasurer, C. T. Bare, Independence. The directors are as follows: T. E. Wilson, Rowley; Richard Fratzke, Jesup; Fred French, Independence; Harry Brintnall, Winthrop; Harry Bacon, Hazleton; Will Ross, Lamont and Loren Meythaler, Jesup.

LEAGUE MARCH MILK PRICES

The producers' base price for Class 1 (fluid) milk in March will be \$2.33 per 100 pounds at the 201-210 mile freight zone, according to an announcement made by the Dairymen's League Cooperative Association, Inc. This price has remained unchanged since January 7th. Prices of the lower classes of milk will be as follows:

Class 2-A, milk made into cream	\$2.10
Class 2-B, milk made into plain condensed and ice cream	2.25
Class 2-C, milk made into soft cheeses	2.25
Class 3, milk made into evaporated, condensed and milk powder	2.00
Class 4-A, surplus milk made into butter, price based on average wholesale price of butter during February.	
Class 4-B, surplus milk made into American cheese, price based on average wholesale price of cheese during February.	

The fellow who is all wrapped up in himself is just a bundle of conceit.

BOUGHT A REAL PRODUCER

Blanche Hengerveld Wayne, a member of the Everbreeze Herd owned by Geo. Lightbody of Dalton, Penna., is a real producer. In the month of November she milked 1,776 lb. and for December she exceeded 2,000 lb. and at Christmas time was producing 70 lb. milk a day on two milkings. She has reached 76 lb. in her new home. Mr. Lightbody purchased this cow October 29th at the F. M. Riker dispersal. As she has only three quarters Mr. Lightbody is asking his friends what she would do if she had four quarters?

BLANCHE HENGERVED WAYNE
now producing 70 lb. a day from three quarters at two milkings.
Owned by Geo. Lightbody, Dalton, Penna.

Blanche Hengerveld Wayne as a three-year-old made an official record of 24.95 lb. butter, 539 lb. milk in seven days. She is from a granddaughter of Butter Boy of Elmwood and was sired by King Hengerveld Hartje. Mr. Lightbody has every reason to be pleased at the performance of his purchase for in the same sale he bid off her sire, King Hengerveld Hartje, and now has this bull at the head of his herd. The daughters of King Hengerveld Hartje are large, handsome cows, big of barrel and wide of hips. One daughter of King Hengerveld Hartje produced 900.6 lb. butter, 26,233 lb. milk in 305 days, a world's record in the ten months division at time of making.

King Hengerveld Hartje was sired by King Segis Hengerveld, a son of King Segis from a 33 lb. daughter of Pieter Hengerveld's Count De Kol and his dam was Maid of Elmwood Hartje, a daughter of Butter Boy of Elmwood with a seven day official record of 30 lb. butter and 575 lb. milk made as a four-year-old.

Lewisburg, R. D. 3, Union County, Pa.

AT DENVER AND WICHITA

Looking better than ever Zwingara Segis Clothilde, the great show cow owned by the Modern Woodmen Sanatorium at Woodmen, Colorado, carried off the grand championship at the National Western Stock Show which was held at Denver, Colorado, January 19th to 26th. R. F. Haeger of Algonquin, Illinois, was the judge and commenting on this cow he says "She's a peach. Right now I do not know but what she would beat any I have seen this season."

Holsteins and Milking Shorthorns were the only dairy cows on exhibition although several Guernsey breeders had made entries. There were fourteen herds of black and whites. The Woodmen herd took five first prizes, five seconds and two thirds as well as a special herd trophy.

Skylark Barbara Duchess, owned by the Colorado Agricultural College, was first in the junior yearling class and was made junior champion and reserve grand champion.

King Pontiac Parthena Champion, the three-year-old bull owned by the Woodmen, was expected to win the championship but he went down to defeat before Avoca Lodge King Johanna, owned by the Arkansas Valley Sugar Beet & Irrigated Land Company of Holly, Colorado. Mr. Haeger says that with a little more size and stretch this bull would be hard to defeat.

The junior champion bull was Woodcraft Pontiac Champion Star. He is a son of King Pontiac Parthena Champion. He was the best of a nice class of senior bull calves and was made reserve grand champion.

The entire show was characterized by high quality and Judge Haeger learned that it was the general opinion that it was the best show that they have ever had. Nearly every animal was led into the ring in fine condition. There was only one three-year-old bull, Columbine Piebe Changeling 3d, owned by the Myron Stratton Home at Colorado Springs. Ben F. Simpson of Denver, showed the best senior yearling bull in Echo Sylvia Sir Segis while the first prize junior yearling bull was Johan Walker De Kol Lad, owned by Mrs. R. G. Douglas of Ft. Logan, Colorado. Caspar Hofmann of Denver had the best junior bull calf in Triune Ormsby Piebe 43d.

The Colorado State Home showed the best three-year-old, Duchess Colorado Ormsby Jane, while Mountain Maid Julie

Combination of the Willow Springs Farm at Mt. Morrison, was the best two-year-old. The Colorado State Home carried off the blue ribbon in the senior yearling class with Kate Kornelyke Ormsby Jane. Caspar Hofmann carried off the blue for both senior and junior heifer calves with Butter Girl Piebe De Kol and Amy Allie Pontiac Segis.

The Modern Woodmen won most of the group prizes, taking Graded Herd, Yearling Herd and Produce of Cow, the Colorado State Home taking Get-of-Sire and Ben Simpson the blue for Calf Herd, the Woodmen being second in each instance.

After the show Mr. Haeger held a judging school and illustrated his talk with True Type models and the grand champion cow, Zwingara Segis Clothilde.

The herd of A. J. King of Kansas City, Missouri, carried off a large share of the honors at the Kansas National Livestock Show held at Wichita, Kansas, January 28th to February 2d. Triune Ormsby Piebe 4th carrying off first prize as a yearling bull and then being awarded junior and grand championship. Zwingara Segis Clothilde repeated her triumphs at Denver by taking first prize in the aged cow class, twenty-four competing and then annexing the senior and grand championship.

Champion Echo Sylvia Pontiac 3d, owned by Jack Harlan of Pawhuska, Oklahoma, was the first prize two-year-old bull and senior champion. Crescent Beauty Star Belle of the King herd was first in the four-year-old class. Bock Diamond Pontiac of the same herd was first prize senior yearling and Bock De Kol Gerda Girl was the first prize junior yearling and junior champion. There were 345 head of Holsteins shown, coming from some of the best herds in the Southwest.

There was a sale after the show at Wichita in which eighty head averaged over \$180.00 and all agreed that it was a real good sale as many of the animals were young and unfitted. Mr. Haeger was the auctioneer. In fact, he was kept quite busy as besides judging the cattle and working in the sale he also had a judging school which was well attended.

INTER-MOUNTAIN LIVESTOCK SHOW

Utah dairymen have imported into the state more than \$100,000 worth of dairy cattle during the present calendar year, reports R. N. Mead, manager of the Seventh Annual Inter-Mountain Livestock Show, which will be held at Salt Lake City, Utah, Union Stock Yards, during the first week of April. Utah is rapidly forging ahead as a dairy state and it is the intention of the management to get out, if possible, big exhibits of the dairy breeds. Large cash prizes are offered. Besides the breeding classes there will be many classes of fat cattle in which competitions of large prizes are given.

There is no charge for admittance or entry to the show and reduced rates will be given by the railroads both for passengers and their exhibits. The railroads will transport exhibits at ordinary rates for the show and make no charge for the return trip if this is made within thirty days after the close of the exhibition provided the bill of lading is accompanied by the certificate of the secretary that such exhibits were shown and have not changed ownership. Holstein breeders who are in shape to exhibit at this show should not overlook the opportunity to display their wares and advance both their own interests and the interests of the breed.

BARNYARD SCENE AT MAPLE RIDGE

Cows of this quality are mated with KING HAS APPLE PLUM COPIA whose dam has A. R. O. records of 30.47 lb. butter, 682.3 lb. milk in 7 days, 130.63 lb. butter, 2,789.4 lb. milk in 30 days as a two-year-old and as a six-year-old made 33.24 lb. butter in a week.

When looking for something good, call on us. Head under State and Federal Supervision. Last lot CLEAN. MAPLE RIDGE FARM J. E. F. R. HOWARD, Proprietor, Saugus, Cal., Springfield, Penn.

THE DAIRY INDUSTRY AND WASHINGTON.

By A. M. LOOMIS, Secretary of the National Dairy Union.

While there have been "ups and downs" in all other agricultural industries since the war, the dairy industry has remained reasonably "up." This has had the natural result of attracting men and money into the dairy industry. It is time to sound a real warning. The dairy industry cannot continue to be both naturally and artificially inflated without suffering the same result that follows over-development of other industries.

It is said that twelve men in the United States control the marketing of 85% of the oils and fats in foreign and domestic commerce exclusive of butter. The representatives of the industrial users of oils and fats known as "The Bureau of Raw Materials" are the applicants for a reduction in the tariff on linseed oil. Dairy interests have joined in opposing this reduction, believing it to be an attack upon the tariff not only of linseed oil but of all other oils and fats which would ultimately result in the reduction of the tariff on butter if such reduction can be forced. Conferences in Washington the fourth week in

January disclose the fact that a big organization was bringing much pressure to bear on the President and the Tariff Commission to reduce this tariff item. Those representing the dairy industry have succeeded in securing a postponement and a committee of three, of which the Secretary of the National Dairy Union is one, is preparing to present all the facts to the President, Congress and the Commission.

No dairy legislation has been introduced in this session of Congress. The members of Congress seem to think that the dairy industry is so prosperous that it does not need any more attention. This is a bad state of mind to be in. On the other hand, several bills have been introduced for the purpose of reducing the tax on oleomargarine and even one of the friends of the dairy industry has made some effort to introduce a single standard oleomargarine tax bill, which if carried, would eliminate the check which now exists against the wholesale manufacture and sale of colored oleomargarine. It is unlikely that any of these efforts will make any progress but all of them need watching.

We have hoped to have legislation introduced at this session putting the public eating-houses which serve oleomargarine under the same necessity for taking out a federal license and submitting

to inspection that now prevails in the wholesale and retail establishments where oleo is sold. Thus far, however, it has not been possible to find an opportunity for the consideration of such a measure.

The dairy industry will find much material for careful study in the following table showing production of oleo in the U. S. for 1923 as compared with 1922:

	Colored.		Uncolored.	
	1923.	1922.	1923.	1922.
January	673,654	405,556	19,959,300	16,481,840
February	658,106	384,208	19,064,100	11,810,300
March	755,437	375,697	18,967,000	14,886,880
April	735,015	339,637	17,298,400	13,346,212
May	679,998	351,361	17,774,500	12,413,584
June	629,512	309,536	13,631,300	9,730,664
July	543,593	303,730	11,072,700	14,427,100

PREPARE TO FIGHT REFERENDUM

Upwards of \$800 was subscribed at the annual meeting of the Lewis-Pacific Dairymen's association to help fight the dairy substitute referendum to be voted on next fall. This referendum is on bill No. 38 passed by the legislature of the State of Washington. The bill prohibits the use of milk substitutes in condensed or evaporated milk.

The Lewis-Pacific Dairymen's association has had a prosperous year. In 1923 a gross tonnage of 21,960,580 pounds of milk was handled, a gain of over 6,000,000 pounds, as compared with the previous year. Gross sales for the past year total nearly \$908,000, as compared with less than \$600,000 the previous year. J. A. Scollard was re-elected president, and Harvey R. Shoultes, secretary. Mr. Scollard was presented with a gold watch as a token of appreciation for his services.

BUY HERD BOOKS FOR MEMBERS USE

The Mulvane Holstein Breeders' Club has purchased a partial set of Herd Books and a complete set of Blue Books from D. M. Cahill, Peru, Kan. These will be kept at the office of the Sedgwick County Farm Bureau, 335 N. Market St., Wichita, Kansas, and their use is free to those who wish to avail themselves of the opportunity. A number of cattle owners have made use of these books to compile pedigrees of their animals and to make pocket herd books.

Willow Brook Stock Farm

Is about 2,000 feet above sea level.

HEALTHY of course,—the herd, which has been established eighteen years is Fully Accredited.

PRODUCTION. Twenty head, of which half were first and second calf heifers, averaged 10,211 lb. milk in the calendar year on twice-a-day milking.

A few choice Females offered.

OHIO ACCREDITED HERD TO BE SOLD

A well-known Holstein herd that has been fifteen years in the building will be sold at public auction, March 15th, at Orwell, Ashtabula County, Ohio. The herd now contains thirty-one head and was built on a A. R. O. foundation. Every female in the herd with the exception of the present herdsire was raised on the premises, reports the owner, E. V. Geer.

The herd has been headed by a number of real good bulls including a son of Colantha Johanna Lad and a grandson of King of the Pontiacs while the present herdsire, Sunny Lawn Sir Ona Payne, is a grandson of Funderne Pride Payne and Maple Crest Pontiac Hartog.

Sunny Lawn Sir Ona Payne was by Meadow Holm Ona Champion, whose dam, Meadow Holm Ona Clothilde, as a junior two-year-old produced 14,943.1 lb. milk, 735.58 lb. butter in a year. Tested again as a five-year-old, she produced 13,083.6 lb. milk, 577.07 lb. butter in 210 days, carrying calf 158 days of the time she was on test. She is a daughter of the famous old cow Ona Clothilde De Kol, 1,100 lb. butter, 25,000 lb. milk in a year, whose daughters include the 1,000 lb. cow, Ona Clothilde De Kol 2d, and the 1,300 lb. Ona Button De Kol. Ona Clothilde De Kol 2d is the dam of Ona Clothilde Wayne, 1,266.65 lb. butter in a year and she in turn is dam of Ona Pontiac Wayne, 1,087.13 lb. butter in a year.

Sunny Lawn Sir Ona Payne is from Rag Apple Bessie of Maple Hill, a 22.28 lb. four-year-old that averaged practically 80 lb. milk a day while on test. Her dam Bessie of Maple Hill 2d has a 26.74 lb. seven day butter record with 667.2 lb. milk and in a year produced 1,198.32 lb. butter, 28,801.4 lb. milk.

The Geer herd has always been operated from a dairy standpoint and the animals are real producers, while the establishment is on the accredited list, another reason why stock from this herd should receive the attention of Holstein enthusiasts.

The farm is located about a mile from Orwell village which is reached by motor bus from Cleveland or Warren. The nearest railroad station is East Orwell which is on the P. Y. & A. branch of the Pennsylvania lines. Mr. Geer informs us that the farm sale will be in the forenoon and the cattle will be sold in the afternoon starting promptly at one o'clock. You can get your catalog now by writing Mr. Geer at Orwell.

THE OMWAKE AND SPECK DISPERSAL

Sixteen young granddaughters of Sir Colantha Pietertje Korndyke will be offered at public auction when the Omwake and Speck herd is dispersed at Greencastle, Pennsylvania, on March 12th. Few herds, no matter how many animals they contain, have as many granddaughters of Pontiac Korndyke, for Sir Colantha Pietertje Korndyke is both a son and grandson of that famous old time sire.

Sir Colantha Pietertje Korndyke, as his picture shows, is a very handsome bull. His dam, Colantha Pietertje Korndyke, has a seven day official record of 30.80 lb. but-

BACKUS PEDIGREE CO., MEXICO, N. Y.

ter, 529.9 lb. milk. She was by Pontiac Korndyke, from Colantha Pietertje, 23.52 lb. butter, 544 lb. milk in a week, a daughter of Emperor De Kol and the A. R. O. cow, Alice Pietertje Gem, three of whose daughters exceeded the 21 lb. mark in seven day official work.

The Omwake and Speck herd is accredited and is one of the few Holstein accredited herds in Franklin County. There are forty-five animals in the herd and with the exception of eleven all are less than five years old. The senior herdsire, Ormsby Clothilde Lad, is from a daughter of Hengerveld De Kol with a record made as a three-year-old of 20.73 lb. His sire is Ormsby Korndyke Lad, a bull whose daughters and granddaughters have made good wherever they have gone in short time, long time tests and in everyday dairy work.

Several members of the herd are worthy of mention. One which is bound to create much interest is Lady Westtown Segis, a heifer that has never been beaten in the show ring although she has been exhibited three different years as a calf, as a yearling and as a two-year-old.

The sale will be held on the Omwake and Speck Farm at Greencastle, March 12th. Geo. Baxter will be the auctioneer and S. R. Miller, who is indispensable at Southern Pennsylvania sales, will be the sale manager.

LOYALSOCK HERD DISPERSAL

Loyalsock herd, one of the best bred aggregation of Pennsylvania Holsteins will be absolutely dispersed March 12th on the Loyalsock Farm, Montoursville, Pa. The passing of this good herd will be regretted for it is one of the oldest Holstein breeding establishments in the Keystone state. There are larger herds but very few with better record backing.

The pet of the herd is the young sire, King Jemima Segis. This bull is a son of Jemima Johanna Segis, 1,175 lb. butter, 26,370 lb. milk in a year as a four-year-old. She is a daughter of Jemima Johanna of Riverside 2d, 23,890 lb. milk, 1,192 lb. butter, who in turn is the daughter of the famous old Canadian cow, Jemima Johanna of Riverside, 30,373 lb. milk, 1,280 lb. butter. At the time Jemima Johanna Segis completed her record whereby she became the champion of Canada, in the four-year-old class, these three cows formed a world's record combination for a three generation group, their year records averaging 26,878 lb. milk, 1,216 lb. butter, a showing which, we believe, has been surpassed by only one other three generation group.

We had the pleasure of examining King Jemima Segis soon after he became a resident of Loyalsock herd and have seen the Jemimas in their own home and know that they are a wonderful family, possessing splendid individuality as well as remarkable producing capacity. Another three generation group in this same family have year records averaging 25,542 lb. milk, 1,165 lb. butter and the original cow, old Jemima herself, is the only one appearing in both of these great producing combinations.

Another bull in the Loyalsock herd is Traverse Echo Sylvia King, who also possesses a high order of individuality. His sire is Echo Sylvia King Model and his dam is Traverse Inka Johanna, a cow with an official record of 736.4 lb. milk, 33.27 lb. butter. She has twice made over 30 lb. in a week; has a long list of good records; and better yet, has transmitted her own capacity to her descendants.

She has five daughters in the Advanced Registry. One, Traverse Inka Hartog has a five-year-old record of 694.5 lb. milk, 35.50 lb. butter in a week and as a four-year-old produced 21,146.1 lb. milk, 950.75 lb. butter in ten months. Her freshening dates preliminary to making these two records were just one year and twenty-one days apart. The other daughters of Traverse Inka Johanna include a 26.55 lb. junior three-year-old; a 28.47 lb. junior four-year-old and a 24.75 lb. junior three-year-old; while another as a five-year-old made 32.92 lb. butter in seven days official test.

One of the great cows in the herd is Loyalsock Colantha Witra, 25,618 lb. milk, 1,185 lb. butter in a year. She has four daughters in the herd of which one, Loyalsock Korndyke Witra, recently closed a year record of 1,075 lb. butter made as a three-year-old. Another daughter of this cow, calving as a two-year-old, produced 650 lb. butter in ten months while two other daughters are not yet tested. The Witra family are noted for individuality as well as production. Space forbids individual mention of the many good producers in this herd but we may briefly list a few. Champion Echo Sylvia Pontiac, the great transmitting son of May Echo Sylvia is represented by 32-lb. four-year-old and 29-lb. two-year-old daughters. The 32-lb. heifer has an eleven months old daughter sired by Alcartra King Sylvia and there is a young son of the 29-lb. two-year-old by the same young sire, who was struck off for \$50,000 in the show ring and was by Carnation King Sylvia from the grand old cow, Tilly Alcartra, who two different years made world's records for milk production in twelve consecutive months, the first being 30,451.4 lb. and the second, 33,425.3 lb. with 1,323 lb. butter.

Despite the fact that the herd has been established for so many years and that both short time and long time records have been given to many of the animals, at the present time there is only one cow in the herd that is past seven years old. We understand that the establishment will be closed down and the entire forty-five head sold at public auction, March 12th, at Loyalsock Farm, which is at Montoursville, just a short distance from Williamsport, Pa. This point is readily accessible to all Holstein enthusiasts. Those who have at any time partaken of the hospitality of the owners, Flock Bros., or Superintendent F. A. House know that no effort will be spared to give the visitors a good time.

KELLER'S SALE DATE

In the John B. Keller advertisement appearing in the February 22d issue, page 131, the date of his sale was inadvertently omitted. The event will be staged Friday, March 14th, at Meadow Lane Farm, Chambersburg, Pa., Route No. 7.

There are thirty-three head in the sale, four bulls and twenty-nine females. The older females have been mated with Piebe Carnation Mercedes Walker, whose dam as a junior four-year-old produced 25.88 lb. butter in seven days, her average test being 5.97% butterfat. Piebe Carnation Mercedes Walker is a grandson of the two great sires, Matador Segis Walker and King Pietertje Ormsby Piebe. It would be difficult to find two other sires whose daughters had made larger records and won more honors at leading fairs.

The story of the herd which appears as one of the feature articles in this issue tells of the lines of breeding represented in the herd. Some of the greatest sires of the Holstein breed are represented by granddaughters and other descendants. They will all have to be sold as the farm is rented. Mr. Keller is going back to his former business and the hogs and other farm property have already been disposed of. Don't forget the date is March 14th, and S. R. Miller will be the sale manager, evidence that all details will be handled in good shape.

POLK SCHOOL REDUCTION SALE

Cold weather and snowbound roads materially affected the attendance at the reduction sale of the Polk State School, held at Polk, Pa., February 26-27. The offerings were mostly calves, yearlings and two-year-olds, with eight young bulls. The one hundred and one animals brought a total of \$8,350 certainly low enough for animals of the breeding and quality, especially as they were from an accredited herd.

There were eight bulls that averaged \$126.87, the top price being \$265 for King Pontiac Korndyke Jannet, a son of King Pontiac Dean Korndyke from Polk Jannet Fay, 31 lb. butter and 720 lb. milk in a week. This well bred young fellow was struck off to Jos. Burkhardt, Franklin, Pa. The top price for females was \$160 paid by C. R. McKinnis, Blairsville, Pa. for the yearling heifer, Gudula Clothilde Jannet, a daughter of King Champion Jannet from Gudula Clothilde Pontiac 24, a 31 lb. daughter of King Korndyke Segis Inka. R. E. Haeger of Algonquin, Ill. was the auctioneer.

The animals all went to Pennsylvania breeders. A number of county and state institutions seized the opportunity to obtain stock from a herd on the accredited list backed by the state of Pennsylvania. Mercer County Poor Farm, Mercer, obtained a number of good ones as did the Torrence State Hospital, Blairsville, and the Fayette County Home at Uniontown. Other buyers were Hermes Grove Dairy Co., Pittsburgh; Chas. Baxter, Mercer; Jay B. Grumbling, Blairsville; J. S. Langley, Uniontown; C. W. Rickert, Stoneboro; Jno. B. Wood, Utica; J. W. Griffin, Franklin; H. P. Eakin, Slippery Rock; J. N. Randolph, Uniontown; E. A. Borland, Sandy Lake; O. L. Sturges, Stoneboro; Chas. Randolph, Volant; H. L. Forbes, Sandy Lake; and T. W. Brenner, Beaver Falls.

ECONOMICAL SALE MANAGEMENT

One of the best Ohio sales we ever had the pleasure of reporting was conducted by the veteran Ohio sales manager, F. G. Johnston of Columbus on the farm of H. A. Betow, Fremont, Ohio, February 27. The auctioneer was Col. C. E. Baylor of Wellington, whose jokes and quips kept his audience in good humor. The five-year-old herdsire brought \$105 while the yearling herdsire was struck off for \$505. There were eighteen cows in milk and they brought \$3,480, an average of \$193.33, a real good price as one animal was nine years old; four were seven years old; four were six years old; two were five years old; there were two four-year-olds; four three-year-olds; and a two-year-old and four of the animals had imperfect udders.

The ten unbred yearling heifers averaged \$109. There were six bull calves and three heifer calves and the age ranged from one day to five months. These totaled \$355 or an average of \$39.44. Two grade cows, one of which was fresh, together brought \$210. In addition there were ten tons of alfalfa hay and this brought \$22.25 a total of \$222.50. The complete sale total was \$5,067.50. But the best is yet to come—THE TOTAL EXPENSE OF THIS SALE WAS LESS THAN 7% OF THE RECEIPTS, quite a difference from some of the greatly boomed so-called national and state sales where 10% commission has been deducted and then when all the bills were in, the consignors have been asked to come across and help make up the deficiency.

RECORDS IN THE RETREAT HERD

Daughters of King Pontiac Maple Knoll Ormsby, the good sire who has so many good daughters in the Hillside and Springbrook herds, are making good records in the Retreat herd, owned by the Central Poor District of Luzerne County, Pennsylvania. Hillside Pontiac Lily is

HILLSIDE DORIS ORMSBY
now in test as a junior three-year-old 29.51 lb. butter in seven days. Picture taken as a yearling.

now in test as a junior three-year-old and promises to exceed 28 lb. butter in seven days. Hillside Doris Ormsby, who as a yearling heifer produced 20.34 lb. butter, 432 lb. milk in seven days and in thirty days produced 1,824.7 lb. milk, 81.59 lb. butter, is again in test also as a junior three-year-old. In the first seven

days of her test she has produced 29.51 lb. butter, 462.1 lb. milk and Mr. J. O. Vaughan, herdsman of the Retreat herd says that she is going to make an even greater record. "She is just one real heifer."

In the Retreat herd they have a number of daughters of King Pontiac Maple Knoll Ormsby, who is also the sire of their senior herd bull King Pontiac Maple Knoll Ormsby a son of the great King of the Pontiacs and from Maple Knoll Helen, a cow that two different years exceeded 30 lb. butter in seven day official test. When just past her fourth birthday, she produced 30.97 lb. butter in a week and as a six-year-old made a seven day record of 33.16 lb. butter and in thirty days is credited with 126.37 lb. butter and practically 80 lb. milk a day for the month. She is a daughter of King Korndyke Hengerveld Ormsby and is therefore sister to the famous sire, Ormsby Korndyke Lad.

Cow Testing Association Reports

BIG PRODUCTION IN CUMBERLAND COUNTY

David Gibble and Son of New Kingstown had the high herd in the Cumberland County Cow Testing Association for January, reports the tester, A. A. Raudabaugh. Three animals in this herd were fresh in April, 1923, and six others were two-year-olds fresh in September and October, yet the entire herd averaged 1,394 lb. milk and 45.9 lb. fat during the month. Nineteen members of this dairy produced over 1,000 lb. milk and thirteen produced over 1,200 lb. Fifteen exceeded 40 lb. of fat, seven produced more than 50 lb. and five went over the 60 lb. mark.

In each of these respects the herd of Ivo V. Otto was second although the second high average was made by fourteen grade Holsteins owned by H. A. Shultz, their average being 1,316 lb. milk, 38.6 lb. fat.

The leading producer was a registered Holstein "Ormsby" owned by Mr. Otto. She produced 2,396 lb. milk, 81.5 lb. fat. "Lady" a registered cow owned by W. H. Wertz is second with 2,430 lb. milk, 80.2 lb. fat. Her stable mate "Nancy" is third with 2,176 lb. milk and 74 lb. fat. "Grace" a grade Holstein owned by David Gibble is fourth with 1,869 lb. milk, 71.6 lb. fat while another Otto cow is fifth with 1,832 lb. milk and 71 lb. fat.

Mr. Otto has three on the list of ten leaders. Mr. Wertz has one, Mr. Gibble two, L. D. Nailor one, J. L. Baschore one and G. W. Strook one. These ten cows averaged 2,074 lb. milk, 70.5 lb. fat and their average test is 3.4%. This ten-cow average is the second highest since the organization of the Association about five years ago and from a number of standpoints the report shows the best production for the number of cows over 1,000 lb. milk and 1,200 lb. milk as well as for number above 40 lb., 50 lb. and 60 lb. fat. There were 137 cows that exceeded 1,000 lb. of milk and 86 that exceeded 1,200 lb. while there were 105 that made better than 40 lb. of fat in the month, 46 exceeded 50 lb. and 20 that produced over 60 lb.

In the Association there are 26 herds with 308 cows in milk and 56 animals dry. Mr. Raudabaugh is to be complimented on the splendid work done in his Association as well as for the very complete report he has rendered.

PUREBRED SIRE PROVES WORTH IN VIRGINIA

The surest, quickest, and cheapest method of increasing the production of a dairy herd for the average farmer is by the use of a good purebred sire. This fact is clearly brought out by the records of a herd in the Fairfax County, Virginia, Cow Testing Association No. 1. Several years ago a purebred Holstein bull of very good breeding was placed at the head of the herd belonging to Mr.

Retzer of Herndon, Va. At the present time Mr. Retzer has a yearly Cow Testing Association record on five of the daughters of this bull, as well as the cow test records of the dams. To make these records comparable, records of daughters were brought up to maturity by the method used by the U. S. Dairy Division. The five dams showed a total production of 31,998 lbs. milk and 1,245.0 lbs. butterfat or an average production of 6,400 lbs. milk and 249.0 lbs. butter with an average test of 3.89 per cent. The five daughters showed a total production of 51,857 lbs. milk and 2,086.1 lbs. butterfat or an average production of 10,371 lbs. milk and 417.2 lbs. butterfat with an average test of 4.02. The average increase in production of daughters over dams being 3,971 lbs. milk and 168.2 lbs. butterfat, or 62.0 per cent increase in milk and 67.5 per cent increase in butterfat production. This past year Mr. Retzer has received a farm price of slightly over \$3.00 per cwt. for his milk which is sold as fluid milk. At this rate the gain in production of these five daughters of almost 20,000 lbs. brought a return of about \$600 in excess of their dams or an average of \$120.00 per cow for one year.

In addition to greatly increasing the production and raising the butterfat test, there was also a very marked improvement in type and characteristics which are indicative of good dairy animals, as well as breed characteristics. As a matter of fact this bull was so prepotent that even when bred to common red cows, as was the case in two of the instances, his daughters gave every indication from color, type, markings and conformation of being purebred Holsteins. His daughters are also very uniform, especially considering the very ununiformity of their dams. He has also given especially fine udders to all of his daughters. Of course as so often is the case he passed into the hands of the butcher long before his real worth was known.

In light of such instances as this it is hard to understand why so many farmers still persist in keeping scrub bulls. The 1920 census shows that we have in the United States about 752,371 males of which 187,299 or about 25 per cent of them are purebreds. The Virginia census showed that there were 8,207 dairy bulls in use, of which 2,251 or only about 27 per cent of them being purebreds. Why not butcher the grade or scrub bull and replace with good purebreds?

APPETITE FOR ROUGHAGE

Sambo—"Say, Rastus, somethin' funny happened to me las' night."
Rastus—"Dat so?"
Sambo—"Yes, las' night I dreamed I was calin' shredded wheat, an' when I waked up, half my matras was gone."

ULYSSES HOLSTEINS DO WELL

The Ulysses Cow Testing Association operates in Potter County, Pennsylvania. It is the first cow testing association to be organized in this county in four or five years and is the second one to run a full year.

Although there are a number of good purebred Ayrshires in the organization, most of the honors have been carried off by Holsteins. Good herds are owned by H. H. Hall of Ellensburg and Lawrence Buck.

During the February test month, eighteen herds were enrolled, containing over 300 cows of which 213 were in milk and ninety-five dry. Six cows exceeded 50 lb. fat in the month and eighteen exceeded 40 lb. while fourteen produced more than 1,200 lb. milk.

The leader was the purebred Holstein, Puella, owned by Mr. Hall. She is credited, by the tester M. K. Green, with 67.3 lb. butterfat, 1,496.4 lb. milk. A stable mate, Pomona, has 58.8 lb. fat, 1,508 lb. milk to her credit. Tony, a purebred Holstein owned by Lawrence Buck was fourth with 51.8 lb. fat, 1,232.5 lb. milk, just ahead of the Hall cow, Octavia, with 51.7 lb. fat, 1,203.5 lb. milk. Mr. Hall had three cows in the list of the leading ten and Mr. Buck had five. Another purebred Holstein with over 50 lb. fat was owned by N. J. Leete while the other member of the leading ten was a purebred Ayrshire.

BREMER COUNTY ASSOCIATION

What is claimed to be the biggest record ever made by an Iowa cow testing association was made by the Bremer association during January. A total of 334 cows averaged 923 lb. milk and 33.2 lb. fat.

During December, Bremer County led the State for both milk and fat production averages and is expected to, for the first month of this year. The members of this association are all "dirt farmers" and there are no high-priced herds to help boost the average.

The high record is made by "Tigly," whose breeding represents a cross of Holstein and Brown Swiss. "Tigly" is owned by F. A. Chester & Sons of Plainfield and produced 939 lb. fat and 1,863 lb. milk. Last year this cow produced over 500 lb. fat.

Barbetta Pet Segis, a purebred Holstein owned by E. J. Wylam & Sons, of Plainfield, leads for milk with 2,510 lb. and is second for fat with 82.8 lb. Barbetta's record was made under very ordinary farm conditions.

"Bessie," another Holstein owned by Carl Kuethe of Waverly, is third with 80.7 lb. fat, 1,878 lb. milk. The Kuethe herd led for average production.

The Association year ends March 31st, and there is considerable competition for first place. "Doria," a purebred Holstein

owned by W. B. Loveland, has led during the year and has a total of 517.8 lb. fat, 14,502 lb. milk to her credit. At present she leads for milk as well as fat production but she is rapidly approaching the end of her lactation period and Barbetta and Tigly will probably defeat her as both have just freshened again.

Barbetta had 13,502 lb. milk, 479.9 lb. fat to her credit on the last of January and if she averages a little more than 60 lb. fat for February and March, she will reach the 600 lb. mark. Tigly had 443.1 lb. fat, 10,595 lb. milk to her credit on the last of January.

A summary has been made of all the cow testing association records completed between September, 1922, and September, 1923. The herd of F. A. Chester & Sons averaged 404.9 lb. fat, 10,640 lb. milk. For the three previous years the herd of John Garaghty & Sons of McGregor, has led the State. The Garaghty average was 402.2 lb. fat, 7,768.9 lb. milk. The milk honors went to the herd of Carl G. Kuethe with an average production of 11,730 lb. milk. This herd averaged 397 lb. fat.

There were 124 purebred Holsteins enrolled in the Iowa Associations. Ida Walker Segis Girl of the Wylam herd produced 560.3 lb. fat, 15,300 lb. milk. This is the second highest milk production in the State, first place being taken by a high grade Holstein in the Kuethe herd with 15,694 lb. milk.

VIRGINIA CONDUCTS TESTER EFFICIENCY CONTEST

The Dairy Extension Office of the Virginia Polytechnic Institute Dairy Department is conducting a cow testing association efficiency contest for the year of 1924. This contest is being conducted to stimulate greater interest on the part of cow testers in their work, as a reward for efficient service and to encourage the securing of high results and the keeping of accurate records.

Awards are made on a point basis and the tester who secures the greatest number of points each month receives a cash prize of \$10. At the end of the year the tester who has the highest standing receives a cash prize of \$100. The tester with the second highest standing receives \$50 and the third highest \$25.

GOOD FOR TUTTLE

H. R. Tuttle, of Oconto Falls owned the leading herd in the Oconto Falls, Wis., Association for January. This herd of fourteen registered Holsteins averaged 46.4 lb. fat. A member of this herd was individual leader, for both milk and fat production, she being credited with 72.3 lb. fat and 2,009 lb. milk.

GRADES IN FRONT

Six grade Holsteins owned by O. M. Blyton led the Prairie Farm Dallas Association for January with an average of 1,156 lb. milk, 44.1 lb. fat. Nellie, a member of this herd, was the individual leader with 1,479 lb. milk, 65.1 lb. fat. Arthur M. Eide is the tester of the association.

ILLINOIS TESTING

The splendid grade Holstein herd of Geo. Mohrman led the Whiteside County Association and all other herds in the state during the month of January with an average production of 55.5 lb. fat, 1,505 lb. milk. Thirteen purebred and grade Holsteins, owned by Frank Flack of the Joe Daviess Association No. 1 was second with an average of 49.7 lb. fat, 1,462 lb. milk; sixteen purebred Holsteins owned by A. D. Cornue of Hebron were third with an average of 48.1 lb. fat, 1,307 lb. milk. Eight purebred Holsteins owned by Oscar Engstrom of Rockford were fourth with 45.7 lb. fat, 1,007 lb. milk and the twenty-four purebreds of the Rawleigh Farms were fifth with 44.5 lb. fat, 1,220 lb. milk. In sixth place is a purebred and grade herd of one dozen animals owned by Kump & Estes with 1,320 lb. milk, 44.2 lb. fat leading the Ogle Association and beating out Rock River Farm whose eighty-four purebred Holsteins averaged 1,233 lb. milk, 43.3 lb. fat.

All of the ten highest producing herds are black and white and black and white herds led twelve of the eighteen associations. A purebred Holstein in the Rock River Farm herd led the state for production with 2,220 lb. milk, 91.1 lb. fat. Stablemates were second, third, and fourth; one producing 1,922 lb. milk, 90.3 lb. fat; another 2,523 lb. milk, 88.3 lb. fat; and the fourth, 2,316 lb. milk, 87.9 lb. fat. A purebred Holstein owned by Hyde Park Farm is fifth with 2,124 lb. milk, 83 lb. fat. Purebreds at the Rawleigh Farm stand next with 1,907 lb. milk, 82.7 lb. fat and 2,500 lb. milk, 82.5 lb. fat; a purebred of the Oscar Engstrom herd is in eighth place with 1,717 lb. milk, 82.43 lb. fat, just ahead of another purebred owned by A. W. Fischer with 1,962 lb. milk, 82.41 lb. fat. Tenth position is held by a grade Holstein owned by O. E. Pritchard with 1,724 lb. milk, 81.1 lb. fat. Black and white cows led fourteen of the eighteen associations, there being six purebreds and eight grades. The other four associations are led respectively by a purebred Brown Swiss; a purebred Jersey; a grade Jersey; and a grade Guernsey.

HOLSTEIN LEADS FOR SECOND SUCCESSIVE YEAR

The Oconto, Wis., Testing Association closed the second year of work on December 31st. There were 321 cows which finished the year and their average production was 9,626 lb. milk, 264 lb. butterfat. The average cost of feed was \$62.37 and the average profit was \$80.63.

Beauty Daisy of Helenwood, a registered Holstein, owned by E. O. Shankley, Oconto Falls, was high cow for 1922 and also led for 1923. This six year old cow produced 8,977 lb. milk, 472.4 lb. butterfat during the year. Her total feed cost was \$106.60 and her net profit was \$173.00.

The leading herd consisted of eight Holsteins owned by Fred Mittag with an average production of 397.7 lb. butterfat. Second place was taken by sixteen Holsteins owned by E. B. Dutton & Son with 356 lb. fat.

Quality and breeding combined. Look no over.

A. E. ROBINSON,
Bangor, Me. Montrose, Pa.

NEBRASKA TESTING

Polly Segis Sylvia Waldorf, a senior two-year-old owned by the Woodland Dairy herd, Woodland, Nebraska, made an outstanding record during December by producing 5,901 lb. butterfat in the two days' test of the December Cow Testing association work. Varsity Gerben Aster of the University of Nebraska; Omaha Alcartra Cornucopia and Lassic Jones Virgil, both belonging to the Union College at Union View; Ola Lincoln of the University of Nebraska Jersey herd; and Pledge Rose King of the North Platte substation herd each made over five pounds butterfat in the two days' test and rank in the order named. All of them are mature cows.

Varsity Derby LaVinnie, owned by the University of Nebraska, made a new state record in the junior four-year-old class for butter production. In the 305 days of her test, she is credited with 19,791 lb. milk, 705.42 lb. butterfat. The best 365-day record completed in December was made by Gerben Segis Pledge Rose and was 20,639.8 lb. milk, 789.5 lb. butter. She is owned by the North Platte Substation.

HIGH RECORDS IN VIRGINIA

By L. P. EMERICK

The 624 cows in the twenty-five herds comprising the Fairfax County, Virginia Cow Testing Association No. 1, finished their cow test year with an average production of 8,066 lb. milk and 323.7 lb. butterfat. Last year this association averaged 7,726 lb. milk and 305.4 lb. butterfat. Three years ago the average was less than 250 lb. butterfat.

The high herd in butterfat production was the herd of twenty-four cows, mostly grade Holsteins owned by Ben Middleton, of Herndon. This herd averaged 10,962 lb. milk and 432.9 lb. butterfat. Last year this herd averaged 8,544 lb. milk and 331.9 lb. butterfat.

The high herd in milk production was the herd of fourteen purebred Holsteins owned by P. B. Crandall of Herndon. This herd averaged 11,764 lb. milk and 404.2 lb. butterfat.

The highest producing cow was the grade Holstein "Sadie" owned by Mr. Middleton. Her record for the cow test year was 21,689 lb. milk and 847.5 lb. butterfat. For her full lactation year her record was 23,257 lb. milk and 915.9 lb. butterfat. This record makes her the second highest grade cow in the world and the undisputed champion grade cow of the south. Last year her cow test record was 18,490 lb. milk and 729.6 lb. butterfat.

Three herds averaged over 400 lb. butterfat and 10,000 lb. milk. Twenty-one averaged over 300 lb. butterfat. Fifteen cows averaged over 500 lb. butterfat, forty over 450, seventy-nine over 400, 154 over 350, 260 over 300 lb. butterfat.

The value of the product above cost of feed was \$143.92. All herds are T. B. tested, about 1,000 animals were tested during the year with only one reactor. All herds are headed by a purebred sire. During the year sixty cows were sold for

beef, and 134 were sold for dairy purposes.

There were fifty-seven cows in the association for the full year, on whose dams we also had a full year's record. These fifty-seven daughters' records, brought up to maturity where necessary, averaged 9,712 lb. milk and 392.6 lb. butterfat. The dams averaged 8,499 lb. milk and 328.4 lb. butterfat. The five daughters of one purebred Holstein bull averaged 10,371 lb. milk and 417.2 lb. butterfat, compared with their dams average of 6,400 lb. milk and 249.0 lb. butterfat.

There were fifteen herds in the association for at least three years, they averaged 8,817 lb. milk and 347.8 lb. butterfat. Herds in less than three years averaged 7,572 lb. milk and 296.9 lb. butterfat. The fifty-three full year purebreds averaged 9,706 lb. milk and 360.4 lb. butterfat, the grades 7,603 lb. milk and 313.7 lb. butterfat.

PENNSYLVANIA TESTING

Twenty-three Pennsylvania Cow Testing Associations report that 5,967 cows were tested during December of which 788 produced more than 40 lb. fat and 903 more than 1,000 lb. milk, while 290 exceeded 50 lb. fat and 556 gave more than 1,200 lb. milk. The highest individual milk yield was 2,654 lb. made by a registered cow owned by J. S. Murphy of Woodbine and enrolled in the York Valley Association. The second largest yield was 2,523 lb. milk also made by a registered Holstein. She was owned by W. H. Wertz, Cumberland County Association. A purebred Guernsey led for fat with 94 lb. with a purebred Jersey second with exactly 92 lb. The highest ten cows averaged 71.5 lb. butterfat made in the York Valley Association while second place was taken by the Cumberland County Association with an average of 68.7 lb. fat. The Cumberland County Association led for number of cows above 40 lb. fat and number above 1,000 lb. milk the figures being 90 and 107 respectively.

AN IDAHO DOLL

An average production of 639 lb. milk, 26.7 lb. fat for 433 cows was reported for January by W. A. Johnson, tester in Canyon County, Idaho. The high cow is Doll with 1,695 lb. milk, 64.4 lb. fat to her credit. She is closely followed by Dutch, a grade Holstein, owned by Herman Wittenbrink, with 64.1 lb. fat. Mr. Wittenbrink's herd of eight cows has been the high herd for three consecutive months. Their average for January is 1,027 lb. milk, 44.6 lb. fat.

WE CAN'T PRONOUNCE HIS NAME

A graduate of the University of Illinois has been engaged as fieldman in the Avoca, Wisconsin, Cow Testing Association. His name is Vallablidas Hargovindas Dani. He is a native of Bombay, India. After a few years of practical experience Mr. Dani expects to go to his native country and teach his countrymen American methods of dairy farming.

PORTER HAS PRODUCERS

Ralph Porter had a grade and registered Holstein herd enrolled in the Rosendale-Eldorado, Wisconsin, Cow Testing Association. One of the cows produced 13,923.3 lb. milk, 491.4 lb. butterfat and led the association for the recently ended year. The second high cow is also owned by Mr. Porter and she produced 12,791.8 lb. milk, 411.8 lb. butterfat. A grade Holstein owned by Will Rusch & Son is third with 8,408.3 lb. milk, 406.4 lb. butterfat.

The average profit per cow of the high producing herd equaled 2.9 times the average profit per cow of the lowest producing herd. There were 50 registered Holsteins and six registered Guernseys in the Association. The average for the entire number of cows enrolled was 255.8 lb. fat. During the year there were 399 cows on test nine months or more and they were owned by thirty-one different farmers.

VIRGINIA TESTING

A purebred Holstein led all the cows tested in Virginia during the month of January. She is owned by Miniborya Farms and enrolled in the Henrico Association and is credited with exactly 80 lb. fat. A grade Holstein, owned by J. N. House is second with 79.9 lb. fat in the Prince William County Association. Third place is taken by a purebred Holstein owned by Mrs. McKay in the Albemarle Association and credited with 76.2 lb. fat while a purebred Holstein owned by H. L. Butler & Sons produced 73.8 lb. fat in the Culpepper Association. Thirteen associations reported their leaders; four are headed by purebred Holsteins and four by grade Holsteins. Two of the leaders are purebred Jerseys; two are purebred Guernseys and the other association is headed by a grade Guernsey.

IN A DAIRY SECTION

Julia, a grade Holstein, owned by Oliver E. Pritchard of Maple Park, Ill., led the Kane County, No. 2 Testing Association for January. She is credited with 81.1 lb. butterfat from 1,724 lb. milk. De Kol, a purebred Holstein, owned by Warford & Sons was second with 73.7 lb. fat, 1,993 lb. milk. This herd consisting of eleven cows carried off high herd honors with 1,038 lb. milk, 37.7 lb. fat per cow.

Six hundred and forty-eight cows were tested with an average production of 827 lb. milk, 29.7 lb. fat. Seventy-four exceeded 40 lb. fat while sixteen of these produced more than 50 lb.

LEADS KUNA AGAIN

A herd of nine purebred black and white cows led the Kuna Idaho, Testing Association for January with an average production of 1,037 lb. milk, 39.1 lb. fat. The high individual was a registered Holstein owned by Ira Forrey with 2,154 lb. milk, 87.1 lb. fat.

Two hundred and fifty cows were tested of which forty-seven produced more than 40 lb. fat. The average production of all the cows tested was 719 lb. milk, 30.4 lb. fat.

GRADES DO WELL IN IOWA

Eight grade Holsteins enrolled in the Clear Lake Iowa Cooperative Cow-Testing Association carried off high herd honors for the month of January with an average production of 1,419.55 lb. milk, 46.76 lb. fat. They are owned by S. J. Ott. Members of the Ott herd were high individuals, the leader producing 1,936.6 lb. milk, 67.7 lb. fat and the second high cow producing 1,607.8 lb. milk, 51.4 lb. fat. The average production of all the cows in the association was 636.83 lb. milk, 22.83 lb. fat. Twenty-one cows produced more than 40 lb. butterfat in the month.

NEARLY A HUNDRED

A registered Holstein owned by E. W. Cowles & Son of South Byron led the Byron Wis. Association for January with 2,759 lb. milk, 99.3 lb. fat. Registered Holsteins, owned by F. H. Boyle stood second and third with 1,860 lb. milk, 78.1 lb. fat and 1,984 lb. milk, 77.3 lb. fat.

The leading herd consisted of twenty-one Guernseys and Holsteins their average production being 1,146 lb. milk, 40.9 lb. fat. They were owned by Fred Backhaus.

THE BREED IN THE LEAD

During January ninety-seven cows enrolled in the Merton, Wis., Association produced more than 40 lb. fat. Fred Funk & Sons, had the highest herd average, their fifteen grade and purebred Holsteins averaging 1,398 lb. milk, 50.8 lb. fat. A seven-year-old grade in this herd was the leader with 70.2 lb. fat. A purebred Holstein owned by M. Weber & Sons of Merton, was second with 1,420 lb. milk, 69.2 lb. fat.

WEHINGER WINS AGAIN

Seventy-seven of the 445 cows tested in the Clinton Rock, Wis., Association during January, produced more than 40 lb. butterfat. The leader was a purebred Holstein owned by John Wehinger & Son of Janesville, with 2,545 lb. milk, 81.8 lb. fat to her credit. This animal was milked three times a day. C. A. Larson of Clinton had the high herd, his thirteen grade Holsteins averaging 1,214 lb. milk, 44.8 lb. fat.

MINAHAN'S PUREBRED FIRST

Twenty-eight of the cows tested in the Pulaski Wis., Association during January produced more than 50 lb. butterfat, reports William Rudinz, tester.

The leader was a registered Holstein owned by J. R. Minahan of Green Bay, Wis. She is credited with 2,077 lb. milk, 93.4 lb. butterfat. A grade Holstein was second with 1,798 lb. milk, 80.9 lb. fat. This animal is owned by George Tubbs.

A small girl came running into the house one evening in great excitement. "Oh, mother!" she cried. "We've had the most wonderful day. We saw a snake; we smelled a skunk, and we met Aunt Mary!"

OUR HERD IS COMPOSED
of Descendants of**KEYSTONE BEAUTY PLUM JOHANNA**

25,787.5 lb. milk, 1,394.71 lb. butter in a year. This record was made in strict official test as a senior four-year-old, and was World's Record at time of making. Will spare a few females. Prices reasonable.

Herd Under State and Federal Supervision.

THE WHOLE FAMILY INTERESTED

W. E. Macomber, of Garrard Creek, Wash., is building a purebred herd. His herdsire is Milk Monarch, born May 20, 1922 and bred by the Carnation Stock Farms, Seattle. Milk Monarch was sired by Sir Bessie Fayne De Kol Fobes who is also sire of Tillamook Daisy Butter King De Kol, the 1923 National Dairy Show grand champion and winner of grandchampionship at the Pacific International in 1922 and 1923 fairs.

The dam of Milk Monarch is Chimacum Wayne Monarch Cornucopia with a ten month's record of 822.82 lb. butter, 23,295 lb. milk, world's record for milk in the senior three-year-old division. This heifer has a seven day record of 28.6 lb. butter 632.7 lb. milk and is a daughter of Sir Chimacum Wayne.

Milk Monarch is a very typy fellow and carries lots of style, and will stand at the head of a good herd.

Last Christmas, Mr. Macomber presented a heifer to his daughter Beulah and his son Lewis. This pair of heifers are Olympia Princess Sadie Wayne and Olympia Model Wayne.

MERCER COUNTY ERADICATING TUBERCULOSIS

Cattle in Mercer County, Pa., and adjoining townships in Crawford and Butler Counties were tuberculin tested last April and July when 5,966 herds containing 46,453 cattle were tested. Only 1,162 reactors were found.

The work was accomplished at a total cost of \$82,855.75, which includes \$61,281.39 for State and Federal indemnities, \$7,500 for transportation, which was carried by the owners themselves, and other items such as salaries, supplies and clerical assistance in collecting and compiling numerous reports.

Dr. S. E. Bruner, veterinarian in charge of the work has prepared a report. He states that owners and breeders in the Grove City community took up the accredited herd plan in 1918. The movement spread throughout Mercer County until in January, 1923, one hundred and fifty owners of cattle representative of every part of the county came together and voted in favor of the modified accredited herd plan.

A general committee was appointed with a chairman for each township. The chairmen organized sub-committees of one to three men for each school district, the latter to make a survey of all owners of cattle. The report of all these committees indicated that 95% of the owners in the district of the test agreed to test.

When the test was started on April 16, the state veterinarians found that in some townships only 70 to 75 percent of the owners had signed but missionary work by the thirty-eight veterinarians assigned to make tests assisted by County Agent W. S. Hagar and other community leaders resulted in 98% of the herds being tested when the drive was completed.

The actual testing of the herds in the forty-one townships and the municipalities included within the area was finished

in one week's time. Ninety-one percent of the herds were found free of tuberculosis on this first test. On the 823 reactors found in Mercer County alone, a total of \$27,047 was paid in State indemnity, or an average of \$32.86 a head, and total Federal indemnity, \$16,038, an average of \$19.48.

Following the policy of the state Bureau of Animal Industry, a retest was made in July of herds found infected on the first test and an initial test applied at the same time to herds which were missed in the first drive. A total of 6,608 cattle from 833 herds was tested in the second drive and 125 reactors found.

At the completion of the first test, a quarantine was established on the area pertaining to the movement of cattle into and within the area. Since more than one percent of the total number of cattle in the area reacted, a retest must again be made of the entire cattle population in April, 1924.

Dr. Bruner expressed the belief that from present indications less than one-half of one percent of the cattle will be found tuberculous in the coming April drive. If this result obtains Mercer County and the adjoining townships in Butler and Crawford will qualify as the first Official Modified Accredited Area in Pennsylvania and the area will not be again tested for a period of three years.

A BULLY ASSOCIATION

Twenty-five herds containing 307 cows were tested in the Cerro Gordo, Iowa Association for January. Eighteen cows produced more than 50 lb. butterfat and twenty-three exceeded 40 lb. There are twenty-seven purebred bulls in the Association.

Aaggie Jane Hengerveld, a purebred Holstein, was the leader being credited with 2,238 lb. milk, 78.3 lb. fat. Aaggie is nine years old and is owned by Schermerhorn Farms. The leading herd was owned by Keeler & Hadley. This purebred black and white herd averaged 1,278 lb. milk, 43.3 lb. fat.

TESTS SIX SISTERS

Six heifers, daughters of Pabst Champion Bruno, have been tested on the Anola Vista Stock Farm, owned by H. W. Bennett, Oakfield, Wis. Anola Dorothy Pabst Bruno, a junior three-year-old produced 527.9 lb. milk, 28.53 lb. butter her average being 4.32%. Anola Nedie Pabst Butterfly as a senior two-year-old produced 547.8 lb. milk, 25.49 lb. butter, her average test being 3.27%. Both these heifers were given verification tests.

CHAMPION COMES BACK

During January, a year record of 27,065 lb. milk, 1,283.75 lb. butter was reported by the Canadian Association for the cow Orndyke Pieterje Korndyke ad owned by R. R. Stevens, Bowmanville, Ont. This cow in a previous lactation period is credited with 24,119 lb. milk, 1,122.50 lb. butter in the ten months' vision of which she is the champion.

HANDSOME AND A PRODUCER

Queen Lyons Wayne De Kol a member of the good herd owned by John H. Howard of Hillcrest View Farm, Wyalusing, Penna., produced 11,560 lb. milk in eight months while enrolled in cow testing association work. She has several good official records. As an eight-year-old she produced 25.88 lb. butter, 536.3 lb. milk in seven days and tested

QUEEN LYONS WAYNE DE KOL

26.10 lb. butter, 532.9 lb. milk in seven days. Owned by John H. Howard, Wyalusing, Pa.

as a nine-year-old made official records of 26.30 lb. butter, 542.9 lb. milk in a week and 105.90 lb. butter, 2,326.8 lb. milk in thirty days. She is a daughter of Sir Lyons Hengerveld De Kol who has a long list of good record daughters.

Queen Lyons Wayne De Kol is not only a high-class producer but is also a very fine individual as can be seen by the accompanying photograph.

FOUR GENERATIONS IN TEST ROW

Upland Johanna De Kol No. 121161 is a great old cow owned by Sidney Mattingly & Sons of Loogootee, Indiana. She was born May 1, 1909, and she is now in her fifteenth year. In the Mattingly herd there are five direct generation descendants from this old foundation cow and twenty female members of the herd are among her descendants.

Upland Johanna De Kol recently finished a year record of 14,939.1 lb. milk, 623.4 lb. butter tested as a fourteen-year-old cow. But this is just the beginning of the story. She has three daughters in the herd. Peachleaf Natsey De Kol tested as a nine-year-old, made 18,839.9 lb. milk, 843.6 lb. butter, and her sister Peachleaf Romeo Johanna De Kol produced 15,245.7 lb. milk, 625 lb. butter, and the other daughter, Peachleaf Margaret De Kol made a year record of 20,169.2 lb. milk, 802.3 lb. butter.

Peachleaf Natsey De Kol has a six-year-old daughter, Peachleaf Dairy Queen De Kol. This cow tested as a six-year-old, made a year record of 26,801.1 lb. milk, 1,054.9 lb. butter. She becomes the state champion for butter production displacing Wythe Beryl Homestead De Kol with 1,023.56 lb. butter from 29,537.3 lb. milk, made last year. Incidentally we may say that this cow is owned by Joe T. Wein of Crown Point and is a member of a very small herd.

The new state champion has a daughter Oka Queen De Kol, a great-granddaughter of the Upland cow. Tested as a three-year-old, she produced 17,193.3 lb. milk, 668.6 lb. butter.

These records are not the history of testing over a number of years but were all made during the past year. It is very seldom that there are four generations on test at one time in a herd and it is rare indeed that they do as well as the cows standing in the Mattingly establishment. We understand that Mr. Mattingly did not test before last year and that he has only a small herd.

The new state champion Peachleaf Dairy Queen De Kol is an animal of superior individuality. She is about evenly marked, perhaps a little more white than black and her picture shows that she is a good looking dairy cow. She was not handled any different from the rest of the herd, standing in the stallion with the others of the dairy and during the latter six months of her year's test was in pasture with her stablemates. Her grain rations consisted of cornmeal, wheat bran, linseed oilmeal and cotton seed meal with some beet pulp. She was fed corn silage, and legume hay—clover, alfalfa and cowpea.

Every month of her test she produced over 2,000 lb. milk and on the last day her milk production was 61.8 lb.

NICE RECORDS AT CARROLL FARMS

A number of good official records have been completed recently at the Carroll Farms, Sykesville, Md. Houwtje Vale Posch, as an eight-year-old, produced 577.4 lb. milk, 27.32 lb. butter while her five-year-old daughter Houwtje Segis Vale made 600.4 lb. milk, 25.62 lb. butter in a week. Canary King Pearl De Kol, tested as a four-year-old, made 490.4 lb. milk, 20.51 lb. butter; the four-year-old Pearlina Pontiac Korndyke made 559 lb. milk, 19.61 lb. butter and a record of 461.8 lb. milk, 19.03 lb. butter was made by the three-year-old Bessie Bonheur Oak. This is certainly a nice bunch of records to make on one batch of cows. The test ended January 23d.

Carroll Farms are owned by Wade H. D. Warfield. Besides having purebred cattle they also have Berkshire swine, Shropshire sheep and several varieties of purebred poultry. They have a new junior herdsire Dutchland Creamelle King Change whom we hope to show to our readers before very long.

WELL, WHAT ABOUT IT?

Our breed extension department recently sent out a press bulletin announcing that the yearly production of the leading Holstein cow in each of the forty-seven states is 41,689 lb. butterfat, equivalent to 52,111 lb. butter. The average production of each cow is 1,109 lb. butter in one year. The total production of these forty-seven cows is sufficient to supply each family with one pound of butter in cities the size of Rochester, N. Y., and Portland, Ore.

This production is 1.3 times the average of the 16,294 purebred Holsteins which have been admitted to the Advanced Register on records which have been made under the supervision of the state agricultural colleges.

READY FOR LIGHT SERVICE

Sired by King Pontiac Maple Knoll Ormsby, our 33-lb. son of King of the Pontiacs.

Dam:—Hillsdale Hengerveld Lyons, 488.1 lb. milk, 27.58 lb. butter. She is by Dutchland Sir Lyons Hengerveld from a 24.85 lb. cow.

Bull was born April 8, 1923 and will weigh about 800 lb.

Price, \$175

whose dam made 30.17 lb. butter in seven days as a YEARLING, averaging 58.3 lb. milk a day. She is by King Pontiac Hillsdale and from a 31.39 lb. daughter of King Burke Hengerveld.

This herd, which numbers 60 head, is under State and Federal Supervision.

Menzo A. Brooker

R.D. 2, South New Berlin, N. Y. Chenango County.

SLIFER AND POLLED HOLSTEINS

Polled Holsteins are noted for symmetry and type as well as production. Many of the best herds in Pennsylvania and eastern Ohio contain a number of Holsteins that are naturally hornless and these are usually strong among the very best members of the herd.

In sending in change of advertisement A. Conrad Slifer of Lewisburg, Pa., calls attention to the remarkable animals in the pedigree of the young bull calf he is offering for sale. The sire is Korndyke Creamelle De Kol Pontiac, a grandson of the noted sires Dutchland Korndyke Lad and Korndyke Abbeckerk. Korndyke Creamelle De Kol Pontiac is a son of Honsinger Beryl Korndyke, 20.76 lb. butter, 533.9 lb. milk in a week as a ten-year-old, the dam of Highland Korndyke Lassie, 33.9 lb. butter, 666.2 lb. milk in seven days as a four-year-old.

The young bull calf, which was born Dec. 26, 1923, is from Cora Hengerveld Korndyke Lady, a heifer that is now milking 45 lb. daily on twice a day milking and feeding. She is sired by Butter Boy Korndyke Johanna one of whose daughters, Sadie Butter Girl Spofford, produced 29.99 lb. butter, 647.6 lb. milk in a week. This bull is by Colantha Johanna Lad 8th and from May Butter Girl De Kol, 30.9 lb. butter, 690.8 lb. milk in seven days, 1,067.5 lb. butter, 25,594 lb. milk in a year. Butter Boy King Johanna is full brother to the 32-lb. cow Butter Girl Johanna and also to Butter Girl May Johanna, 639.8 lb. milk in seven

days and 22,823 lb. milk, 955 lb. butter in a year.

Mr. Slifer says that Cora Hengerveld Korndyke Lady, the dam of this calf is a pippin and that four generations back of her have had good topline, good udders, well placed tests and were pleasant milkers. Her dam, Cora Hengerveld Plum, was a real good cow and the average of her eleven milk tests in cow testing association work was 4.23% fat. She is from an A. R. O. cow and was by King Plum Johanna, whose dam, Cornucopia Plum Johanna produced 1,056.78 lb. butter in a year and has five A. R. O. daughters that average 18,723.1 lb. milk, 918.35 lb. butter in long time test, four of the daughters tested as heifers. The average test of the records made by these six animals, the dam and her five daughters, is practically 4% butterfat.

The young bull is backed by some wonderful animals. A four generation pedigree shows, in the last generation, the names of the great sires Dutchland Creamelle Korndyke Lad, Colantha Johanna Lad 8th, and King Plum Johanna who, had he had the same opportunity would probably have occupied as prominent a position in the Blue Book as the other two, judging from the performances of his dam and his sisters as well as the showing made by his daughters in dairy work.

PROFITABLE INVESTMENT

About three years ago J. H. Berdine of Franklin, Nebraska, purchased from his townsman C. J. Furry, a purebred Holstein cow, paying \$350 for her. Two years ago this cow dropped twin heifers which Mr. Berdine sold late in December to E. J. Laux of Upland, receiving \$350 for the pair. One of these heifers had freshened and Mr. Berdine kept the calf. This one with the old cow and two other daughters he has leaving him four head of purebred cattle and besides this he has cash to the amount of his original investment.

These are the first purebred Holsteins in the Laux herd but Mr. and Mrs. Laux have established quite a reputation as breeders of Poland China hogs and S. C. White Leghorns. Their establishment is known as Pleasant Acres.

PROFITABLE IN MISSOURI

From a herd of twenty Holstein cows, a breed not very popular in their part of the country, Mr. and Mrs. H. S. Drummond, manager of the Dr. Bieme farm near Middle Grove, Mo., sold dairy products amounting to \$2,500 during 1923. Most of the milk was sold to dairymen who retailed it in Moberly, twelve miles distant.

The Bieme farm is owned by Dr. H. P. Bieme, a radium specialist of Quincy, Illinois. Mr. Drummond was formerly manager of the dairy herd owned by the Union Soldiers' Home at Quincy, Ill.

REGISTERED HOLSTEIN YEARLING BULL cheap. 30-lb. dam, 35 lb. sire. Also heifer calves. **ALEX. MURDOCK & SONS**, Wyoming, Pa.

ADD THIS TO YOUR LIBRARY

A brief history of the Federal Bureau of Animal Industry is to be published to celebrate the fortieth anniversary of the Bureau next May. It will be prepared by Dr. U. G. Houck who will be assisted by chiefs of the various divisions. The book cannot be printed as a department publication so will be sold at actual cost which will depend upon the number ordered. If only one thousand copies are printed the cost will be approximately \$1.75 per copy, while if three thousand are printed the price will be around \$1.00 per copy.

The book is divided into two parts. Part I deals with the conditions and events indicating the need for a national bureau of animal industry and which led to its establishment. Part II is devoted to the story of the establishment of the Bureau; the eradication of contagious pleura-pneumonia, its first great task; its growth and organization, including personnel; the origin, work and accomplishments of the different divisions of the Bureau; its publications; the interest it has displayed in veterinary education in this country, etc. The book will consist of approximately 300 pages 6x9 inches and will be well bound in cloth.

The edition will be limited to the number of subscriptions received within sixty days from January 15th. They should be ordered from Dr. U. G. Houck, 1426 M Street Northwest, Washington, D. C. The book is approved by the Secretary of Agriculture and by Dr. J. R. Mohler, Chief of the Veterinary Department at Washington.

Livestock owners, veterinarians, and livestock and agricultural organizations will find this a handy reference book, for it will contain much information that cannot be obtained elsewhere without much research and comparative study.

NEW ZEALAND MARKETING POOL

Sometime ago the New Zealand House of Representatives passed a bill which provided for Government control of exported dairy products. This act which had to be approved by a referendum of dairy producers before it became a law provides for a "pool" of dairy products for export. This pool will be controlled by a board on which will sit representatives of the Government, the producers and the London agency which handles the products. Nearly all of New Zealand's exported dairy products are marketed at London.

QUADRUPLTS

A Holstein cow owned by the Fairview Dairy Company at Hottzdale, Pa., gave birth on Tuesday, February 5th, to quadruplets. All four of the calves are fully developed and as lively as can be, but the mother died four days afterwards.

This is the first time in the records of Clearfield County that four calves have been born at one time. An effort will be made to raise the bovine babies and exhibit them at the Clearfield County Fair next September.

KING HERD STILL WINNING

Despite the fact that they went through a long and very successful show season, the A. J. King herd has not rested on the laurels they won last fall but late in January went to Wichita and competed at the Kansas National Livestock Show. Although there were 345 head of Holsteins exhibited by some of the best breeders of the Southwest, the King herd won a goodly share of the honors. The new herdsire, Triune Ormsby Piebe 4th, won first prize in the yearling division, and was junior champion and grand champion over all bulls shown. Crescent Beauty Star Belle was the first prize four-year-old, losing only to the noted show cow, Zwingara Segis Clothilde, the grand champion. Bock Diamond Pontiac was the first prize senior yearling, while Bock De Kol Gerda Girl was the first prize junior yearling heifer and was junior champion. A number of lesser awards were won by others in the King herd.

Mr. King plans to exhibit at the Southwestern Livestock Show at Oklahoma City and to go from there to the Fort Worth Exposition, Fort Worth, Kansas. This good Missouri herd is bound to win many of the prize ribbons, no matter where it competes.

VERMONT PRODUCERS

A number of good records have recently been completed in the Newmont Farm herd, owned by R. E. Eddy of Poultney, Vt. Iva Scotia Beets produced 677 lb. milk, 31.8 lb. butter in seven days and 2898 lb. milk, 132.36 lb. butter in thirty days. Her best seven days milk production was 718.2 lb. She was grand champion female at the Rutland Fair last fall. Her four-year-old daughter, Newmont Mutual Scotia made 611.8 lb. milk, 30.13 lb. butter in seven days and 2,530.8 lb. milk, 116.63 lb. butter in thirty days.

The mature cow, Pauline Cornucopia Mutual, made a seven day record of 627.7 lb. milk, 27.05 lb. butter and her junior four-year-old daughter, Lady Serida De Kol Mutual produced 524.6 lb. milk, 25.83 lb. butter. Newmont Esther De Kol Walker, a senior three-year-old in this herd completed a seven day test with 501.5 lb. milk, 22.8 lb. butter.

TESTERS SHORT COURSE

A testers short course will be given at Pennsylvania State College; begins at 10 a. m., March 10th, and continues until noon, March 15th. The only expenses for those taking the course will be board, room and living expenses. Fourteen different counties now need testers or will need them in the near future and there are possibilities of new positions opening right along.

"IT PAYS TO BUY THE BEST"

Registered Holstein Heifer Calves from son of first prize bull of New York State. Beauties \$60 each. Registered, transferred and express prepaid east of Mississippi. **NU-BORN FARMS**, Jasper, N. Y.

SMITH & CLARK GET NEW HERDSIRE

Smith & Clark of Honesdale, Pa., have purchased from the Hillside & Springbrook Farms at Trucksville, a very nice young bull ten months of age. He was sired by King Pontiac Maple Knoll Ormsby, whose daughters are making splendid records and who was by King of the Pontiacs from a 33-lb. daughter of King Korndyke Hengerveld Ormsby. The dam of this young bull is Akinside Dottie Pietje Pontiac. She is the youngest cow in Pennsylvania to make over 30 lb. butter and over 600 lb. milk in seven-day official test. Calving at three years, six months, four days old, this daughter of Pietje 22d Son produced 609.3 lb. milk, 30.51 lb. butter in seven days with an average test of 4.01% fat.

The dam and sire's dam of this fine young bull have seven-day records that average 31.835 lb. butter. There are many other big producing cows as well as a number of splendid transmitting sires that appear in his pedigree and he certainly has the right to sire producers.

RECORD MAKING AT HILLSIDE FARMS

A junior three-year-old daughter of King Pontiac Maple Knoll Ormsby is now in test at the Hillside Farms. In seven days she has produced 29.51 lb. butter and is making a very large thirty-day record.

The daughters of King Pontiac Maple Knoll Ormsby are making good. Several of the daughters of this bull tested as two-year-olds have made from 20 to 25 lb. butter in seven days. The bull himself is a son of King of the Pontiacs and Maple Knoll Helen, 33.16 lb. butter in a week as a six-year-old and 30.97 lb. butter in seven days as a junior four-year-old, each time averaging well over 5% fat. She was a daughter of King Korndyke Hengerveld Ormsby and is, therefore, a sister to the famous New York sire, Ormsby Korndyke Lad.

IN THE LIMELIGHT

The picture of a Holstein bull calf owned by W. J. Higdon and Sargent Brothers of Tulare, California, appeared simultaneously in thirty-six Pacific Coast newspapers on the morning of February 15th. These papers represent a circulation of 500,000.

This calf is a son of King Korndyke Acme and his dam, Aaggie Acme Burke, as a three-year-old made 1,142 lb. butter in a year.

STRICKLAND FARMHOUSE DESTROYED

Fire of unknown origin destroyed the farmhouse on the Strickland Estate, Carthage, N. Y., on the morning of January 11th. The property loss is estimated at \$7,000 and there is no insurance as the policy had recently expired and was not renewed. Mr. and Mrs. L. A. Housman were the tenants. The barn was saved as well as the forty head of registered Holstein cattle it housed.

RECORDS AT WEST VIEW

Several good records have recently been made at West View Stock Farm, Centerville, Pennsylvania. Maple Grove Pontiac Fanny as a seven-year-old produced 629.8 lb. milk, 25.39 lb. butter in seven days. The junior three-year-old, Pauline Wetzel, produced 457.3 lb. milk, 19.75 lb. butter. This was from three quarters as one of her tests was badly cut last fall before she was dried off. The senior two-year-old, Selkirk Ridge Brandi Soldene, tested 105 days after freshening, made 463.2 lb. milk, 20.34 lb. butter in a week.

The head of the herd is Maple Grove Clever Konigen Glista, No. 375894, whose fourteen nearest dams have seven day records that average 24 lb. butter. He is a son of Clever Model Glista, whose dam, Glista Coreva, has twice made over 30 lb. butter in seven day official test and is one of the highest record cows in the great Holstein herd at Cornell University.

The herd at West View is operated from a dairy standpoint. The proprietor, Merle W. Ongley, is an enthusiastic Holstein breeder who selected his foundation stock with great care.

SOME BABY

On January 25, 1924, Countess Johanna No. 69668 dropped a heifer calf weighing 120 lb. in the herd of C. E. Stouffer, Shippensburg, Pa. Countess Johanna was born March 3, 1907. She is a daughter of Johanna Clothilde's Lad and Saltram Countess. She has an official record made as a six-year-old of 428.2 milk, 18.47 lb. butter. A heifer calf weighing 120 lb. is quite a performance for a cow nearly seventeen years old.

LIVINGSTON HONORS TO HOLSTEINS

Eight purebred Holsteins owned by Jay B. Tooley, of Howell carried off the herd honors in the Livingston Association No. 1 for the month of January. Their average milk production was 1,523.2 lb. and average fat production 52.2 lb.

Christmas, owned by Burr J. Hoover, was the high individual with 2,480 lb. milk, 114.5 lb. fat. Ferndale, owned by C. S. Heeg & Son was second with 2,489 lb. milk, 102.1 lb. fat. Lady Cadillac was third with 1,727 lb. milk, 100.2 lb. fat. The first two animals were milked four times daily while Lady was milked twice. The ten leading cows in the association were Holsteins, either grade or purebred. The tester is Milton Shier.

During January nine of the ten leading cows tested in the Livingston Testing Association No. 2 were black and whites, the animal holding sixth place being a grade Guernsey, reports tester, Stuart Lambie. Patty Laurel Hengerveld, owned by A. F. Morgan of Pinckney, Mich., held first position with 67 lb. fat from 1265 lb. milk. Garza Creamelle Segis Pietertje, was second with 63.7 lb. fat from 1,800 lb. milk. She is owned by Roy F. Placeway, also of Pinckney.

THE KANSAS BETTER BULL CONTESTS

George W. Catts, agricultural commissioner for the Kansas City Chamber of Commerce, on February 7th at Manhattan, presented prizes to representatives of the various counties engaged in the 1923 purebred sire campaign. The Franklin County Farm Bureau again led, replacing 103 scrub bulls by purebreds. They were awarded the \$500 cash prize offered by the Kansas City Chamber of Commerce.

During 1922 Franklin County replaced 161 scrub bulls and won a prize of \$1,000 given by the Chamber. Much of the credit is due F. Joe Robbins, who has been the Franklin County agent for the past three years.

Morris County won the second prize of \$250 by the replacement of 90 scrub bulls. Paul B. Gwin is county agent.

No less than 1,358 scrub bulls were replaced by purebreds in the Kansas Counties competing in both the 1922 and 1923 contests. Shorthorns led in number. Franklin County dairymen purchased twenty-one Holstein bulls and ten were purchased in Morris County.

HOLSTEINS AS USUAL

Thirty-eight of the 155 animals tested in the Rice County Testing Association for January produced more than 40 lb. butterfat. The average test of all the cows in the association was 934 lb. milk, 3371 lb. fat, and an average fat test of 3.61%. The leader of the thirteen herds enrolled in the association was composed of nine Holsteins, owned by R. F. Wolcott, Faribault, Minn. They averaged 1,399 lb. milk, 47.04 lb. fat. Thirteen black and whites owned by Anton Helberg, Faribault, were second with 1,189 lb. milk, 40.08 lb. fat. Mr. Wolcott had the highest producing cow in the association. She was a grade Holstein and produced 68.24 lb. butterfat from 1,587 lb. milk.

MARYLAND PUREBREDS IN FRONT

Houwtje Segis Vale, a purebred Holstein owned by Wade H. D. Warfield and enrolled in the Howard County, Md., Testing Association produced 81.4 lb. butterfat from 2,201 lb. milk during the month of January. Star Segis Korndyke Moss Side, also a purebred black and white was second with 67.3 lb. fat from 1,683 lb. milk. Pearlina Pontiac Korndyke, a member of Mr. Warfield's herd was third with 65.9 lb. fat from 1,940 lb. milk.

A pair of June Calves from an Accredited Herd, A. R. O. Dams Sire; Maple Grove Yuma Glista, whose dam produced 641 lb. milk, 27 lb. butter in 7-day official test. \$125 takes the pair, Maple Grove Stock Farm, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

A magazine writer tells us that a dog fills an empty space in a man's life. This is especially true of the hot dog.

ARP TO STAY IN BUSINESS

From time to time the BREEDER AND DAIRYMAN has told of Arp's Dairy, Eugene, Ore., of the production of the cows in the herd and occasionally of the owner Max Arp attending sales or club meetings. Last August fire destroyed all the buildings of the Arp dairy and the owner got ready to turn the farm into an orchard, but he says, "We missed our Holsteins and that changed our plans again. Now we have sold our farm at Eugene and bought the 519 acre, Donnybrook Farm, near Seattle, Wash. We are moving our small herd of thirty Holsteins this week."

Donnybrook Farm is served by Route No. 1, from Bothell, Wash. We know that many readers of the BREEDER AND DAIRYMAN will wish Mr. Arp and his family every success in their new location.

FULDE COMES EAST

Holstein breeders of the East will welcome back the well-known feed man, J. C. Fulde, who has accepted the position of manager of the Feed Department of D. A. Stickell & Sons of Hagerstown, Maryland. This enterprise will specialize on high-quality feeds and on account of the advantageous location of the plant will be able to serve the Holstein-Friesian feeders of the East to good advantage.

Mr. Fulde has a wide acquaintance in the eastern United States. For many years he has been connected with the Quaker Oats Company and for several years has been located at Chicago. His many friends will wish him success in his new position.

HIS DAIRY WIPE OUT

John Grieff, Civil War veteran of Bridgewater Township, Somerset County, will, if the bill now before the New Jersey legislature be adopted, receive \$1,500 for the death of forty-two Holsteins which died from the effects of eating foliage covered with arsenic on the estate of James B. Duke, the tobacco king.

The poison was used by agents of the State Department of Agriculture in fighting the gipsy moth on the Duke estate. According to Senator Case of Somerset, who is responsible for the introduction of the bill, the cattle wandered across the Raritan River, onto the Duke estate and there received the fatal dose. Grieff was left practically penniless.

COOPERATIVE CAMPAIGN

A community purebred sire campaign is being waged in Snohomish County, Washington. An inspection committee consisting of representatives of different breeds have been appointed. Ed Hoem of Snohomish being the Holstein representative. They are to look over all the animals offered and reject any found not up to standard.

The manager of the campaign is R. M. Turner, assistant director of the Extension Service of the State College. George Gue of Auburn and G. M. Wallace of Sunnyside are the salesmen.

Three Times Grand Champion

KING ALCATRA RAG APPLE POSCH

for three successive years has been Grand Champion male at the Susquehanna County Fair and Susquehanna is the leading Holstein County of Pennsylvania. He heads our Accredited Herd which contains cows that have produced more than 12,000 lb. of milk in a year in C. T. A. work. A son of King would look mighty good at the head of your herd.

A. R. BUSH

Susquehanna County

MONTROSE, PA.

PINE RIDGE HERD

is headed by

KING RELIANCE LOCKHART VERMAN. He is a son of **KING VERMAN**. **PORTIAC HENGELVELD** and **PEARL LOCKHART RELIANCE**, 24.70 lb. butter, 425.5 lb. milk in a week as a four-year-old.

In the Dairyman's Division she has a year record of 15,497.7 lb. milk, 322.1 lb. butter. Think what that means!

Then she was the First Prize three-year-old at the 1920 New York State Fair.

Now about a son of this good bull! Herd under State and Federal Supervision. Last test Clean.

Established fifteen years.

Dan E. Anderson

R. D. 3, Norwich, N. Y.
Chenango County.

Waldron Farm Holsteins

KING SYLVIA PONTIAC FIERKE is the sire of a nice bunch of heifers in our herd which consists of 20 head of registered Holsteins.

He was by **CHAMPION ECHO SYLVIA PONTIAC** and from **May Echo Pontiac** 24, 36.33 lb. butter, 360.8 lb. milk in seven days as a junior four-year-old. Her dam, a daughter of **May Echo Pontiac**. We offer his sons and a few good cows and heifers bred to him.

Head under State and Federal Supervision.

Tested CLEAN.

MRS. MAUD DWIGHT
Chenango Co., South Otsego, N. Y.

BOUGHT PART OF MORRIS RANCH

H. O. Harrison of San Francisco paid \$200,000 or approximately \$320 per acre for 620 acres of the Woodland property of A. W. Morris & Sons, Corporation. Mr. Harrison is an automobile distributor and owns a high-class herd of registered Aberdeen Angus cattle which will be placed on his new ranch.

The transaction materially restricts the holdings of the Morris Corporation as they sold 1,100 acres about five years ago and took a lease on the property which has nearly expired.

They still have about 800 acres between Woodland and Knights Landing and it is reported that they will erect modern cattle barns on this property. There are still about 200 head of young registered Holsteins on the Harrison property which must be vacated before very long and buildings will have to be erected to take care of the stock.

REGAN IN VIRGINIA

Jerry Regan, well known to Holstein enthusiasts of southern Pennsylvania has left Cream Rose Dairy, Livermore, Pa., and is at present at the Seward Stock Farms, Petersburg, Va., one of the greatest Holstein establishments in the Old Dominion State.

The Seward Stock Farms are owned by H. S. Seward. This gentleman, who has a high class Holstein herd, will be remembered as the purchaser of the bull, **Carnation Pietertje Colantha**, at the Third Brentwood Sale. This bull is a son of Dutchland Governor Sir Colantha and Segis Pietertje Prospect, 37,381.4 lb. milk, 1,448.7 lb. butter in a year, the world's champion cow for milk production in year test.

His many friends will wish Mr. Regan every success in his present location.

ITALIAN DAIRY EXPOSITION

Exposition Internationale De Laiterie is the title of an exposition which will be held at Milan, Italy, April 19, 1924. The exposition is one of dairy products and the machinery used in the manufacture of these products. The event was scheduled to take place November of last year but was postponed. The exhibits of manufacturers of machinery used in dairy factories are particularly invited by the committee in charge. The exhibition is under the patronage of his Majesty the King of Italy and the Italian government. All exhibits will be passed by the custom officials as free of duty and the freight charges for transportation of the goods will be reduced and there will be a reduction of passenger rates. The address of the committee is Castella Postale, 812 Milano, "Italia."

SALES FROM BRIDGEPORT HERD

Mr. T. B. Hotchkiss of Waterbury, Conn., recently bought from Bridgeport City Farms, Bridgeport, Conn., the bull, **Sir Korndyke Bess Piebe** 2d. This bull was sired by **Sir Korndyke Bess Piebe**, a son of **Queen Piebe Ormsby Mercedes**, a cow that has records of production of 5,795.24 lb. butter, 124,988.30 lb. milk in six years. The dam of the young bull is **Orville Colantha Creamelle**, with a record made as a three-year-old of 812.19 lb. butter, 18,764 lb. milk. She is a granddaughter of **Colantha Johanna Lad**.

The Bridgeport City Farms sold a real good bull to **Earl Bennett** of Norwich, Conn. This is **Sir Sunnyside Colantha** who was from **Beaver Dam Sarah**, 20,758.7 lb. milk, 769.04 lb. butter in a year as a junior three-year-old.

PUREBRED SIRES SOLD

The Waseca County purebred sire campaign conducted by the Minnesota Holstein Breeders' Association resulted in eighty sires being placed in the county. These consist of eighteen Guernseys, forty-seven Holsteins, eleven Shorthorns, two Herefords, and two Red Polls. The movement was backed by bankers and agricultural extension leaders.

CONDEE HONORED

R. A. Condee, livestock editor of the *Los Angeles Cultivator*, and head of the Agricultural Department of the California Junior Republic at Chino, has been appointed by Governor Richardson as director of the state board of agriculture.

Mr. Condee will assist in the management of the California State Fair this fall. Mr. Condee has had considerable experience. He is a director of both the Southern California and the Los Angeles County Fairs and is one of the vice-presidents of the Pacific Slope Dairy Show. Under his supervision the boys of the Junior Republic have exhibited stock of various kinds at a number of fairs and have been very successful.

SECOND LARGE YEAR RECORD

Roxland Oceta, owned by the Summit Farms of Davidson, Me., recently completed another great record and is the first cow in the state of Maine to make two consecutive year records of each over 20,000 lb. milk. Her first long-time record was made as an eight-year-old and was 21,099.9 lb. milk, 728.86 lb. butterfat, equivalent to 911.07 lb. butter; while her second record recently completed was 20,833 lb. milk, 695.92 lb. fat. Three different years in official test she made 28, 29, and 30 lb. butter, each time producing over 600 lb. milk. She is a daughter of **Midland Korndyke** and **Lota De Kol**, a 30-lb. cow.

MABEL LEADS IN SAC COUNTY

Twenty-seven herds containing 314 cows were tested in the Sac County, Iowa, Testing Association during January. The average milk production for all cows was 602 lb. and the average fat production was 23.23 lb. Eight cows produced more than 50 lb. fat and twenty-eight exceeded 40 lb.

Mabel, a purebred Holstein, owned by **Henry C. Hoft, Jr.** of Wall Lake was the leader with 1,705 lb. milk, 64.7 lb. fat to her credit. Her net profit was \$23.84.

A SALE WITHOUT A SLOPER CLOVERBLOOM FARM DISPERSAL

YORK, PENNSYLVANIA

MARCH 21, 1924

Cloverbloom Farm being sold, the entire herd must also be sold without reserve. It includes:

A NUMBER OF CHOICE FAMILY GROUPS—BETTER BUY ONE OR MORE OF THESE.

Granddaughters of the century sire, **KING SEGIS PONTIAC ALCATRA**;

ALBINA PONTIAC NETHERLAND, a yearling heifer that won eleven prizes at the shows last fall; Twenty-nine young females and the herd sire, **COLANTHA JOHANNA KING**, probably the handsomest son of **Colantha Johanna Lad** 8th, in turn one of the very best sons of **Colantha Johanna Lad**.

Colantha Johanna King is five years old. His dam is by **King Quality** from a daughter of **King Walker**—There's breeding for you and any amount of big records.

This is a herd of young animals bred for production and possessing choice individuality. They will make good wherever they go.

Sale Manager, S. R. Miller.

Auctioneer, Nelson Henry.

COMPLETE DISPERSAL OF LOYALSOCK HERD

45
HEAD

MARCH 12, 1924

A Herd of Real Producers and Choice Individuals. No Slopers

45
HEAD

KING JEMIMA SEGIS, a grand individual, whose three direct dams have year records averaging 1,216 lb. butter. You are bound to like him.

TRAVERSE ECHO SYLVIA KING, a show bull, son of **Echo Sylvia King Model**, and **Traverse Inka Johanna**, milk 736.4 lb.; butter 33.27 lb.; twice over 30 lb.; 5 A. R. O. daughters, one 35 lb. and one 32 lb.

LOYALSOCK COLANTHA WITRA, 1,185 lb. butter in a year; together with four of her daughters, one of which recently closed a year record of 1,075 lb. butter as a three-year-old, while another made 650 lb. butter in 305 days as a two-year-old. This is one of the greatest families of the breed.

A daughter of **CHAMPION ECHO SYLVIA PONTIAC** with two 30-lb. records including 32 lb. made as a four-year-old; also her 11-months-old daughter, sired by **Alcatra King Sylvia**, the \$50,000 son of **Carnation King Sylvia** and that wonderful producer and former World's Champion, **Tilly Alcatra**. A 29-lb. two-year-old daughter of **CHAMPION ECHO SYLVIA PONTIAC** and her son sired by **Alcatra King Sylvia**.

A 20-lb. two-year-old daughter of **KING SEGIS PONTIAC COUNT**, the only sire with three 30,000-lb. year record daughters.

A 30-lb. four-year-old daughter of **KING SADIE VALE HENGELVELD**, he by **King Korndyke Sadie Vale** from the highest record daughter of **Sir Veeman Hengerveld**.

Only one cow in the herd over seven years old. The sale will be held at

Entered as second-class matter April 8, 1922 at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

Onaco Sir Lucille Jolie Beauty

His dam and sire's dam successively held the World's Championship for butter production in the senior four-year-old class—yearly division.

His dam, Lucille Jolie Pontiac, produced 1,173.15 lb. butter in 365 days, her milk averaging 3.94% fat.

His sire's dam, Keystone Beauty Plum Johanna, produced 1,294.71 lb. butter in 365 days, her milk averaging 4.02% fat in strictly official test.

The dam made 33.29 lb. butter in seven days, and the sire's dam, 32.88 lb., while, curiously enough, each produced 665.5 lb. milk in the seven days.

A bull combining the blood of these two great former World's Champions is BOUND to sire producers. The daughters of Onaco Sir Lucille Jolie Beauty are not yet in milk but they show promise of inheriting the producing capacity of their famous relatives.

You cannot obtain these heifers but you can obtain one of their brothers. Write to-day to

Vernon, Vermont, 5 Miles South of Brattleboro
Wednesday, March 26th, 1924

This herd is headed by Mt. Hermon Volunteer No. 364198, whose dam made a junior two-year-old record of 22,413 lb. of milk in 365 days, and has just finished a three-year-old record of 23,924 lb. milk in 365 days, averaging over 90 lb. daily for over 90 days. The Mt. Hermon School is keeping her last bull for use in their own herd. The sire has 75% the same breeding as a 30,000 lb. cow. His dam won \$100.00 in gold at The National Dairy Show for A.R.O. cow. Her half-sister won first prize of \$150.00.

The sale includes nine head of the get of Mt. Hermon Volunteer. Only one animal in herd is over seven years and only three over five years old.

Will also sell one registered black Percheron mare, weight 1,650 lb., nine shoats, a few tons of hay, and the farm machinery, including DeLaval two-unit milking machine, nearly new.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

DETACH HERE—**The Holstein Breeder and Dairyman—Two years for One Dollar**

Keeping His Girls on the Farm

ONE of the most influential cattlemen in Columbia County is Clarence Reece of Berwick, Pa. Mr. Reece is a progressive dairyman and naturally his herd consists of purebred Holsteins. He is secretary of the Columbia County Holstein Breeders Association and is a member of the Grange, Dairyman's League and of the local Farm Bureau. Some time later we plan to say more about his Holsteins but at the present time we will just mention that he is one of a number of dairymen that recently purchased the splendid sire, King Alcartra Rag Apple Posch, a bull that for

liked Holsteins, and felt it would be right for me to have a calf of the same breed.

Finally our calves were secured and the Club was started on the 5th of February, 1921. The Club started with fourteen members. The calf which I grew was two months old when I received it. I was very proud of my calf and started right in to feed it according to Father's advice and a sheet on feeding calves which I got from the County Agent. The ration fed was 30-lb. corn, 30 lb. oats, 30 lb. bran, and 10 lb. oil meal, with all the silage and hay she would eat. I believe in feeding plenty if you expect calves to grow to be big cows.

In growing out a calf I find it important to feed regularly and also to always have the milk at the same temperature.

The picture I am sending you shows some of the fun one has along with the work connected in growing a calf.

She was a little past a year old and was developing into a nice young cow when Father had her dehorned

LADNAR DE KOL SEGIS

RAISED BY PAULINE REECE

Pauline is the second girl, reading from left to right, Grace is to her left and Gladys is near the calf's head.

three years had won the grand championship at the Susquehanna County Fair. This bull was purchased from A. R. Bush of Montrose, Pa., and his purchasers had the opportunity to look over the "get" of this bull both grade and purebred before they closed the transactions for although Mr. Bush's herd is exclusively purebred, King Alcartra Rag Apple Posch has a number of grade daughters, some of them in milk in a neighbor's herd.

Mr. Reece is prominent as a breeder of Duroc Jersey hogs. When the Pennsylvania Duroc Jersey Breeders' Association met in Harrisburg at the time of the Farm Products Show, they elected Mr. Reece vice-president.

Clarence, as nearly everyone calls him, has imparted his love for the farm and of purebred stock to his children. His girls have all been members of calf clubs and their efforts have been crowned with a considerable degree of success. We will let each of the young ladies tell her story in her own words.

PAULINE COMBINES WORK AND FUN

I decided to join the Moreland Holstein Calf Club of Lycoming County, Penna., at the time the Club was being formed. My father is a Holstein breeder and I

FARRAGUT LOUISE KORNDYKE

Raised by Gladys M. Reece, Berwick, Penna.

and she bled to death. I felt so bad about losing her that my father gave me a heifer from his herd. This heifer freshened the 28th of December, 1923 with a heifer calf and is milking 40 lb. a day.—PAULINE REECE.

GLADYS TRIED TO BEAT HER SISTERS

The summer of 1922 the Columbia County Holstein Association started a Holstein Calf Club. As my two sisters were in a Calf Club the year before I wanted to have a calf of my own too, so father said I could go in the Club. There were twenty-three of us. On

August 16th, they had a Holstein picnic at our home and gave out the calves. I drew Farragut Louise Korndyke from the herd of T. L. J. Reece of Montoursville, Penna. She is a nice individual and has grown to be a real heifer. As I had watched my sisters grow their heifers I suppose I had a better chance than some of the boys and girls. But I was more anxious to beat my sisters.

I started to feed my calf the same ration father feeds, whole oats, whole milk right from the cow, and all the clover hay it would eat. I fed one pint of oats and six pounds of whole milk twice a day and as she grew older, I increased the oats till she ate three quarts twice a day. Of course, I had to do something to make her beat so I tried to take time every day to brush and lead her. In the fall of 1922, twenty-two of the Club members showed their calves at the Bloomsburg Fair. I won second place with her in club judging and second place in the open class. She has grown very good. I think she will weigh around 1100 lb. and will be two years old the 27th of February, 1924.

The most important things in growing calves are, I think, a good grain ration, plenty of clover hay, whole milk, all the pure water they want and a regular feeding time and don't forget the judge likes to see your calf or heifer stand up well and lead gentle in the show ring.—GLADYS REECE.

GRACE IS A REAL COW-GIRL

In the winter of 1921 at a Community Farm Bureau meeting held at our home they talked of starting a Holstein Calf Club. Father asked us girls if we wanted to join and we decided we would. As we always helped father milk and feed the calves, we thought it would be nice to own a calf of our own.

On February 5, 1921, the Central Pennsylvania Holstein Association held a meeting at our home and they gave out fourteen Holstein heifers. I drew a nice heifer from the herd of H. T. Clees of Montoursville,

KUPERUS COLANTHA BOBBET 2d
Calf Club heifer raised by Grace Reece, Berwick, Penna.

Penna. Her name was Kuperus Colantha Bobbet 2d.

I started to feed my calf according to father's advice and a sheet on feeding calves which I got from the County Agent. We mixed a grain ration of 30 lb. oats, 30 lb. corn, 30 lb. bran and 10 lb. oil meal.

I gave her 1½ lb. twice a day of this ration and all the hay she would eat and 8 lb. skim milk twice a day.

As she grew older I increased her grain ration till she was eating 3 lb. twice a day at the time of the

Lycoming County Fair held at Hughesville in the second week of October, 1921 where I showed her. We won third prize in Club work, the prize being \$15. There were fourteen animals exhibited. Father thought I should show her in the open class so I did and she won third prize in the open class with at least twenty competitors.

Boys or girls that never had a Club calf of their own can't realize the fun and real interest we really have in raising and showing a nice heifer.

My calf freshened when she was twenty-two months old. I was fortunate to get a heifer calf and I sure was proud of it and took the best of care of it. In the meantime we had moved to the farm we are now on in Columbia County and a Calf Club of twenty-three was started and as my heifer calf was old enough to be sold as a Club calf, I decided that if the committee would accept her, I would sell her so she was in the Club formed in Columbia County this last year. She has really done better than her mother when it comes to winning prizes. She won second in the Calf Club round-up at the Bloomsburg Fair and third in the open class. I showed her mother along with father's cows at the fair this year at Bloomsburg and she won first prize in her class against seven others.

She is a very nice individual and she has been handled by halter till she will stand in any position I want her to. I think one of the best points any boy or girl can accomplish with their heifers, is to have them to come out in the show ring and stand in the right position before the judge.

I have her in a Cow Testing Association which started in October and she has been on the honor roll for all three months that she has been tested.

The picture I am sending is not a very good one, but it is the best I have of her by herself. GRACE REECE.

League Withdrawals Less than Last Year

WITHDRAWALS from the Dairymen's League Coöperative Association, Inc., were less than half the number reported in 1923. The period when notice of cancellation of contract could be filed was from February 12th to 28th and the withdrawals are effective April 1st. During the recent ended period cancellation notices were received from 2,987 active participants in the pool and from 2,137 inactive members, a total of 5,124 as compared with 10,768 a year ago.

The membership department reports that during the week of March 3rd, 127 new contracts were received and that during the first thirteen days of March, 212 milk producers signed up to join the pool, a total of 4,123 new contracts since April 1, 1923.

League officials announced that the February pool price for three per cent milk at the 201-210 mile zone is \$1.90 per 100 pounds with a deduction of five cents for certificates of indebtedness and eight cents for pool expenses. The cash distribution is \$1.77 payable on March 25th.

The ultimate success of a breeder as well as the manufacturer depends largely if not wholly upon the product which he produces.

Purebreds in Commercial Production

By Prof. E. A. Trowbridge, University of Missouri

THE great function of purebred livestock is the improvement of animals used for commercial production of livestock products. If it does not, or cannot serve this purpose, there is no reason for its existence. If it serves other purposes, they have been and are at this date of secondary importance. That it is in a large way serving the first purpose is amply proven by the ever improving quality, increasing efficiency and closer approach to market standards of herds, flocks and studs where purebred animals, especially sires, have been used intelligently. That it has served some other purposes is probably true, and if these have been for human betterment, well and good. If they have been otherwise, the unsatisfactory results have in most cases been due to lack of information and understanding, bad management or judgment, or unreliable advice.

It is certainly true that some individuals among purebred animals have failed to improve the livestock of commercial production. It is equally true that some individual men have lost money in purebred livestock ventures. However, purebred animals of the better sorts have wrought the change from the longhorned steer of early days to the prime baby beef of to-day; from the 200-lb. butter cow to the 800-lb. butter cow; from the ill-shapen, poorly conformed, rough yearling shote to the efficient pork making pig of the present day. Most men who have tried constructively, sanely and conservatively to breed purebred livestock have found it a business of pleasure and reasonable profit. The vast majority of those who have intelligently used purebred males for the improvement of commercial herds and flocks have found it highly profitable.

The purebred livestock industry has become so extensive that at times, and to certain people, it seems to be almost an end in itself. With the great development of the production of purebred animals for breeding purposes as a specialized business, there is danger that the real purpose of purebred livestock may be lost.

In the attempt to produce some special non-essential character the general usefulness of the animals may be lost to sight. It is possible for a man to rush hurriedly into the production of purebred livestock as a speculative venture. It is possible for a man to founder upon the rocks of pedigree fad or non-essential characteristics. Some have tried to get into the business in a big way in too short a time. They have failed to understand the great principles underlying the purebred livestock business and its relation to commercial production and have gone to the rocks of financial ruin.

Some men have failed in the purebred business because they have attempted to start right at the top, unwilling to grow into the business and develop a reputation. They have either purchased individuals at prices far above their value or else they have been unwilling to pay a fair price for individuals that were really worth that price. Others still have failed because of extensive purchases, more or less on credit at times when prices were extraordinarily high and have been forced to take the depreciation which always follows such a period.

Others have failed because of bad advice. Bad advice may come from those who lack information and understanding, or from those selfishly perverted by mercenary considerations. In seeking advice in any line of endeavor, reliable advisors are always essential.

It is therefore evident that the man who expects to make a business of breeding purebred livestock for breeding purposes must thoroughly understand its limitations and possibilities.

In the beginning it must be understood that the largest group of breeders of purebred livestock must be producing males to be sold to head commercial herds of grade or scrub females. There is a group of breeders just beyond this great group whose business consists largely in producing herd males and occasional females for this larger class. There is the last group of breeders which is relatively small. It includes a small group of constructive breeders who are producing individuals of the most superior quality and merit which may be used for the improvement of other purebred herds and for the improvement of their own. Herds do not classify in any one of the above classes because of their size, nor because of the money invested, nor the bank rating of the owner, but because of the real merit of the animals produced and the constructive policies of the man at the helm. It must also be remembered that every herd in every class produces some inferior individuals, and that when selections are made both individuality and pedigree should be considered.

This purebred livestock business is organized much like the great blood system of the body; being pumped from the heart through the larger arteries into the smaller arteries and ultimately into the capillaries where the supplying of food to the tissues of the body really takes place. The man who is producing the purebred bull to be sold for use in commercial production occupies this later very important place.

The men who have made creditable reputations or who are now doing so are those who understand the broad principles upon which this business operates. They have usually gone into the business gradually and at reasonable prices. Many of the best breeders have purchased a few females and by careful effort and the use of good males have produced their own herd by breeding; they are men who either have been in the business for a long time or expect to stay in the business for a period of some length. In most cases the speculative feature of the business has been minimized or at least of secondary importance; they are men who have an eye to the improvement of livestock in their communities.

There are some men who seem especially fitted to take up the production of purebred livestock. There are others who by nature and circumstances are not fitted for the business.

During the past five years some examples of marked success and some of glaring failure have come to our attention. This is not more true of the livestock business than of other branches of industry. The condi-

tions brought on by the war and its aftermath have been largely responsible for this period of uncertainty.

For the average man who handles livestock the first consideration should be herd betterment through the use of good purebred males. The quickest and most certain profits in the business lie in this direction.

Betterment of community livestock should be the next consideration. By producing purebred males which can be sold to neighbors and others for the improvement of grade livestock the breeder becomes a real factor in the prosperity of his community. By demonstrating what superior sires can do he furnishes convincing evidence to others. Breed improvement is the field into which relatively few may advance and while it requires ability, thought and patience the results, if the business is properly handled, are satisfying and worth while.

A Man of Vision

AT THE annual meeting of the Holstein-Friesian Association of America held at the Yates Hotel, Syracuse, New York, June 5, 1901, one of the speakers was a newly admitted member, Henry D. Watson, of Kearney, Neb. Mr. Watson at that time owned an extensive ranch in what was then regarded, from the dairying standpoint, as an undeveloped and unpromising region. The distance he had traveled and his own picturesque personality made Mr. Watson an object of interest to the members present. Mr. W. A. Matteson, then president of the Association, called upon Mr. Watson to say a few words to his fellow members. Among the things Mr. Watson spoke of was alfalfa. He told that in 1890 there was a drought in the state. He saw a small piece of land that was growing alfalfa and as the alfalfa grew all summer when almost everything else died down, he purchased the land and in 1894, when there was another drought, had an experimental plot of twelve acres. At that time Western men had an idea that they could not grow alfalfa unless it was irrigated but from that year no water excepting that which fell from the skies went on the land. In 1895, Mr. Watson sowed 1,000 acres to alfalfa; another 1,000 acres in 1896; and, when he spoke to the breeders in 1901, he said he then had 25,000 acres seeded to alfalfa. Naturally he was an alfalfa enthusiast.

Funeral services for Mr. Watson were held in Omaha, February 11th. Under the caption, "A Man of Vision" the *Lincoln Star* says:—"Henry D. Watson was an architect of wealth, and a builder of fortunes, who derived his chief enjoyment from the contemplation of the works he had wrought and the benefits he had brought to his fellow men. For although the vision, the energy and the genius of Mr. Watson resulted in enriching the State of Nebraska and its people to an extent beyond calculation, he died practically void of worldly wealth, rich only in the knowledge that he had benefitted his fellows and that his efforts were widely appreciated.

"It was Mr. Watson who demonstrated that alfalfa could be grown in this state without irrigation and probably no single crop has brought greater return to Nebraska than this one, which he urged with such earnestness and convincing eloquence. He saw the future of

dairying and three decades ago he built at Watson's ranch the largest dairy barn in the country, stocking the place with a wonderful herd of Holstein cows. Poultry was recognized by him as an unfailing source of income and the poultry stock and arrangements of the ranch were of the highest class.

"Every prediction made by Mr. Watson for Nebraska more than thirty years ago has come true and every word of advice given by him has been vindicated. He saw the future, but he was ever so occupied in bringing it to the attention of others, that they too might reap, that his own harvest was neglected and lost. Yet not entirely so. Henry D. Watson sowed for mankind, rather than for himself. He put the seed into the ground that the world might garner and be the richer that he had sown. He saw the harvest and rejoiced in its abundance, even though little of the material return went into his own storehouse.

"Nebraska and Nebraskans owe much to Henry D. Watson."

More Modified-Accredited Areas

NINE Counties were added to the list of modified-accredited areas by a recent announcement of the Federal Bureau of Animal Industry. The first list announcement when the regulation was signed July 23, 1923, included seventeen counties in four States. The new list is composed of Grand Traverse County, Michigan; Iredell, Robeson, Greene, Alamance, and Wayne in North Carolina; Ohio County, Indiana; Giles, Tennessee, and Edgar, Illinois.

The amendment under which these two lists of counties have been designated as modified-accredited areas makes it possible for farmers and breeders of cattle to get the maximum benefit from their efforts at tuberculosis eradication even though the disease has not been wiped out entirely. Counties in which a test of all the cattle within their borders shows the presence of not more than one-half of one per cent to be reactors will be given the advantage of this designation. The few others in which infected animals were found, and of course removed, are quarantined and cannot be retested within less than sixty days from the date of the country-wide test. The States in which such counties occur will maintain quarantines to protect them from the introduction of untested cattle from anywhere outside.

When an area has become modified-accredited it will remain so for three years provided no development indicates that there has been an increase in the percentage of tuberculosis. If the percentage appears to have increased at any time to as much as one per cent then all the cattle must be tested again; if it is between one-half and one per cent then only the herds containing infected cattle need be retested.

The milk production of heifers out of ordinary cows and sired by Holstein, Jersey and Guernsey bulls increased over that of their dams by 64 per cent. The fat production increased by 52 per cent, the second generation increased in milk production over the original cows 130 per cent; in fat production, 109 per cent. —*North Carolina Agricultural Ext. Service.*

To Restore Right and Justice

GEORGE E. STEVENSON, former Vice-President of The Holstein-Friesian Association of America and forty-five other members living in Maryland, New York, Ohio and Pennsylvania have brought an action against those who are assuming to act as Directors of The Holstein-Friesian Association of America.

The purpose of this action is to stop extravagance in the Association's management, and to stop further encroachment upon the Reserve Fund of the Association for the purpose of promoting or exploiting the Extension Department; declaring the raising of the transfer fee from Fifty Cents to One Dollar and Fifty Cents and the paying of Fifty Cents on each transfer fee to State Associations, Irregular, Illegal, Null and Void, and requesting the Court to order a new election of its officers, at which election the breeders will be given the right to vote directly, either in person or by proxy.

For the benefit of our readers, we are printing in full the body of the petition.

To the Supreme Court:

The undersigned, petitioners, namely George E. Stevenson, of Clarks Summit, Pa., Joseph J. Jermyn of Scranton, Pa., Frank W. Kehl, of Strykersville, N. Y., Charles H. Newman of Sandusky, N. Y., Charles Eldridge, of Porterville, N. Y., A. J. Miller, Edward G. Carpenter, Clarks Summit, Pa., H. M. Rowe, Baltimore, Md., John T. Shannahan, Charles L. Couch, Buffalo, Irving A. Tarbox of Buffalo, Ford W. Hudson of Arcade, N. Y., John H. Caves of Buffalo, N. Y., Clayton E. Bray of Arcade, N. Y., Wade H. Barnes of Endicott, N. Y., Julius C. Fish of Corbetsville, N. Y., Robert Winship, Waverly, Pa., Arch W. Miller, Waverly, Pa., G. A. Spencer of Waverly, Pa., Glen Spencer, Waverly, Pa., Ray Tomlinson of Wales Center, N. Y., W. E. Stephenson, of Worthington, O., Gus H. Tepper, James Meter, Columbus, Jones Derrer, George Derrer, Camp Chase, O., C. A. Snow, Columbus, O., D. N. Postlewaite, Columbus, O., Mark F. Bensley, Buffalo, N. Y., Guy C. Ames, Franklinville, N. Y., Leo P. Rausch, Marysville, O., Harry G. Burns, of Marysville, O., Philip Rupright, Marysville, O., Charles B. Nigh, Hagerstown, Md., Cyrus Stouffer, Smithsburg, Md., John M. Martin, Smithsburg, Md., J. Fred Roulette, Sharpsburg, Md., Clarence V. Eldridge, Hagerstown, Md., John B. Keller, Chambersburg, Pa., S. E. Speck, Greencastle, Pa., O. P. Omwake, Greencastle, Pa., I. C. Barr, Greencastle, Pa., S. R. Miller, Chambersburg, Pa., Arthur B. Morgan, Franklinville, N. Y., each over the age of twenty-one years and each a citizen of the United States, respectfully makes application for a show cause order in a proceeding pursuant to Section 32 of the General Corporation Law, against Holstein-Friesian Association of America, and the following named persons as directors of said Association, De Lancy B. Armstrong, Thomas Elder, Fred Pabst, James A. Reynolds, Horace W. Norton, Jr., Fred F. Field, W. S. Moscrip, E. A. Stuart, H. V. Noyes, W. H. Mott, R. E. Chapin, George A. Fox, John A. Bell, Jr., F. M. Peasley, G. Watson French, R. J. Schaefer.

FIRST: That the Holstein-Friesian Association is a domestic corporation created by Chapter 333 of the Laws of 1885, reincorporated in the year 1914, pursuant to the membership corporation laws of the State of New York, the certificate of such reincorporation being filed in the office of the Secretary of State, January 2, 1914.

SECOND: That each of your petitioners became a member of said association, has since remained in good standing, entitled to all the rights, privileges and advantages of such membership, and that all of your petitioners are united in interest.

THIRD: That Section 3 of Chapter 333 incorporating the said Association provides as follows:

"Said corporation shall issue its certificate of membership signed by its President, and Secretary and sealed with its corporate seal, to each of its lawful members, which certificate shall not be transferrable and shall be evidence of membership and shall entitle its owner while a member of good standing to vote personally, or by proxy, at its meetings, and to all the privileges and advantages of such membership. But said corporation may cancel any certificate and forfeit and terminate any membership and all rights and privileges arising therefrom, for his wilful disobedience or evasion of its by-laws and other rules, and regulations, and for any wrongs committed by him against said corporation or its property, interests or rights which forfeiture and eviction shall be cumulative to any other legal remedy said corporation may have against said evicted member."

FOURTH: That Section 23 of the General Corporation Law provides as follows:

"Section 23. Qualifications of members and voters. Unless otherwise provided in the certificates of incorporation, every stockholder of record of a stock corporation shall be entitled at every meeting of the corporation to one vote for every share of stock standing in his name, on the books of the corporation; and at every meeting of a non stock corporation, every member unless disqualified by the by-laws, shall be entitled to one vote. The stockholders of a stock corporation by a by-law adopted by a vote at any annual meeting, or at any special meeting duly called for such purpose, may prescribe a period, not exceeding forty days prior to meetings of the stockholders, during which no transfer of stock on the books of the corporation may be made. Except in cases of express trust, or in which other provision shall have been made by written agreement between the parties, the record holder of stock which shall be held by him as security, or which shall actually belong to another, upon demand therefor and payment of necessary expenses thereof shall issue to such pledgor or to such actual owner of such stock, a proxy to vote thereon. No member of corporation shall sell his vote or issue a proxy to vote to any person for any sum of money or any thing of value. The books and papers containing the record of membership of the corporation shall be produced at any meeting of its members upon request of any member. If the right to vote at any such meeting shall be challenged, the inspectors of election or other persons presiding thereat, shall require such books, if they can be had, to be produced as evidence of the right of the person challenged to vote at such meeting, and all persons who may appear from such books, to be members of the corporation may vote at such meeting in person or by proxy, subject to the provisions of this chapter."

That Section 26 of the General Corporation Law of this State provides as follows:

"Section 26. Proxies: Every member of a corporation, except a religious corporation, entitled to vote, at any meeting thereof, may so vote by proxy. No officer, Clerk, Teller, or Bookkeeper of the corporation formed under or subject to the banking law, shall act as proxy for any stockholder at any meeting of any such corporation. Every proxy must be executed in writing by the member himself, or by his duly authorized attorney. No proxy hereafter made, shall be valid after the expiration of eleven months from the date of its execution unless the member executing it, shall have specified therein the length of time it is to continue in force, which shall be for some limited period. Every proxy shall be revocable at the pleasure of the person executing it, but a corporation having no capital stock, may prescribe in its by-laws, the persons who may act as proxies for members and the length of time for which proxies may be executed."

FIFTH: That until and during October, 1921, the by-laws of said Association provided for voting in person or by proxy and that up to and including the month of June, 1921, at all meetings of the Association, all voting was in person or by proxy. That the annual meeting for 1921 was held at Syracuse, New York, in the month of June.

SIXTH: That in the month of October, 1921, a special meeting of the Association was held at the City of St. Paul, Minnesota, at which meeting a delegate system was adopted and that

from and after said St. Paul meeting, all voting has been done, pursuant to such delegate system and no voting has been done by proxy.

SEVENTH: That there are now over twenty-two thousand members of the Association, residing in the different states of the Union and also in some parts of Canada and that there are upwards of 1,200,000 of registered Holsteins in the United States.

EIGHTH: That the annual meeting in June, 1922, was held at Kansas City, Missouri, and upon information, your petitioners allege that no delegates or members were present from Alabama, Florida, Georgia, Idaho, Kentucky, Louisiana, Tennessee, or Utah, and that one John F. McCarthy, a member of the Association from Texas, was present and that he was given a seat among the delegates without the right to vote. That there were elected to attend such annual meeting 136 delegates and that there were present and voting at such convention seventy-five delegates. That in twenty-seven districts no nomination of delegates was made, and that these twenty-seven districts under the rules were entitled to thirty-one representatives. That at such meeting directors were elected and a resolution was passed clothing the board of directors with power to employ a secretary of the association and a superintendent of advanced registry.

That the annual meeting of the Association for the year 1923, was held at the City of Cleveland, Ohio, on the 6th day of June, 1923. That by the delegate system, so adopted, as aforesaid, at St. Paul, 136 delegates were to be elected. As a matter of fact only 120 were elected and but eighty-four were present.

No nominations having been made, the following states were not represented: Alabama, Arizona, Arkansas, Colorado, Florida, Georgia, Idaho, Louisiana, Montana, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia, and Wyoming. That directors were elected.

NINTH: Upon information and belief that prior to May 5, 1921, no meetings of the Association could be held outside the State of New York. That on that day, Chapter 577 of the laws of this state, went into effect, providing that meetings of the Association could be held without the State of New York. That on the 3rd day of May, 1923, Chapter 327 of the laws of the State of New York went into effect and telegraphic notice thereof was immediately and on that day given Secretary Houghton of the Association, and your petitioners allege that from and after May 3, 1923, the Association could not legally meet outside the State of New York.

TENTH: Your petitioners further allege that upon a call of the officers of the Association the annual meeting of the year, 1923, was held at Cleveland, Ohio, on or about June 6th, and that all proceedings of the meeting held in Cleveland, Ohio, in June, 1923, including the election of the directors, were without the State of New York, and that such meetings selected Richmond, Virginia, as the place of meeting in 1924, and that the Association has already taken the initial steps looking to the holding of such meeting.

ELEVENTH: That the selection at such Cleveland meeting of Richmond, Virginia, as the place of meeting of the Association in June, 1924, was without warrant, illegal and void.

TWELFTH: Your petitioners allege upon information and belief that the adoption of the delegate system at the special meeting at St. Paul was without the State of New York, was in contravention of the laws of this State, and of the charter of the Association and that such system deprives members of the Association of the right to attend an annual meeting and vote either in person or by proxy, for Directors, Secretary or that no special meeting can be held without the State.

THIRTEENTH: Your petitioners further allege upon information and belief that all acts and proceedings of the annual meeting held at Kansas City in June, 1922, were because of the operation of the delegate system and because of the deprivation of the right of any member to vote in person or by proxy for directors and secretary, illegal and void.

FOURTEENTH: Your petitioners allege that the meeting at Cleveland, Ohio, in June, 1923, was illegal and void, because of the operation of the delegate system at such meeting, it was a deprivation of the right of the members of the Association to

vote either in person or by proxy, for Directors, Secretary or Superintendent of A. R. O.

FIFTEENTH: Your petitioners further allege that such delegate system and plan of voting deprives members of the Association of their rights and privileges, deprives a member from voting direct or executing a proxy which could be voted. That a member who attended personally could only vote if he had given the committee on credentials of the Association ten days' notice of his intention to attend and that the operation of such delegate system amounts to disfranchisement of a majority of the members of the Association.

SIXTEENTH: Your petitioners further shows that up to and on or about June, 1919, the fees to be paid the Secretary of the Association on the sale and transfer of any animal, for a transfer certificate was the sum of twenty-five cents, and that under the careful and prudent management of the Secretary and Superintendent of Advanced Official Registry, the reserve fund of the Association had grown to \$347,000; that at that time, the fees for such transfer were increased to one dollar, which at once became a grievous and oppressive burden upon the small farmer or practical dairyman. That previous to and at the annual meeting at Syracuse, New York, in June, 1921, a determined effort among the entire membership was made against such excessive fee, with the result that by an overwhelming majority by membership and proxy vote, namely in a vote of 13,331 by a majority of 2,258 votes, such fee was reduced to fifty cents. That thereafter and on or about the month of June, 1922, at the Kansas City meeting, for the purpose of creating a so called extension service, and entrenching and perpetuating themselves in the management and control of the affairs of the Association, the then Board of Directors by and through a vote of the delegates present again raised such transfer fees to one dollar and a half.

Your petitioners further allege upon information and belief that over twenty thousand members of the Association are plain, every day practical farmers, who live on their own farms, do a part, if not all of the actual labor thereon. That there are some of the members of the Association who are men of great wealth, prominent politically, and socially in business enterprises and circles, and it is from this class of the membership that the present board of directors and some of the officers are made up. That by and through the so called extension service, state associations in several of the states were formed each of which associations have been placed in charge of a man who for a paid salary has looked after such extension service and managed the same in such a manner, as to safeguard and protect the interests of the said Board of Directors, in a political way to the end that their management and control has been perpetuated and entrenched. That because of the great expense attendant upon such extension service, or propaganda, it became not only necessary to increase such transfer from fifty cents to one dollar and a half, but also the same coterie of gentlemen farmers composed of wealthy politicians and business men who are owners of Holstein-Friesian cattle merely because of a hobby or fad, and not because it was necessary for their livelihood, from their viewpoint of self preservation, decided that it was necessary to encroach upon the surplus funds of the Association, which on the first day of June, 1923, amounted to \$459,749.54, and they served notice upon the secretary, and he, as in duty bound, served notice upon the membership, that a motion would be made at the annual meeting in Cleveland, to take \$93,000 out of such Reserve fund, and expend it in so called extension service, with the result that \$47,000 or more was actually taken from said reserve fund and was devoted to the ostensible purpose of benefitting the breed through the so called extension service. That through the operation of the so called extension service a certain portion of said one dollar and fifty cents transfer fees and the accumulations therefrom, namely, fifty cents on each transfer, are made payable to organizations formed in various states for the purpose of the so called extension service, with the result that a half dozen of the states which have greater membership than others received a very large proportion or one-third of such fees, which are again used in an effort to perpetuate this same coterie of gentlemen farmers, in their control of the association. Your petitioners allege that no benefit whatever accrues to any member of the association from this so called extension service, except these few "Gentlemen Farmers, politicians and business men above noted.

SEVENTEENTH: Your petitioners further allege that the increase of the transfer fee to one dollar and fifty cents and the diversion of a fifty cents thereof from the treasury of this association into the hands of these so called state associations to expend as they see fit, is in contravention of the letter and spirit of the articles of the association or charter of this association and in contravention of the laws of this state and are ultra vires, illegal and irregular.

That showing how easily the affairs of the association are controlled, it is only necessary to point to the attendance of the 1922 meeting at Kansas City, when only seventy-five delegates were in attendance and to the 1923 meeting in Cleveland, when only eighty-four delegates were in attendance; these delegates each year were selected by these state organizations of this so called extension service, the leaders of which are always selected and approved by the executive committee of this same political board of directors and in this connection, your petitioners allege that in the final analysis of the action of the board of directors, with reference to these transfer fees, and the treasury surplus, it amounts practically to a looting of the treasury and is not in the best interests of the association nor the great membership thereof, scattered throughout the United States, and your petitioners further allege that the increase of such transfer fee to one dollar and fifty cents was illegal, and that such transfer fee is of right and should be at the rate of fifty cents for each transfer as fixed and determined at the Syracuse meeting in June, 1921.

EIGHTEENTH: That attached hereto and marked exhibit "A" is a copy of Section 48 of the Membership Corporation Law of this State as it existed prior to May 5, 1921, and attached hereto and marked Exhibit "B" is a copy of the same section as amended by Chapter 327 of the laws of 1923, which became effective May 3, 1923, and attached hereto and marked Exhibit "D" is a copy of the act of the legislature of the State of New York, passed May 25, 1885, incorporating the Holstein-Friesian Association of America, and attached hereto and marked Exhibit "E" is a copy of the certificate of reincorporation of the Holstein-Friesian Association, said exhibits are hereby referred to and made a part of this petition.

NINETEENTH: That your petitioners are aggrieved by and complain of said election of directors at Cleveland, Ohio, in June, 1923, and all resolutions, acts and proceedings at such meeting. Also of the resolutions, acts and proceedings of the meeting at Kansas City in 1922, and at St. Paul, Minnesota, in October, 1921; the establishment of the delegate system and the dissipation of the funds of the association by and through the so called extension work or system and the selection of Richmond, Virginia, as the place of meeting of June, 1924, the increase in transfer fees, and the deprivations of this right to vote for Secretary and Superintendent of A. R. O.

TWENTIETH: At present there are acting as directors of said association the following named persons whose places of residence and expiration of term of office are as follows:

Name	State	Expiration of Term
E. A. Stuart	Seattle, Wash.	1924
W. H. Mott	Herington, Kan.	1924
H. N. Noyes	Kenwood, N. Y.	1924
R. E. Chapin	Batavia, N. Y.	1924
De Lancy B. Armstrong	Watertown, N. Y.	1925
Fred Pabst	Oconomowoc, Wis.	1925
George A. Fox	Chicago, Ill.	1925
T. E. Elder	Mt. Hermon, Mass.	1925
W. S. Moscrip	Lake Elmo, Minn.	1926
John A. Bell, Jr.	Pittsburgh, Pa.	1926
Horace W. Norton, Jr.	Lansing, Mich.	1926
F. M. Peasley	Cheshire, Conn.	1926
G. Watson French	Davenport, Iowa	1927
Fred W. Field	Brocton, Mass.	1927
James A. Reynolds	Cleveland, O.	1927
R. J. Schaefer	Appleton, Wis.	1927

TWENTY-FIRST: That your petitioners and applicants are advised by counsel that there is no provision of law by which a notice of motion may be served upon non residents of the State of New York, in a proceeding commenced under Section 32 of the General Corporations Law, which will be sufficient to bind

such persons to comply with any order made by the Court on this application or to compel attendance of non residents or to enjoin or restrain such non residents and that there is no provision made by law for the service of a notice of motion upon such non residents and that deponent is also advised by counsel that it is necessary to procure an order from the Court directing the manner of such service upon such non residents. Deponents are further advised by counsel that an order to show cause should be obtained in order that the temporary restraining order asked for hereon may be made.

TWENTY-SECOND: That the principal place of business of the Holstein-Friesian Association is at Buffalo, New York, and that Wing R. Smith of Syracuse, New York, is the Treasurer of the Association.

TWENTY-THIRD: That no previous application has been made by your petitioners and applicants to any Court or judge for the relief asked for herein.

WHEREFORE, your petitioners and applicants pray that an order to show cause be made herein directing the Holstein-Friesian Association of America, De Lancy B. Armstrong, W. S. Moscrip, Horace W. Norton, Jr., Thomas E. Elder, W. H. Mott, H. V. Noyes, James A. Reynolds, Fred Pabst, Fred F. Field, R. E. Chapin, George A. Fox, John A. Bell, Jr., F. M. Peasley, G. Watson French, R. J. Schaefer, and requiring them and each of them to show cause why the proceedings of the special meeting in St. Paul, Minnesota, in October, 1921, and all of the acts at said meeting should not be declared null and void, and why the meeting held at Kansas City, Missouri, in June, 1922, and all the resolutions, acts and proceedings thereof should not be declared illegal, irregular, void, and of no effect because all of the proceedings of said Kansas City meeting was held by and through the operation of the delegate system illegally adopted at the St. Paul meeting in October, 1921, and because such delegate system is in contravention of the laws of this State, and the charter of the Association providing for the system of voting, also to show cause why the meeting held in Cleveland, Ohio, in June, 1923, should not be declared null and void, because held without the State of New York, and also under the delegate system, also to show cause why the officers and board of directors of the Association should not be permanently restrained and enjoined from encroaching upon the reserve funds of the association for the purpose of exploiting the so called extension service; also to show cause why the fee to be paid the Secretary of the association on the sale and transfer of any animal and for the transfer certificate should not be reduced from one dollar and fifty cents to fifty cents, and why a new election for the said officers of director of said association which were illegally elected at the meeting in Cleveland, Ohio, in June, 1923, and at Kansas City, Missouri, in June, 1922, and at Syracuse, New York, in 1921, also the secretary and superintendent of Advanced Registry should not be ordered by this Court to be held within the State of New York under the supervision of this Court, and why all of said persons now assuming to act as directors of the Association, should not be enjoined and restrained from taking any action or performing any function of said office until the order and determination of this Court of the application herein made, and the holding of said election under the supervision of this Court and why your petitioners and applicants should not have such other and further relief as right and justice may require and your applicants further ask that the said order contain a provision enjoining and restraining said persons as directors as aforesaid, from acting as such until the order and determination of the application and the further order of the Court made upon such order to show cause, also why they should not be enjoined and restrained from holding a meeting at Richmond, Va., in June, 1924, or any other meeting outside the State of New York.

The hearing is set for 10 o'clock A. M., April 2d, at Erie County Court House, Buffalo, N. Y.

Holstein milk, obtained under the best possible conditions, would be my choice at all times for the artificial feeding of infants.—Dr. C. K. Johnson, University of Vermont.

Bell Farm Champion Heads Four Herds

FOUR owners of herds enrolled in the Volant Cow Testing Association which operates in part of Lawrence County, Pennsylvania, recently purchased from Bell Farms the young bull, Bell Farm Champion, son of the Pennsylvania State Champion, Bell Farm Hattie.

The cows in each of these herds last year averaged over 10,000 lb. milk and over 360 lb. butterfat. The

BELL FARM CHAMPION

Owned jointly by R. B. Stoner, F. F. Alford and C. M. Hartzel all of New Castle and Wesley McMillin & Son of Wampum, Pennsylvania.

owners are R. B. Stoner, F. F. Alford and C. M. Hartzel all of New Castle and Wesley McMillin & Son of Wampum. These herds have been mentioned a number of times in the pages of THE BREEDER AND DAIRYMAN devoted to Cow Testing Association news. The recent transaction is all the more interesting to our readers.

Bell Farm Champion was sired by Bell Farm King Sylvia, the well-known son of Champion Echo Sylvia Pontiac and Susie Abbekerk Colantha. This great cow known as "White Susie" is noted for her individuality and production. She is credited with records of 109.60 lb. milk in a day, 35.12 lb. butter, 737.10 lb. milk in seven days and has several long time records including 1,113 lb. butter, 28,361.1 lb. milk in a year.

Bell Farm Hattie has already made a number of remarkable records. Calving as a junior two-year-old she produced 538.8 lb. milk, 28.28 lb. butter in a week, 2,248.3 lb. milk, 116.93 lb. butter in thirty days, 20,410.4 lb. milk, 1,037.03 lb. butter in a year, all of which are the highest records ever made in the junior two-year-old class by a Pennsylvania heifer. She came back as a junior three-year-old and in seven day test produced 517.3 lb. milk, 31.34 lb. butter.

Bell Farm Hattie is a daughter of King Valdessa Pontiac and is from a cow that made almost 900 lb. butter in a year and tested very close to 4% fat, while during the year of her test work Hattie averaged 4.06% fat.

Bell farm Hattie was exhibited at the National Dairy Show last October, where she was placed third in the three-year-old class, which was headed by a half-sister, Bell Farm Bakker. These two sisters together with two other daughters of King Valdessa Pontiac carried away first prize in the "get-of-sire" class, which many constructive breeders regard as the highest honor that can be won by any herd.

Bell Farm Champion is a handsome bull, is from a splendid young show cow and was sired by a son of one of the greatest show cows living. From the standpoint of type as well as milk and butterfat production he should prove a valuable addition to the high-class producing herds he now heads.

How Milk and Cream Are Used

ONE-EIGHTH of the total amount of milk produced in the United States is used to flavor tea and coffee, is the conclusion of dairy statisticians of the United States Department of Agriculture.

The coffee consumption of the country is around one billion pounds annually or approximately forty billion cups. This requires forty billion ounces of cream, the milk equivalent of which is 12½ billion pounds, or practically one-eighth the total production of milk in the United States.

Consumption of tea in the United States is practically eighty-five million pounds or approximately twenty-one billion cups. The quantity of cream used in tea averages only one-half that in coffee or one-half ounce per cup, or a total in terms of milk of over three billion pounds.

Making liberal allowances for the use of milk in coffee and tea or of half milk and half cream, there still would be more than one-eighth the total production of milk used in these two beverages. The quantity of milk and cream used in tea is equal to the production of 750,000 cows and the requirements for coffee equals the production from three million cows. The department's survey also brought out the fact that one-tenth the sugar consumed for all purposes in the United States is used in coffee and tea, the quantity thus consumed being 800 million pounds a year.

If the public could be induced to drink one-fourth less tea and coffee and replace those beverages with milk, what a blessing it would be to the dairy industry while the consumers themselves would be, in the majority of cases, materially benefited.

Listening In at Washington

FOR the first time in recent years, or since the oleomargarine tax law became effective, the report of the Internal Revenue Bureau for January, shows that the sale of uncolored oleomargarine has passed one million pounds per month. There has been a great increase in sales during the past few months. Study this:

	January, 1922	January, 1923	January, 1924
Oleo, Colored	405,556	673,654	1,000,994
Oleo, Uncolored	10,481,840	19,959,300	22,839,980

The increase for 1923 over 1922 amounted to almost 100% in colored oleo and 43,000,000 lb. uncolored oleo, or nearly 30%. The total for 1923 was about 218,-

BARNYARD SCENE AT MAPLE RIDGE.

Cows of this quality are mated with KING RAG APPLE PLUM COPIA whose dam has A. R. O. records of 30.47 lb. butter, 688.6 lb. milk in 7 days, 120.63 lb. butter, 2,769.4 lb. milk in 30 days as a five-year-old and as a six-year-old made 33.28 lb. butter in a week.

When looking for something good, call on us. Herd under State and Federal Supervision. Last test CLEAN.

MAPLE RIDGE FARM

J. S. & F. R. HOWARD, Proprietors, Susquehanna Co., Springville, Penna.

A Chip Off the Old Block

RICHARD GARDNER is the oldest son of B. J. Gardner, well-known Holstein breeder of Factoryville, Pennsylvania. Our cover illustration of this issue depicts Richard with his favorite heifer, a daughter of Lady De Kol Midget. Under Richard's fostering care the heifer can be expected to make a better cow than her mother who freshened before she was two years old and in her first lactation period in cow testing association work produced 7,697 lb. milk, 255.88 lb. butterfat. Lady freshened for the second time before she was three years old and was again enrolled in the cow testing association. During her second lactation period she produced 8,932 lb. milk, 253 lb. fat.

The Gardner herd is on the Accredited list and was the first Accredited herd in Lackawanna County. Richard intends to be a breeder of purebred Holsteins when he grows up and also intends to have his herd on the Accredited list.

Echo Answers "Why?"

AT THE annual meeting of the Wisconsin Cheese Producers' Federation held at Plymouth, Wisconsin, February 13th and 14th, John M. Kelley, vice-president of the Holstein-Friesian Association of America, advocated putting on a Wisconsin Show in Madison Square Gardens.

As long as Wisconsin dairymen and business men finance such an enterprise no one can find any fault with their attempt to advertise the goods they produce. But if Mr. Kelley means for the Holstein-Friesian Association of America to finance a Wisconsin Dairy Show in New York City, he will meet strong opposition from dairymen of the East who are unable to see why Mr. Kelley does not advocate a Wisconsin Dairy Show in Chicago, the second greatest City in this country. Why overlook the market that is close to the Wisconsin dairymen's door and attempt to compete in the New York market in which the Eastern dairymen have enough troubles of their own?

000,000 lb., or nearly 15% of the total amount of butter made and sold.

Bill HR 7113, to establish a Dairy Bureau in the United States Department of Agriculture was introduced on February 19th, following a hearing given by the Committee on Agriculture of the House of Representatives. The dairy industry is united in wanting this piece of legislation passed.

The Norbeck or Diversification Loan Bill, was defeated in the Senate on March 13th, by a vote of forty-one to thirty-two. Of the thirty-two who voted in favor, twenty-two were Republicans and ten were Democrats and, with the exception of seven all came from States west of the Mississippi River. One of the Louisiana senators voted for and the other against the Bill. Of the forty-one votes against the Bill, eighteen were Republicans and twenty-three Democrats and, with the exception of eight all came from States east of the Mississippi.

The Capper Truth-In-Fabrics Bill is meeting considerable opposition from manufacturers' representatives. At the present time it looks as if this Bill will also fail of passage.

The U. S. Tariff Commission hearing on the vegetable oil tariff controversy lasted seven days. Representatives of cottonseed, peanut, and flaxseed producers, producers of dairy and hog products and of oil made from these products that compete with oriental oils, took four days to air their views in opposition to tariff changes and before completing their case filed an application asking that the Commission also consider the rates of duty on all products into which vegetable oils entered as a material component part, specifying a list which includes about fifty important commercial articles ranging all the way from lard substitutes to high explosives and floor coverings. No indication was given by the Tariff Commission as to its action.

The great function of purebred livestock is the improvement of animals used for commercial production of livestock products. If it does not, or cannot serve this purpose, there is no reason for its existence.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the Spotted Poland China Journal, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

March 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Misrepresentation Again

AT THE hearing on February 14th before Judge Pooley at Buffalo, New York, in the motion on the matter of George E. Stevenson and nineteen other breeders against persons who assume to act as directors of the Holstein-Friesian Association, we understand that after evidence had been introduced to the effect that four of the five New York State breeders, who verified their signatures on the petition, had withdrawn their names, that James A. Reynolds, Chairman of the Executive Committee, stated in the presence of those at the hearing that five out of six of the Ohio petitioners had also withdrawn from the petition.

In an editorial published in *The Holstein-Friesian World* under date of February 23d, on page fourteen, appears the following statement:

"All but one of the Ohio members whose names were used made a sworn statement repudiating and protesting against the use of their names in such litigation against the Association."

THE HOLSTEIN BREEDER AND DAIRYMAN has in its possession affidavits from five Ohio signers absolutely denying the truth of the statement said to have been made by James A. Reynolds, Chairman of the Executive Committee and the statement as published in *The Holstein-Friesian World*. More than that, the names of these same five Ohio breeders are to be found in a new petition filed in the Superior Court before Judge Pooley under date of March 15th.

The following is a copy of the affidavit made by Mr. James A. Meteer, one of the Ohio signers. We have copies of similar affidavits of four other Ohio breeders:

State of Ohio }
County of Franklin } ss:

On this 7th day of March, 1924, personally came before me James A. Meteer, who being duly sworn did depose and say that the statements made in "The Holstein-Friesian World" of their issue of February 23, 1924, that I, as one of the applicants in a certain petition therein mentioned, did say that I had been misinformed and deceived into getting me as an applicant and wished my name withdrawn, etc., are false and untrue. To my knowledge I made no such statement to any person whatsoever and anyone saying I made such statements is spreading a falsehood.

HARRY S. ORT,
Notary Public.

Commission expires, March 16, 1925.

From the above it would appear that the statement made by James A. Reynolds, Chairman of the Executive Committee at the time of the hearing in Buffalo, on February 14th, was False and Untrue, and that the statement published in *The Holstein-Friesian World* under date of February 23d, as above mentioned was also False and Untrue.

When we learn of the methods used in trying to deceive the breeders with reference to the Ohio breeders who signed the petition, we are led to conclude that possibly the four New York breeders who withdrew from the petition were induced to do so through misrepresentation.

It might have been unfortunate for the cause which Mr. Stevenson and nineteen other breeders were representing to have four of the original signers on the petition withdraw their names, and then again it might have been the best thing that could have happened, in that the underhanded methods resorted to will put the breeders generally on their guard and they will be brought to realize more than ever before that the dominating influence in the Association's management seemingly will resort to the lowest form of deception and underhandedness to retain control and accomplish their ends.

We believe that the members of The Holstein-Friesian Association are displeased with the methods that are being used in handling the Association's affairs, and will be moved to a point where a concerted effort will be put forth to place the management of the Association in the hands of Honest, Straight-forward, Clean-thinking, men, who will manage the Association so that it will serve the best interests of its members and not try to manage the members to serve the best interests of the management.

Good News

WE ARE glad to announce that the State and Federal authorities seem to have the California foot-and-mouth disease outbreak under complete control. There is very little to add to our announcement in the March 8th issue. Although there has been sixty-two cases in all reported they have been confined to the three original counties of Alameda, Contra Costa and Solano. These three counties and six adjoining them are still under quarantine. The source of the outbreak has not yet been traced.

Breeders Renew Action

A SHOW Cause action was brought against those who are assuming to act as Directors of The Holstein-Friesian Association on Saturday, March 15th. Forty-six breeders and members of The Holstein-Friesian Association living in Maryland, New York, Ohio and Pennsylvania are petitioners.

It is anticipated that this effort on the part of the members will afford the desired relief and will result in stopping further expenditure of the Reserve Fund; the paying of \$.50 on each transfer fee over to State Associations; fixing the transfer fee at \$.50 and restoring the members' rights.

The details contained in the petition will be found elsewhere in this issue. We believe that the breeders generally, North and South, East and West are in sympathy with the movement which Mr. Stevenson of Pennsylvania, former Vice-President of the Association and forty-five other breeders have undertaken. There is perhaps no better way of showing appreciation for the good work that has been undertaken than to send a letter of appreciation to Mr. Stevenson or other signers whose names appear on the petition, commending them for the firm stand they are taking in favor of Right and Justice and against Wrongdoing.

The Holstein-Friesian Association is a breed organization, the principal function of which is to keep the breed pure through official registration. It is not and never was intended to become a complicated organization requiring a large Directorate, a multitude of Committees, or an army of Paid Propagandists to manage its affairs.

Breeders and Billboards

JUST how much money was expended advertising the Holstein billboards advocated by our Extension Department and the Paid-State-Secretaries, is hard for us to determine, but it was a considerable sum. Let us see how the breeders responded. Since the billboard campaign was started seventy-six have been erected, either purchased outright or on a rental basis. California has fourteen billboards, rented for a period of three years from a billboard concern and Washington has six on a similar basis.

The Wisconsin breeders, may be in response to Vice-President Kelley's teachings, purchased the largest number, they taking twenty-two, Ohio purchased fifteen, Pennsylvania, six, Michigan, four, Iowa, two, Minnesota, two, while Maryland, New Jersey, New York, Oregon and Utah each took one. It would be difficult to estimate the influence one billboard would have in increasing the demand for Holstein milk in the State of New York.

We would like to know the location of that billboard and to learn just how many of the residents of New York State have seen this billboard and read its message during the past year, and how much the demand for Holstein milk was increased as a consequence.

The billboard plan is against the spirit of the times. Within the past week material has come to our desk condemning all billboards as being obstructive to view, marring the landscape and contrary to esthetic taste.

These condemnations came from the States of Massachusetts, Minnesota, New York and Pennsylvania. As the boards were paid for by the members themselves and averaged very near \$100 each by the time they were erected, the wonder is, not that they were purchased but that breeders in the United States could have been induced to purchase as many as seventy-six.

The billboard movement is only one of the ill-advised plans promulgated from the Extension Department office. When it was first announced THE BREEDER AND DAIRYMAN predicted its failure. Besides offending esthetic taste its cost was all out of proportion to its value as an advertising medium.

Milk Favored as National Drink

RESOLVED that we: * * * do favor and recommend the establishment of milk as a national drink."

You might think that this was a resolution adopted by an enthusiastic gathering of Holstein breeders but you would be wrong. It was a resolution adopted at the Kansas Agricultural Convention which was held in January at Topeka, Kansas, and the audience included the leading agricultural organizations of the State and officials high in agricultural circles.

The full resolution was: "Resolved that we, the agricultural representatives of the Commonwealth of the great State of Kansas, do favor and recommend the establishment of milk as a national drink."

The preamble upon which this resolution was based declared "our boys and girls are the men and women of to-morrow, and healthy physique is conducive to good citizenry." It also recognized that "the dairy cow is the foster mother of the human race and an important financial support of the Nation."

The superiority of purebreds on a utility basis is due principally to: Better conformation and quality, increased production, more economical production and earlier maturity.

"It is a mistaken idea that scrubs are more hardy than purebreds. Purebreds are hardy if only those are kept which are of good constitutional vigor."—U. S. Department of Agriculture.

CRESCENT BEAUTY STAR BELLE
First prize aged cow, senior and grand champion female at Oklahoma City Show. Owned by A. J. King, Kansas City, Mo.

CLUB ACTIVITIES

GAFKE RESIGNS

A split among the members of the Jefferson County Holstein Association has resulted in the resignation of Secretary A. F. Gafke and directors, W. G. Marshall of Whitewater and H. G. Fischer of Jefferson, Wisconsin. An effort will be made to reunite the factions into a County organization with a new field agent and have a number of clubs which will be affiliated with the County Association of which J. C. Cort of Lake Mills, manager of the Milford Meadows Stock Farm, is president.

THINKING OF FALL SALE

F. W. Durban was elected president of the Oregon State Holstein Breeders Association at Portland, February 9th. The other officers were: Vice-President, Robert Warrens, Forest Grove; Secretary-Treasurer, Paul Adams, Warren; Directors, Eugene Finley, Jefferson; A. J. Evers, Forest Grove; J. H. Loescher, Fairview, and George McCart, Harrisburg.

A committee was appointed to obtain a consignment of Holsteins for the Pacific International Exposition sale next fall and was instructed to ask that the Oregon quota be increased from twenty to twenty-five head.

INDIANA ORGANIZED

C. W. Newman of Culyer, Ind., was elected president of the Indiana Holstein Breeders at a meeting held at Plymouth, March 1st. Prior to this meeting the state had been districted according to the Holstein cattle population and meetings had been held in each of the six districts and a director or delegate was elected from each district to attend the Plymouth meeting. Six districts were represented by seven men while there were a number of local Holstein breeders present together with L. H. Fairchild and J. D. Canan of the Purdue University Dairy Department. P. L. White of Oxford was chosen vice-president, L. H. Fairchild, acting secretary; and Chas. Ohlfest of Valparaiso, treasurer.

BILL HAS NEW JOB

Edgar L. Bill, formerly publicity agent for the Association Extension Department was recently appointed program director of the Sears-Roebuck Agricultural Foundation radio broadcasting station, which will be operated about April 1st.

Mr. Bill has had considerable experience. He was formerly

agricultural editor on a well-known daily newspaper, associate editor of the *Orange Judd Farmer* and was publicity man for the Illinois Agricultural Association, returning to that organization after a few months in the Holstein Extension Department. He is credited with being instrumental in organizing the only rural motion picture production company in the United States—The Homestead Film Company—producers of the rural films used by the American Farm Bureau Federation.

CLAIMED TO HOLD RECORD

L. M. Compton, superintendent of the Government Indian School at Tomah, Wis., was recently chosen president of the Monroe County Holstein Breeders Association. He will co-operate with officers of the Guernsey association to lay out an extensive calf club program. Mr. Hal Stevens of Tomah, Chicago and New York recently donated \$100 to be distributed among the various calf clubs of the county and both Holstein and Guernsey Associations are co-operating with County Agricultural Agent Liddle to find the best way to use the gift.

Mr. Compton is claimed to hold the record for service to a single institution in the United States Government Indian Service and the Holstein herd of the Tomah Indian School holds the record for production in Monroe County.

IN BLUE EARTH COUNTY

Jens Johnson was elected president; A. C. Rosin, vice-president; and L. H. Sohre, secretary and treasurer of the Blue Earth County Holstein Breeders Association at its annual meeting March 1st, at Mankato, Minn. A vote of thanks was given J. C. Marlow, retiring secretary and treasurer for the work he had accomplished the past year. He refused reelection on account of business matters which needed his full time.

Resolutions were passed endorsing the Fifty Million Dollar Livestock Loan Bill or Norbeck-Burtness measure. This was originally promulgated by John L. Coulter, president of the North Dakota Agricultural College, to relieve the stringent situation among farmers and bankers of North Dakota but has been adopted as being equally applicable and necessary to the farmers of Minnesota, South Dakota and Montana. Charles F. Collisson, agricultural editor of the *Minneapolis Tribune*, made several speeches advocating the measure. Short talks were made by J. C. Marlow, County Farm Agent, L. F. McMillan and State Secretary Geiger.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

MEN IN THE LIMELIGHT

No. 1. F. G. JOHNSTON

For nearly thirty years, F. G. Johnston of Columbus, Ohio, has been active in the Holstein-Friesian industry, first of all as a breeder and in recent years as a pedigree expert, catalogue builder and sale manager.

He became a member of the Holstein-Friesian Association in 1900. When Mr. Johnston handled his own herd he met with considerable success. The Ohio State Board of Agriculture awarded three silver cups to the Ohio owner of cows making the largest amount of milk, fat, and solids not fat, in forty-eight hours. These prizes were awarded in the years, 1900, 1901, 1902 and 1903, and Mr. Johnston won eight of the cups. They make an impressive showing.

F. G. JOHNSTON
Ohio Pillar of the Holstein Industry.

Extravagant methods never appealed to Mr. Johnston and so he has never been affiliated with those who believe it is necessary for a breeder to spend all that he has in hopes of making a clean-up. He has been a pillar of the Holstein industry in Ohio and has always looked at Holstein-Friesian affairs from the standpoint of the little breeder and dairyman.

The Secretary's notice preliminary to the convention of delegates held at Kansas City, Missouri, June, 1922, carried a proposition for transfer fees that many owners of purebreds believe should have received more consideration than was given it. A number of resolutions on the transfer fee were carried in the Call. When the Convention met, J. B. Irwin of Minnesota offered a substitute resolution which raised the transfer fee for members from fifty cents to \$1.50 and shortened the time between sale and application for single fees from six months to three months. Mr. Irwin offered his resolution as a substitute for the others but Judge Peasley brought Mr. Johnston's plan before the convention because of its originality. Mr. Johnston's opinion was that the transfer fee should be based on a sliding

scale of values, that a cheap bull calf should not carry a heavy transfer fee and that an animal sold at a high figure should carry a transfer charge commensurate with the value of the animal. There was no debate on the resolution and no arguments presented for or against. President Lowden asked all who favored a fixed rate as against a graduated scale to say Aye and to the contrary, No, and it was voted down. Had Mr. Johnston been at the convention in person he could have quoted the graduated tax on incomes in support of his proposition.

Being in touch with many members of the Holstein-Friesian Association, men who have small herds and are unable to keep the pace set by some of the large, spectacular establishments, Mr. Johnston found that many of the acts of the body of men presuming to act as directors of the Association were detrimental to the interests of the smaller and poorer members.

He believes that the Association should be operated so as to do the most good possible to the greater portion of its membership and not for the benefit of a favored few. His motives have been impugned by representatives of the predatory interests, who make their usual claim when anyone criticizes them and their friends—that he is working in the interest of crooked records.

THE BREEDER AND DAIRYMAN asked Mr. Johnston to make a statement and this is what he said:

"I have nothing special to say except that I expect to stand up for the little fellow and farmer whom I believe constitute the large majority of the members of the Association. I would like to see them getting a square deal which I am convinced that they are not getting now by a long ways. I do not believe there is a law on the statutes of New York that would allow such an injustice as this delegate system is to the small breeder and farmer, more especially those in the remote districts. Every poor farmer who has paid his \$25 to this Association to become a member should have just as many rights as any man who has wealth and money to burn running to the yearly meetings to control matters.

"The proxy is the only right way to get equal and just rights. We all will admit that it can be abused and what plan is there that can not be abused? If the delegate system is not abused the way it is now carried on by those transacting business for the Association, why I have never seen any abused system. The old proxy is the straight American system and keeps those in office on their toes all the time for if they go wrong they know where the proxy will drop at the next meeting. The argument is sometimes used that our Association has outgrown the proxy system. The proxy system is used in all large corporations, in banks and in railroad systems, some of which have over 100,000 stockholders. If such businesses have not outgrown the proxy system, why is it not advisable for an association with a membership of 23,000?

"I would like for those now in the offices to show me any way

PINE RIDGE HERD

is headed by

KING RELIANCE LOCKHART VEE-MAN. He is a son of KING VEEMAN PONTIAC HENGELVELD and of PEARL LOCKHART RELIANCE, 26.70 lb. butter, 485.5 lb. milk in a week as a four-year-old.

In the Dairyman's Division she has a year record of 15,837.7 lb. milk, 882.1 lb. butter. Think what that means!

Then she was the First Prize three-year-old at the 1920 New York State Fair.

How about a son of this good bull? Herd under State and Federal Supervision. Last test Clean.

Established fifteen years.

Dan E. Anderson

R. D. 3, Norwich, N. Y.
Chenango County.

Three Times Grand Champion

KING ALCARTRA RAG APPLE POSCH

For three successive years has been Grand Champion male at the Susquehanna County Fair and Susquehanna is the leading Holstein County of Pennsylvania. He heads our Accredited Herd which contains cows that have produced more than 12,000 lb. of milk in a year in C. T. A. work. A son of King would look mighty good at the head of your herd.

A. R. BUSH
Susquehanna County MONTROSE, PA.

Sure, We're Accredited

and our cows produce, too.

For Instance,

Bess De Kol Contest Keyes, as a three-year-old, made in a year of Cow Testing Association work, 16,475.9 lb. milk, 484.3 lb. butter-fat.

The entire herd—old cows, young cows, and heifers—averaged over 12,000 lb. of milk.

If you want stock of this quality, write or, better yet, come and see.

Charles Ace

R. D. 1 Tunkhannock, Pa.
Wyoming County.

that the poor member of this Association has to correct misuses of authority by those now in office. We all know that the small breeder and farmer is having a hard time to make both ends meet and has no money to contribute to the expense of sending delegates to a yearly meeting, but he could send his proxy to someone he knew was going and would voice his views. I say give us back the proxy, and then the poor man has an equal chance with the wealthy. If things do not go right he has his proxy to fight with without special cost and if the wealthy man wants to hold all he must get out and fight for it every year with the chances against him if he does not do the right thing. I would rather fight for what I think is right and lose, than win and not have justice to parties. If we stand up and fight I believe the time is coming and not far off when we will get our rights."

GET TEST RECORDS TO GARDNER

In his remarks preliminary to announcing the records published in number nine of the current volume of "Reported Tests," Superintendent Gardner calls attention of owners of Holstein-Friesians to the fact that the present official testing year closes on Monday, March 31st, and entries to the thirty-fifth volume of the Blue Book close on the same date. All certified reports of official tests closing not later than March 31st, and received in the Advanced Registry Office during the first week in April, will be accepted provided the reports are complete in all respects. Many state agricultural colleges hold up reports of tests for which the supervisors charges are unpaid and breeders are urged to act promptly in making their payments in order that the reports of their test may be included in the 35th volume of the Advanced Register Year Book. The attention of the breeders is called to the fact that test records are not complete until they have been certified by the superintendent of the official test of the state in which the test was made. Uncomplete reports sent to Mr. Gardner's office direct are not accepted until they have been returned to the state college for certification; so that sending of reports without certification delays their acceptance instead of hastening it.

Superintendent Gardner further says:

"Owners with cows on long-time test that complete their tests during the month of March should send final monthly milk reports as fast as the cows close their tests, seeing to it that the colleges are asked to forward the certified reports of monthly official test periods, so that these reports may also reach this office before the close of the month. No cow in the ten-months' division is supposed to have completed her test until such time as she may freshen; and it will not be necessary to hasten the reports of cows completing the 305-day period where these cows do not freshen prior to April 1st. Since at the close of the testing year the whole force of clerks handling long-time tests is employed in the closing up of the tests that are completed during the testing year, the reporting of the January credits will have to be postponed until such time as these closing cows have been taken care of; and the reporting of January and February credits will be taken up as soon after the close of the testing year as possible.

Letters to the Editor

FALCONER GETTING RESULTS

Dear Sirs:

Hurry and change my advertisement as I have sold twelve head advertised in the DAIRYMAN to Ira Hartz of Elverson, Pa. Mr. Hartz came out here and made a personal inspection of my herd before buying. He was pleased with the high percentage of fat in the milk of the daughters of my senior herdsire, Long Beach De Kol Korndyke, who is a son of Friend Hengerveld De Kol Butter Boy and from Maple Crest Pontiac Spotted Annie, 30.86 lb. butter in a week, 1,266.27 lb. butter in a year. She was sired by Pontiac Aaggie Korndyke and was from Spotted Ann Daughter, 30.14 lb. butter in a week and 1,088.75 lb. butter in a year. Long Beach De Kol Korndyke has nearly 100% the same breeding as Maple Crest Korndyke Hengerveld, the only living Century Sire.

Mr. Hartz was also pleased with the enormous size of my mature cows, a number of them weighing 1,700 lb. and 1,800 lb. But really what landed the deal was that I was able to show him that I never had any T. B. in my herd. While his purchase was being tested he was on the job every minute of the time and was fully convinced that he was taking home with him an absolutely clean herd to start with.

Mr. Hartz's purchase was eleven females, ranging in age from one week to one year, mostly daughters of Long Beach De Kol Korndyke and those of breeding age were bred to my junior herdsire, King Ormsby Pontiac Creator, he being a son of "Creator" who is full brother to Bess Johanna Ormsby, the 44 lb. cow who has just completed a yearly record of 30,143.3 lb. milk, 1,497.6 lb. butter. He is from Spring Farm Pontiac Maid 2d, 35.66 lb. butter in a week as a four-year-old. As a five-year-old she made over 34 lb. butter in a week from 800 lb. milk and in ninety days produced 8,925.2 lb. milk, 385.37 lb. butter. The test was carried along for 297 days in which she made 20,532.6 lb. milk, 918.16 lb. butter. She is a remarkably well-bred, her sire being King Korndyke Pontiac Lass, son of the former champion and first 44 lb. cow, K. P. Pontiac Lass and her dam, Spring Farm Pontiac Maid, being a 28 lb. daughter of Spring Farm King Pontiac, son of King of the Pontiacs and the 37 lb. cow, Tweede White Lady. The nine nearest dams of King Ormsby Pontiac Creator have seven day records, averaging 35 lb. butter.

The bull we sold Mr. Hartz is from a 21 lb. junior three-year-old daughter of Long Beach De Kol Korndyke and was sired by Traverse Dutch Weg, whose dam produced 762.8 lb. milk, 34.63 lb. butter in seven days and 24,657.4 lb. milk, 1,123.66 lb. butter in a year. She is a granddaughter of the noted sires, De Kol 2d's Butter Boy 3d and Pontiac Butter Boy.

Yours truly,

DAVID FALCONER.

Scottville, Michigan, Feb. 16, 1924.

Dear Editor:

Just to let you know your issue of February 8th has some good solid thought that any Holstein member should read and digest. That issue and President Coolidge's talk, February 12th, in New York, is what every live American should read and consider.

Success to you and your efforts to put business on a business basis.

Most Respectfully Yours,

G. MAURICE GREEN.

Truxton, N. Y., Feb. 18, 1924.

THE PENNSYLVANIA STATE COLLEGE.

HOLSTEIN BREEDER AND DAIRYMAN:

I have just received the February 8th issue of your magazine and wish to compliment you on the most excellent report on the doings of the Farm Products week.

E. B. FITTS.

In Charge, Dairy Husbandry Extension.

Gentlemen:

Will you please send my paper to the following address as I cannot very well get along without it and oblige

JERRY REGAN.

Seward Stock Farms, Petersburg, Va., Feb. 26, 1924.

EDITOR, HOLSTEIN BREEDER AND DAIRYMAN:

I have been taking the HOLSTEIN BREEDER AND DAIRYMAN the past year and think it hits the point.

G. L. W.

New York State Breeder.

EDITOR:

I have enjoyed your paper very much and think it is well gotten up and both interesting and attractive.

H. C. S.

New Jersey, Jan. 14, 1924.

A rolling stone won't gather moss—

Well, maybe this is so.

But a rolling pin makes up the loss,

By gathering the dough.

Cow Testing Association Reports

HOLSTEINS LEAD IN CUMBERLAND COUNTY

Becky, a registered Holstein owned by Ivo V. Otto, of Carlisle, Pa., led the Cumberland County Cow Testing Association for the month ending February 24, with the production of 2,049 lb. milk, 89.5 lb. fat. Corliss Farm Josephine Alcartra, owned in the herd of G. L. Strock & Son was second with 1,770 lb. milk, 83.2 lb. fat. Becky averaged 4.36% fat and Josephine 4.07%. Martha, a grade Holstein of the David Gible herd was third with 2,160 lb. milk, 82.1 lb. fat. Mr. Otto had two cows on the list of ten highest producers, W. H. Wertz had three, all registered Holsteins, the Gible herd was represented by one grade and one registered Holstein. The leading nine animals were black and whites, the tenth being a grade Guernsey. These ten averaged exactly 1,900 lb. milk, 70.7 lb. fat.

The highest herd consisted of twenty cows owned by David Gible & Son and their figures were 1,312.6 lb. milk, 44.6 lb. fat. This herd was dispersed at public auction, March 6. The thirty-four animals averaged \$117.50 and this included purebred cows, calves and bulls beside a few grade milkers and grade calves. The eighteen cow dairy of Ivo V. Otto was second with the average of 1,222 lb. milk, 41.3 lb. fat. H. A. Shultz herd consisting of fourteen grade and purebreds averaged 1,216 lb. milk 36 lb. fat.

The Cumberland County Association, of which A. A. Raudabaugh is tester, had twenty-six herds enrolled during the testing month. Three hundred and eight of the animals were in milk and fifty-five were dry. There were ninety-three cows that produced over 40 lb. fat and forty-five over 50 lb. while ninety animals each produced over 1,200 lb. milk in the testing month.

ZWINGARA COMBINES TYPE AND CAPACITY

No less than 37,337 cows were tested during January in the nine states under the jurisdiction of the Western Office of the Federal Dairy Division. The leading producer was the famous Holstein show cow Zwingara Segis Clothilde, owned by the Modern Woodmen Sanitarium, at Woodmen, Colorado. She is credited with 2,957 lb. milk, 112.4 lb. fat. When you take into consideration that this cow has been carted around the country during the past few months competing at many different fairs; that she was exhibited at Denver, Colorado and Wichita, Kansas and carried off the senior and grand championships for females at each event it can be seen that Zwingara is a real producer and combines superb type with great producing capacity. No wonder that Judge Heger who awarded the blue and purple ribbons to her said "Right now I don't know but what she would

beat any I have seen this season. She's a peach." Bob's judgment is confirmed by the cow testing association records.

Second to Zwingara is Zo Zo, a registered Holstein owned by F. F. Pellissier of Whittier, Cal. Zo Zo has to her credit 2,698 lb. milk, 106.9 lb. butterfat. Helm Farm, Cocoran, Cal. has a registered Holstein in third place with 2,910 lb. milk, 104.7 lb. fat. The Pellissier herd leads for average production in the division for fifteen cows or more, the average for twenty-one purebreds being 1,428 lb. milk, 59.4 lb. fat. The division for fifteen cows or less is headed by the Holstein herd of E. H. Rosenberg, Colorado Springs, Colo., with an average for twelve milkers of 1,554 lb. milk, 61.4 lb. fat. A Washington herd is second and a California herds are third and fourth and all consisted of black and white cows.

A JEWEL OF A COW

Jewel Princess Johanna, a purebred Holstein owned by H. M. Herrick of Fredericksburg, Ia., was the leader in the Chickasaw Testing Association during January. She produced 1,675 lb. milk, and exactly 67 lb. fat. Mr. Herrick owned the high herd, his ten purebred Holsteins averaging 1,319 lb. milk, 47.3 lb. fat in the month. Guy F. Whitcomb with seventeen head of purebred and grade Holsteins held second place with the average production of 1,230 lb. milk, 41.4 lb. fat. Two hundred and eighty cows were tested with an average of 735.7 lb. milk, 26.8 lb. fat.

MICHIGAN GRADES DO WELL

Twenty-three herds containing 254 cows were tested in the Branch County, Mich., Testing Association during January. Of the 206 cows in milk, twenty-eight produced more than 1,000 lb. milk, 13 more than 1,250 lb. milk, and thirty-four exceeded 40 lb. fat.

Eight grade Holsteins owned by Fred Boley of Quincy were the leaders for both milk and butterfat production, their average being 1,177 lb. milk, 48.20 lb. fat.

The leader for milk production was a grade Holstein owned by C. M. Highley of Girard with 1,745 lb. milk to her credit. This is the highest milk production recorded in the Association. Her fat production was 57.58 lb.

MINNIE FIRST IN ARIZONA

An average of 753 lb. milk, 28 lb. butter is credited to the 613 cows in twenty-five herds enrolled in the Maricopa County, Ariz., Testing Association during January.

Minnie, a purebred Holstein, owned by B. Coman carried off the honors for fat production with 93 lb. fat. She belonged to the leading herd containing fifteen cows or more and their average production was 1,278 lb. milk, 43.2 lb. fat.

FIRST TEN ARE HOLSTEINS

Three hundred and twelve cows in 26 herds were tested in the Goodville, Pennsylvania Testing Association during the testing month ending March 14th. Thirty-four of these produced more than 40 lb. fat; fourteen more than 50 lb.; while seventy-one exceeded 1,000 lb. and thirty-nine, 1,200 lb. Luke W. Martin, of Goodville is the tester.

All of the leading ten cows are black and whites, either grades or purebreds. A purebred owned by Mast Stoltzfus was first with 2,403 lb. milk, 91.3 lb. fat; stablemates were fourth and sixth with 2,109 lb. milk, 73.8 lb. fat and 1,821 lb. milk, 65.6 lb. fat. Second on the list was a grade Holstein owned by Ira M. Eby, she being credited with 2,331 lb. milk, 81.6 lb. fat. Mr. Eby had a purebred in ninth position. A purebred was third with 1,785 lb. milk 78.5 lb. fat. She was owned by John A. Styer. Jason M. Eby had three grades on the honor roll and Harry Metzler had one.

HARBECK HEADS WESTERN ALLEGANY ASSOCIATION

For the month of February, Mr. J. B. Harbeck & Sons, of Black Creek, N. Y., who are members of Western Allegany Association had an average production of 1,600 lb. milk, 57 lb. butterfat per cow on 21 head of which eleven were in two or three year old form. The dairy was milked three times a day and the animals freshened from last May to January.

The high cow, Daisy May Mechthilde produced 2,818 lb. milk, 93 lb. butterfat. Her cost of feed was \$22.92, value of product over cost of feed \$38.79.

Eleven of the twenty-one head were daughters of Royal Johanna Korndyke a son of the well-known sire Colantha Johanna Lad 8th.

OUR HERD IS COMPOSED of Descendants of

KEYSTONE BEAUTY PLUM JOHANNA

25,787.5 lb. milk, 1,294.71 lb. butter in a year. This record was made in strict official test as a senior four-year-old, and was World's Record at time of making. Will spare a few females. Prices reasonable.

EASTERN BRADFORD COUNTY BREEDERS SALE

All cattle offered in the Eastern Bradford County Breeders Sale will be from herds either accredited or run on the accredited plan, reports the sale manager, J. G. Kerrick, of Towanda, Pa. The event will be staged at Wyalusing, Pa., on April 10th, starting at 1 p. m. The cows will be tuberculin tested and a sixty day retest guarantee will be given. The cows will be of the business kind and many of them close up to freshening and there will be a few young bulls. Mr. Kerrick assures us that the buyers will be given prompt and fair treatment.

Wyalusing is on the main line of the Lehigh Valley Railroad. There is excellent train service and is easy of access from both east and west. Catalogs will be ready April 1st, and can be obtained from J. G. Kerrick, Towanda, Pa.

NIAGARA MAID HERD DISPERSAL

Sale manager R. Austin Backus writes us that the Shanahan dispersal sale will be held on Niagara Maid Farm which is within one and one-half miles of East Aurora, New York. East Aurora is about seventeen miles from Buffalo and is reached by the Pennsylvania Railroad. This village is noted as being for many years the home of Elbert Hubbard, philosopher and writer, and those who attend the sale should take the opportunity of looking over the Roycroft shops which are monuments of the industry and philanthropy of Mr. Hubbard. Should it be necessary to stay over night, those who desire something different in the way of a hostelry should patronize the Roycroft Inn where there are many mementos of Mr. Hubbard and where the

BACKUS PEDIGREE CO., MEXICO, N. Y.

rooms in this institution, instead of being numbered, are named after famous painters, writers, etc. Many other things about this establishment are of interest.

The head of the Shanahan herd is Prince Echo Sylvia Fayne, a grandson of Champion Echo Sylvia Pontiac and Natoye De Kol 4th, a Canadian show cow with an official record of 704 lb. milk, 31.13 lb. butter in seven days. Prince Echo Sylvia Fayne is from Queen Fayne Alcartra, 579.2 lb. milk, 32.09 lb. butter in a week as a junior four-year-old. Her dam made 27.50 lb. butter in seven days and is from a 33-lb. cow. The six nearest dams of Prince Echo Sylvia Fayne averaged over 33 lb. butter and 675 lb. milk.

In the herd there are fifty registered and eighteen grade Holsteins. Space forbids individual mention. There is a yearling heifer whose dam is a 34 lb. cow and was from a 30-lb. cow. There is a daughter of a 31 lb. four-year-old cow that averaged practically 95 lb. milk a day while on test. There are daughters of 25-lb. cows, two daughters of a 20-lb. two-year-old who in turn is from a cow that made 32-lb. butter in a week as a three-year-old while quite a number of other animals who are close up to Pontiac Korndyke and the two famous western New York sires, King Aaggie Segis and Dutchland Colantha Sir Inka.

The sale date is March 26th. Mr. Backus will be in the box and the auctioneer will be Glenn R. Mead.

OSWEGO COUNTY BREEDERS QUALITY SALE

On April 29th, at Fulton, N. Y., the executive board of the Oswego County Holstein club have decided to hold a sale which will be entitled the Oswego County Breeders Quality Sale. R. Austin Backus of Mexico, will be sale manager. Oswego County has been noted for the quality of its animals ever since the earliest days of A. R. O. work. Netherland Hengerveld, world record cow for five years, was a resident of Oswego County and her daughters Magadora and Pietertje Hengerveld were both born in the old Stevens herd at Lacona. Mated with Milla's Pietertje Netherland, these two daughters produced two of the greatest sires the breed has known, Pietertje Hengerveld became the dam of Pietertje Hengerveld's Count De Kol and Magadora became the dam of Hengerveld De Kol, although the latter sire was dropped in the Pontiac herd.

BARNES DISPERSAL

When the Barnes herd is dispersed at public auction at Vernon, Vt., on March 26th, intending purchasers will be offered their choice of a nice bunch of home raised cattle. The animals have no official records as Mr. Barnes never employed a supervisor. He kept his best producers and bred for type. In commenting upon this fact he says, "I think that in past years cows have been bred for heavy production and large records with little regard for conformation so that the breed has been gradually losing constitution and type." Mr. Barnes has been a Holstein breeder for about eight years. Poor health is the reason for selling. The herd is headed by Mt. Hermon Volunteer, whose dam averaged over 90 lb. milk a day for more than ninety days as a three-year-old, just finished a three-year-old record of 23,924 lb. milk and as a junior two-year-old produced 22,413 lb. milk in 365 days. Vernon is five miles south of Brattleboro, Vt., and is a short distance from the state lines of Vermont, New Hampshire and Massachusetts. The Barnes herd is accredited.

RICHMOND PLANS FOR CONVENTION AND SALE

By W. L. KIRBY

The Holstein Friesian Association of America will hold its next annual Convention in Richmond, Virginia, on June 4, 1924. This is the first time that a southern city has been so honored and the Virginians are hard at work.

The Virginia Holstein-Friesian Club with the cooperation of the Richmond Chamber of Commerce and the Virginia Farmers' Milk Producers Association has completed arrangements to entertain all delegates as well as representatives and visitors in accordance with the prestige of Old Virginia Hospitality. A sumptuous banquet, Old Virginia Style, will be laid on the night of June 4th.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 209.)

A tour of some of the historically famous places of Richmond and vicinity is being arranged by the Henrico Holstein Club. Visits will be made to St. John's Church, that famous and venerable structure in which Patrick Henry uttered those immortal words which led to the independence of the American Colonies, to Gamble's Hill at which John Smith, exploring the James, landed at the head of tidewater, to Tree Hill Farm where Powhatan's wigwam stood and the point at which Pocahontas saved the neck of John Smith, to the White House of the Confederacy with its Civil War memorials and museum, and to numerous other famous places. The city will open its doors to Holstein Breeders and endeavor in every way to make their visit both pleasant and profitable.

The National Sale on June 5th and 6th, will be held in the Pavilion at the Virginia State Fair Grounds. The cattle are to be stabled in the new fireproof and well lighted Dairy Barn adjoining and may be seen at any time before or during the sale.

An extensive dairy exhibit will be placed in the adjoining hall by the extension force of the Virginia Experiment Station. This exhibit will be very complete and all phases of the industry will be presented in an attractive and instructive manner.

Virginia extends a cordial invitation to all dairymen to attend these events and to share their profits and pleasures with her.

BACKUS TO HOLD SALE AT EARLVILLE

Under the management of R. Austin Backus of Mexico, N. Y., a sale will be held at Earlville, N. Y., March 14th and 15th. Consignments are limited to the herds that are under state and federal supervision and Mr. Backus is anxious to obtain cows which will be just fresh or soon due to freshen at sale time. This is, we believe, the only consignment sale that will be held in Earlville this spring. Besides limiting the sale to animals coming from tuberculin tested herds, Mr. Backus is insistent that only good animals pass through the sale ring. The day is past when a sloping cow with an ill shaped udder, sired by a well advertised bull or from a cow with a large record can be led into the sale ring and sold there for a high figure. To-day men want the animal that looks as if she can go into the herd and by her production make a substantial profit above the cost of feed and labor. Sale manager Backus is endeavoring to see that the 1924 Earlville Sale surpasses in quality of offerings any of its predecessors and is soliciting consignments to secure this result.

MARYLAND ACCREDITED HERD DISPERSAL

One of the good Maryland accredited herds will be dispersed March 26th, at Detour Heights Farm, Detour, Maryland. This herd, containing twenty-six head of registered animals and five grades, passed another clean test this month, March 7th, to be exact. The herd includes granddaughters of a number of great bulls including King Korndyke Sadie Vale, King Segis Pontiac Alcartra, and Spring Farm King Pontiac.

The herdsire, The Great Countess Rag Apple, is by Rag Apple the Great a son of Segis Fayne Johanna. This great cow made over 30 lb. butter in seven days at her first freshening as a junior three-year-old, being tested in the Bloomingdale herd, Somerville, N. J., one of the greatest breeding establishments of its day, then owned by A. A. Cortelyou. She has other records above 30 lb. butter in a week. There are only two cows in the world that each have four daughters that each have made over 1,000 lb. butter in year test and Segis Fayne Johanna is one of these two cows.

The double grandsire of The Great Countess Rag Apple is a son of Pontiac Lady Korndyke, the first cow to make 38 lb. butter in seven days official test or 156 lb. but-

WYOWANNA HERD was the first accredited herd in Lackawanna County.

It is headed by BLACRES BAPTISTE ORMSBY, whose dam made 642 lb. milk, 31.74 lb. butter in a week as a four-year-old, 865.10 lb. butter in a year.

You are offered your choice of this big producing, Accredited Herd.

FACTORYVILLE PENNSYLVANIA

ter in thirty days. His dam is from a 24-lb. four-year-old daughter of a 30-lb. cow and the dam's dam is by a son of Judge Hengerveld De Kol and Pearl Ormsby Bruke, the highest record daughter of Pearl of the Dairy's Joe De Kol. The Great Countess Rag Apple carries eight close crosses of Pontiac Korndyke, who many regard as the greatest transmitting sire of the breed.

Automobilists regard the City of Detour as mythical but there actually is a place of that name. It is located on the Western Maryland Railroad and is about midway between Baltimore and Hagerstown. Detour Heights Farm is about 400 yards from Detour station, Mr. W. F. Miller, the owner writes us. The pedigree expert is S. R. Miller, Chambersburg, Pa. The auctioneer will be E. L. Stitley with E. M. Shank as clerk of the sale. This is a complete dispersal and the rest of the farm livestock as well as the farming implements will be sold.

GIBBLE DISPERSAL SALE

A good crowd and satisfactory prices were in evidence at the dispersal sale of the David Gible herd held March 6th, on the farm near Mechanicsburg, Pa. The twenty-eight purebreds averaged \$134.34; five bulls, two of which were under one year old, averaged \$101.60; while the twenty-three females averaged \$143.19. Thirty-four head averaged \$117.50; this included purebreds as well as a few grades and grade calves.

The top price was \$300 paid for Swansdale Pontiac Aaggie Queen, a two-year-old daughter of Pabst Hengerveld Pontiac. Her son, born August 30th, and sired by a son of Creator, went for \$101 to Samuel Zeigler, Mechanicsburg.

The herd had a splendid reputation for production and in the cow testing month ending February 24, 1924, the twenty cows in milk had the splendid average of 1,312.6 lb. milk, 44.6 lb. fat while one of the grades produced 2,160 lb. milk, 82.1 lb. fat. The sale was managed by A. A. Raudabaugh, tester for the association. Among the purchasers were:—A. N. Lehman, Carlisle; Paul C. Gible, W. J. Kimmel, S. E. Raudabaugh & Son, Samuel Zeigler, Lawrence D. Weary, Joseph M. Conrad, Clara Hopple, Roy G. Shaul, all of Mechanicsburg; Elmer Zimmerman, Camp Hill; E. H. Lehr, York Springs; and Enos H. Hess, Grantham.

OMWAKE AND SPECK DISPERSAL

The heaviest snowfall of the year affected the Omwake and Speck Dispersal Sale held at Greencastle, Pa., March 12th. The farm sale was scheduled to take place the day previous, but storm prevented. Wednesday was bright and clear although a strong, cold wind made it rather unpleasant for those in attendance. There were forty-three animals offered, a young bull calf from the accredited herd of J. Fred Roulette, Sharpsburg, Md., and forty-two animals from the Omwake and Speck herd besides a few small bull calves dropped after the catalog was printed. The forty-three head averaged \$127.79; nine bulls, seven of them under six months old, averaged \$80, and the thirty-eight females averaged, \$125.65. Despite the fact that there was a number of breeders present from Maryland, all the animals remained in Pennsylvania and a number of new herds were started.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 211.)

The sale of the day was that of the young bull calf offered by Mr. Roulette. He was born November 7th, was very straight and handsome and was consigned by his owner to show the quality of stock in the Roulette herd. Individuality rather than records determined the selling price for his three direct maternal dams were not even A. R. O. and only one of his granddams had been officially tested. The bidding on him was very active and he went for \$110 to H. W. Small & Sons, Marion, Pa.

The Hermes Grove Dairy Company of Pittsburgh, Pa., took the young herdsire, Champion Valdessa Jetta for \$155. This bull was a real good individual and the young calves sired by him showed splendid top lines. We are of the opinion that he was worth every dollar he cost his purchasers and then some. He was sired by King Valdessa Champion and his dam, S. J. P. K. Jetta, has just closed a year record as a four-year-old in the herd of John M. Martin, Smithsburg, Md., making 17,662.4 lb. milk, 725.51 lb. butter. This record was completed after the catalog was printed and so was announced by auctioneer Baxter and sale manager S. R. Miller. The Hermes Grove Dairy Company took seventeen others to keep this young sire company.

Ormsby Clothilde Lad went to Ira C. Barr of Greencastle, Pa., for \$175. This six-year-old son of Ormsby Korndyke Lad is a large deep bodied, good-looking, bull. His hair and hide, top line and depth of body would make him a serious competitor in almost any show ring but he had never been exhibited or even handled. Mr. Barr took seven head in all, paying the top price of \$240 for Clothilde Inka Hendrik 3d, a nice young heifer coming four years old. Mr. Barr also took the show heifer Lady Westtown Segis for \$230. These two young cows are closely related and have about 80% the same blood lines.

Other purchasers were:—H. F. Stover & Brother, Mrs. Annie M. Foreman, J. B. Shrader, Greencastle; E. S. Grimm, Albert Funk, Waynesboro; Clyde Bitner, Shadygrove; J. H. Lear, E. C. Ludt, W. A. Woods, Carlisle; D. E. Witherspoon, Chambersburg; H. W. Small & Sons, Marion; and Dr. J. L. Lenker, Harrisburg.

MURPHY RECORDS

Aurora Hengerveld Badger, on the Murphy Farms at Egg Harbor, Wis., produced 690.9 lb. milk, 35.29 lb. butter in seven days and after the test was closed was milking 104 lb. a day.

The first daughter to freshen of Ambassador Fobes made 427.4 lb. milk, 21.24 lb. butter in a week as a two-year-old. Hengerveld Pontiac Gracia, who holds the state record for 305 days as a senior four-year-old, with 923.88 lb. butter finished the year with 1,188.5 lb. butter.

Be Reasonable

YOU would not expect your Holsteins to produce the maximum yield of butterfat if you did not provide them with a proper balanced ration.

Is It Reasonable

to expect your soil to produce a maximum yield from year to year without the same attention and feeding?

Your Soil Needs A Balanced Ration

For every element taken from the soil by growing plants a like amount must be returned thru the agencies of manures, fertilizers, legumes, etc.

Baynes' Soil Improver

will help you settle your soil problems and will be sent to any address in the United States for 25 cents a year or 5 years for \$1.00 with the valuable 74 page booklet "FEEDING DAIRY COWS" as a premium.

WYOWANNA HERD

The first accredited herd in Lackawanna County, Pa., was owned by B. J. Gardner. His establishment is at Factoryville and is still on the accredited list. The herd consists of thirteen milkers, eight two-year-olds, and five calves and the bull, twenty-seven animals in all. The present herdsire is Blacres Baptiste Ormsby. He is a son of Colantha Denver Champion and Blacres Ambrosia Lyons, 31.74 lb. butter, 642 lb. milk in a week as a senior four-year-old. She has a year record of 865.1 lb. butter, 19,349.5 lb. milk. Her dam is a 27-lb. four-year-old with 642 lb. milk in a week and is by Sir Lyons Hengerveld De Kol from a 25-lb. cow. Six of the seven dams appearing on a four generation chart have been officially tested and their seven day records average 32.14 lb. butter, 611.1 lb. milk while the three nearest dams average 33 lb. butter and over 600 lb. milk in a week and 127.7 lb. butter, 2,636 lb. milk in thirty days.

Mr. Gardner's herd was built around the cow Saltram Dijkstra De Kol 3d, a cow purchased from N. A. Gardner, a distant relative of the present owner. Ten producing females as well as a number of young heifers trace to this great cow, who was from the same dam as Saltram Dijkstra De Kol 2d with an official record of 34.29 lb. butter in a week.

No Advanced Registry records have ever been made in the herd but the cows have done good work in the cow testing associations; for instance Saltram Dijkstra De Kol 3d, made over 10,000 lb. milk in a year on two milkings a day.

The herd prefix is Wyowanna, formed from the names Wyoming and Lackawanna as the farm lies in that corner of Lackawanna County extending into Wyoming. Mr. Gardner became a member of the Holstein-Friesian Association of America in 1918 and his dairy is composed of purebred Holsteins because he believes that they are the most profitable dairy cows.

A WELLBRED MARYLAND BULL

King Tillie Echo is the name of a very handsome young bull owned by J. Fred Roulette of Sharpsburg, Md. He was purchased from the Carnation Stock Farms and is, we believe, the only Carnation bull in the state. His sire is Carnation King Tillie Denver, a son of the noted Carnation King Sylvia, sold at the Milwaukee National Sale, for \$106,000. Jolie Tillie Denver, the dam of Carnation King Tillie Denver, has official records of 28.91 lb. butter, 558.3 lb. milk made in seven days and 114.67 lb. butter, 3,308.6 lb. milk in thirty days.

The dam of King Tillie Echo is Echo Segis Korndyke Copia. As a two-year-old heifer she produced in a week, 20.32 lb. butter from 468.7 lb. milk. The dam and sire's dam of this young bull have each produced over 35 lb. butter and over 700 lb. milk in seven day official test. Her dam, Princess Echo De Kol 2d made 35.33 lb. butter, 708.9 lb. milk in a week

and her sire's dam is Korndyke Queen De Kol 6th, three times over 30 lb. butter and twice over 700 lb. milk in seven days, her top records being 37.26 lb. butter, 781.5 lb. milk. She is the highest record daughter of Korndyke Queen De Kol, the best known daughter of the famous old foundation cow, Belle Korndyke.

The Roulette herd is accredited and is the oldest accredited herd in Washington County. It was selected and built up from the standpoints of individuality, production and high test. We are informed that the milk from this dairy averages 4% right along in its every day work.

MODIFIED ACCREDITED AREA

Jefferson County is the first county of Pennsylvania to be officially designated as a modified area.

A tuberculin test of 10,251 cattle in Jefferson County was conducted several weeks ago by officials of the State and Federal Bureaus of Animal Industry. Prior to the test about 400 herd owners had availed themselves of the opportunity to eliminate tuberculosis from their herds through State and Federal aid. The first work of this kind done in the county was so favorably taken by the cattle owners that applications were poured in on the officials to have the remainder of the herds tested and placed on a tuberculosis-free basis.

The efforts of cooperating agencies within the county were effective in having more than 90 per cent of the herd owners test their cattle. Of the 10,251 cattle tested, only 62 were found to be affected with the disease. All the condemned animals were promptly removed from the county and slaughtered under Federal-State supervision.

CAUSES OF STERILITY

At the annual veterinarians short course held at Iowa State College Ames, Iowa, January 17, Dr. W. F. Guard, one of the speakers, maintained that the 365 day production test was one of the greatest causes of sterility in purebred cattle because of the high forced feeding and irregular breeding practices. Beef cattle in show condition are also very liable to be sterile, he declared.

PRAY FOR HELP

Foot and mouth disease is raising havoc with English herds. Friday December 28, was set apart as a day of special prayer for deliverance from foot and mouth disease by authorities at Chester Cathedral. Chester is the chief city of Cheshire County which has been noted for its cattle for a thousand years. The Cathedral itself has been for more than six hundred years one of the most noted English, stately, church edifices.

"Your honor, I was not intoxicated."

"But this officer says you were trying to climb a lamp-post."

"I was, your honor. A couple of cerise crocodiles had been following me around all day, and I don't mind telling you that they were getting on my nerves."

**Rag Apple Korndyke**

Let me sell you grandsons and granddaughters of this famous sire who was by Pontiac Korndyke and from a former World's champion, a 31-lb four-year-old and a full sister to the first cow to make 1,000 lb. fat in a year.

Herd Accredited. Prices Reasonable.

B. C. ROBERTS

Wyoming Co., Meshoppen, Pa.

Your Choice

of grandsons of the great

Clara Clothilde Lyons

639.8 lb. milk in seven days, 4,872.8 lb. in sixty days, 20,771.2 lb. milk, 723.40 lb. butter in 10 months as a two-year-old.

No. 1. Dam, Johanna Cornucopia Colantha 3d, 21.08 lb. butter, 522.4 lb. milk in 7 days A. R. O. During December this cow produced 1,869.3 lb. milk. Calf born November 2, 1923. Is more black than white and is a nice one.

No. 2. Dam, Clover Johanna of Riverview, 343.3 lb. milk, 18.28 lb. butter in seven days as a two-year-old. Since freshening as a four-year-old, she has averaged 1,700 lb. milk per month. Calf is more white than black and bound to please.

These cows are sisters and from the same dam and both are nice individuals as well as big producers.

FRED B. KEENEY

Wyoming Co., Laceyville, Pa.
HERD ACCREDITED

**King Ormsby Veeman Korndyke**

is by the 1346 lb. year record sire KING ORMSBY IDEAL and was from a good record daughter of KING KORNDYKE SADIE VALE.

Although his dam was tested as a junior two-year-old, his seven nearest dams have A.R.O. records averaging 30.89 lb. butter.

Herd has passed two clean tests, is under State and Federal Supervision and has never had a reactor. We will book your orders now for March and April calves.

QUICK NOW UNIVERSITY HERDSMAN

The many friends of J. B. Quick, formerly of Meshoppen, Pennsylvania, will be pleased to learn that Mr. Quick is now herdsman in charge of the animals owned by the University of Arizona. The university herd is kept at Tucson and contains a number of fine animals of different breeds. At the time of writing, late in February, a member of the Hol-

JAY B. QUICK

A former Pennsylvania Holstein breeder who is now in charge of the herds owned by the University of Arizona, Tucson, Arizona.

stein herd was milking 125 lb. per day under the care of Mr. Quick.

Although he has many new interests to take up his time, Mr. Quick still likes to hear how things are going in the East and enjoys reading the HOLSTEIN BREEDER AND DAIRYMAN for in sending instruction to change his address on the mailing list he said, "If my subscription has expired please inform me and I will renew it at once."

THE BREEDER AND DAIRYMAN joins with its many readers in wishing the new University of Arizona herdsman, his wife and daughter, health, success and happiness in their new home.

DO COWS UNDERSTAND POLITICS

During December, 1923, thirty-four cows were milked in the purebred Holstein herd owned by the Missouri State Sanatorium at Mount Vernon. They produced 54,980 lb. an average of 1,617 lb. for each cow. At present there are 72 cows and calves in the herd.

The Sanatorium was built in 1905 by the State for the treatment of incipient cases of tuberculosis. The grounds, 218½ acres, were donated by citizens of Mount Vernon. At present there are 221 patients undergoing treatment. Within two and one-half years 210 patients have been discharged as arrested cases.

The Sanatorium and five other similar State institutions are consolidated under

one Board of Managers which is composed of six members, three Democrats and three Republicans. Three of the Superintendents of this institution are Republicans and three are Democrats and there are three Republican stewards and three Democratic stewards. No one has ever ascertained the politics of the dairy, as far as we know.

The law provides that the buying of supplies for these six institutions shall be done by the six stewards together with the President of the Board of Managers. Lists containing the requirements are sent to a number of wholesale houses or to any responsible bidder that wishes to do business with the State.

Purchases for a three months' period is in the neighborhood of \$150,000 and at times there have been as many as forty-five wholesale houses bidding for patronage.

RAISING DAIRY CALVES

Pennsylvania State College is planning a series of five articles on caring for dairy calves. This is article No. 1; others will follow from time to time.

To raise a strong, healthy calf, one must start caring for it before it is born.

1. The cow should be in good, strong, healthy condition when the calf is born.

2. Give the cow a clean, comfortable place at calving time.

(a) In the summer time there is no better place than a nice grassy lot.

(b) In winter time, or during bad weather, a clean, well-bedded box stall that has been thoroughly disinfected should be used.

(c) Oftentimes, calves are born in unsanitary places and die in a short time due to some infectious disease which cannot be cured by medicine or care.

3. Watch the cow during calving time, but do not disturb her unless extra help is needed.

(a) Occasionally a calf is born with mucus clogging its nose and throat. This can easily be removed and prevent the calf from smothering, as it might do within a few minutes.

(b) Sometimes a cow refused to own her calf and may tramp or hook it.

(c) Disinfect the naval cord with tincture of iodine or other disinfectant to prevent infection through the naval. Some dairymen advise tying up the cord.

WHY IT WAS PROSY

Timothy Hay—Did you ever read the *Congressional Record*?

Al Falfa—I tried to do it one year, but I didn't like it.

Tim—What was the matter? was it too prosy?

Al—No; it didn't have any advertisements in it.

REGISTERED HOLSTEIN YEARLING BULL cheap. 30-lb. dam, 32 lb. sire. Also heifer calves. ALEX. MURDOCK & SONS, Wyoming, Pa.

BULL AND PONY RACE

Jed Hawkins, who lived for many years in Turkey Hollow, was a wood-hauler by occupation. He drove a large roan bull and a skinny bay pony to his wood wagon and was known far and near by this strange team. When asked why he did not get a match for either the bull or the pony, his reply was that he did not care for a match for his bull, as he was so contrary, and he could not afford to buy another horse. As he continued to work the bull and the pony together, he became so attached to them that he hated to give either one of them up.

One Saturday morning Jed cut a load of stove wood and that afternoon hauled it to Pruneville, a small town in the mountain country about four miles from his home. This place had only 400 or 500 inhabitants, but on Saturdays and trade days a great many people came to Pruneville. It was 3 o'clock in the afternoon of a beautiful day in the early fall when Jed reached town with his load of wood and traded it to the storekeeper for some dry salt meat. He then rode out to see what was called the trade grounds to see the crowd and "gas" with old acquaintances.

In spite of the fact that Jed had been hauling wood with the bull and pony for several years and was known by nearly everyone in the county, many gibes were thrown at him and his oddly matched team. One lank mountaineer, by the name of Silas Adderberry, asked Jed if he thought the bull was growing any. The bull was then 10 or 12 years old.

"Nope" said Jed. "Only growing older."

This caused an outburst of laughter. One fellow in the crowd had a would-be race pony and was bantering everybody right and left for a race.

"Jed," said this fellow, "I'll bet you \$10 my old Chock can beat your bull in a 100-yard race and give the bull 20 feet start."

"I'll call the bet," said Jed, "if I can borrow the money."

This caused another roar from the crowd. Jed went up to the store and borrowed the \$10 from the storekeeper and was soon back and removing the harness from the bull. When the owner of "Chock" saw that Jed was in real earnest about running the bull against his pony, which was considered the fleetest thing on foot in that part of the county, he was delighted. He was so sure his pony could beat the bull, he could almost feel the money jingling in his pockets. There was not a man present who did not believe the pony would beat the bull and some of Jed's friends took him aside and advised him to back out, but to no avail. Jed was the better acquainted with bull nature than the others were and had an idea what would happen.

Chock and the bull were mounted and Jed rode the bull off 20 feet from the starting point, while the crowd lined up on each side of the course to see the fun. This is just what Jed wanted them

to do. The lines of men were just 10 feet apart to keep the bull in the course intended for him to run. The mob of fun-loving mountaineers began to holler and slap their knees with their big felt hats and when the word was given to start, someone near the bull shouted "Whoop-ee-ee!" and struck him with his big felt hat. This scared the bull and he gave a jump and kept on going right down the avenue between the two rows of howling men, scared within an inch of his life, with Jed hanging on as though life depended on it. The noise and hullabaloo had an opposite effect on the pony. He reared and tried to turn the other way, but his rider used spurs and quirt and kept him headed the right way until he gave out, and the pony got the upper hand. Then he whirled and ran in the opposite direction as fast as he ever ran in his life, and by the time the frightened bull reached the end of the race course, the pony was twice as far away and going toward town with only one object in view, to get as far away from the crowd as possible in as short a time as possible.

The rule at country pony races is that when one of the contestants refuses to run and the other one does run, the award is made to the one reaching the end of the race course, so Jed won the \$10. He hitched his bull and pony again and went back to the store and paid back his borrowed money amid the cheers of his friends, while "Chock" and his master were making good time getting out of town. In fact, "Chock's" master never came to Pruneville again, as he was ruined as a race rider and was ashamed to be seen in a place where his race pony had been defeated by a bull.—*Progressive Farmer*.

FRENCH LIVESTOCK SHOW

The annual French livestock show, which was discontinued in 1914 after having been in existence for many years, was revived last June in a modified form and is to be continued with enlargements this spring, according to an announcement by the Minister of Agriculture received by the United States Department of Agriculture through the State Department. The show will be held at Paris from March 18th to 23d and will be open to "breeding bulls, rams, hogs, and goats and fat animals of the same classes." In addition, there will be exhibits of milk and butter and a shepherd dog contest. Only animals born and raised in France will be admitted, according to the announcement received.

In former years this show brought together the best specimens of the French breeds. It was an affair of international importance and many transactions were effected there with both home and foreign buyers.

FOR SALE.—Holstein Bull Calf, born Feb. 20, 1924, from a good producing dam, sired by Cray Farms Segis Warrior, which was purchased from Horton Cray Co., Warren, Pa. Price \$50. Walter Wirth, Batesville, Indiana, R. R. 1.

EVERBREEZE FARM

GRACE ABBEKERK CALYPSO

is a specimen of the big producers in our ACCREDITED HERD. They are being bred to the herdsire, KING HENGERSVELD HARTJE, whose daughters include Walker Hartje Spoford 960.6 lb. butter, 26,233 lb. milk in TEN months, World's Record for milk at time of making.

GEORGE LIGHTBODY

Lackawanna Co. Dalton, Pa.

Valley View Farm

Offers Choice Young Heifers
Sired by Our Herdsire

Dutchland Konigen Hengerveld
Lad

he by King Segis Pontiac Konigen from a daughter of Colantha Johanna Lad with 17,539.9 lb. milk, 781.11 lb. butter in a year as a four-year-old. Her dam a 24-lb. daughter of Hengerveld De Kol is from a 20-lb. daughter of De Kol 2d's Butter Boy 3d.

There's Breeding for You.

O. P. WALKER & SONS

Thompson, Pa., Susquehanna Co.

Herd under State and Federal
Supervision.

COLONEL JOH LYONS

Son of King Joh and Gypsy Lyons, a 33.63 lb. daughter of King Lyons.

The seven-day records of his eleven nearest dams average 32.15 lb. butter.

Our herds contain 120 head and are under State and Federal Supervision.

L. N. Mack & Son and Floyd E. Mack

Susquehanna County

Montrose, Pa.

KING IS STILL MAKING GOOD

The great show bull King Alcartra Rag Apple Posch purchased by a group of breeders, members of the Columbia County Holstein Association is standing in the barn of Clarence Reece at Berwick, Pa. The bull made the trip from the home of his former owner, A. R. Bush, Montrose, to his new home in good shape and his new owners like him better every time they see him. Under date of January 14, Mr. Reece reports that they have already bred sixteen cows to him.

King Alcartra Rag Apple Posch has in his pedigree a combination of blood lines which has produced a number of noted sires and many high producing cows. This bull, who was by a show bull, has three different years carried off the grand championship at the Susquehanna County Fair and as Susquehanna County leads all the counties of Pennsylvania for number of Holsteins it can be seen that he possesses individuality of a high order.

In the herd of Mr. Bush, there are daughters of King Alcartra Rag Apple Posch that would please any critical judge and we are informed that in the neighborhood there are grade heifers by him that are both high class individuals and big producers. The BREEDER AND DAIRYMAN feels elated at the result of its efforts to save this bull from the fate which has befallen many high class sires and trusts that he may be spared for a long life of usefulness. Such bulls as King are worth more to the Holstein breed than are a whole barnyard full of pedigreed scrubs whose only recommendations are that they are purebred and that their dams or some of their female ancestry have made large records while surrounded by ideal conditions and tested regardless of expense or profit.

A LEADER IN HIS COMMUNITY

One of the leading dairymen in the Unadilla Valley is Earl Mathews, of New Berlin, New York, who owns a herd of 35 head of purebred Holsteins and a number of good grades. The milking dairy is made up of good big cows of fine type. The individuality of this herd is considerably above the average. Mr. Mathews herd is under State and Federal Supervision and has passed two clean tests.

At the head of the Mathews herd is a son of Aetna Jewel De Kol 3d with a seven day record of 30.21 lb. butter, 542.6 lb. milk. This bull is sired by Idleaze Pontiac Pietje, a son of King Hengerveld Pietje from Idleaze Pontiac Lass 42.50 lb. butter in seven days as a junior four-year-old, the second highest record daughter of King of the Pontiacs.

The Mathews farm consists of 300 acres of which about 125 are tillable, the remainder being in pasture and woodlot. The buildings are large and capacious, are kept well painted and are pleasantly located. Mr. Mathews is a believer in up-to-date farming methods, that is the reason he owns purebred Holsteins. He owns a tractor, a truck, a manure spreader, and a number of other modern farm implements. His buildings are lit by electricity which is furnished by a home

lighting plant. An Empire milking machine saves much of the drudgery in the barn and the cows are watered from drinking cups which are supplied from springs on the hillside. There is a furnace and other conveniences in the farm house.

Mr. Mathews was born on a farm adjoining his present establishment. For several years he was in the chicken business and he still owns about 700 White Leghorns. The eggs are shipped direct to city markets and bring the highest prices. Mr. Mathews took the short course at Cornell. He is a member of the Farm Bureau and of the Dairymen's League and is Secretary of the Chenango County Breeders' Association. He is a son-in-law of the well-known Holstein breeder, Grant B. Low. His three-year-old son, Grant Low Mathews, is a "chip off the old block" and already shows that he has inherited the tastes of his father and grandfather for he can talk cows and pedigrees.

BUILDING A NICE HERD

Joe Van de Loop of Rudolph, Wisconsin, is building up a good registered herd and recently purchased a heifer calf and a yearling bull for the Hamman Hurst Stock Farm.

Last fall Mr. Van de Loop purchased two heifer calves from the same establishment. He now has two full sisters, daughters of Estella Mercedes Homestead, a cow with an A. R. O. record of 25.11 lb. butter, 480.8 lb. milk and the dam of two good record daughters. The other heifer is from Johanna Hengerveld Gewina with a seven-day official record of 20.64 lb. butter.

The sire of these three calves is Sir Rachel Jess Homestead, whose dam, Jess Evergreen De Kol 2d, has a seven-day record of 31.19 lb. butter, 731 lb. milk and a year record of 1,266.66 lb. butter, 27,889.3 lb. milk.

The young bull is a son of Rachel Gewina Fobes Homestead, who has a year record of 667.76 lb. butter, 18,625 lb. milk made as a two-year-old. The three nearest dams of this young bull have seven-day records that average 29.46 lb. butter, 676.6 lb. milk.

NO "EQUIVALENT" FOR HIM!

An old Kentucky Negro insured his tobacco barn and shortly afterward it was struck by lightning and burned to the ground. Uncle Mose looked forward to the handling of a considerable sum of money as a result of the loss, but instead the insurance company built him a new barn, and showed a clause in his policy which permitted the company to either pay the money value of his loss or provide the equivalent.

Shortly afterwards a life insurance agent called on Uncle Mose and wanted him to take out a policy on his dusky wife, Aunt Eliza. Uncle Mose chased the agent off the premises and said, "I knows what you all gwan to do in case I takes out this surance on 'Liza and she dies. I don't get no money, no sah. 'Yo' jes' fotch another big fat nigger wench and pass her off as a 'quivalent.'"

ALASKAN AGRICULTURE

Gold, forests, fish and fur for long years were Alaska's only real important assets, but now we read in reports of the several agricultural experiment stations that real progress is being made in developing the agricultural resources of our farthest north possession. It is not the hope of the United States Department of Agriculture to make the soil of this region produce in great abundance, but there is good reason to believe that much of the food being shipped in can be grown there and that better supplies of fresh vegetables, fruit, and milk can be provided.

The Government and settlers are growing cattle, sheep and goats. Attempts are being made to cross the yak and common cattle just as has been done in central Asia for many years. The hardy, rustling, heavy-haired Galloways have been found admirably suited to the southwestern part of the Territory, and this breed with the Holstein-Friesian is being used to produce reciprocal crosses which it is hoped will result in a hardy dairy type.

Especially hardy strains of small grains do well in the interior during most seasons, and when the summer is wet or frosts come too soon the crops can be made into hay or silage. Barley is the most promising stock grain as it matures much earlier than either spring wheat or oats, the latter being used almost entirely for hay. Hybridization experiments are being made in an effort to develop higher yielding and harder grain varieties.

It is predicted that legumes are destined to play an important role in Alaskan agriculture. Most of the alfalfas lack sufficient hardness for this climate, even the Siberian varieties and Grimm, but a yellow-flowered kind, *Medicago falcata*, sent from the department experiment fields in 1909, has survived the hard winters. Next in importance is a perennial vetch. The common clovers have been tried and found wanting, but red clover is of value as an annual crop sown early in May and cut for hay or plowed under late in August. Early-maturing field peas promise to be an important crop in the interior. Sweet clover has failed.

Winter feed is a big problem for Alaskan farmers, but the silo is helping them solve it. Oats with peas or vetch makes good silage, as do also some of the native grasses, especially wild rye and a tall sedge. Smooth brome grass has proven the best of the tame grasses.

WHEAT FARMERS TURNING TO
DAIRYING

Whitman County, Washington, is claimed to be the greatest wheat growing county in United States. The 1923 crop was thirteen million bushels and the general average for the county was thirty-two bushels per acre. Yet times are not as prosperous as they should be in Whitman County.

Only a small portion of the 1923 crop has been sold. The price started off at about eighty-five cents a bushel and has since held very close to that figure.

Years ago this would have meant enormous profits but it spelled loss this year to the producers. For one thing taxes are several times what they were several years ago; wages are higher and everything else costs more.

A few farmers have gone into dairying and they are better off than the wheat producer. There are a number of Holstein herds and their owners are making the dairy business pay. C. H. Barclay, Pullman, has received as high as \$700 a month for the product of his dairy. Brick Burford, secretary of the Washington Farm Bureau is working with several bankers and business men in an effort to bring a lot of good dairy cows into the county. A number of big farms with from 640 to 2,000 acres in wheat own dairies of from six to eighteen cows each and are paying running expenses with cream checks.

KEEP THIS IN MIND

Since November 1, 1923, J. D. Abercrombie of Prosser, Washington, has been handling the Taranaki herd of Holsteins owned by ex-commissioner of agriculture, E. F. Benson. Mr. Benson, who is now immigration agent for the Northern Pacific Railroad, several years ago purchased six bred heifers from the herd of William Todd & Sons of Yakima, and sent them to this farm together with the bull, Pietertje Beauty Segis, a full brother to Segis Pietertje Prospect.

There are now sixty head in the Benson herd of which twenty-two have A. R. O. records. Mr. Abercrombie, who for six years was a Holstein breeder in Montana, expects to put records on this stock. There are five of the original six animals of the Todd bunch and they have heifer records ranging from 20 to 23 lb.

One of the cows in the herd is now eight years old and has records of 26.67 lb. butter in seven days and 991.4 lb. in 365 days. She has six daughters on the farm while her son by the Prospect bull heads the herd of D. C. Hanson of Gibbon.

Pietertje Beauty Segis is now past eight years old and his daughters show considerable promise. One of them has produced 52 lb. milk in a day on twice a day milking.

TRYING FOR BETTER STOCK

Late in January two bull associations, one Guernsey and one Holstein, were organized in Jerome County, Idaho.

The Jerome Cooperative Holstein Bull association, with nine members, who own 130 cows, secured four high-class Holstein bulls, with dams averaging more than 750 pounds of butterfat in a year. Three of these bulls were bought from the University of Idaho herd and one came from Wisconsin.

"IT PAYS TO BUY THE BEST"

Registered Holstein Heifer Calves from son of first prize bull of New York State. Beauties \$60 each. Registered, transferred and express prepaid east of Mississippi. NU-BORN FARMS, Jasper, N. Y.

WINTER'S HERD IS ACCREDITED

The first herd in Bergen County, New Jersey, to be placed on the accredited list is the Holstein establishment owned by Albert Winter of Mahwah. Mr. Winter conducts a feed and grain business in Mahwah and takes a great deal of pride in his purebred Holsteins. Naturally he was very much gratified when this herd passed its third successive clean test. Tranquillity Sadie Vale Wayne, in this herd, promises to make around 44 lb. butter in a week. She already has a 41.67 lb. record to her credit made last year.

A pair of June Calves from an Accredited Herd. A. R. O. Dams. Sire: Maple Grove Ybma Glista, whose dam produced 641 lb. milk, 27 lb. butter in 7-day official test. \$125 takes the pair. Maple Grove Stock Farm, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

Waldron Farm Holsteins

KING SYLVIA PONTIAC PIETJE is the sire of a nice bunch of heifers in our herd which consists of 60 head of splendid Holsteins.

He was by CHAMPION ECHO SYLVIA PONTIAC and from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in seven days as a junior four-year-old, her dam a daughter of May Echo Sylvia. We offer his sons and a few good cows and heifers bred to him.

Herd under State and Federal Supervision, last test CLEAN.

Bradford Co., R. D. 5.

Wyalusing, Pa.

PROSPECTS IN THE HOG BUSINESS

Hog production has passed the crest in the surplus producing regions and a downward movement in production is well under way according to the results of the December, 1923, pig survey of the Department of Agriculture cooperating with the Post Office Department through the rural carriers.

The survey shows a decrease of 8.7 per cent in the number of sows farrowing in the fall of 1923 from the fall of 1922 for the United States. A decrease of 6.1 per cent in the Corn Belt is shown. In the June 1923 pig survey, farmers stated they intended to breed 28 per cent more sows for Fall farrowing in 1923 than in the Fall of 1922, the intended increase in the Corn Belt at that time was shown as 25 per cent.

The decrease in Fall farrowing is, no doubt, the result of low hog prices in June and July of 1923. Many sows that were intended for Fall farrowing in 1923 were marketed instead as indicated by the fact that 61.8 per cent of the hog slaughtered at packing plants during August, September and October were sows, compared with 59.3 per cent for the same months the previous year, which is interpreted as an increase in slaughter of about 1,500,000 sows for this period. This is also supported by the fact that while there was an increase of about 25 per cent in the inspected slaughter of hogs during the four months, July to October, 1923 inclusive, over the same period the previous year, the average weight per head was about the same for the two years, indicating that the number of sows slaughtered must have increased at least proportionately with the increase in the total slaughtered.

While the survey shows that the sows farrowed in the Fall of 1923 decreased

8.7 per cent for the United States and 6.1 per cent for the Corn Belt, from the previous year, the actual pigs saved were reported as having decreased only 6.8 per cent for the United States and 3.8 per cent for the Corn Belt.

A decrease of 1.2 per cent in numbers of sows bred or intended to be bred for Spring farrowing in 1924 in the United States, and a decrease of 5.4 per cent in the Corn Belt from sows farrowed in the spring of 1923, is also reported. There decreases showed the intentions as of December 1st. Since that time, the marketings of hogs have been the heaviest ever known for a similar period, the price has been low and the corn-hog ratio has been unfavorable to hog production which may indicate a further reduction of sows kept for breeding.

Actual farrowings as shown by previous surveys, have heretofore fallen considerably short of the expressed intentions at the time of breeding. The December 1922 survey showed an increase of 13 per cent in intentions to breed for farrowing in the spring of 1923 for the whole country, while the actual farrowing increased less than 4 per cent. In the Corn Belt, the intentions were to increase 15.6 per cent while actual farrowings increased 8 per cent.

The total 1922 pig crop in the Corn Belt was 24.6 per cent larger than the total crop of 1921, according to the Department survey. This is born out by the record of the marketings from these states. The total marketings for the Corn Belt from the 1921 crop were about 37,000,000 head and from the 1922 crop were upward of 48,000,000 head. Assuming the farm slaughter for these two years to be the same as shown by the 1920 census figures, namely 5,300,000 head and estimating other local slaughter at 2,000,000 head each year, this would make the total production of hogs in the Corn Belt about 44,000,000 head in 1921 and about 55,000,000 head in 1922 or an increase of 25 per cent.

The total crop of 1923 in the Corn Belt is shown by the surveys to be 2.5 per cent greater than the total crop of 1922. If these figures are as dependable as those showing the increase in the 1922 production, the market supply from the Corn Belt from the 1923 crop will be about 49,500,000 head instead of 48,000,000 head marketed from the 1922 crop.

It is important to note in this connection, however, that the marketings during October, November and December from the 1923 crop are already 3,000,000 head in excess of the marketings during the same months from the 1922 crop, indicating that because of this heavy early market movement during the latter part of 1923, there will probably be a falling off in the marketings during the first nine months of this year from the number marketed during the same period last year.

You never can tell. Even the man with an impediment in his speech may have views that are decidedly pronounced.

GROWING SOUTH DAKOTA HERD

The Holstein herd owned by the Custer Sanatorium near Sioux Falls, S. D., contains thirteen purebred daughters and four granddaughters of Sioux Johanna Champion. This bull was by Colantha Johanna Champion 2d from Redfield Alewin Champion, a granddaughter of Colantha Johanna Champion. Colantha Johanna Champion is the youngest son of the former world's champion cow, Colantha 4th's Johanna and who was the dam of Colantha Johanna Lad.

The Sanatorium herd now totals forty-five head of which eight are grades. There are fourteen purebred cows, fifteen purebred heifers and eight young bulls. The Custer Sanatorium herd is proving that the Black Hills and Custer County are well adapted to the dairy industry and the herd is fed on rations available to the average farmer of South Dakota,—bran, shorts, ground oats, hay and pasture.

Gerard Hay in telling of this establishment says that here "pitchforks are used for pitching hay and not for punching cows."

CATTLE VALUATION DROPS

Although there were several hundred more dairy cows on the farms of Pennsylvania this year than there were last, the value of such cows has dropped approximately \$634,000 reports Director L. H. Wible in his annual January 1st inventory. On January 1, 1924, there were 862,835 dairy cattle over two years old reported on Pennsylvania farms as compared with 862,467 head on January 1st, 1923.

The average value per head has dropped from \$57.80 to \$57.00. In January, 1922, there were 862,868 dairy cattle reported, at an average value of \$59.00 per head, or a total value of \$50,946,852.00.

BACKED BY MANY RECORDS

Fullerton Bess Burke Ormsby is the name of a bull just about a year old purchased by Harry Johnson & Son of Artesia, California. This bull is a son of Marathon Bess Burke the well known Erickson herdsire. His fifteen dams have seven day records averaging 30.17 lb. butter and his eleven nearest dams average 30.91 lb. butter in seven days and 1,025.20 lb. butter in year test. His dam Wisconsin Fobes Ormsby 2d has a record of 31 lb. butter made in a week as a three-year-old and is a daughter of Sir Pietertje Ormsby Mercedes 37th.

INSINUATING PERSISTENCE

You can overdo a good thing. Former Vice President Marshall, when governor of Indiana, received a complimentary ticket for a free bath at a new bathing place that had just been opened. A week later another ticket arrived. He wrote back to the commissioner: "Dear Sir, I received your first free ticket to the bathing beach and considered it a compliment. Your second I considered a suggestion. A third I shall deem a positive insult."

DAIRYING IN A BEEF COUNTRY

Fifty young cows were sold to an experienced dairyman by the management of the Harlan-Turner Farm, Stamford, Texas, and the average price was \$200. This is the biggest single deal that has been transacted by the Harlan-Turner interests since the herd was started a number of years ago. There are a number of real good ones left. The pride of the dairy is Beautiful Edith, a cow that has produced over nine gallons of milk per day. A number of animals in this herd are not native Texans but were purchased in the Salt River Valley when the ranchmen of that section dreamed of making fortunes with long staple cotton and plowed under the fields of alfalfa and disposed of their dairy herds. Five carloads of Holsteins were shipped from Arizona to Stamford by M. L. Carpenter of Phoenix and Mr. Turner purchased twenty heifers from this shipment paying \$100 for each of them.

The history of the development of this herd is the story of the development of dairying in a hitherto beef section. When ordinary Texan longhorns could be purchased at \$10 a head, Mr. Turner bought three grade Holsteins for \$60 and these did so well that the owner decided to buy purebreds. When he got three registered heifers for \$325, the cowboys examined his head for "leak crevices." But Beautiful Edith was one of the three and the money was well invested.

For the past two years the milkers of this herd has averaged four gallons daily during the lactation period. The milk is weighed daily and animals not coming up to the standard are disposed of. The herd is tuberculin tested at regular intervals and every three months the new calves are vaccinated with anti-black-leg serum. The cowboys call the Holstein calves "Baby Mulattos."

THOROUGHBREDS AGAIN AT COLDSTREAM

Coldstream Farm, the property of Chas. B. Shaffer is again the home of thoroughbred horses. Some great race horses have been raised at this establishment, notably Aristides, winner of the first Kentucky derby in 1875, as well as the great race horse and sire, Broomstick. It is sixteen years since Coldstream Farm was the home of thoroughbreds. The horses will be in charge of Thos. B. Young, youngest son of Colonel Milton Young, who formerly owned part of the property.

COLLEGE HAS GOOD HERD

College Jewel Blanche, owned by the Texas Agricultural College recently completed a year record of 21,813.6 lb. milk, 668.27 lb. butterfat which is the highest record ever made by an animal in the college herd which now contains eight Holstein cows whose average year records are 22,114 lb. milk, 665.65 lb. fat or 832 lb. commercial butter. The college herd is in charge of Prof. Geo. P. Grout, head of the Department of Dairy Husbandry.

STATE OF RHODE ISLAND PURE-BREDS

A good purebred Holstein herd consisting of 76 cows, 9 heifers, 10 calves and two bulls are owned by the Rhode Island State Prison. About 55,500 lb. milk or nearly 28 tons are produced monthly by this herd which is distributed to a number of state institutions. A force of sixteen men take care of the cattle.

At the State Home and School there are 19 cows and a bull and the production of this herd is about 15,800 lb. milk each month, which is used in the institution. Each child is given a quart a day for drinking purposes.

At the State Hospital for Mental Diseases there are 39 purebred Holsteins which during the year 1923 produced 162,734 quarts of milk.

Superintendent Roy L. McLaughlin of the Sockanosset School for Boys says there are 21 Holsteins in their herd practically all of them registered and the dairy produces 320 lb. milk a day all of which is used at the school. The youngsters get cocoa made with plenty of milk twice a day besides receiving a pint of milk daily for drinking purposes.

BUY GOOD BULL FOR GRADE HERD

A well bred young Holstein bull has been purchased from Gage & Kurtz of Groton, S. D. by Willis Adams a banker of Lisbon, N. D. The animals on the Adams farm are owned jointly by Mr. Adams and the tenant Ed. Reidburn and are grades.

The young bull is a son of King Johanna Fayne Homestead, who was by Piebe Laura Ollie Homestead King and from Johanna Fayne Star, 32.7 lb. butter in seven days as a twelve-year-old, a daughter of Sir Johanna Fayne. The dam of the calf is a young cow that has a senior three-year-old record of 21 lb. butter in a week. She has never been shown but three of her sisters have won blue ribbons at the South Dakota State Fairs. The dam's dam has a seven day butter record of 28 lb. and a thirty day record of 112½ lb.

DOINGS IN HELM HERD

Helm Tuebie Hiske Mead, a senior two-year-old daughter of King Hiske Mead, owned by the Helm Farms, Corcoran, Cal. completed on January 26, a 365 day record of 803 lb. butter announces Harry Redd, herdsman of Helm Farms.

Helm Princess Cicely Hiske Mead, a half sister to Helm Tuebie Hiske Mead, completed on January 2, a 365 day record of 22,000 lb. milk, 893 lb. butter. She is a junior three-year-old and this is her first lactation period.

Eldorado May, a daughter of Sir Aaggie De Kol Acme, made a seven-day record of 735 lb. milk containing 27.54 lb. butter. Last year she produced 25,436.8 lb. milk, 845 lb. butter in a year.

The entire Helm herd consisting of 108 producing cows averaged 1,400 lb. milk, 46.6 lb. fat during January, despite the fact that two-thirds of them are in their first lactation period.

PENNSYLVANIA AGRICULTURE

The annual crop report of the Bureau of Statistics says that during 1923 there were 7,366,770 acres devoted to the nine principal farm crops in Pennsylvania. In 1919, the census year, the area planted was 7,595,207 acres. The crops included wheat, corn, rye, oats, buckwheat, barley, potatoes, tobacco and hay. These crops together with sweet potatoes and yams, edible beans, cloverseed, apples, peaches, pears, grapes and maple syrup and sugar constitute seven-eighths of the total value of all crops produced in Pennsylvania. It appears from these figures that the value of the 1923 crops was very close to four million dollars greater than the value of the crops of the preceding year but nearly one hundred and sixty-five million dollars less than the 1919 crop. The average value of crops raised on each of the 202,250 farms was approximately \$1,212.20 in 1923.

Practically no change occurred in the value of farm land during the past two years. Farm wages by the year, with board, increased in 1923 from \$370 to \$408, and by the day, with board, from \$2.10 to \$2.45. The wages of female household help on farms increased from \$5.35 to \$5.90 a week.

PENNSYLVANIA CORN CROP

Pennsylvania is not generally regarded as a corn state, yet, the total value of the 1923 crop was over fifty-five millions, says the State Department of Agriculture, the exact figures being \$55,651,914.85. The acreage was 1,476,360 and the total number of bushels produced 58,911,920. The average price per bushel was 94 cents and the average yield per acre 39.9 bushels.

THERE'S NO EQUALITY

An Arkansas woman has cremated her third husband. It seems unfair that some should be old maids while others have husbands to burn.

**TIDY ABBEKERK PRINCESS
MADALINE**

This splendid daughter of the noted century sire, Tidy Abbecker Prince, is the dam of our junior herdsire.

He is by King Korndyke De Kol Changeling whose dam made 40.26 lb. butter in a week and was from a 30 lb. cow with over 600 lb. milk.

GRADE HOLSTEINS NEEDED

The California Breeders Sales and Pedigree Co. advertises that they have on hand orders for more than five hundred high class grade Holsteins in addition to a number of grade Holstein heifers under milking age. The cows must meet the following specifications:

Must be tuberculin tested and entire herds from which they come must have comparatively clean history for several years.

Herds from which they come must show no prevalence of contagious abortion for at least one year.

Cattle must be well marked, of at least fair size, and evidence of production will be asked in form of cow testing association records or creamery records from which average production may be figured.

We understand that a large proportion of these animals are for the export trade. One of their clients is taking three and four-year-old grade Holstein cows in lots of twenty-five and fifty. He evidently knows where he can place these animals for he is willing to make a contract extending over a considerable period.

DISINFECTANT WHITEWASH

A disinfectant whitewash, recommended by the Iowa Agricultural Experiment, combines general utility of ordinary whitewash with disinfectant properties of stock dip. By its use, it is asserted, applications of stock dip can be supplanted. For interior use in poultry and hog houses, barn basements and stables, it proves especially suitable.

The formula is compounded from the following ingredients:

- (1) Hydrated lime, pecks1½
- (2) Salt, pounds2
- (3) Commercial lime-sulphur, gal. ...4
- (4) Water, gallons40

Equivalent amounts for a small quantity of the above whitewash are approximately as follows:

- (1) Hydrated lime, heaping quart ...1
- (2) Salt tablespoonfuls3
- (3) Commercial lime-sulphur, gal. ...1½
- (4) Water, gallons4

Alum added to a lime whitewash lends adhesiveness. An ounce to a gallon is sufficient. A pound of cheap bar soap dissolved in a gallon of boiling water and added to about five gallons of thick whitewash will give it a gloss like oil paint.

Two applications should be made each year, one each in the fall and spring. To insure penetration in cracks and crevices, the operation is preferably done with a high-pressure spray pump.

GOES BACK ON DEAL

An elderly man named James C. Good, who recently acquired the Carleton College farms between Fairbault and Northfield, Minnesota, has filed suit against the Carleton corporation to cancel the trade for the farms for which Mr. Good exchanged the Ashmore apartments in Minneapolis. Mr. Good alleges that he was told the farm was worth \$42,000 and the personal property worth \$9,200 while his valuation is \$13,600 for the farm and \$3,000 for the personal property.

He says that the representatives of Carleton College, one of which was a former mayor of Minneapolis, took advantage of his age and physical condition. Carleton College Farms was formerly the Fleckenstein farms, a well-known Minnesota Holstein breeding establishment.

BERYLWOOD STARTS HERD

Five head of purebred Holsteins were sold by the Berylwood Stock Farm of Hueneme, California, to the County Hospital at Santa Barbara. The animals, which were selected by Superintendent C. G. Vandervier, will form the foundation of a Holstein herd and includes two aged cows, a two-year-old and a three-year-old heifer. The bull, Berylwood Count Douwe Pontiac, is a son of Prince Aaggie of Berylwood and the 33 lb. cow, Douwe Pontiac. His ten nearest dams have year records that average 1,094 lb. butter.

It is quite possible for a man to be of a mechanical turn of mind without having wheels in his head.

ROWLAND HAS COW STANDARD

Phillip Rowland and his son, E. P. Rowland, of Oxford, Conn., have a standard of 7,000 lb. of milk for their mature cows. Animals failing to reach this standard are disposed of.

The Rowlands began to keep Holsteins fourteen years ago although they had owned a farm twenty-three years and formerly had Jerseys. There are a few descendants of this Jersey foundation in the herd but only purebred Holstein bulls have been used for the past fourteen years. The heaviest producing cows are the purebred Holsteins. The seventeen milkers averaged 8,400 lb. last year. One grade cow gave 63 lb. of milk in a day.

"Not all purebred bulls are of value," says Mr. Rowland. Some years ago he purchased a bull that looked promising and raised thirteen heifers before he discovered that all of them were poorer than their dams. This was an exceptional case. The present sire is Bridgeport King Ormsby, a grandson of King of the Ormsbys.

The milk is sold in New Haven and is marketed through the Connecticut Milk Producers' Association. Mr. Rowland belongs to the Seymour Dairy Club, an organization of farmers, organized for the improvement of their dairy herds.

IN PARTNERSHIP WITH UNIVERSITY

Theo. Koster, of Moscow, purchased a half interest in the Holstein bull, Idaho Matador Foremost No. 409709 from the University of Idaho. Mr. Koster has a small herd of Holsteins. Most of his foundation animals were purchased from the University. For several years he has leased University bulls.

The two nearest dams of Idaho Matador Foremost have year records that average 22,871.1 lb. of milk and 1,010.11 lb. of butter. He was sired by Matador Violet Idaho, a son of the famous Idaho Violet Posch, a cow with three year butter records above 1,000 lb.

The dam of the young bull is Ida U Segis Colantha. As a junior two-year-old she produced 18,919.7 lb. of milk. 751.81 lb. of butter a year, Idaho State records for both milk and butter in her class. After freshening again as a junior three-year-old and breaking State butter records for seven and thirty day tests she was continued on long time test in which she has 20,348 lb. of milk, 637.25 lb. of fat to her credit in 300 days. She is a daughter of King Segis Matador Walker and a granddaughter of Alaska Yukon Colantha, one of the original foundation cows of the University herd.

NOW HEADS COUNTY HERD

Prince Artis Creamelle now heads the big Holstein herd of Dunn County asylum near Menomonie, Wisconsin. He is a son of Dutchland Creamelle Denver Prince and is full brother to Madam Artis Wayne Denver, the undefeated champion two-year-old show heifer of 1923. Prince was purchased from the Jefferson County Asylum, Jefferson, Wisconsin.

Please mention THE HOLSTEIN BREEDER AND DAIRYMAN when writing to our advertisers

THEY STEAL THE CREAM

Daniel Retief, who formerly was creamery manager in British South Africa has just graduated from the dairy department of the Iowa State College. Mr. Retief gives an amusing account of some of the troubles of South African dairymen.

The principal food of the South African natives is mealies, somewhat similar to corn mush. When the natives found that cream formed a tasty addition to the usual dish, trouble started right there and then.

On the South African dairy farm practically all the work is done by natives. A dozen or more of these natives are employed in the average sized creamery and a few more collect the cream. These latter few are chosen after considerable investigation into their habits and characters. They spend from 5 p. m. to 5 a. m. collecting cream from outlying farms. This has an average butterfat test of 45 per cent and the temptation to purloin a little of the cream is almost irresistible.

The natives excel as drivers of oxen but are almost helpless with other animals so slow moving ox teams are used exclusively when collecting cream. The average South African dairy farm has an area of about 1,500 acres and the average herd of cattle is about 100. They get practically no grain but feed on blue grass pasture. The cattle are principally Holsteins with a few Ayrshires. The government is doing a lot to establish the South African Holstein aiming to improve both the type and producing ability and to make the name South African Holstein a standard of excellence. Importations of cattle from Holland are now prohibited and the government has restricted all importations in order to prevent introduction of foot and mouth disease.

Thirty-three years ago Thomas Russell managed the organization of a cooperative association for the marketing of

dairy products. Five farmers hired a building 12 by 15 feet at Mooi, a village in the province of Natal and with a barrel churn converted their cream into butter. Today Thomas Russell heads a farmers' cooperative association which runs a chain of fourteen creameries in South Africa with an annual production of 2,800,000 lb. butter besides other products. Twice during the life of this association it has bought out other country-wide creamery associations. The first of these was a government controlled enterprise which, owing to mismanagement, failed to be profitable. The second was an association owned by capitalists and which for a time came very nearly putting the cooperative association on the rocks but the farmers stuck to their own association and it weathered the storm and today handles practically the entire dairy produce of the southeastern states of British South Africa.

DEPENDS UPON CIRCUMSTANCES

The food value of crops varies in different localities. Soil and climate both have their influences. At Ottawa, Canada, a mixture of corn, beans and sunflowers proved more valuable than corn silage. At State College, Pennsylvania, it was found that silage composed of one-third soy bean forage and two-thirds corn by green weight had an insufficient amount of feeding value as compared with corn silage, to insure adequate returns for the extra trouble and expense of producing the corn-soy-bean silage. Oat and Canada field pea silage were inferior to corn silage for milk production. However, a ration consisting of grain and mixed hay was decidedly improved for milk production by substituting oat and pea silage for most of the hay. Roughage composed of clover silage and hay was decidedly better for milk production than hay alone as the sole roughage. Clover hay may profitably be ensiled when for any reason a sufficient amount of corn is not available for an adequate silage supply.

LESS WHEAT BEING PLANTED

Following the law of supply and demand, wheat should bring a higher price next fall than it does now for, according to data collected by the United States Department of Agriculture, the world is sowing less wheat than it did last year. The total area seeded to date in the largest wheat-growing countries is slightly in excess of 44,000,000 acres, as compared with over 51,000,000 acres last year. That the world is getting back to normal in the production of crops is evidenced by the comparative figures for 1922 and 1923. These figures show that the world production of wheat, rye, barley, oats, corn and flaxseed in 1923 exceeded in each case the production in 1922.

Baker—How many languages does your wife speak?

Brayde—Great guns, man, isn't what she says in one language enough?

SHE IS BOSS OF THE DAIRY

Miss Louise M. Maier was, without a doubt, the most interesting spectator at the Syracuse National Dairy Show sale for Miss Maier bid off some fifteen head of animals for the Miners' Dairy of Butte, Montana. Naturally our readers will be interested to learn something about that institution.

The Miners' Dairy has been in operation for more than twenty-one years. It was one of the first herds to be federally accredited in Montana and was the first accredited herd in Silver Bow County. The herd has been headed by King Alcartra Susie Prilly, a son of King Segis Alcartra Prilly and Susie Segis Alcartra Abbecker, a young cow with a seven-day record made as a senior two-year-old of 421.8 lb. milk, 22.88 lb. butter and a thirty-day record of 1,831 lb. milk, 93.76 lb. butter while she has a record of 780.68 lb. butter, 15,908.5 lb. milk made in a year.

Miss Maier was assisted in her selection by Frank T. Fowler of Lake Villa, Ill., and she became a member of the Colantha Club when she purchased the great show heifer, Nutmeg Colantha Eveline, a consistent prize winner and a strong contender for the blue ribbon in the senior yearling class at the National Dairy Show.

Miss Maier was appointed by Governor Dixon as one of the Montana official delegates to the World's Dairy Congress. She is a strong believer in the use of milk on the table and advises the people of her native state not only to drink milk but also to educate themselves as to the value of the dairy industry. She believes in organized cow testing associations, breed associations and dairy clubs and is also an advocate of the accredited herd system.

Deacon—"Do you know anything about parts?"

Choir Leader (formerly automobile mechanic)—"Sure. The soprano needs a new valve, and the bass ought to have his exhaust fixed."

HORNLESS HOLSTEINS

Keystone Plum Johanna

is an example of the individuality and producing ability combined in hornless Holsteins. She produced 1,052.9 lb. butter, 22,190.7 lb. milk in a year and in two consecutive years produced 1,938.06 lb. butter, 40,236.9 lb. milk. Her full sister, Keystone Beauty Plum Johanna, was the former world's champion four-year-old for yearly production. This cow, like other members of the family carried a superb udder. It was photographed eight months after freshening by a Pennsylvania State College Professor who lectured upon it as an example of intensive development and perfect shape.

Let us give you a price on a hornless bull.

THE BLOOD OF WORLD CHAMPIONS Is STRONGLY in EVIDENCE at SILVERWOOD

KING PONTIAC ALCARTRA PIETJE is our senior herdsire. He was from Fairmont Zerna Segis Pietje, 35.61 lb. butter in 7 days as a junior four-year-old, World's Record when made. His sire, King Segis Pontiac Alcartra, was from a heifer that made World's Records for butter production for periods of 7 days, 30 days and 365 days while he was by a son of a cow that made World's Butter Records for 7 days, 30 days and for a full year.

A daughter of our bull recently produced 23 lb. of butter in 7 days as a two-year-old from only 2 quarters and she milked 60 lb. a day. Daughters and Sons of King have won high honors in the show ring. Let us price one to you? Our herd is under State and Federal Supervision.

G. L. and G. WEIR STROCK *PARTNERSHIP SALE*

SEVENTY—PUREBRED HOLSTEINS—SEVENTY
TUESDAY, MARCH 25th, STARTING AT 10 A. M.

Among the offerings are:

The grandly bred sire, KING AAGGIE SEGIS DE YONG, by King Aaggie Segis, also sire of Fancher Farm Maxie, the 46.84 lb. World's Champion. His dam is a 30.58 lb. double granddaughter of Dutchland Colantha Sir Inka, and is from a 26-lb. daughter of a 22-lb. cow. The three nearest dams of King each averaged above 4% fat in official test.

Nearly 30 daughters of this sire. Those in milk all test higher than their dams and milk nearly as much as heifers as their dams at full age.

Daughters of Lothian De Kol Korndyke and King Segis Champion, granddaughters of Tidy Abbekerk Prince, Pontiac Korndyke, Sir Korndyke Pontiac Artis, Judge Segis, Judge Lyons, King Segis Champion, Ormsby Korndyke Lad, Korndyke Abbekerk and Pontiac Korndyke Hengerveld De Kol.

Animals in this herd have produced from 16,000 to 17,000 lb. milk in a year of cow testing association work.

Last year our 40 milkers averaged in association work, 9,400 lb. milk, 385 lb. BUTTERFAT.

The Strock Farm is one mile southwest of Mechanicsburg, on the Williams' Grove Road. Free bus service to and from all trains.

S. R. MILLER, Pedigree man.

Vol. III

HARRISBURG, PA., APRIL 8, 1924

No. 7

Published Semi-Monthly. Price, 75c. Per Year

A SCENE ON THE FARM OF FRED B. KEENEY, LACEYVILLE, PA.

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922 at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

Onaco Sir Lucille Jolie Beauty

His dam and sire's dam successively held the World's Championship for butter production in the senior four-year-old class—yearly division.

His dam, Lucille Jolie Pontiac, produced 1,173.15 lb. butter in 365 days, her milk averaging 3.94% fat.

His sire's dam, Keystone Beauty Plum Johanna, produced 1,294.71 lb. butter in 365 days, her milk averaging 4.02% fat in strictly official test.

The dam made 33.29 lb. butter in seven days, and the sire's dam, 32.88 lb., while, curiously enough, each produced 665.5 lb. milk in the seven days.

A bull combining the blood of these two great former World's Champions is BOUND to sire producers. The daughters of Onaco Sir Lucille Jolie Beauty are not yet in milk but they show promise of inheriting the producing capacity of their famous relatives.

You cannot obtain these heifers but you can obtain one of their brothers. Write to-day to

PROFITABLE IN THE HANDS OF ANY
PRACTICAL FARMER

1918	1921
1919	1922
1920	1923

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

VOL. III

HARRISBURG, PA., APRIL 8, 1924

No. 7

The Greatest Producing Maryland Herd

Purebred Holstein-Friesians, of Course

MILK and other dairy products have always been considered good food for people not in perfect health and for many years physicians have held that this rule applies to people mentally as well as physically afflicted. Hence, you will find that nearly all State Institutions maintain dairy herds. In the large majority of cases the herds are composed of Holsteins, grade or purebred.

Some three of four years ago those responsible for the management of the Springfield Hospital at Sykesville, Maryland, found it difficult to obtain enough fresh milk of good quality to supply the patients with even a small amount daily. The fame of the Pontiac herd owned by the Eastern Michigan Asylum, was

Brothers have long been known as Holstein enthusiasts and good cattlemen and they had built up a herd which had more than a local reputation for production.

This bunch of heifers consisted of daughters of Segis Tritomia Pontiac, a grandson of the two famous Holstein sires, King of the Pontiacs and King Segis. His daughters in the Springfield Hospital herd show uniform type of high quality. They are milky animals, usually light colored, good individuals and producers. These daughters of Segis Tritomia Pontiac together with others secured from Waukesha County had been bred to Woodcroft Perfection, a son of Lady Perfection Korndyke, 40.25 lb. butter, 726.7 lb. milk in seven days and 27,008.4 lb. milk, 1,046.12 lb. butter in a year. Woodcroft Perfection came from the well-known Holstein herd of Dr. Hubert Work, formerly Postmaster General and now Secretary of the Interior.

The first bunch of cows did so well that another carload was secured, this time from around Howell, Michigan. Being picked up from different herds there

MARY PRILLY NETHERLAND

The cow depicted upon the advertising signboard of the Springfield Hospital.

known the world over wherever Holsteins or State Institutions were known and the Trustees of the Springfield Hospital decided to start a Holstein herd that should be as good as it was possible to develop. The first obstacle they ran upon was money. The Maryland legislature did not see its way to vote a large amount of money for any such purposes and only a limited appropriation was available.

Waukesha County, Wisconsin, has been termed the cow county of the United States and, probably influenced by that claim, capable judges were dispatched there in search of stock with instructions to get good animals at a low figure. A fine bunch of young cows and heifers were obtained but it is only fair to say that instead of being Wisconsin-raised the animals came from a neighboring state and were bred by the Westerheide Brothers of New Douglas, Illinois. This does not detract from them in any way for the Westerheide

JESSIE FOBES VIOLET MUTUAL 20

Show cow and dam of the show heifer, Spring-Sykes Fobes Violet.

is no one line of breeding strongly prominent although Maple Crest blood lines enter into the pedigree of several.

To take care of these animals Forrest G. Farr, a graduate of the University of Illinois was secured to be Superintendent of the farm and dairy. Mr. Farr was formerly in the feed business and is well-known to many Holstein men in the eastern United States. Under Mr. Farr's fostering care the animals have done so well that the thirty-two cows in milk averaged 61 lb. a day with an average test of 3.87% butterfat during the recent official visit of the representatives of the Univer-

sity of Maryland. Mr. Farr not only cares for the dairy but also manages the farm which, with the grounds, contains 1,132 acres. The help consists of a few good men together with a select few of the Hospital inmates.

The Hospital herd is enrolled in test work supervised by the Dairy Husbandry Department of Maryland University. For the month of January the three highest record animals of any breed were from the Springfield Hospital herd. Ouida Pontiac Carolyn produced 182.1 lb. milk, 6.698 lb. fat during the two-day visit of the official representative. Eli Prilly Ordella made 136.1 lb. milk, 6.161 lb. fat. Eli Oak Prilly was in fifth place with 4.707 lb. fat, 153.7 lb. milk. There are thirty-four Holsteins that produced more than 3.5 lb. fat during the two days and, of this number, the Springfield Hospital herd is represented by fifteen, a splendid showing, as the district under the jurisdiction of the Maryland Dairy Husbandry Department takes in the State of Maryland, the District of Columbia and a few counties of southeastern Pennsylvania.

On March 13th, the *Baltimore Sun* carried a picture of Howard Star Annetta Prince, a member of the hospital herd. The *Sun* announced that this cow, by a production of 2,624.7 lb. milk, and fat equivalent to 106.5 lb. butter, became the thirty-day champion for Maryland and exceeded any cow in the District of Columbia with her seven-day record of 624.3 lb. milk, 26.18 lb. butter. On February 18th, Annetta produced 96.6 lb. milk. She is a senior four-year-old and is in her second lactation period.

A number of good official records have been made in this herd. Ouida Pontiac Carolyn produced 626.3 lb. milk, 28.07 lb. butter in seven days. But it is the intention of Mr. Farr and the management to obtain milk enough for the use of the Hospital rather than to make official records. Record making is a side issue.

There are a couple of grade cows, really unregistered Holsteins, in this herd. They came from a purebred herd and the story is that the owner died and the heirs could not ascertain the particulars on which to base the application for registry and so the animals are unregistered. Something of the quality of this pair can be grasped at from the fact that in a month one of them produced 101.4 lb. butterfat, fat, mind you, not butter.

It is difficult to single out any individual animals for praise, there are so many good ones and the entire herd is of uniform high quality, but the boys at the farm call Jessie Fobes Violet Mutual 2d the show cow and her picture indicates that she has a right to the title. This granddaughter of Beauty Pietertje Prince possesses great capacity and is capable of holding her own in almost any show ring, as her picture indicates. She is the dam of Spring Sykes Fobes Violet, one of the handsomest young things we have ever had the pleasure of examining.

Spring-Sykes Fobes Violet was shown last fall at the Maryland State Fair, where she was second in a class of twenty-two. At Springfield in a class of forty-four she was third and at Syracuse, she was second in a class of twenty-six.

Another cow that did well in the show ring is Mary Prilly Netherland, No. 565715. So much do the boys think of her that one of them painted her picture and

when you go into the Hospital grounds you will see a big Holstein signboard painted in black and white. On this signboard is the picture of Mary Prilly Netherland, over the cow appears the word "Springfield" and under her the word "Holsteins," the whole forming a sign that attracts attention, advertises the breed and the herd and as a herd advertisement, is worth much more to the Hospital than any patented sign as it depicts a representative of the Springfield herd.

To mate with this high-class herd a bull of high quality was desired. But the funds were not adequate to buy the bull that Mr. Farr and the Trustees desired so arrangements were made to borrow Colantha Sir Ollie Piebe from the United States Dairy Division farm at Beltsville, Md. This young bull was born July 8, 1923. The day he was six months old he weighed 601 lb. His pedigree combines a number of strains noted for production. He is a grandson of Colantha Johanna Lad and Piebe Laura Ollie Homestead King and a great-grandson of Dutchland Sir Pontiac Rag Apple and Sir Hengerveld De Kol Ormsby and all four of these sires together with others close up in the pedigree have daughters that have made very large year records.

Colantha Sir Ollie Piebe is sired by Denton Colantha Sir Rag Apple. This bull has twenty-nine daughters with long time records. One of his daughters in the ten months Division made 922.58 lb. butter from more than 19,000 lb. milk and another as a four-year-old produced 810.41 lb. butter, 19,600 lb. milk in ten months. Denton Colantha Sir Rag Apple is by Colantha Johanna Lad from Dutchland Rag Apple Aaggie. She was sired by Dutchland Sir Pontiac Rag Apple and her dam is from a granddaughter of Aaggie Grace 2d's Pietertje, the first cow in the East to give 100 lb. milk a day in official test.

The dam of Colantha Sir Ollie Piebe is Mercedes Laura Ollie, a daughter of Piebe Laura Ollie Homestead King, whose daughters include May Walker Ollie Homestead, 1,523.23 lb. butter, 31,610.6 lb. milk, United States champion for year butter production, and Piebe Laura Veeman Artis, 1,328.12 lb. butter, 30,753.4 lb. milk in a year. Mercedes Laura Ollie has only been tested once and that in her first lactation period. She freshened when thirty months old and in a year made 20,063.7 lb. milk, 782.37 lb. butter. Colantha Sir Ollie Piebe comes from record ancestors for his dams have been tested for a number of generations back.

In this herd there are no surplus females nor will there be for a long time to come as the herd will gradually be enlarged. The Springfield herd is a standing advertisement for the Holstein breed and despite the fact that there have been a large proportion of male calves they have been snapped up by owners of near-by dairies and for a long time there has been a waiting list containing names of dairymen who want a purebred Holstein bull calf from this big producing herd. Many of these dairymen have never previously owned a purebred bull. Mr. Farr says that some of his bull calves do not get very good treatment, their owners being poor caretakers and utterly unfitted to make a success of the dairy business. On the other hand some of the dairymen take pride in seeing how good an animal they can develop and by following as closely as they can the

operations and practices of the Springfield herd, they give their animals better care, raise better stock, get better returns and so the investment of a few dollars in a purebred bull calf in many instances leads to a much greater degree of prosperity for the dairymen-owner.

The Springfield Hospital, being a state institution, the near-by dairymen feel that they are semi-owners of the herd. Some keep track of the production of the dam of their bull calf. Others have a favorite cow and speak for the first bull calf she drops. Prices are set very low by Mr. Farr and the trustees who figure that they are thereby doing dairy extension work of the very best kind.

It would not be fair to close this story without saying something about the three trustees who are mainly responsible for the establishment and success of the herd. One of these is John M. Dennis, State Treasurer, and the most noted Holstein breeder of Maryland. Mr.

Dennis is also treasurer of the Hospital, has backed the Springfield Holstein herd in a number of ways and gratuitously loaned them one of his show bulls as a herdsire. The second trustee is Senator Wolfe, who prides himself on being a plain dirt farmer. Mr. Wolfe has undoubtedly had more direct farm experience than either of his two conferees and any one obtaining an executive position on this farm has to have plain common sense and actual experience as well as theoretical knowledge. The third trustee is Senator Wade H. D. Warfield, vice-president of the Board of Directors. Mr. Warfield is a business man of Sykesville who owns and lives on the farm on which he was born now sixty years ago. To his knowledge of local business affairs, local farming conditions and sound common sense a large share of the credit is due. These three trustees together with Mr. Farr make a splendid combination.

Washington Holsteins Force Scrubs to Block

By Lincoln R. Lounsbury

WASHINGTON Holsteins forced thirty-five scrub, grade and nearly purebred dairy bulls to the block in four weeks time, as the result of a purebred sire campaign conducted in Snohomish County, Washington.

Holsteins led in the number of scrubs replaced. At the close of the purebred dairy sire campaign, the actual sale of which lasted only four weeks, thirty-five Holsteins; thirty-four Guernseys and seven Jerseys, all of good breeding, dethroned the same number of scrub and poor animals.

This purebred dairy sire campaign, the first of its kind in Washington and one of the first in the Northwest, was conducted through the cooperative efforts of dairymen, breeders, businessmen and the State College extension service. Much credit for the success of the campaign, as well as the success of the Holstein breed must be given to W. E. Meyers, western Holstein fieldman, who with local breeders worked unceasingly. The Holstein breeders state association as well as the county association greatly assisted the dairymen and extension service in the work.

"A purebred sire—Milk check higher"—was the slogan chosen by the dairymen for the drive. The purpose of the campaign was to help increase the milk production per cow, which in turn increases the monthly check, by the elimination of scrub, grade and "nearly purebred" bulls and the enthroning of purebred sires with good production behind them.

Snohomish County was chosen as a demonstration county by the extension service of the State College of Washington at their summer conference last year. Plans were made at that time through the extension dairy specialist and county agent to conduct such a drive.

It had been found that nearly 16,000 milking cows in the county were producing dairy products valued at \$2,946,000 per year; that the county stood fourth in the state as to the amount of butterfat produced per cow with 238 pounds, and that of the 775 sires heading

the dairy herds some 430 were grade, scrub or "nearly purebred."

The value of better breeding and management had been shown in the county by the 405 cows which had finished a year in the cow testing association with an average record of 322 lb. butterfat, or an increase of 84 lb. fat over the average of the county and 126 pounds above the 196 pound average for the State of Washington.

As the time drew near for the campaign, former plans were changed and a somewhat new scheme worked out. R. M. Turner, assistant director of the extension service and Arnold Z. Smith, county agent of Snohomish County, helped put the successful element into the work.

A central purebred dairy sire committee was chosen of representatives from each breed in the county, as well as bankers, dairymen, businessmen, newspapers, superintendent of schools, chamber of commerce, county agent and representatives from the state office of the extension service.

This committee set six weeks as the time for the campaign, with the first three weeks devoted to listing bulls, taking surveys and working up publicity and sentiment, while the last three were devoted to the actual selling of the animals. The central campaign committee took the responsibility of the drive and appointed community campaign committees in seven districts of the county. These were composed of a similar personnel as the general committee, and secured a survey of all scrub sires in their territory, helped list bulls, and worked up the general feeling for the drive in their respective communities.

Much publicity and advertising was conducted through the daily and weekly papers during the entire time of the drive, under the direction of the extension agricultural editor. Banks, businessmen and dairy products men ran ads relative to the purebred sire campaign. Every meeting of all civic clubs, granges, farmer organizations and the like had from four to ten

minute speakers on every program. There was not a spot in the county where the farmers did not know about the purebred sire campaign.

One of the big jobs of the central committee was the listing of bulls, but because of the general publicity which had been sent to all parts of the state, together with the work of the different breeders associations, these listings amounted to the following different purebred sires for sale: ninety-four Holsteins; ninety-one Guernseys; thirty Jerseys; six Ayrshires and one Brown Swiss, making a total of 231 purebred dairy sires offered. These animals came from seventeen counties in the State of Washington, two in Oregon and one in California.

All bulls were sold direct to the farmers by four salesmen who had been chosen because of their ability to sell and their knowledge of dairy stock. These men were assigned to four districts, divided nearly equal as to the number of prospects. The actual selling time was extended to four weeks, which made the campaign last seven weeks from the firing of the first gun till the last of the seventy-six bulls were sold.

A commission of ten per cent, with \$15 as a minimum, of which \$2.50 went to the central committee to help cover expenses, was given the salesmen for their work. Each man was supplied with a detailed description of the bulls for sale and from this list they were able to choose the animals which best suited the herd of the farmer owning a scrub bull.

As a safeguard between the dairyman buying the purebred bull and the seller, there was an inspection committee, composed of a representative from each of the three leading breeds, who looked over and passed upon all animals for sale in the county, and upon request, inspected all animals brought into the county from outside.

So intense was the interest at the beginning that on the first day of selling an owner of a scrub bull telephoned the office of the campaign committee and told them he was in the market for a purebred bull and wanted to see the salesman right away.

The selling price of the bulls ranged from \$35 to \$485, while the age spanned the space of time from one week to six and one-half years. While many of the bulls were under one year old, there were still a number which ranged above that age and were ready for service.

As a result of the campaign, the sale of bulls in the entire state was stimulated to such an extent that the manager of the Carnation Stock farms told members of the committee that in one month their sale of bulls had been increased over forty per cent, and that more than half of those sold were outside Snohomish County.

Already two bids have been placed with the extension service to put on similar campaigns in other counties.

Holstein breeders in Snohomish County taking an active part in the campaign included: Ed. Hoem, Snohomish, member of the central campaign committee; Clarence Ellingson, Stanwood; V. W. Dawley and P. J. Walen, Silvana; John Anderson, Arlington; Tom Erwin, Marysville; Martin Treosti, Snohomish; H. Steffen, Monroe and H. M. Baxter, Sultan, all members of the community committees.

The following are new owners of Holstein sires: H.

Voss, W. O. Cedargreen, Kenneth Hodges, G. Salvadalina, E. Salvadalina, Arthur Johnson, H. Besema, James L. Bruce, E. Verlinde, Herman Zehr, A. Gestad, J. H. Gissom, Carl C. Orr, M. Bergen, Gilbert M. Jones, A. McDonald, Joe Bueler, A. C. Pickering, George Barr, Stecher Brothers, Schilter Brothers, Olin Olsen, Eric Lundel, T. P. Evans, Frank McGuire, Arthur Salvadalina, H. A. Theiss, Frank Bohl, James McDermott, J. A. Houck, J. B. Love, Mrs. Laura Morris, L. Krasien & Sons and W. E. Nims.

Milk and Cream Consumption on the Increase

CONSUMPTION of fluid milk and cream in both farm and city homes has been increasing rapidly for several years, a survey just completed by the United States Department of Agriculture indicates. Average consumption in 1923 was 53 gallons, compared with 50 gallons in 1922, and 49 gallons in 1921. The average daily consumption in 1923 figures out 1.16 pints per person.

Some interesting data was found. Farms were divided into two classes: those that had cows and those without cows. Average daily per capita consumption on farms having cows was 1.78 pints in 1923; on farms without cows the average consumption was .775 of a pint, and in city homes the per capita daily consumption averaged .87 of a pint.

The farm figures were tabulated from approximately 30,000 schedules of consumption on individual farms, and represent the most comprehensive survey ever made of milk and cream consumption. Data on consumption in cities were obtained principally from boards of health and covered nearly 300 cities, or about 25,000,000 people.

Latest California News

ALTHOUGH the Federal and State veterinarians have been unable to confine the California foot-and-mouth outbreak to the three original counties of Alameda, Contra Costa and Solano, yet under date of March 29th the Federal Veterinary Bureau sent out a reassuring report. The latest case was discovered March 22d. Fifteen counties are now under quarantine but infection has been discovered only in seven. The four new counties are Los Angeles, San Francisco, Merced and San Joaquin. In San Joaquin infection has been discovered in only one herd consisting of 100 animals. Trouble has been found in eleven Merced County herds, containing 5,530 bovine animals. In these two counties in particular, range riders are patrolling the infected areas and preventing the moving of herds over the roads and trails.

The force of Federal veterinarians has been increased from 77 to 105 and Dr. Eugene Houck is, at this writing, April 4th, enroute from Washington to California to take charge. Both State and Federal veterinarians report that the owners and local authorities are coöperating in every possible manner to prevent spread of the trouble.

Capitalizing a Hobby

By ARGUS

THROUGH the activities of The Advanced Registry Department of The Holstein-Friesian Association of America an "Aristocracy" has been created within the breed. Registered Holstein-Friesian cattle have become divided into two classes, those with Advanced Registry records and those without Advanced Registry Records.

Here in America where the road from the humblest dwelling to the White House is open, we do not countenance a custom that limits the opportunity of obtaining the highest position of honor in the country to a "Chosen Few," an "Aristocracy."

Why then should 85 per cent of the breeders of 90 per cent of Holstein-Friesian cattle recorded, countenance the limiting of competition at fairs, advocated by The Advanced Registry Department, only to animals that are in the Advanced Registry, a "Chosen Few," an "Aristocracy"?

We believe the breeders will have little sympathy with or support for the movement to transplant this almost obsolete Old-World custom to our "Land of the Free."

The Secretary's report shows that upwards of 877,000 females have been recorded and the Superintendent of Advanced Registry's report shows that upwards of 100,000 females have been recorded.

The interests of the members of The Holstein-Friesian Association have become divided as to the kind of animals which they may own; those owning Advanced Registry animals constituting one class, and those owning animals not in the Advanced Registry constituting the other class.

Approximately 15 per cent of the members of The Holstein-Friesian Association of America owning 10 per cent of the cattle, participate in the making of Advanced Registry records to a greater or lesser degree and 85 per cent of the members who own 90 per cent of the cattle do not indulge in the making of Advanced Registry records.

The fees that are paid into the Association's Treasury are contributed in about the same proportion as the number of cattle owned by each class. Fifteen per cent of the members who own Advanced Registry cattle pay 10 per cent of the total fees collected by the Association and 85 per cent of the members who do not own Advanced Registry cattle pay 90 per cent of the fees collected by the Association. Thus of every dollar that goes into the Association's Treasury, 10 cents is paid by the owners of Advanced Registry cattle and 90 cents is paid by owners of cattle that are not in the Advanced Registry.

Until 1918 and 1919, the activities of the Association were so conducted that it served the interests of both classes of breeders equally, with a growing tendency toward favoring the few that owned Advanced Registry cattle. In 1919 and from that time until the present, there has been a decided change in the Association's policies and management.

The Association is controlled by a Board of sixteen Directors. All but one, if not all of them, are selected

from that class of breeders that own Advanced Registry animals. Eighty-five per cent of the members who own 90 per cent of the cattle, who constitute the Breeder and Dairyman class are not represented in the Association management, yet they are contributing 90 cents of every dollar that goes into its Treasury in fees.

With the Association management selected entirely from the 15 per cent of the members who own 10 per cent of the cattle that are in the Advanced Registry, it is quite natural that the owners of Advanced Registry cattle would receive special favors on the part of the Association.

It might be well to state at this point that the Advanced Registry Department is, and has been, from the very beginning, supported wholly from fees collected at the Secretary's office. There is no fee charged for issuing of Advanced Registry certificates and the breeders who avail themselves of the Advanced Registry privilege are called upon to pay only 10 per cent of the cost of running the Advanced Registry Department, the other 90 per cent of each dollar expended is paid from fees collected from owners of cattle not in the Advanced Registry.

Aside from the keeping of records and the issuing of Advanced Registry certificates, the Advanced Registry Department, in coöperation with the Extension Department is causing to be sent out many news items, circulars and propaganda setting forth the superior merits of cattle in the Advanced Registry with particular emphasis given to phenomenal records in the various Advanced Registry classes with no figures showing the cost of production or the economical value of the record.

The Association through its Extension Workers and State-Paid Secretaries is maintaining a selling agency for cattle and conducting consignment sales where only animals of Advanced Registry backing are eligible for entry.

The Association is not confining its activities to the advertising and selling of Advanced Registry cattle, but through its present Extension Department is entering into an advertising campaign that will assist a certain few breeders to market a part of their milk under the trade name of "White Nectar."

Again the Plain Breeders and Dairymen who constitute 85 per cent of the membership of the Holstein-Friesian Association and own 90 per cent of the cattle will be called upon to pay \$9.00 out of every \$10.00 that is expended in conducting the advertising campaign to create a market for a few quarts of Holstein milk to be sold at a special price under the trade name of "White Nectar."

(To be continued in the April 22d issue.)

Labor Demand and Supply

GOOD farm labor is still at a premium in Pennsylvania and the supply is about 84% of the demand, reports the State Department of Agriculture. It is expected that the shortage of desirable farm help will become acute when the road building program begins in the spring.

Holsteins in Ancient Babylon

HOLSTEINS were the backbone of the dairy business in ancient Babylonia. This startling deduction is made from reports of the discoveries made by a joint expedition of the University Museum, Philadelphia, and the British Museum. The expedition has been working at Tell-el-Obeid, Babylonia, four miles from what is considered to be the biblical city of Ur of the Chaldees, the birthplace of Abraham.

This expedition has discovered what is claimed to be the oldest building standing above ground. This building is more than 6,000 years old, therefore, must have been built some 4,000 or more years B. C., at the time when modern civilization was in its infancy.

The expedition was headed by Dr. C. Leonard Woolley who in his report says:

"Of the frieze of cattle lying down we have a dozen examples. Above them was a frieze of a different sort. Figures in white shell or limestone were inlaid against a background of black tessellate, the whole inclosed in a copper frame. Of this we have a complete section in perfect condition. Some show bulls advancing in solemn procession. The most interesting, a panel four feet long, has on one side a milking scene, cows and their calves, and men milking the cows into tall jars."

The black and white color scheme of the frieze indicates that the Holstein cow was then, as she is now, the favorite dairy animal. Notice that the animals were milked into tall jars, also that the bulls walked in solemn procession. Maybe they had cattle shows in those days.

In describing the building, Dr. Woolley says:

"A broad flight of stone steps led to a platform about twenty feet high on the south corner of which stood the temple proper, its gate tower fronting on the stairway. Its facade was set back from the edge of the platform so as to leave a narrow step on which stood a row of statues of bulls sculptured in the round." Maybe the office of the Babylonian Bureau of Animal Industry.

Aaggie Smashes all U. S. Records

ALL records for Cow Testing Association work as well as for grade cows were recently shattered by Aaggie, the grade Holstein owned by Sam W. Barber of Scottsburg, New York. In the Livonia Association she completed a year's work and is credited with the gigantic totals of 33,557.6 lb. milk and fat equivalent to 1,616.1 lb. butter. This butter record is greater than any other made in the United States by any cow.

Aaggie freshened on March 1, 1923, with a heifer calf. Her owner milked her four times a day from then until the first of September when she was dropped to three times a day milking, which was continued for the rest of the year. Mr. Barber milked her the entire year with an Empire machine, not missing a single milking. It is reported that he attended the National Dairy Show but did not leave home until after the noon milking and then after journeying seventy-five miles to Syracuse he looked over the Show, left there at five

o'clock and drove back to Scottsburg, arriving there in time for the evening milking.

During the entire year, Aaggie stood in the stanchion in the Barber barn. Mr. Barber thought he would keep her in a box stall but she apparently wished for the company of the other cows and was discontented so she was allowed to go back to her stanchion.

The principal feed of this cow was alfalfa. During most of the year she had alfalfa hay and for three summer months had access to green alfalfa. In addition, she had corn silage and during the season had green corn. In addition, she had beet pulp alternated by cut beets, sometimes one and sometimes the other,

AAGGIE
World's record champion grade cow. 33,557.6 lb. milk, 1,616.1 lb. butter in a year, 58,852 lb. milk, 3,027.85 lb. butter in two years C. T. A. work. Owned by Sam W. Barber, Scottsburg, New York.

whichever she seemed to care for the most. Her grain ration consisted of 90% Unicorn and the other 10% corn meal when it could be obtained, and when it could not, ground corn and oats.

Aaggie, in good condition, weighs around 1,800 lb. She has a very large barrel and body, in fact, she has so much capacity that she looks short legged.

Since Mr. Barber owned this cow, she has freshened three times. The first time she had twin bull calves. Fortunately, these animals were kept by their owner. Her second calf in the Barber herd was a heifer which was born March 5, 1922. This heifer has freshened and has produced 70 lb. milk in a day as a two-year-old.

Aaggie and her doings have been reported a number of times by THE BREEDER AND DAIRYMAN. Previous to making the tremendous record just reported, she made in the cow testing year 25,295 lb. milk and fat equivalent to 1,411.75 lb. butter, which, at time of making, was the world's record performance for a grade.

Aaggie is certainly a great cow and it is a pity that this daughter of a purebred Holstein sire is not registered.

In a year's time the cow influences but one individual, her own calf, whereas the average bull, siring 20 calves, influences each calf, making his influence equal to that of a herd of 20 cows.

The best milk is said to come from Holstein cows, and the superiority of their milk is probably due to the unusual vigor of these animals.—Benarr Mac Fadden and Dr. Charles S. Porter.

Chip Elms: The Largest Southern Holstein Herd

CHIP ELMS HERD is, we believe, the largest herd of purebred Holsteins in the South and also lays claim to being the best. It consists of over 200 head and in it a number of large official and long time records have been made. Usually there are about a dozen cows on official test and around forty in test for longer periods, some for ten months and some for the full year.

Delicious Ormsby, recently closed official records as a junior four-year-old of 28.22 lb. butter, 564.6 lb. milk in seven days and 110 lb. butter from 2,390.8 lb. milk in thirty days. She made this creditable showing after dropping twin bull calves and in her previous lactation period as a junior three-year-old she produced 758.8 lb. butter, 16,060.5 lb. milk in ten months. As her twin calves were dropped inside of fourteen months from her previous freshening she qualifies for the ten months' division and also becomes Virginia State champion in the ten months' division. Her showing is all the more creditable as she closed the test while traveling around the Fair circuit during which she took first prize in the aged cow class at Petersburg and second at the Virginia State Fair at Richmond.

Delicious Ormsby is a daughter of Pride of the Ormsbys who was by Sir Pietertje Ormsby Mercedes and from the 34.59 lb. cow, Glen Canary De Kol. Delicious is from a 21-lb. granddaughter of De Kol 2d's Butter Boy 3d.

Another good three-year-old in the Chip Elms herd is Etrick Banks Eglantine. She started her year's

DELICIOUS ORMSBY
28.22 lb. butter, 564.6 lb. milk in seven days as a junior four-year-old. As a junior three-year-old she produced 758.8 lb. butter, 16,060.5 lb. milk in ten months, Virginia State record.

work by making a State record producing 25.7 lb. butter, 615.4 lb. milk in seven days and 103.65 lb. butter from 2,535.1 lb. milk in thirty days. She is a daughter of King Pontiac Pansy Veeman, who is a grandson of King of the Pontiacs and was from a 20.74-lb. two-year-old daughter of King Korndyke Sadie Vale. The only other tested daughter of this bull is Etrick Banks Rose Marie, the holder of the State record in the junior three-year-old class for both seven and thirty days, making 23.1 lb. butter, 518.8 lb. milk in seven days, 95.1 lb. butter from 2,101.8 lb. milk in thirty days. Eglantine is from a granddaughter of King of the

Pontiacs with an official seven-day record of 20.8 lb. butter while Rose Marie is from an untested daughter of King Burke Hengerveld.

Delicious Ormsby and Etrick Banks Eglantine were in the care of E. B. Hine line while they were in test. Mr. Hine line is a young man, just twenty-one years old, who believes the best way to get the best record on a cow is to be always on the job. If he continues his work with test cows, students of A. R. O. work will learn of many more records made by animals in his charge.

One of the herdsires at Chip Elms is Sir Veeman Hengerveld Claude. He is a line-bred son of Sir

SIR VEEMAN HENGERVELD CLAUDE
One of the herdsires of Chip Elms herd. His daughters win in the show ring and also produce. Owned by H. S. Seward, Petersburg, Virginia.

Veeman Hengerveld and is from a 22-lb. two-year-old daughter of King Korndyke Sadie Vale. His daughters are splendid animals and the first to be tested made 19.27 lb. butter in seven days as a junior two-year-old after winning the blue ribbon in her class at Petersburg and forming one in the winning "get-of-sire" class.

Besides King Pontiac Pansy Veeman and Sir Veeman Hengerveld Claude they have in service a son of King Segis Pontiac Alcartra, two grandsons and a great-grandson of Colantha Johanna Lad as well as Meadow Holm Burton Hartog, a son of Maple Crest Pontiac Hartog.

Chip Elms herd has specialized in the making of 305-day records with the result that animals in this herd hold every State record in this division with the exception of that for senior two-year-olds. Old Inn Grace Colantha heads the mature class with a record of 19,358.5 lb. milk, 922.58 lb. butter. State records have also been made in other divisions.

The Chip Elms herd is kept on the Seward Stock Farms, Petersburg, Virginia. These farms are owned by H. S. Seward, a prominent trunk and traveling bag manufacturer. The Superintendent is James McI. Ruffin, one of the vice-presidents of the Virginia Holstein-Friesian Club. Another well-known cattleman connected with this establishment is Jerry Regan, who was formerly in charge of the test cows of Cream Rose Dairy, Livermore, Pennsylvania.

This establishment extends a cordial invitation to all readers of THE BREEDER AND DAIRYMAN, attending the National Convention and Sale, to come out to the farm and look over this great Southern herd.

Official Auctioneers

LIEUTENANT-COLONEL C. W. EDWARDS of Woolston Manor, North Cadbury, Somerset was appointed official auctioneer and advisory expert at a recent meeting of the British-Friesian Cattle Society. The president said that the sole duty of the new official would be to assist breeders in any way they desired and to conduct sales by auction when so requested. The subjects on which Col. Edwards will give advice are feeding, breeding and hygiene.

Colonel Edwards was the official delegate of the British-Friesian Cattle Society to the World's Dairy Congress. While at Syracuse, he spoke at the smoker given by the New York Holstein Association to the visitors. Colonel Edwards is a very different type of man from what we have been used to as the American auctioneer. He is rather soft spoken, quiet and reserved, though when induced to speak would talk freely. His remarks upon the type of American Holsteins, particularly the bulls, and his observations on the Holstein cattle sale conducted at the time of the National Dairy Show were not appreciated by all who heard and read them. We would like to see Colonel Edwards in the auctioneer box and so learn if his methods are as well suited to American conditions as those adopted by our own auctioneers.

Rowe Loses Herd Sire

MR. H. M. ROWE, owner of De Kol Farm, located near Catonsville, Maryland, reports the loss of his herdsire, Fayne Segis Prince De Kol. This bull was a very handsome fellow, deep bodied and straight—a real show bull. Mr. Rowe says that Prince always was a glutton and always kept himself well-filled except when feed was kept away from him but he must have eaten something particularly indigestible. Whatever it was, events moved swiftly. The man in charge called Mr. Rowe at Baltimore at eleven o'clock; the best veterinary surgeon in the district was on the farm at two o'clock; but at five o'clock the troubles of Fayne Segis Prince De Kol were over.

Fayne Segis Prince De Kol was a son of Silver Prince De Kol, former herdsire at the De Kol Farm. His dam was Finderne Butter Fayne 2d, a 17.63-lb. four-year-old daughter of King Pontiac Segis Korn-dyke and from a record daughter of King Hengerveld Aaggie Fayne. Tremendous records have been made by near relatives of this cow.

The females in the De Kol Farm herd are choice individuals with square udders and there is not a blemished animal in the bunch. Practically all have been bred and raised on the farm. Mr. Rowe is no advocate of paying big prices because some ancestor has, under heavy feeding, made a large milk and butter record regardless of profit. He looks for everyday production and is a crank on straight top lines and square udders. In an effort to improve livestock in his section of the country, he has given away a large number of young bulls and says that he is going to scout around and select another herdsire from some of these fine fellows, sons or brothers of Fayne Segis Prince De Kol.

Northern Pacific Cuts Dairy Cattle Freight Rates

IN AN effort to stimulate the diversified farming movement and to assist its patrons to secure good dairy cattle, the Northern Pacific Railroad Company will, for the ninety days between April 15 and July 15, allow a 25% reduction in freight rates on dairy cattle shipped from eastern terminals to all points in North Dakota and Montana. This information comes from H. W. Byerly, General Immigration Agent of the Railroad Company, who sent it to A. O. Collentine, the Wisconsin Dairy Extension Specialist. Mr. Byerly goes a step further and says that the Northern Pacific is both able and willing to assist those interested in securing dairy cattle, to find cattle of this kind at reasonable prices.

The Northern Pacific has operated a number of "Dairy Specials" which have carried dairy cattle, grades and purebreds of various breeds, animals that have performance records, through its territory and these have created considerable interest in the dairy industry.

Farmers in the Dakotas and Montana are learning that one-crop farming is risky business and that the dairy cow can be depended upon to bring in a steady income while, even if the farmer does not wish to engage extensively in the dairy business, a few cows on a grain farm consume considerable feed that would otherwise be practically wasted; the milk and butter produced furnish ideal food for growing children and the surplus skim milk is valuable as an adjunct to grain for growing hogs and calves.

Inspection and Standardization of Cream

PRACTICALLY every city has milk inspection, but the United States Dairy Division points out that the inspection of cream has been largely neglected although cream is an important factor in public health. It is used in the modification of milk for babies. Older children as well as adults use cream on cereals, fruits and desserts. A large quantity is used in the manufacture of ice cream.

As in the inspection of milk the two main factors to be taken into consideration are: first, the sanitary features; and second, the food values, or those things affecting the consumer's pocketbook.

The same precautions to insure good cream should be taken as has to be taken to produce a satisfactory quality of milk. During production, handling, and delivery, cream should receive the same care as milk.

From the chemical standpoint, there should be clearly defined and well enforced grades. There should be a fixed minimum standard for butterfat in light, table, or coffee cream, which is the usual cream of commerce. Such standard usually requires from eighteen to twenty per cent fat. Where so called "double cream" is sold, it should contain at least twice the legal fat percentage of ordinary cream to avoid misbranding and deception. "Whipping cream" may contain less fat than "double cream," but according to a ruling, cream shipped interstate and labeled "whipping cream" must contain at least thirty per cent butterfat.

The Junior Breeder and Dairyman

Keitha Keene

Keitha Keene, at the time the above picture was taken, was a member of a calf club operating around Lacona, N. Y. Keitha's father is Cornwall E. Keene and he has been an owner and breeder of registered Holsteins for fifteen years but having only a few purebreds, has never become a member of the Holstein-Friesian Association of America. He is one of those little breeders and dairymen who have never felt that they had \$25 to spend as membership fee although he freely confesses that, had he joined the association when he first acquired his first purebred Holstein, he would be considerable ahead from a financial standpoint.

KEITHA KEENE AND HER CALF CLUB HEIFER

Mr. Keene at one time was superintendent of the D. W. Field Farm, Montello, Mass., and while he held that position he had charge of De Kol Creamelle while she made her record of 26,280 lb. milk in a year. She averaged over 100 lb. milk a day for more than 100 days and was the first cow of which this was ever said. After Mr. Keene left his Massachusetts position he located about three miles from Lacona, N. Y., on the farm on which he, with his wife and Keitha, still reside.

Boys Learn to be Herdsman

Boys at the California Junior Republic, Chino, California, have an opportunity to learn dairying under R. A. Condee, Superintendent of Agriculture and Dairying at the Institution.

Ida De Kol Pearl Lyon was the second calf from the first purebred cow owned by the Republic. In the year ending February 8, 1924, this cow produced 26,219 lb. milk, 1,285.25 lb. butter. She was cared for during the year by four boys under the supervision of Reni Bruileau, who several years ago was a student at the Institution. Listen to what this cow did while the boys looked after her.

She started the year by producing a fine heifer calf. Then in official test she produced 32.5 lb. butter in seven days, 131.7 lb. in thirty days. Then she went to the

California State Fair where she won second prize in the mature cow class. At the Southern California Fair she took first prize. Her son, Republic Ida Spofford Lyon, was the grand champion bull at the State Fair.

During her year test her average daily ration was 11 lb. of grain and 20 lb. of silage while she consumed 500 lb. of hay each month. At the end of the year she weighed 15 lb. more than at the beginning.

The four boys that cared for her were: Edward Fitch, Jack Rentfle, Arthur Harrison, and Tom Davies. The first two boys have left the Institution and have good positions with dairy herds and are doing well. Arthur Harrison is about to leave for a position while Tom Davies is still taking care of Ida and training himself for more responsibility.

Some one at the Junior Republic said that the Institution is raising purebred cows because they help to train boys for responsible and good paying positions. "When you train a boy for agricultural work you not only help the boy but you also help the whole community."

Boys Learn to Dehorn

The stock judging class of the Woodland High School, Woodland, California, on February 15th, visited the establishment of C. W. Hanson and dehorned twelve head of registered Holsteins as well as a registered Holstein bull owned by Marvin Howard of Spring Lake. This was part of their studies under Instructor Luther Dubois.

Before the boys did anything with live animals they studied the skull of a cow. The horns were sawed from this to show the proper angle and how they should be taken off to insure rapid healing and no after growth. A temporary shute was erected near a gate post and most of the cows were dehorned in this although one animal was thrown and her horns taken off while she was prone. There are sixteen boys in the class.

Nebraska Calf Club Scheme

The Phelps County Dairy Calf Club is being organized at Huldrege, Neb. The boys and girls wishing to join will be organized in a junior calf club with president, vice-president and secretary and will be given parliamentary practice and subject matter study in dairy husbandry covering a three year course.

The calves will be bred at the age of eighteen to twenty-four months to an approved Holstein bull. If the resulting offspring is a female, it is to be returned to the committee when four months old and will then be placed in the charge of some other boy or girl just as was the original calf. The cow then becomes the sole property of the club member. All bull calves as well as the milk produced are to be the property of the club member.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

April 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

An April Fool Joke

WHEN we received the March 29th issue of *The Holstein-Friesian World*, we read very carefully and seriously the editorial appearing under the heading, "Interesting Expense Figures," which reads in part as follows:

"A very prominent Holstein breeder has been kind enough to make an unsolicited statement to the *World* of some of the items of expense incurred in his retail milk business which is maintained along with a reasonably large herd of purebred Holsteins. He submits the following interesting figures for 1923 business:"

Auto repairs	\$1,081.00
Advertising	1,140.00
Milk cases and bottles	1,543.00
Auto gas and oil	1,792.00
Freight and express	1,772.00
Light and power	1,015.00
Labor	10,045.00
Feed and bedding	10,549.00
Registration and Transfer fees	74.33

"You probably know that I am one of the little breeders on the hillside and I wish you would note the vast sum of money that I am obliged to expend for registration and transfer fees."

The above figures appeared so ridiculously out of proportion to the legitimate expense of conducting a dairy farm, so we immediately set out to analyze each separate expense item and tried to visualize its possible relation to legitimate, economical dairying.

The first item which this "Little Breeder on the Hillside" is charging up to his cows is "Automobile Repairs," \$1,081.00. Think of this amount. "Auto Repairs."

The second item, "Advertising," \$1,140.00. We as-

sume that *The Holstein-Friesian World* received checks for this amount.

The third item is "Milk Cases and Milk Bottles," \$1,543.00. This charge would indicate that this particular "Little Breeder on the Hillside" was operating a retail milk business and charging the expense of the same to his dairy, thus confusing retailing expense with cost of production.

Again this "Little Breeder on the Hillside" may be one of those few members of the Holstein-Friesian Association who is trying to market his products under the trade name of "White Nectar" at 25 or 30 cents a quart, taking advantage of the special advertising campaign that the Association is putting on to benefit members of his class.

The fourth expense item is "Auto Gas and Oil," \$1,792.00, nearly \$150.00 per month. Just imagine a Dairy farmer, a "Little Breeder on the Hillside" paying this vast sum for "Auto Gas and Oil." He does not give a detailed account of whether he visited Palm Beach, Fla., Los Angeles, Cal., or Yellowstone Park, but from his next expense item we are to infer that "Auto Gas and Oil" were not used in hauling Freight or Express, because he lists these items in his fifth expense charge as \$1,772.00, which again amounts to nearly \$150.00 per month. Can any of our readers imagine a breeder and dairyman who is dependent on the returns from his dairy for a livelihood expending any such sum of money as \$1,772.00 per year for "Freight and Express"?

The sixth charge is "Light and Power," \$1,015.00; not quite \$100.00 per month. The seventh is "Labor," \$10,045.00, or \$837.08 per month. The eighth charge is "Feed and Bedding," \$10,549.00, or \$879.08 per month.

This "Little Breeder on the Hillside" does not tell us the size of his herd nor the receipts from the sale of milk and dairy products and surplus cattle, neither has he rendered any account of interest on investment, depreciation, etc., but his total expense, exclusive of interest on his investment, and depreciation, but including registration and transfer fees of \$74.33 is \$29,011.33.

If we are able to estimate from the transfer and registration fees as to the size of the herd of this "Little Breeder on the Hillside," we would have to go about it in the following manner:

Assuming that this herd consisted of 35 producing females, he could count on having 30 or 35 calves per year. Allowing approximately 10 per cent for loss from animals failing to breed or calves dying from accidents, we should have approximately 32 calves per year. Let us give this "Little Breeder on the Hillside" the benefit of all doubts. Therefore let us assume that he has registered 20 females and 12 males. The registration fee on a female is \$1.00 and the fee on a male calf is \$2.00 or a total registration expenditure of \$44. Let us again assume that the owner is in a position where by the expenditure of \$1,140.00 in advertising he has been able to sell all of his male calves and eight females. The transfer fee on the 20 animals would be \$30. This brings the total sum for registering and transferring to \$74. We will not attempt to account for the 33 cents of the \$74.33 paid for registering and trans-

ferring stock unless the owner is registering or transferring portions of an animal.

Let us analyze the expense account of this "Little Breeder on the Hillside" from another angle. His total expense, exclusive of interest on investment and depreciation, including the \$74.33 for registering and transferring, was \$29,011.33. By deduction we have arrived at the fact that his milking herd consists of approximately 35 females. If we divide our \$29,011.33 by the 35 milking females, it would give us the gross yearly cost of keeping each animal, or \$828.81. When we arrived at this enormous yearly cost figure of \$828.81 per cow we realized that it was April first, that we were trying to compare the expense of conducting a retail milk business with the expense of operating a dairy farm, and that the \$74.33 tacked on to the expense of operating a retail milk business was nothing more or less than an April Fool Joke. But we can't quite figure out whether the joke is on us, or on the editor of the *World*. Maybe some of our readers can tell us?

Conditions In the Dairy Industry

THE general agricultural outlook for 1924 indicates that farmers are undertaking a normal production program. It is apparent, however, that agricultural production this year will still be attended by the difficulties arising from high wages and other costs, loss of farm workers, and the general disparity between prices of farm and urban products, says the Federal Bureau of Agricultural Economics.

The dairy industry since the war has been relatively more prosperous than certain other types of farming, due to an increasing consumption of dairy products in this country.

In 1919, the per capita consumption of dairy products expressed in terms of whole milk was 831 pounds. In 1920 it was 841 and in 1921, 923 pounds. In 1922 it rose to 950 pounds. This represents an increase of 14% from 1919 to 1922. Available data for 1923 indicate a continued increase in per capita consumption.

This marked increase in consumption, total and per capita, was met by an increase in production of milk in the United States from 90,000,000,000 pounds in 1919 to 102,500,000,000 pounds in 1922, an increase of nearly 14%.

In 1923 the net imports of butter and cheese amounted to 18,000,000 pounds and 56,000,000 pounds respectively. With the net exports of condensed milk amounting to 184,000,000 pounds, deducted from these imports, there was left a net import balance equivalent to 447,000,000 pounds of whole milk.

Another significant fact to be noted is that during 1923 there was accumulated in the United States surplus stocks, principally of condensed milk and cheese, equivalent to 603,000,000 pounds of whole milk in excess of the stocks at the beginning of the year.

Estimates of the number of dairy cows in the United States on January 1, 1924, indicate that milk production will closely approximate the amount required for consumption at the present rate of consumption. A somewhat unfavorable factor in the outlook is the possibility of increase in supplies imported from foreign countries.

Dairy production has increased in foreign countries

since the war. Already in 1922 the surpluses from exporting countries were fully equal to the pre-war exports and data available for 1923 indicate that a further increase was made that year. If the trend of milk production in exporting countries continued to increase as in recent years, the surplus available for export in 1924 will exceed that of 1923.

Preliminary reports show that Denmark has just finished a record year of butter export, with 242,000,000 pounds shipped out. Holland's exports of butter during 1923 amounted to 53,000,000 pounds—a slight increase. New Zealand, with 127,000,000 pounds of butter to the United Kingdom, more than maintained its record exports of 1922. Butter exports from Argentina were materially increased, its shipments to the United Kingdom alone were 55,000,000 pounds compared with 40,000,000 for 1922 and 7,000,000 before the war. Australia, on the other hand, suffered from severe drought last year which cut in half her 1922 butter exports of 101,000,000 pounds to the United Kingdom. Siberian butter has again come into the British markets. The Baltic States are becoming factors of some importance with their small but growing surpluses of butter.

Great Britain is the chief buyer of the world's exportable surplus of dairy products. In 1923 Great Britain imported besides shipmen's from the Irish Free State, approximately 5% more butter than in 1922, bringing her total net imports up to 575,000,000 pounds. This was more than the amount of butter imported by that country in any pre-war year and indicates a total consumption of butter in Great Britain exceeding any pre-war year. British imports and domestic production, when measured in milk equivalent about balance each other.

If, in 1924, demand in the United States maintains greater strength in comparison with foreign demand, it is quite probable that a larger share of the world's exportable surplus will seek market in the United States and may prove to be an important factor in the dairy situation.

Production of creamery butter in the United States has increased in the past five years an average of approximately 45 million pounds annually. The estimate of number of dairy cows in the United States on January 1, 1924, showed an increase during the last year of 238,000 head. This represented more than the average annual increase for the previous five years and occurred mainly in butter producing territory. In other words, the probable increase in domestic butter production in 1924 is not likely to be below the prior average of 45 million pounds.

From the best information available, the per capita consumption of butter in the United States in 1923 was approximately up to the pre-war level.

Available information shows the production of cheese in the United States in 1923 as an increase over 1922. Cheese imports amounted to 64 million pounds, which slightly exceeded the heaviest pre-war annual importations.

It appears that any further increase in domestic cheese production must take account of the fact that our per capita consumption of cheese is practically back to the pre-war level. A very sensitive relationship usually exists between the price of cheese and the price of butter.

Total unsold stocks of condensed and evaporated milk at the beginning of 1924 are exceedingly large. The foreign demand in 1923, by the inclusion of purchases for European relief, about equalled that of 1922. There was a slight increase in the domestic demand. The present tendency to reduce production of condensed and evaporated milk may help toward bringing the prices of these products back to a parity with butter and cheese.

There is an increasing demand in cities for ice cream and milk drinks which may possibly offer an outlet for a part of the milk supply previously used for condensing purposes. Condensers usually turn to the butter industry as an outlet for any milk which cannot be profitably manufactured.

From many cities reports are current that the surplus of fluid milk and cream available for city distribution is increasing. The effect of this surplus and the relation of the milk market in general to the whole dairy situation may be expected to cause milk prices in 1924 to follow closely the general trend of butter and cheese prices.

In the last two years fluid milk and cream consumption in households has increased four gallons per capita or approximately 8%. Improvement in quality accompanied by better merchandizing and advertising should tend to promote a still larger increase in consumption.

The past year was one of great industrial prosperity, and consumer demand was maintained at a relatively high level. While the general situation does not appear necessarily disadvantageous to efficient producers, it clearly raises possibilities of increasing imports and a lower margin of profits. Although consumption is increasing, it is not a time for undue expansion of production but rather for greater efficiency.

Legal Matters Pending

THE George case, we understand, will come up for argument and final disposition before the Court of Appeals early in May. This case is very important to the dairy interests of the purebred Holstein industry. Its outcome and final disposal will be awaited with much anticipation by the majority of the members of the Holstein-Friesian Association and breeders of Holstein cattle.

The breeders are not particularly interested in this case from the standpoint of records but they are vitally interested in the case from the fact that it involves restoring the members' rights to manage the Association, elect officers and fix fees by direct vote.

The case involves the question of whether the Transfer Fee of 50 cents as established by the members at the Syracuse convention should stand or whether the \$1.50 fee fixed at Kansas City by the political group should stand.

It will determine whether the Association is to be managed in a conservative way by a Board of six Directors, elected or chosen by the members, or by a Board of sixteen Directors chosen by delegates.

It will also determine whether the Association will continue to function as a millionaire club, its business meetings dragged all over the United States and staged as an entertainment and a side-show to consignment

sales, or whether it shall function as a breed organization to register and transfer purebred Holsteins and conduct a conservative amount of legitimate extension work.

The case of George E. Stevenson and 46 other breeders against those who assume to act as directors originally set for April 2d was transferred to a special term to be argued before Judge Pooley, Counsel to determine the time of argument.

Your Opinions Are Requested

HOLSTEIN breeders of Susquehanna County, Pennsylvania, are putting into practice the Gospel of clean consignment sales and honest dealing. For the past two years breeders in Susquehanna County have been holding annual consignment sales, taking all known precautions to guard against the deceptive and dishonest practices that have become so prevalent in some consignment sales, of both a local and national character.

All animals that go into the sales are selected from herds that are accredited or regularly tuberculin tested. Health, Type and Production are ever the watchwords kept in view by consignors. Breeders or judges not residents of Susquehanna County make all selections and pass on all animals.

All consignors agree to refrain from bidding on or buying each other's cattle or employing anyone to buy or bid for them, and each animal is sold under a guarantee to be as represented and subject to a sixty-day retest.

L. M. Thompson, President of the Susquehanna County Club and President of the Pennsylvania Federation of Holstein-Friesian Clubs, in an open letter to the breeders, printed elsewhere in this issue, invites an open discussion of the Susquehanna County plan. We heartily endorse Dr. Thompson's suggestion and invite and welcome a discussion of this important question in the columns of THE HOLSTEIN BREEDER AND DAIRYMAN.

South African Friesian Over 30,000 lb.

THE highest milking cow in South Africa is a Friesian named Lady Dorothy Parthenia Butterfly. Calving as a three-year-old she is credited with 18,285 lb. milk, 619.7 lb. fat. As a four-year-old she produced 21,094 lb. milk, 805 lb. fat; as a five-year-old she reached the 30,000 lb. mark and is, we believe, the only cow in that far distant country credited with such a performance. Her top record is 30,495 lb. milk, 1,139 lb. fat. In 1,120 days she produced a total of 69,874 lb. milk, 2,563.7 lb. fat. She is again in test as a six-year-old and in the first eight months of her year has produced 21,459 lb. milk, 876 lb. fat and is said to be giving about 60 lb. a day and testing 4.5% fat.

Her picture shows a strong, deep bodied cow with a good udder, perhaps a little pendulous. She is straight on the back and square over the rump; has a rather heavy dewlap and perhaps a shorter thicker neck than we are taught to look for in big producing dairy cows. She is very handsomely marked, about even black and white. Her picture indicates that she has lots of constitution.

OKLAHOMA BREEDERS' MEETING

At the annual meeting of the Holstein Breeders' Association of Oklahoma held March 5th at Oklahoma City, it was voted to cooperate with the other dairy breed associations of the State and to hold a bigger dairy show at the 1925 Southwest American.

The following officers were elected: President, M. C. Bogle, Norman; Vice-President, A. D. Outhier, Homestead; Secretary-Treasurer, H. B. Binkley, Ringwood; Directors—A. G. Hirachi, Oklahoma City, Fred Ball, El Reno and P. Atlee, Oklahoma.

STATE ASSOCIATION MEETS WITH BOYS

A joint meeting of the Nebraska Holstein-Friesian Association and the State Dairy Calf Club was held March 8th in the Chamber of Commerce rooms, Kearney, Nebraska.

Joe Clark, of Ravenna, outlined the intent and purposes of the recently formed Nebraska Dairy Association. W. H. Swartsley, of Riverdale, gave an interesting talk on "Care of the Cow." W. J. Bolan, of Elmcreek, spoke on "Testing of Cattle," while other cattle owners talked on the possibility of the dairy cow and of business methods.

On behalf of the Dairy Calf Club, Perry Richmond, of Miller, winner of a scholarship, stated he would use it to further his knowledge of farming and dairying. George Fisher, who won the free trip to Lincoln, told what he expected to see there. F. G. Schroeder, president of the Club, told of the steps taken to train a judging team in Buffalo County this year.

County Agent, John Ludden, closed the meeting with a talk on the feeding and care of dairy cows and indorsed demonstration work.

ENCOURAGING OUTLOOK IN ALLEGHENY COUNTY

Four Holstein meetings were held in Allegheny County, Pa., during the three weeks of March and three of these were very well attended, reports the Allegheny County Club Secretary, Albert B. Craig. As a result of these meetings one cow testing association is being formed and a number of townships signed up for the tuberculin test. Allen Crissey, district fieldman, attended the meetings and will come back a little later. Mr. Craig reports an encouraging state of affairs in the county. There is more and more interest being taken in Holsteins. Several men who have been milking grade cows are now going over to purebred Holsteins and one dairyman in particular, who was on the fence between Holsteins and Guernseys, has definitely decided in favor of the black and whites. Mr. Craig concludes his letter with the statement, "The industry is looking up considerable with us."

UTAH BREEDERS MEET

At the annual meeting of the Holstein Breeders' Association held at Logan, Utah, February 16th, C. S. Potter of Ogden was elected president; Harold Nelson of Woods Cross, vice-president; Gilbert Thatcher of Ogden, secretary-treasurer, with C. Z. Harris of Richmond and E. Holdaway of Utah county as directors.

The meeting was held following the fourth annual consignment sale of Cache Valley breeders held in the dairy barns of Utah Agricultural college. The purebred heifers averaged \$159, one bringing \$225. Six bulls averaged \$148 while the average price for nine grades was \$80. These grades were from dams that had produced 350 or more pounds of butter in cow testing association year. The nine purebred heifers were from dams with records of better than 500 lb. The offerings were sold by Colonel E. O. Walters of Filer, Idaho, and there were between 500 and 600 in attendance.

STRESS ECONOMICAL PRODUCTION

Economical production was the theme of a talk by E. A. Williams of the Purdue University Extension Department to the Holstein breeders of St. Joseph Valley at a meeting held at South Bend, Ind., February 21st. He said the secret of saving that practically insures success lies in the proper feeding of dairy cattle and the elimination of the poor producer.

"There are certain fixed charges to the dairyman, which are but slightly altered whether he handles good or poor cows. The general overhead amounts to twenty-five per cent of the cost of production and labor twenty per cent. These two items will be nearly the same for well fed or poorly fed cows. But the cost of feed figures fifty-five per cent of the whole and here is where the largest saving can be made, by proper feeding and the use of feeds in cows that have the ability to digest it and turn out a large quantity of milk. We are developing the cow testing associations in Indiana to 'measure' our cows and to feed our cows to best advantage and discard the cow which has no ability to bring a high price for milk."

JOHNSTOWN DAIRY DAY

The thirteenth annual dairy day show of Johnstown, Colorado, was held late in February and 1,200 people gathered to look over the seventy-five Holstein and Guernsey cattle exhibited. The awards were placed by Prof. George E. Morton of Colorado Agricultural College and Prof. A. F. Fitch of Kansas Agricultural College, who explained their judging as they worked.

The grand champion bull of the show was a Guernsey, owned by J. W. Purvis while the reserve champion was the herdsire of J. B. Sloan & Son; the grand champion cow was a Holstein

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

owned by the Agricultural College while a Guernsey owned by J. W. Purvis was reserve champion. The Holstein "get of sire" was won by C. W. Henry and the Agricultural College with J. W. Whowell & Son second and Crawley & Letford third, Crawley & Letford was first in the herd class with Conrad Lesser second. First prize in the butterfat contest was carried off by Holsteins; Crawley & Letford winning first with 637 points with a cow from the C. W. Henry herd taking second with 632 points.

There were many valuable prizes with a total value around \$750. These were donated by merchants of Johnstown; by the Great Western Sugar and the Colorado Condensed Milk Company and the First National Bank of Johnstown.

SUCCESS RESTS ON PROPER FEEDING

About seventy-five farmers met in the Chamber of Commerce rooms, Kearney, Nebraska, February 9th. The occasion was a meeting of the Mid-West Holstein-Friesian Association.

Dan Morris emphasized the stabilizing influence which dairying has on Nebraska's economic welfare and reviewed the intent and purpose of the recently formed Nebraska Dairy Society.

Professor A. L. Haecker of The Agricultural College at Lincoln pointed out the greater value of the dairy cow as a money maker compared with the beef animal. He said that the success or failure of dairying rested on proper feeding and that with no livestock was feeding a more essential factor in production. Frank Robinson spoke along the same lines and indorsed the Professor's statements.

County Agent, John Ludden, reported his observations on the use of milk in the hot lunch clubs held in the schools around the County.

W. H. Swartsley of Riverdale and Joe Clark also said a few words.

LEADERS AT OKLAHOMA CITY AND FORT WORTH

Dairy cattle were exhibited for the first time at the Southwest American Livestock Show held at Oklahoma City, March 1st to 8th. Climatic conditions during the past year in this State together with other troubles are discouraging the beef men from trying to furnish livestock for the packers and there is an increasing interest being taken in dairying.

Holsteins were exhibited by the Holtex Farms, Dallas, Texas; Edward Thomas, Oklahoma City; J-Bar-Ranch, Pawhuska; P. H. Atlee, Oklahoma City; A. J. King, Kansas City, Mo. They were judged by Professor H. C. Cave of Manhattan, Kansas.

Holtex won first in the aged bull class with Echo Sylvia King. Champion Echo Sylvia Pontiac 3d won the blue for two-year-olds for J-Bar-Ranch. King with Triune Ormsby

Piebe 4th carried off the blue in senior yearlings while junior yearlings went to Holtex on Holtex King Sylvia, King taking first prize in the calf class with Hollyhock Sir Pete Rhoda Korndyke, Holtex being second and third.

Crescent Beauty Star Belle was easily first in the aged cow class, J-Bar-Ranch being second and Holtex third. King took first and third for two-year-olds, winning the blue with Charlevoix Marbury De Kol. Holtex Echo Hartog Elzevere beat Bock Diamond Pontiac in the division for senior yearlings with another Holtex entry third. King's good show heifer, Bock De Kol Gerda Girl, won first for junior yearlings with Lady Superba Pabst, of the same stable, second.

The senior and grand champion bull was Echo Sylvia King, Triune Ormsby Piebe 4th being made junior champion. King turned the tables for females winning senior and grand cham-

BOCK DE KOL GERDA GIRL

pionship with Crescent Beauty Star Belle, Holtex getting junior championship with Holtex Echo Hartog Elzevere. King won the aged herd prize with Holtex second. Holtex had first and third for young herd with King second. The calf herd went to Holtex with King second while Holtex took first and third for "get-of-sire," King being in second place. For produce of dam Holtex took first and second with King third.

At the Fat Stock Show held at Fort Worth, Texas, with R. E. Haeger of Algonquin, Ill., as judge, the following week Holtex Farms won first in the mature class with Echo Sylvia King. Champion Echo Sylvia Pontiac 3d won the blue in the two-year-old class for Mr. Harlin. Triune Ormsby Piebe 4th was the best senior yearling with Holtex King Sylvia the best

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

MONTANA FARMERS TURN TO DAIRYING

Montana, known as the range country, the home of the beef steer and the cowboy, is still a cow country, but the type of cow is rapidly changing. The reds, roams and white faces are gradually changing to the black and white, the fawn and brown. The cow boys are either leaving for other places or learning to milk.

Farming in ye olden days was all on an extensive scale, and it was often said that farming in Montana was done on horseback. But Montana farmers like those in Idaho and other western states are reducing the size of their farms. The old-time cattlemen, sheepmen and wheat farmers who are so fortunate to be living in the fertile, irrigated valleys are now turning to the dairy cow, the hog and the chicken as the solution of their farming problem.

To prove that Montana is really interested in the dairy industry and that farmers who are, or will be dairymen, are not only interested but are profiting by the experiences of other dairymen, is shown by the fact that in one year's time from March 1, 1923 to March 1, 1924, Montana has increased the number of standard cow testing associations from none to five. These five new associations are all well organized and are operating at this time. They are as follows: Bitter Root Valley Association, Hamilton; Flathead County Association, Kalispell; Lake County Association, Ronan; Sanders County Association, Plains and the Yellowstone County Association, Billings.

These five associations have a total membership of 155 dairymen, testing 1,675 cows. All of these associations are located in the irrigated sections of the State, and is an indication that the members intend to make dairying a permanent branch of their agricultural operations.

W. S. MURDOCK, *Western Office, U. S. Dairy Division.*

SHEFFIELD FARMS MILK PRICE

The non poolers or that portion of them shipping to the Sheffield Farms Company met at 524 West 57th St., New York City, March 25th, and made arrangements for the price for April milk. Official representatives from sixteen routes were present together with five other producers and four representatives of the Sheffield Farms Company.

The president appointed four of the representatives F. E. Mather, Ulster, Pa.; John H. McCarty, Cambridge, N. Y.; Rodney Lovell, Sharon, Conn., and D. W. Tyler, Roxbury, N. Y. as a price fixing committee. After retirement this committee recommended a price of \$2.205 per hundred pounds for 3% milk in the 200-210 mile zone with the usual freight and butterfat differentials. One-half cent per hundred pounds is to be deducted and paid to the Treasurer to meet the expenses of the group representatives. The recommendation of the Committee was unanimously adopted.

A special committee consisting of C. W. Halliday, North Chatham, N. Y., A. J. Outhouse, Croton Falls, N. Y., and Mr. McCarty were appointed to audit the Treasurer's books for the period ending March 31, 1924.

LIVINGSTON COUNTY BREEDERS MEET

The annual meeting of the Livingston County, Holstein Association was held March 13th on the J. G. Hays farm, three miles from Howell, Michigan, now occupied by Mr. and Mrs. Burr Hoover.

After supper President Carr introduced C. W. Long, of the Holstein-Friesian National Extension Service, who paid a number of compliments to Livingston County and said the west was demanding more Holsteins.

The Association decided to put on a scrub bull elimination campaign in the near future. President Carr's report said that nearly \$10,000 worth of business had been done by the members of the association. He praised the County Sales Manager project. During the past year the world's greatest bull association has been organized and the county association has assisted in organizing a Holstein Association in Aranac County.

John Worthington was elected president; Burr Hoover, secretary-treasurer. The board of directors were Tracy Crandall, D. H. Hoover, Raymond Allen, S. C. Heeg, and T. B. Gilkes.

junior. King with Hollyhock Sir Pete Rhoda Korndyke carried off the blue for senior bull calves and Holtex Cadillac Ormsby, won for Holtex Farms in the junior division.

Diggsfield Farm had the best mature cow in Johanna Ormsby Cornucopia. Crescent Beauty Star Belle was easily the best three-year-old and went on to senior and grand championship. Charlevoix Marbury De Kol won first in the two-year-old class

HOLTEX ECHO HARTOG ELZEVERE

First prize senior yearling and junior champion at Oklahoma City. Owned by Holtex Farms, Dallas, Texas.

for King and Bock Diamond Pontiac won, for the same stable, in the senior yearling division with Holtex Echo Hartog Elzevere second, Bock De Kol Gerda Girl won the blue for junior yearlings for the King stable and her stablemate, Miss Pearl Piebe, was best senior heifer calf. Diggsfield Farm won first with Diggsfield King Sylvia Ormsby for junior heifer calf.

CRESCENT BEAUTY STAR BELLE

Senior and grand champion female at the Southwest American Livestock Show, Oklahoma City, Okla. and the Fort Worth, Texas, Stock Show. Owned by A. J. King, Kansas City, Mo.

Champion Echo Sylvia Pontiac 3d was senior and grand champion bull, a popular award with the many Texans present. The junior champion went to Triune Ormsby Piebe 4th and King also took all the female championships, winning senior and grand with Crescent Beauty Star Belle and junior with Bock De Kol Gerda Girl.

OPEN DOOR TO OWNERS OF GRADES

Hans Anton was reelected to succeed himself as president of the Pennington County Holstein Breeders Association while M. T. McFarland, Thief River, Falls, Minn., was chosen for another term as secretary-treasurer. The meeting was held March 15th and was well attended.

The Holstein sale will be held on the fair grounds, October 1st, and the animals will be inspected by an appointed committee. All stock not coming up to standard will be rejected.

It was decided to admit to membership any owner of a purebred Holstein sire even though the remainder of the herd may be entirely of grades. It was also decided to give a purebred male calf to the boy or girl winning first in Holstein calf club at the county fair.

Cow Testing Association Reports

WORK OF WISCONSIN HOLSTEINS

Snowball, a grade Holstein, was the biggest producer in the Hartford-Erin Association which completed its full year's work January 27th with 24 members finishing.

The Association average was 7,656 lb. milk, 276.3 lb. fat. Snowball produced 17,064 lb. milk, 601.7 lb. fat. She is credited with making a net profit of \$230.67. Her owner is Arthur Lepien. Mr. Lepien had thirteen cows, grade and registered Holsteins, that averaged 10,830 lb. milk, 400.8 lb. fat.

During the 29 days of February, Lady Hazel Fobes Segis, a purebred Holstein owned by Schwarzbauer Bros., produced 1,856 lb. milk, 74.24 lb. butter in the Menasha, Wisconsin, Testing Association. She averaged 4% fat. She was kept under ordinary farm conditions and was milked twice daily.

For six consecutive months the purebred Holstein herd of R. L. Ray of Eau Claire, headed the Eau Claire No. 3 Association. During the 29 days of February this herd averaged 1,347 lb. milk, 40.8 lb. fat. For the fourth month in succession the purebred Holstein herd of Louis Hansen held second place, averaging in February 1,056 lb. milk, 38.64 lb. fat.

A seven-year-old purebred Holstein owned by John Wehinger & Son led the Clinton-Rock County Association for the month of February with a production of 86.6 lb. fat and 2,624 lb. milk. She was milked three times daily and also led the Association for January.

A purebred Holstein owned on Craighurst Farm stood second with 61.5 lb. butterfat from 1,923 lb. milk and she was milked only twice daily. The herd of C. A. Larson averaged 37.7 lb. butterfat from 1,121 lb. milk. This thirteen-cow dairy also led in January with an average of 44.8 lb. butterfat, 1,214 lb. milk.

Mary Barrington De Kol, owned by Otto Romey, led the Whitewater Association for the 29 days of February by producing 1,870 lb. milk, 69.2 lb. fat.

Helberg and Anderson own the leading herd in the Colfax Association for February. It consisted of registered and grade Holsteins and averaged 1,074 lb. milk, 38.9 lb. fat. The high cow was a purebred member of this herd and made 2,165 lb. milk, 69.2 lb. fat.

A registered Holstein owned by Harry Hansen of Denmark, led the Denmark Association for February with a production of 2,291 lb. milk, 87.1 lb. fat. She is eleven years old, tested 3.8% and was milked three times daily. A four-year-old grade in the same herd produced

1,785 lb. milk, 60.7 lb. fat on twice a day milking. The Hansen herd consists of registered and grade Holsteins and averaged 1,205 lb. milk, 41.5 lb. fat for sixteen head.

Paul Fromm owned the February leader of the Allenton-Kohlsville Association. She is a purebred Holstein and produced 2,059 lb. milk, 76.2 lb. butter, her average test being 3.7%.

The splendid record of 106.7 lb. fat, 2,223 lb. milk, was made by a registered Holstein owned by J. R. Minahan and enrolled in the Pulaski Association. A grade Holstein was second with 2,340 lb. milk, 81.9 lb. fat.

High cow for February in the Rudolph Association was Charles Hassell's registered Holstein, Colantha. She produced 1,435 lb. milk, 60.2 lb. butterfat during the 29 days. The herd of Joe Van de Loop was first for butterfat production with an average of 38.2 lb. from 1,006 lb. milk. C. Van Asten's herd averaged 1,094 lb. milk, 37.8 lb. fat.

A SPLENDID SHOWING

Doratea Somerset Lilith De Kol 2d leads the Goodville Cow Testing Association for milk production. She has been on test for ten months and in this time has produced 15,142 lb. milk, 453.7 lb.

DORATEA SOMERSET LILITH DE KOL 2D
15,142 lb. milk, 453.7 lb. butterfat in ten months. C. T. A. work. Owned by M. V. Brubaker, New Holland, Pa.

butterfat equivalent to 567.13 lb. butter on the 80% basis. Doratea is owned by M. V. Brubaker of New Holland, Pa. We are indebted to Luke W. Martin, tester of the Goodville Association, for the interesting account of her production. Doratea varied considerably during the year, as her monthly reports show.

	lb. milk	lb. butterfat
May	2,492	77.3
June	2,073	64.3
July	1,903	51.4
August	1,352	33.8
September	1,500	42.0
October	1,088	37.0
November	1,209	37.5
December	1,305	43.0
January	933	32.7
February	1,287	34.7
Total	15,142	453.7

CANADIAN OFFICIAL TESTING

During February the official tests of 66 cows and heifers were accepted for entry in the Canadian Record of Merit. Princess Core Mercena, owned by W. C. Houck of Chippawa, Ontario, leads the mature class with a record of 690.2 lb. milk, 30.01 lb. butter made as a ten-year-old. The well-known show cow, Grace Fayne Aaggie of the Ottawa Experimental Farms is second with 607 lb. milk, 29.91 lb. butter and the very fine 30-day record of 2,465 lb. milk, 124.52 lb. butter.

The Houck's led the junior four-year-old class with Maggie Calamity Hartog, she being credited with 763.5 lb. milk, 31.38 lb. butter. The highest for the junior fours is 27.48 lb. for Raymondale Oakland Korndyke.

Ottawa Francy Bos De Kol of the Ottawa Experimental Farms leads the senior threes with 649.5 lb. milk, 31.12 lb. butter. The largest record in the younger classes is 24.10 lb. butter for the senior two year old, Lilly Francy Lestrang.

Agassiz Pietje Priscilla Korndyke of the British Columbia Experimental Farms makes the largest year record, being credited with 1,061.25 lb. butter from 24,567 lb. milk. The 305 day division is led by Colony Inathe Newman with 23,529 lb. milk, 1,013.75 lb. butter. Colantha Mercena Ormsby, owned by J. W. Innes of Woodstock, Ontario, as a three-year-old, is credited with 16,770 lb. milk, 711.25 lb. butter.

TESTING IN VIRGINIA

By L. P. EMMERICK,
Assistant Dairy Husbandman.

During the month of February there were thirteen active cow testing associations in Virginia with a total of 5,723 cows on test. Of this total 689 cows produced over 40 lb. butterfat, and 280 produced over 50 lb. The highest producing cow for the month was credited with 2,617 lb. milk and 105.5 lb. butterfat. She was a grade Holstein, owned by Ben Middleton of Herndon, a member of the Fairfax County No. 1 Cow Testing Association. The second high cow was a purebred Holstein owned by George R. Bready, also of Herndon, and of the same association. She produced 2,047 lb. milk and 92.0 lb. butterfat. Mr. Bready also had two other purebred Holsteins among the first ten high cows. Of the ten highest cows for the month seven were purebred Holsteins and three were grade Holsteins. There were sixteen cows over seventy pounds of butterfat. Eleven of these were purebred Holsteins, four were Grade Holsteins and one was a purebred Guernsey.

The high herd for the month was a herd of nine purebred Holsteins owned by H. L. Butler & Sons of Culpeper, and members of the Culpeper Cow Testing Association. This herd's average production was 1,395 lb. milk and 51.6 lb.

butterfat. The second high herd is owned by H. J. Hardesty of Berryville, a member of the Northern Valley C. T. A. This herd of nine cows averaged 1,326 lb. milk and 455 lb. butterfat. The third herd was the herd of 34 grade and purebred Holsteins owned by O. K. Miller, a member of the Fairfax County No. 2 C. T. A. This herd averaged 1,123 lb. milk and 43.0 lb. butterfat. The first five herds were all either grade or purebred Holsteins.

J. B. Fink, the tester for the Orange C. T. A., with a total of 106 points, was the winner of the first prize for the month in the Virginia Cow Testers' Efficiency Contest. T. V. Armstrong, the tester for the Fairfax No. 1 C. T. A. was second with 103 points. Sterling Simpson and J. M. Wayman, testers for the Henrico and Northern Valley C. T. A., respectively, were tied for third place with 88 points each.

SOUTH DAKOTA TESTING

The three leading producers in the eight South Dakota cow testing associations were all purebred Holsteins. The leading cow was owned by the Penitentiary Farm at Sioux Falls. During February, she produced 90.68 lb. butterfat, 2,061 lb. milk, but she was closely followed by the two-year-old heifer, Ruby, owned by F. E. Johnson of Hetland, with 88.68 lb. fat, 1,673.2 lb. milk.

Three other members of the Johnson herd exceeded 80 lb. fat. The Penitentiary cow led for net income, returning \$35.54 above the cost of her feed while the Johnson heifer returned \$34.53.

In the eight associations there were 193 herds enrolled, containing 2,561 cows. About one per cent of the number went to the butcher on account of being unprofitable. There are 22 herds containing 509 cows in the Sioux Falls Association of which G. Rogness is tester, where there were 60 cows that made 40 or more pounds of butterfat in the month and 16 head averaged 25 lb.

CORONA LEADS FOR YEAR

Corona, a registered Holstein owned by A. H. Smithson of Holtville, Cal., produced 601.9 lb. butterfat in 305 days during the recently ended cow testing association year of the Imperial County Farm Bureau Cow Testing Association. Mr. Smithson also owned the second highest cow, another registered Holstein, she making 78.3 lb. butterfat in the month. The five highest cows in the Smithson herd produced 338.2 lb. butter during February, an average of 67.6 lb.

Over 100 herds were tested in the association and these contain 3,546 cows. The average production was 686 lb. milk, 26.4 lb. butterfat.

GOOD STATE HERD

The Holstein herd belonging to the Missouri State Sanatorium led the Lawrence-Barry Cow Testing Association for January with an average butterfat production of 47.43 lb. The high cow made 1,928 lb. milk, 75.2 lb. fat.

PENNSYLVANIA TESTING

The highest yield in January by any cow enrolled in any of the twenty-three Pennsylvania Cow Testing Associations was 2,430 lb. made by a registered Holstein owned by W. H. Wertz of Mechanicsburg, of the Cumberland County Association. The second highest was 2,396 lb. and was made by a registered Holstein owned by Ivo V. Otto of Carlisle, also enrolled in the Cumberland County Cow Testing Association. Third place was taken by a purebred Holstein owned by H. F. Freed of Racine, of the Westfield Association operating in Lawrence County.

First place for butterfat production is taken by a purebred Holstein in the Freed herd with 101 lb. fat. Another purebred Holstein owned by Henry Eaves of the Columbia County Association is second with 89.8 lb. fat.

The Sharpsville-Orangeville Association leads for the highest ten-cow average, that being 81.9 lb. butterfat. The Cumberland County Association is second with an average of 70.5 lb. fat.

In the twenty-three associations there were 5,929 cows tested during January, of which 943 produced more than 40 lb. fat, 288 more than 50 lb., while 596 cows exceeded 1,200 lb. milk.

By far the very best showing is made in Cumberland County. Tester A. A. Raudabaugh had 308 cows in his charge, of which 105 exceeded 40 lb. fat and 137 produced more than 1,000 lb. milk. No other Association reached the century mark for either milk or fat.

A PROFITABLE HERD

A dairy of twelve purebred Holsteins owned by Thomas Shover of Shomont, Iowa, earned its owner \$553.80 for the month of February, reports the tester, W. M. Knuth. The high cow was Edgetown Bess Ormsby, she producing 2,010 lb. milk, 102.5 lb. butterfat and making a net profit of \$53.10.

A Holstein herd is second, Guernsey herd third and another Holstein herd fourth.

GOOD SHOWING IN MICHIGAN

Sixteen registered Holsteins owned by Albert Luchtman led the Macomb County, Michigan, Coöperative Cow Testing Association for the month ending February 25th. This herd averaged 1,141 lb. milk, 39.7 lb. fat. A registered Holstein, owned by A. W. Eschenburg, is high cow with 81.8 lb. fat, 1,410 lb. milk. There were 325 cows tested and the average production was 824 lb. milk, 29.1 lb. fat.

A BLACK AND WHITE SUNBEAM

"Sunbeam," a registered Holstein of the Woodrum dairy of Charleston, West Virginia, led the Tri-County Cow Testing Association for the month of February by producing 2,376 lb. milk, 85.5 lb. fat, her milk averaging 3.6%.

A grade Holstein was second, another purebred third and "Latalie," a registered Holstein owned by Kanawha Farm, was fourth.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

SOUTH CAROLINA TESTING

Lady Rooney Mary Korndyke 2d in
the herd of V. M. Montgomery of
Spartanburg, led all the cows in South
Carolina testing work, during February,
by producing 108.6 lb. fat, 2,005 lb. milk.
This was in the first month of her lacta-
tion period and in her junior four-year-
old form. Mildred Korndyke Cornucopia
of the same herd was second with 2,002
lb. milk, 76.7 lb. fat as a senior four-year-
old, and Arcady Segis Atia 2d was third
with 2,246 lb. milk, 74.6 lb. fat as a
mature cow. Ocean Queen Korndyke De
Kol 2d, owned by J. T. Willard of
Spartanburg, was fourth with 74.3 lb. fat,
2,024 lb. milk. A Guernsey was fifth,
Bertha Polly Posch of the Montgomery
herd, sixth, and Sigsbee Farm Mech-
thilde, owned by Kai Schwensen, seventh,
with 69.1 lb. fat, 1,635 lb. milk in the
eighth month of her lactation period.
She is a senior four-year-old.

The Montgomery herd has eleven cows
that have each made over 44 lb. fat in
the month while the Willard herd has
seven that have exceeded 43 lb. Mr.
Schwensen has two each above 62 lb. fat
and 1,600 lb. milk while Clemson College
has a 62-lb. mature cow and two junior
two-year-olds each above the 40-lb. mark.
The highest Guernsey has 72.1 lb. fat
to her credit and the leading Jersey has
67.1 lb. During the month there were on
test 22 Jerseys, 59 Guernseys and 40 Hol-
steins.

Lady Rooney Mary Korndyke 2d is
credited with a seven-day official test of
481.7 lb. milk and fat equivalent to 32.76
lb. butter which makes her the State class
leader of the junior four-year-olds in the
seven-day division.

SAN JOAQUIN ASSOCIATION

Grade Holsteins carried off most of the
honors for February in the San Joaquin
Testing Association. There were 960
cows tested in the 37 herds and the average
for the month was 705 lb. milk, 27.18
lb. butterfat.

The leader in the Division for 15 cows
or more was the herd of 43 grade Hol-
steins owned by Joe Lucas of Ripon, Cal.
Their average was 835 lb. milk, 34.51 lb.
butter. Grade Holstein herds occupied
the next six places.

In the herds for 15 cows or less, first
position was held by five grade Holsteins
owned by Louis Ryan of Manteca, with
an average of 887 lb. milk, 41.55 lb. fat.
The leading producer was "Babe," grade
Holstein owned by William Frasier of
Ripon with 2,047 lb. milk, 86 lb. fat,
while second was another grade, "Nig-
ger," owned by L. Van Wyk, also of
Ripon, with 1,481 lb. milk, 81.4 lb. fat.

MABEL IS GOOD MILKER

Mabel, a purebred Holstein owned by
Henry C. Hoft, Jr., of Wall Lake, Iowa,
is the champion milker of Sac County.
During January she produced 64.7 lb.
butterfat from 1,705 lb. milk and she
netted her owner \$23.84.

There are 27 herds containing 314 cows
in the Association. The average milk
production was 602 lb. and the average
fat 23.23 lb.

MILK FOR INVALIDS

From thirty-four to thirty-six cows are
milked regularly in the herd owned by
the Gaylord Sanitarium near Walling-
ford, Conn. The average milk consump-
tion by the patients is considerably more
than a quart a day and to insure a steady
supply of milk of unquestioned purity the
Institution maintains its own dairy herd
of which about half are Holsteins and
half are Guernseys.

The utmost care is taken to keep the
cattle in good health. Only one reactor
was found in the seventy-eight animals
tested last fall, reports the manager, W.
M. Worthington.

The present head of the Holstein herd
is Colantha Countess Lad, No. 241667, a
son of Colantha Sir De Kol Korndyke
and Countess Bawn Buckeye 2d.

FEWER BUSINESS FAILURES LAST YEAR

According to mercantile reports, the
number of business failures in the United
States in 1923 was smaller than in 1922
or 1921 and the aggregate liabilities were
smaller than those of the previous two
years. In 1921 the number of business
failures was 19,652, with total liabilities
of \$627,402,000. In 1922 the total num-
ber of business failures was 23,676, with
total liabilities of \$624,000,000. During
the year just closed the number of busi-
ness failures was 18,720, with total liabil-
ities of \$530,532,000.

FOND DU LAC FAIR

The Fond du Lac County Agricultural
Society had a deficit of \$4,830.40 as the
result of the 1923 county fair, reported
Secretary S. D. Boreham. Practically
all of this was blamed unto a lack of
attendance on Fond du Lac Day, which
was hampered by inclement weather.
The premiums paid last fall in the cattle
department were \$3,913 of which \$533
went to Holsteins and \$578 to the Guern-
sey classes. The Jersey premiums were
\$469.

TO INCREASE SHOW RING PRIZES

It is announced that the Holstein-
Friesian Association of America will in-
crease its aid to the New York State Fair
by advancing its special premiums from
30 to 40 per cent of the state fair list and
also appropriate \$250 as prizes for county
herd exhibits.

FIVE GOOD ONES

Five purebred Holsteins in the Whit-
aker Farm herd at Walnut, Missouri,
made an average net profit of \$290.40 per
cow. They produced in one year 9,497
gallons of milk containing 3,310.6 lb.
butter. With the exception of a little
oil meal all of the feed consumed was
produced on the Whitaker Farm.

REGISTERED HOLSTEIN YEAR-
LING BULL cheap. 30-lb. dam, 32
lb. sire. Also heifer calves. **ALEX.**

DR. L. M. THOMPSON, MANAGER

THE LATHROP HERD, ACCREDITED
HOLSTEIN-FRIESIAN CATTLE

LATHROP FARM

W. A. LATHROP ESTATE

Montrose, Pa., March 21, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Evangelical Bldg., Harrisburg, Pa.

Gentlemen: I have been meaning for some time to write, asking you if you would
not carry on a little discussion in your paper relative to the method of selling cattle at
auction.

For the last two years the Susquehanna County Holstein Breeders' Association has
held an auction sale in the summer, and our endeavor has been to keep the ethics of this
sale on as high a plane as possible.

The cattle for these sales were selected with care as to health and type, limited to
accredited herds, or cattle under Federal supervision, which had passed at least one clean
test. We had two gentlemen from outside the county, one of whom was a State College
Extension man, select the cattle for the sale from among those offered by the county
breeders, in this way avoiding any possible show of favoritism by the sales committee.

At the sale two years ago, we had each consignor sign a statement to the effect that
he would not bid on his own cattle, nor have any representative bidding for him. At last
year's sale we went one step further, and had the consignors sign an agreement not to bid
on any cattle in the sale, nor have any representative do so for them. We wanted to in-
spire the buying public with the idea that this was an absolutely clean and above board
sale. We went on the theory that, inasmuch as all the cattle were consigned from this
county by relatively near neighbors, and that, having 364 days of the year in which to buy
each other's cattle, we would forego that privilege on the day of the sale. This method
of selling has become known locally as the Susquehanna County Plan, and has excited
considerable interest and in general, approval, by everyone who has seen it work.

There are, however, some arguments against it. We realize that the consignors them-
selves, representing the best breeders in the county, frequently have in their herds sisters,
or other close relatives of the cattle consigned by a neighbor, and might wish to complete
certain family groups of that particular blood line, especially if they saw such an animal
being struck off at a low figure.

The local breeders themselves, knowing the production records of their neighbors'
herds, and frequently production of closely related cows in their own herds, are best able
to judge the value of these animals, and under the Susquehanna County Plan, they are
helpless to prevent the sale of an animal at a figure below her true value, and they miss
an opportunity to add to certain lines of breeding in which they themselves may be most
interested.

However, some of us feel that the advantage of the confidence of our visitors at our
sales has offset the losses which we may have taken by having our own cattle sell cheap,
or those of our neighbor that we might have liked to keep, sold to outside buyers.

The sales committee will meet shortly to determine the policy for this year's sale, and
we should be very much interested to see in your columns a discussion of this question
and to learn the opinions of breeders in other parts of the country.

May I ask if you cannot present this subject in your valued paper in such a way that
it will excite discussion, and bring out comments, either favorable or otherwise, from a
large number of your subscribers for the sake of better auction sales of cattle.

Yours very truly,

L. M. THOMPSON.

LAST CALL

Eastern Bradford County Breeders' Sale at Wyalusing, Pa.,
April 10th.
R. C. Melvin Sale at Liverpool, N. Y., April 15th-16th.

FAYETTE COUNTY SALE

The Fayette County Holstein Association held its annual sale at West Union,
Iowa, March 12th. There was a good crowd and prices were considered satisfactory.
The average for the purebred cows was a little over \$157. There were a number of
grade heifers, some young stock, and the average for the entire sale was \$130.60.
Paul Stewart, of Maynard, consigned six head which averaged \$212.

BRISK SALE AT LOYALSOCK FARM

The very creditable average of \$290.49 was realized for the 41 animals offered
in the Loyalsock herd dispersal sale held on the farm at Montoursville, Pa., March
12th. The 35 females averaged \$279.57 and the six bulls averaged \$359.17.

The top price was \$1,010 paid for Eco-Sylv Rauwerd by the Detroit Creamery
Farm, Detroit, Michigan. This 29-lb. two-year-old was by Champion Echo Sylvia
Pontiac. Her dam was a 34-lb. three-year-old by King Pontiac Artis Canada from
a 30-lb. cow. The same firm paid \$725 for Queen Woodcrest Johanna, a thousand-
pound daughter of a thousand-pound cow and sired by Woodcrest Sir Clyde. Johanna
Segis Fayne Ormsby went to the same company for \$625. As a junior four-year-old
she had a year record of 940.84 lb. butter and was from a good daughter of King
of the Pontiacs. The fourth animal the Creamery purchased was Lady Mechthilde Segis
Pontiac, a 20-lb. junior two-year-old sired by King Segis Pontiac Count. They paid
\$500 for her. H. E. Robertson of York, Pa., paid \$550 for Loyalsock Korndyke
Witra, a thousand-pound year record daughter of the 1,100-lb. year record cow,
Loyalsock Colantha Witra. It cost Mr. Robertson \$400 to own Loyalsock Korndyke
S V Craeg, a 20-lb. two-year-old daughter of King Korndyke Daisy Hengerveld
from a 30-lb. cow. A. C. Slifer, of Lewisburg, Pa., paid \$450 for Llenroc Posch

SALE CATALOGS

We furnished the catalogs for more sales than any other company during the

PEDIGREE EXPERT

Get our R. Austin Backus for your sale—in the box at more sales during the
past six months than any other pedigree man. Book your date before it is
too late.

BACKUS PEDIGREE CO., MEXICO, N. Y.

Blanche whose dam had a year record of 1,272.50 lb. butter. It cost A. H. Erdman
of Elizabethville, Pa., \$300 to own Loyalsock Witra Korndyke, another daughter of
King Korndyke Daisy Hengerveld from Loyalsock Colantha Witra.

Edwin Zimmerman, of Lehigh, took the top-price bull, Sylvia Alcartra King,
a son of Alcartra King Sylvia and from Eco Sylv Rauwerd. The price was \$725.
Mr. Zimmerman and his brother, Lewis, secured a number of good females. King
Jemima Segis, a splendidly bred bull, went for \$555 to a syndicate composed of
P. C. Antes, H. R. Paulhamus, F. J. Barrett, and O. A. Shirey, all of Williamsport,
Pa. This bull was expected to go much higher. A. L. Burlington and W. B.
Kennedy of Wyalusing, Pa., secured a bargain when they obtained Traverse Echo
Sylvia King for \$450. He was by Echo Sylvia King Model from the 33-lb. cow,
Traverse Inka Johanna.

Other purchasers were: Tressler Orphan Home, Loysville, Pa.; W. C. Houck
& Sons, Chippewa, Ontario; P. M. Newman, Pennsdale, Pa.; Jean Bowden, Northrup,
Danville, Pa.; J. Harry Rakestraw, Montoursville, Pa.; Bruce & Daun, Elmira,
N. Y.; C. E. Erdley, Lewisburg; O. A. Shirey, Williamsport; Clarence Snyder,
Muncy; H. W. Goodman, Quakerstown; Wm. A. Decker, Williamsport; C. R.
Savidge, Milton; J. G. Kerrick, Towanda, Pa.

For auctioneer, the Flock Brothers secured Glenn R. Mead of East Aurora,
N. Y., with Jack Houck of Chippewa, Ontario, as pedigree man. They worked to-
gether in fine style and earned commendation from the crowd for alertness, courtesy,
and effective team work.

NUTTLEMAN'S HERD DISPERSED

A sale of purebred Holsteins was held at the sale pavilion, West Salem, Wis.,
February 28th. There were sixty-nine head consigned including a number of baby
calves and they averaged around \$100 per head.

The entire herd of the late Alfred Nuttleman, consisting of fifty-one head of
registered cattle, formed one of the consignments. The high priced cow was a
seven-year-old with a cow testing association record of 12,106 lb. milk, 406 lb. butter-
fat. She went to Ed Funk of La Crosse for \$210. A six-year-old with a record of
10,750 lb. milk, 356 lb. butterfat, went to B. J. Kneeland, Lynxville, for \$200. The
top price bull was eleven months old, consigned by J. D. McDonald and purchased
by J. C. Larson of Elgin, Iowa, for \$150.

The weather was nice but the roads were poor. However, a good crowd was in
attendance. That evening a sale of 50 grade cows and heifers was held in the
pavilion. The total for the two sales exceeded \$10,000.

R. C. MELVIN TO HAVE TWO DAY SALE

A herd of good typy young cows will be offered at public auction at the R. C.
Melvin sale which will be held April 15th-16th at Cold Spring Farm, between Bald-
winsville and Liverpool, New York. The state road running from Syracuse to Bald-
winsville and passing through Liverpool goes right by the farm. The sale will be held
under cover and will start promptly at 10 o'clock each morning.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 249)

R. Austin Backus, sale manager, tells us that the offerings will include K. P. B. K. Carrie De Kol Pohlcrest, who recently made a seven day official record of 31.20 lb. butter and 608 lb. milk and produced over 90 lb. milk the best day. She is a very handsome animal—a typical daughter of her famous sire, King Pontiac Beryl Korndyke, and he is regarded as one of the best transmitting sons of King of the Pontiacs. In this sale is a four-year-old heifer that made 30.70 lb. butter in seven days with 616 lb. milk in her second lactation period. A number of other cows have records ranging from 24 to 28 lb. and several of the animals have show ring records. The herdsire, from a cow that made 34 lb. butter in a week and averaged 108 lb. milk a day for thirty days, is also offered.

The Melvin herd is under state and federal supervision. The animals will be sold subject to a sixty day retest. For many years Mr. Melvin has been known as a capable judge of cattle. He is a liberal feeder and the stock are bound to be in good flesh and condition. Remember that the sale dates are April 15th and 16th.

ON THE LOS ANGELES COUNTY FARM

Among tests now under way at the Los Angeles County Farm, is one on a very promising two-year-old, a daughter of Sir Veeman Korndyke Pontiac out of a granddaughter of De Kol of Valley Mead. She is a splendid individual and a very persistent producer, having made over 71 lb. of fat in her seventh month and increased this slightly in her eighth month. Present indications are that she will make better than 925 lb. butter, her test averaging 3.75% and improving as the test progresses.

Janie Banostine Butter Boy has qualified in the ten months class with the birth of a bull calf by King Segis De Kol Mead, making the very creditable record of 888.6 lb. of butter from 22,055 lb. of milk as a four-year-old. She carried

calf during 178 days of the test period and in addition made 1,006 lb. of butter in 365 days from nearly 25,000 lb. of milk. Her son heads the herd of L. K. Chase in the Palo Verde Valley.

De Kol Korndyke Alcartra Phoenix also freshened in January, qualifying for her second ten months record with over 800 lb. of butter and 20,000 lb. of milk. In 303 days she made 887 lb. of butter from 22,255 lb. of milk. In addition to her producing ability, she a very showy cow. Her sons are now in service in two large herds in San Diego County.

Dora Jeek Pontiac, a second calf four-year-old, made 28.74 lb. of butter in seven days, averaging 80 lb. of milk per day and has made over four pounds of butter per day for the last 60 days.

WILLIAM R. HARRIMAN,
Superintendent, L. A. County Farm.

Be Reasonable

YOU would not expect your Holsteins to produce the maximum yield of butterfat if you did not provide them with a proper balanced ration.

Is It Reasonable

to expect your soil to produce a maximum yield from year to year without the same attention and feeding?

Your Soil Needs A Balanced Ration

For every element taken from the soil by growing plants a like amount must be returned thru the agencies of manures, fertilizers, legumes, etc.

Baynes' Soil Improver

will help you settle your soil problems and will be sent to any address in the United States for 25 cents a year or 5 years for \$1.00 with the valuable 74 page booklet "FEEDING DAIRY COWS" as a premium.

ADDRESS

BAYNES' SOIL IMPROVER,
327 So. LaSalle St., Dept. H Chicago, Illinois

STATE OWNED PUREBREDS EXCEED GRADES

The state of Ohio owns 1,587 head of cattle of which 600 are registered Holsteins, the remainder being grades. The entire herd is valued at \$245,763. Dairy herds are maintained at 14 institutions. Last year more than eight million pounds of milk were produced but this was not enough for the requirements and an additional two million pounds were purchased.

Last summer Director Harper asked for \$14,000 to buy cows but the appropriation was refused by the State Board of Control and Harper was advised to build up the herds by keeping the heifer calves. Those in charge say this is false economy and also the state not only is losing money by buying milk and butter while waiting for the calves to mature, but that the cost of raising the calves adds materially to the cost of the milk produced.

During last year the average milk production of the state owned registered cows exceeded that of the grade cows by 2,031 lb.

LOOK FOR PRODUCTION FIRST

Monday February 25th was a busy day at the Tempealeau County Asylum Farm, Independence, Wisconsin, for eighteen teams arrived carrying Holstein cattle. The new herd consists of nineteen Holstein cows, six of which are purebreds while the others are high grades and in addition there are three purebred heifers and four calves. All have passed the tuberculin test.

Trustee A. W. Liver says that in every instance the Board had access to a record of the animal's production as shown in cow testing association work. Cow testing association records indicate what the cows are capable of doing in everyday work much better than do official records in which the animals are given feed and care beyond the margin of profitable production.

The stock was purchased from dairymen of the county and will replace the old herd which was destroyed on account of tuberculosis.

GOVERNMENT DISCONTINUES FREE RECORDS

The distribution of milk and feed record sheets has been discontinued by the United States Department of Agriculture excepting to members of cow testing associations who can obtain them through their State Dairy Extension Specialist. Non members of testing associations will henceforth have to purchase milk record sheets from parties making a business of selling such supplies.

"IT PAYS TO BUY THE BEST"

Registered Holstein Heifer Calves from son of first prize bull of New York State. Beauties \$60 each. Registered, transferred and express prepaid east of Mississippi. NU-BORN FARMS, Jasper, N. Y.

LARGE RECORDS

Large records were made in a test completed in the Paragon Holstein herd owned by Anderson-Routt Improvement Company of Tulare, Calif. Most of the animals will be continued on year test.

Whittier Clothilde Rowena Hartog produced 790.5 lb. milk, 35.75 lb. butter in seven days, 2,930.8 lb. milk, 141.85 lb. butter in thirty days. At the close of her test she was milking well over 100 lb. a day. She already has a year record of 995 lb. butter and during that year was milked twice a day nearly all the time. She has three daughters in the herd and her dam Whittier Rowena Favorite 2d dropped seven heifer calves of which six are still in the herd. All her calves were heifers.

Paragon Christmas Lady made 551.7 lb. milk, 34.78 lb. butter in seven days as a senior three-year-old while her thirty day production was 2,672.1 lb. milk, 130.23 lb. butter. After she was out of test she reached 100 lb. milk a day. She is a daughter of Toyon Fayne Valdessa.

STEADY WORK

Twenty registered Holsteins owned by F. F. Pellissier, of Whittier, California, averaged 54 lb. of butterfat per cow for the last seven months in cow testing association work. The twenty head include eight two-year-olds, and three three-year-olds. A number of good official records have also been made. Lady Ota Colantha produced 31.4 lb. of butter from 707.5 lb. of milk in seven days and for two months has now milked over 100 lb. per day. This was after qualifying for a 305 day record of 900 lb. of butter, 21,769 lb. of milk.

Zo Zo Pontiac Netherland after qualifying for a ten months record of 791 lb. butter, 16,240 lb. milk, produced 30.21 lb. butter and 534 lb. milk in seven days. A number of good records have been made by heifers tested:

EARNED THEIR BOARD

Fred F. Heil, of the Fairview Dairy Farm, Wausau, Wis., recently slaughtered a pair of Holstein cows. Princess Junita Posch No. 85301 was born March 8, 1905 and was eighteen years old when killed. Her weight was 1,075 lb. During her life she dropped eight males and two females and produced 110,954 lb. milk, 4,832 lb. butter. Queen Netherland Korndyke, No. 110904 was fifteen years of age and weighed 1,150 lb. She had had eight female calves and four bull calves and produced during her lifetime 109,166 lb. milk, 5,032 lb. butter.

BUYS SON OF PRIZE WINNER

Otto Miller, of Plymouth, Wisconsin, purchased from D. W. Huenink, Shady Nook Farm, Cedar Grove, a son of Dodge County Homestead Boy, three times winner at the Wisconsin State Fair and twice winner at the National Dairy Show.

The dam of the youngster is Caroline Johanna Hengerveld Piebe 30.98 lb. of butter in seven days and an average of 821 lb. of butter in three different year tests.

How She Does Milk!

And we have many more like her. Korndyke Abbekerk, Veeman and Hengerveld breeding.

HOLSTEINS BRING A COMPETENCY

Paul P. Stewart, of Maryland, is an Iowa dairyman who has made good and attributes most of his success to the Holstein cow.

Nineteen years ago Mr. Stewart started as a tenant on a run-down farm that produced tons of weeds and twenty-five or thirty bushels of corn to the acre.

He began keeping cows. Thirteen years ago the first purebred Holsteins were purchased and seven years later all of the grades were disposed of and the herd was entirely purebred. Cow testing association work, official testing and purebred bulls are credited with being the three great factors in his success and he says that he never paid less than \$300.00 for a herd sire. To-day he has 320 acres of Iowa land, valued at \$200.00 an acre, 100 head of purebred Holsteins valued at \$20,000 and a modern house, well equipped barns and is an influential citizen in his community.

Mr. Stewart says that he has made a profit every year of the nineteen years he has been on the farm. He uses mostly home grown feeds for his cows and now plants soy beans with his corn to enrich the silage and add protein. About 200 hogs are annually sold from this establishment.

ILLINOIS CENTRAL PROMOTING DAIRYING

The Illinois Central System has offered to buy the farmers of Cherokee County, Iowa, a purebred Holstein bull for their free use provided the businessmen of Cherokee will buy another purebred bull of the same breed and loan to the farmers on the same terms. This is the first offering of this kind to an Iowa County although the railroad has done considerable dairy promotion in the southern states, particularly in Mississippi, Tennessee, Kentucky, and southern Illinois.

The Illinois Central does not propose to make its Cherokee offer general in Iowa but having determined to push dairying in its territory has selected Cherokee County as a place to test its plans.

BUILDING HERDS FAST

Two years ago Forrest E. Riley purchased a section of rich lake-bottom land, six miles south of Corcoran, California. Then he purchased 75 head of registered Holsteins from the Helm Farm Herd and a large number of fine Duroc Jersey hogs. To-day he has 500 head of registered hogs and a big producing dairy at the head of which is Mono Netherlands De Kol, from Maud Netherlands Wayne De Kol, a cow with a year record of 1,312 lb. butter.

HEAVY HOLSTEIN BEEF

A three-year-old registered Holstein heifer was slaughtered by W. J. Higdon, and the dressed carcass, weighing 522 lb. was exhibited at a meat market in Tulare, Calif., where it attracted much attention on account of its unusual size. The average dressed beef carcass as seen in Tulare weighs around 500 lb. The heifer was slaughtered because she was barren.

A CHEAP LIGHTING SYSTEM

A little ingenuity and an investment of \$2 gave Carl Helber a barn lighting system. Mr. Helber, who owns a dairy farm near Ann Arbor, Mich., has a mixed herd of Guernseys and Holsteins, sixteen in number. These are milked by a machine which is operated by a gasoline engine. When the days began to get short, Mr. Helber and his helper, Richard Elgin, decided that a kerosene lantern was hardly the thing to use around a modern barn.

In a junk pile at a near-by garage, Mr. Helber found part of an engine and six broken headlights. For these he paid two dollars. He and Mr. Elgin installed the generator above the gasoline engine used to run the milking machine. Then a belt was connected with the machine and generator, the six headlights were equipped with bulbs and fastened around the barn, wires were attached and the trick was done.

HERDSIRE CHANGES OWNERS

Sir Pietertje Ormsby Korndyke, formerly herdsire for H. A. Brace & Sons of Spring Green, Wis., has been sold to Schultz & Fahning of St. Peter, Minn. He is a son of Sir Pietertje Ormsby Mercedes and his dam is a sister to King Pietertje Ormsby Piebe. Sir Pietertje Ormsby Korndyke is one of three bulls that sired two blue ribbon winners at the 1923 Wisconsin State Fair; one was Matador Segis Walker and the other was Dutchland Creamelle Denver Prince. One son of Sir Pietertje Ormsby Korndyke won a blue ribbon at the National Dairy Show in 1921 and 1922. One of his oldest daughters will soon finish her first year of cow testing association work with well over 400 lb. butterfat, this record made under ordinary farm conditions on twice a day milking.

MODERNIZING CHINESE AGRICULTURE

A modern system of agriculture for China is the aim of the Agricultural Department of Pekin University. The head of the Department is the American Professor, Walter E. Chamberlain, and he is endeavoring to build up the personnel in order to extend the scope of its experimental, educational and research work. The University now has a faculty of thirty-one Chinese and forty-one Americans and a 250-acre farm has been given to it for experimental purposes by a Chinese business man.

MORE EFFICIENCY

The St. Louis County Poor Farm near Duluth, Minn., owns a high class herd of purebred Holsteins. Chris Jensen, farm superintendent, says that when he took over the management of the farm there were thirty-four grade cows in the herd. He was allowed to sell these cows and buy some good Holsteins. Now they are getting more milk from fourteen cows than they did from the thirty-four head that were milked a few years ago.

NEW RECORD AFFECTS PEDIGREES

Maple Grove herd, Centerville, Pa., for a number of years has been headed by Model Daniel Glista, a son of Model King Segis Koningen and Glista Dinah. Glistah Dinah has an official record of 25.7 lb. butter, 556.4 lb. milk in a week. Number 9 of the current volume of "Reported Tests" announced that this cow has, as an eleven-year-old, produced 502.7 lb. milk, 31.26 lb. butter in seven days with an average test of 4.9% in the Cornell University herd. She is a daughter of Glista Coreva, 593.1 lb. milk, 34.08 lb. butter.

The herd at Maple Grove Stock Farm contains a number of daughters of Model Daniel Glista and also of Clever Model Glista, who was also by Model King Segis Koningen and was from Glista Coreva herself. Maple Grove herd is accredited and animals from this establishment have been used as foundation stock in a number of good producing and growing herds.

MILK FOR TRAVELERS

An attractive booklet entitled "Milk" was recently issued by the Southern Pacific Railroad Company. Its cover shows a picture of a dining car waiter serving to an expectant child a bottle of pure milk and the Company advertises that pure milk is served on its trains. The booklet, which is in the form of advertising for travelers, contains articles on milk by Prof. M. E. Jaffa, together with an introduction by Sam H. Greene Secretary-Manager of the California Dairy Council. Some of the pictures show laboratory testing experiments, bottling equipment and several of California's prize dairies.

COW WEIGHS A TON

Idaho Lily Butter Girl De Kol, owned in herd of the University of Idaho at Moscow, tipped the scales at 2,015 lb. a few days before she recently freshened. After she freshened she was placed on test and promises to make well over 1,000 lb. in the year. Her record made in her last lactation period was 20,995.7 lb. milk, 893.9 lb. butter. She is the dam of Idaho Segis Lily, 30,015.2 lb. milk, 1,191.39 lb. butter in a year as a senior four-year-old.

BUYS REAL SHOW BULL

Rolla Fisher of Addy, Washington recently purchased of the veteran Holstein breeder, John L. Smith, the bull Hazelwood Fayne Ormsby Posch, first prize junior yearling at the Pacific International Livestock Show. He is a son of Hazelwood Pauline Fayne, first prize four-year-old at the same show and one of the very best animals exhibited at that event.

Caller (to hostess' little boy)—Why are you looking so intently at the cat?

Boy—Mother said your new hat was enough to make a cat laugh and I'm waiting for it to start.

PUREBRED SIRES FOR 33 YEARS

The Santa Monica Dairy Company herd of Holsteins has won the silver cup for high herd average in the Los Angeles County Cow Testing Association for the past three years. The present indications are that the present years figures will surpass those of last year. During December this big herd of 236 females averaged 40.2 lb. of butterfat per cow with an average test of 3.9%. The high cow made 100.5 lb. of butterfat while one of the grade two-year-old heifers exceeded 60 lb.

Herman Michel, president of the Company, for the past thirty-three years has used purebred sires at the head of this herd. The first one, purchased in New York State, was shipped around Cape Horn on a sailing vessel and landed at San Pedro, California. Among recent herdsires introduced are two sons of Sir Aaggie De Kol Mead. The dam of one of these young bulls is Lady Beechwood Tritomia Ormsby with a record as a two-year-old of 22 lb. of butter in seven days and over 500 lb. of butter from 10,000 lb. of milk in seven months, milked three times daily. She is a daughter of Tritomia Pietertje Ormsby, grand champion Holstein bull at the 1921 National Dairy Show.

COUNTY FARM IS EDUCATIONAL

A fine herd of producing Holsteins is being built up at the County Farm, San Bernardino, Calif. There are now 26 cows in milk and 30 heifers that are expected to freshen during the year. The herd is able to supply the milk needed for the institution and is expected that next year there will be a surplus which will be sold.

The county farm contains 140 acres and on it is produced food, mainly vegetables for the inmates and the prison camp as well. Last summer 5,000 gallons of tomatoes were canned to use during the winter months.

FIRST HEIFER DOES WELL

Steilacoom Prilly Ormsby Blossom is the first daughter of Ormsby Blossom to freshen in the Western Washington State Hospital herd at Ft. Steilacoom, Washington. As a junior two-year-old she made a seven-day record of 460.6 lb. milk, 25.75 lb. butter. Her highest milk production was 72 lb. made on the seventh day of the test. She is now on semi-official test.

THE TREND OF THE TIMES

W. A. Steward and Fred A. Phillips, who have been prominent beef cattle owners of Baker, Oregon, have purchased forty-one head of Holstein cows around Parma, Indiana. The reason for the change is stated to be "The sureness of the cream check."

Mrs. Newlywed (tearfully, after complaints about sponge cake)—"It's that wretched chemist's fault—he must have given me the wrong kind of sponges!"

EVERBREEZE FARM

THE BEAUTIFUL HEAD OF Blanche Hengerveld Wayne

In three months she produced 5,761 lb. milk on two milkings daily and has given 76 lb. in 24 hours.

She is the daughter of my herd sire **KING HENGVELD HARTJE**. Another daughter of this sire made a world's record in the ten months division.

Wyoming County, Penna.

ILLINOIS TESTING

Illinois milk producers were led in February by a purebred Holstein owned by the Rock River Farms and enrolled in the Ogle County Association. This cow made 2,166 lb. milk, 93.1 lb. butterfat. A grade Holstein owned by O. E. Pritchard of the Kane County Association No. 2 is second with 1,856 lb. milk, 87.2 lb. fat. Purebred Holsteins occupy the next four places, then comes another grade, then two more purebreds with a grade in tenth place. Each cow made 74 or more pounds of fat.

The ten leading herds consist of black and white cattle. The twelve-cow grade dairy of George Mohrman of Whiteside County lead with an average of 1,305 lb. milk, 46.2 lb. fat. The purebred herds represented in the leading ten are those of A. D. Cornue of Hebron; Sinnissippi Farm of Oregon and A. W. Fischer of Bensonville. Four other herds in this list consist of both purebred and grade Holsteins.

Seventeen Associations reported. In six cases the leader was a purebred Holstein, in seven a grade Holstein while the others are one purebred Brown Swiss, a grade and a purebred Jersey and a grade Guernsey. Nine Associations are led by black and white herds while the leader in another case is a herd composed of purebred Holsteins and grade Short-horns.

The reliability of records based on monthly tests is brought out by E. A. Forman, tester for the Association operating in Lake County, Illinois. Mr. Forman says:

"The purebred Brown Swiss cow, Sterling Pride of Lake View, owned by Hawthorn Farm, last year made an official record of 22,597.2 lb. milk and 782.5 lb. fat during 365 days, making her world's champion of the breed. She was also run in the cow testing association and her record for 345 days, which brought her to the end of the association year (Dec. 1, 1922), was 21,668 lb. milk and 738 lb. butterfat, about 1,000 lb. milk and 45 lb. butterfat less than the official figures which difference is almost exactly accounted for by the difference of 20 days in the time since the cow testing association test period starting 4 days after freshening (Dec. 16) and running to the end of the association year, while the official test period was 365 days from the freshening date. As the two monthly tests, with only one exception, were always made at different times of the month this comparison is good proof of the reliability of both tests."

BANK BUYS SIRE FOR COMMUNITY

The Brown Bank of August, Kansas, purchased from George Appleman, of Mulvane, the first prize yearling bull at the Wichita Show. He will be used to improve the herds around Augusta. He is a son of King Genista Homestead and is from a junior three-year-old that made 29.64 lb. of butter in a week, State record at time of making. This heifer is now on year test.

STATE RECORD MADE IN DAIRY-MAN'S HERD

In the herd of Fred C. Lehman, Carlisle, Pennsylvania, a very fine record was recently made by Mabel Walker Sylvia Ormsby No. 724003. Calving at the age of 1 year, 11 months and 4 days, she produced 18.13 lb. butter, 529.4 lb. milk in a week. We believe this is the second highest milk record ever made in Pennsylvania by a yearling heifer. For thirty days she averaged over 75 lb. milk, producing 2,262.7 lb., becoming the Pennsylvania State champion in the junior two-year-old class for milk. She freshened December 28, 1923, and in March was still producing 65 lb. milk daily.

Mr. Lehman is very much gratified at the showing made by Mabel Walker Sylvia Ormsby as she is the first heifer to freshen, sired by his herd bull, Dulcevista Echo Sylvia Ormsby, who was by Sir Echo Sylvia Johanna, a half-brother to Carnation King Sylvia. Dulcevista Echo Sylvia Ormsby is from a 18.54 lb. junior two-year old daughter of King Pontiac Hengerveld Ormsby, he a son of King Korndyke Hengerveld Ormsby who was also the sire of Ormsby Korndyke Lad.

Mr. Lehman is of the opinion that Mabel would have made a much larger record had she had the opportunity some of the present world champions have had. Although she did not have any preliminary fitting she reached 79.2 lb. milk her best day. Mr. Lehman has to milk all his own cows and says he cannot afford to pay a large salary for an experienced feeder and acknowledges that he does not know anything about fattening a cow in order to make larger records on her.

THE BREEDER AND DAIRYMAN is of the opinion that the present record of Mabel Walker Sylvia Ormsby is really worth more than if she had been fattened for several months and made a record with an abnormal fat test that indicated at a glance that the record was, from a dairy standpoint, fictitious.

DAYETT SELLS TO SOUTHERN COLLEGE

Mr. J. Irvin Dayett, of Cooch's Bridge, Delaware, has sold virtually his entire herd of Holstein cattle to Winthrop College, at Rockhill, South Carolina. The herd consists of forty cows and heifers and a few calves.

The purchase was made by Professor Gordon Worley. Winthrop College is a school for girls with about 1,500 students. The college already owns 100 head of purebreds. The herd supplies milk, cream and butter for the college dining halls.

COW DROWNED IN DRINKING CUP

A. B. Thompson, proprietor of the Birdlodge Dairy Farm near Grafton, North Dakota, lost a valuable Holstein cow in a rather peculiar way. His barn has individual drinking cups and the cow got one of her horns fastened in such a way that her nose was held on the bottom of the cup and when she was found she was drowned in the drinking cup.

WYOWANNA HERD

LADY DE KOL MIDGET

freshening before she was two years old, she produced 7,897 lb. milk, 255.88 lb. butterfat in C. T. A. work and then, freshening again as a two-year-old, produced 8,932 lb. milk 253 lb. butterfat. Cows of this quality are bred to BLACRES BAPTISTE ORMSBY whose six nearest tested dams averaged 32.14 lb. butter, 615.7 lb. milk.

Accredited Herd—Anything you want.

RAISING DAIRY CALVES

This is the second article of a series of five on the care of dairy calves, prepared by the Pennsylvania State College. Article No. 1 appeared in our issue of March 22d. Others will follow from time to time. This article considers the early days of the calf's life.

Many a calf has stumbled through the first part of its life suffering from scours and digestive trouble, losing a lot of time and growth besides developing to an undesirable animal due to lack of proper care and feed.

1. A calf should be kept in clean, well-lighted quarters at all times.

2. It should have access to a small lot in which to exercise.

3. Be sure the calf gets the first milk that its mother gives. This is colostrum milk and has a laxative effect which the calf needs to give it the right start in life. If for any reason colostrum milk is not available, castor oil should be given in tablespoonful doses every two hours until the bowels move.

4. Teach the calf to drink from a bucket while it is very young. This will require more patience than skill. Pay special attention to keeping the buckets clean at all times.

5. In cold weather keep the calf in well-ventilated, comfortable stalls. In very hot weather it should have shelter from the hot sun and flies.

6. Preventing Horns from Growing.—When the calf is about ten days old, you can feel a button-like lump where each horn will later appear. This is the best time to prevent the growth of horns. With scissors, clip the hair from the button-like lump. Wrap the end of a stick of caustic potash or caustic soda in paper to protect your hands. Dip the end of the stick in water and hold it as you would a pencil. Rub the skin over the lump until it bleeds at the center. Rub vigorously, especially on the highest part of the lump and for a space around it about the size of a dime. Do not make

it wet enough so the caustic potash will run.

7. Milk should also be fed to calves warm and sweet. There is no way by which the digestive system of the young calf can be upset more easily than by feeding cold milk at one feeding and warm milk at another. The use of the finger to determine the temperature of the milk is a very poor method.

8. Feed a calf its mother's milk until it is three or four weeks old, then gradually change it to skim milk and feed skim milk until it is six months old or longer if skim milk is available.

9. Clean, fresh water and salt should be provided for.

10. Calves at all times should be fed grain.

When a calf is born, love it, as it grows, study it.

When it is feeding time, feed it.

When it is thirsty, by all means give it a drink.

When it is sick, comfort it.

When it is cold, shelter it.

And at all times let it know how well you understand it.

DAIRYMAN BUYS BULL CALF

C. Van Asten, of Rudolph, Wisconsin, whose fourteen high grade Holsteins are under test in the Rudolph Association averaged 10,440 lb. of milk, 445 lb. of butter last year, recently purchased a young bull calf, Sir Rachel Mercedes Jess Homestead.

The young bull is from Estella Gewina Mercedes 461 lb. of milk, 24.12 lb. butter in seven days, a daughter of a 25 lb. cow. The bull is sired by Sir Rachel Jess Homestead, a son of Jess Evergreen De Kol 2d, 721 lb. of milk and 31 lb. butter in seven days, 1,266 lb. of butter and 27,000 lb. of milk in a year.

FOR SALE:—A son of King Segis Pontiac Alcartra. Dam's average test 4.28%. Sire of the grand champion female over all breeds at Allentown Fair. Cheap. DAVIS BROS., Seven Valleys, Pa.

TWENTY-FIVE YEAR FEEDING EXPERIMENT

Agricultural research work on the feeding of farm animals which will take at least twenty-five years to complete is announced by Dr. E. B. Forbes, director of the Institute of Animal Nutrition at the Pennsylvania State College.

These experiments will be conducted with cattle, sheep and swine with the aid of the respiration calorimeter. This is an insulated room equipped with controlling apparatus which is used to account for the composition and temperature of all products, incoming and outgoing—liquids, solids and gases. The machine was designed by the late Dr. H. P. Armsby.

The plans of Director Forbes and the net energy conception of the late Dr. Armsby have just been unanimously approved by the American Society of Animal Production, and also by the subcommittee on animal nutrition of the national research council.

HOLSTEIN HERD CHANGES HANDS

Roth & Thuli of Portland recently purchased the dairy herd of John Bogart of Woodland, Washington, and leased the farm which consists of 75 acres of rich bottom land.

The herd consists of forty-seven cows and heifers and two well-bred bulls, eighteen of the cows are purebred Holsteins.

Mr. Roth, who was born near Portland, has spent his life time on a dairy farm near that City. Mr. Thuli was for a long time in the dairy business near Portland although he has been in eastern Oregon for a number of years.

HANSON BUYS HOLSTEIN HERD

The Morris herds are going to have competition in their own bailiwick. C. W. Hanson, one of the leading businessmen of Yolo County, has purchased forty head of well-bred Holsteins from R. L. Holmes of Modesto. One of these animals was purchased for \$2,100 at the sale held at Sacramento around fair time. Mr. Hanson says that his stock has been purchased purely from the milk producing standpoint.

His son, Donald, who is a student in the agricultural class of the Woodland High School, has twice represented his School at stock judging contests at the California State Fair.

PRODUCING STATE HERD

One of the best producing herds in the State of Iowa is owned by the State Hospital near Mt. Pleasant. There are at present about 200 head of Holstein cattle on the big farm. There are a number of grades but these are gradually being replaced by purebreds.

The records show that eighteen animals have each produced from 7,180 to 17,000 lb. of milk in a year while eight different animals have each exceeded 10,000 lb. A number of the purebreds have large records and several have made state records.

RAISED HIS OWN HERD

Near Sweetwater, Nebraska, lives a dairyman by the name of R. R. Vorhees, an enthusiastic Holstein breeder. Back in 1913 Mr. Vorhees purchased a purebred Holstein cow and calf. Although he has sold a number of animals he now has thirty head of purebred Holsteins. For the past four years he has made a practice of having eight cows in milk and he figures that the offspring and skim-milk produced pay for the feed of the cows and for the labor necessary to care for them, and that the cream produced is velvet. Mr. Vorhees does not attempt to make any big records with his cattle but gives them good care under ordinary farm conditions as they exist in Nebraska.

BUYS FROM BERYLWOOD

Berylwood Prince Aaggie Douwie and four purebred Holstein cows have been purchased by the Santa Barbara county hospital from the Berylwood Stock Farm, Hueneme, California.

The county dairy was started by the present superintendent, C. G. Vandever. This good Holstein establishment already leads Santa Barbara, San Luis Obispo and Ventura counties in the average production of butterfat, according to figures of the cow testing associations.

REAL COOPERATION

Coöperation of the right kind is given by George Lightbody, the owner of Ever Breeze Farm, Dalton, Pa. Besides sending along snapshots of some of his good producing cows, Mr. Lightbody sends along a check and instructs us to send the BREEDER AND DAIRYMAN to a couple of his friends that are also interested in purebred Holsteins. With such friends it is no wonder the BREEDER AND DAIRYMAN has been successful to an extent that exceeded the most sanguine expectations of those connected with its establishment.

PABST BULL TO GEORGIA

Dr. Milton Jannagin, of the Georgia State College of Agriculture, Athens, Ga., is feeling real good over the acquisition of Pabst King Segis Clover, purchased from the Pabst Holstein Farms. The sire of the calf is the noted show bull, King Segis Alcartra Prilly, and the dam is a daughter of Creator with a seven day record of 23.12 lb. butter and 469 lb. milk to her credit as a two-year-old, her dam is a daughter of King Pontiac Champion.

BIG PRICE AT PRIVATE SALE

Twenty-one head of Holstein cows were recently shipped from the herd of A. B. Spooner, Jr., to the Los Angeles County Farm. They range in age from two to seven years and brought \$6,500, an average price of \$309.50. They were purchased tuberculin tested.

The truth is mighty, in spite of the fact that might doesn't always make right.

Price \$50 Crated and Delivered at Your Station

Polled Bull Calf born March 1, 1924. About one-half white.

Sire:—King Pontiac Ormsby Pietje No 399407, whose dam was by Ormsby Komdyke Lad. His sire is the noted show bull and show sire, King Pontiac Alcartra Pietje.

Dam:—Inka Pontiac Segis Plum a 26-lb cow with 620 lb. milk. She was sired by a three-fourths brother to Keystone Beauty Plum Johanna and her dam is a granddaughter of Inka Princess Mutual De Kol, a 33-lb. cow with 715 lb. milk.

A. Conrad Slifer

R. D. 3, Union Co., Lewisburg, Pa. The December calf advertised is sold.

AMONG THE FIFTY HEAD at CHENANGO VALLEY STOCK FARM there are Daughters and Granddaughters of

DUTCHLAND CREAMELLE JOHANNA COUNT

whose three nearest dams have seven day records averaging 30.4 lb. butter, 692.7 lb. milk. His full sister produced 27,813.2 lb. milk, 1,284.27 lb. butter in a year as a three-year-old and 30 lb. butter, 604.5 lb. milk in seven days as a five-year-old.

Herd under State and Federal Supervision. Established 1901.

HOMER N. LATHROP

Chenango Co. Sherburne, N. Y.

**SALES FROM MAPLE GROVE
STOCK FARM**

Probably because the stock they offer in reply to inquiries is better than the advertisements show, **Maple Grove Stock Farm** of Centerville, Crawford Co., Pa., report a number of sales all to Pennsylvania parties.

To **Fred Tracy** of Centerville, went a nice young bull born April 6, 1923. The sire was **Maple Grove Ybma Glista** and the dam was **Maple Grove Maggie Spofford**, a daughter of **King Pontiac Jupiter**.

To **W. J. Broadwater**, Glencoe, went two nice heifers, one born November 17, 1922, and the other born January 20, 1923. Both of these were sired by **Maple Grove Ybma Glista**, who was from a 27-lb. cow and was sired by **Model Daniel Glista**, whose dam, **Glista Dinah**, was recently reported as making an official record of 31.26 lb. butter in seven days as an eleven-year-old, with an average test of 4.98%.

To **Walter Hanna**, Townville, went **Maple Grove Fairview King Jupiter**, a bull that had been used at **Maple Grove** which herd contains a fine bunch of calves sired by him. This bull was sired by **King Pontiac Jupiter** and his dam, **Maple Grove Lady Fairview Spofford**, has a seven-day official record of 461.5 lb. milk, 20.60 lb. butter.

Harry B. Marsh, Tryonville, took a very promising heifer born October 22, 1922. The dam, **Maple Grove Pontiac Celeste**, is a good A. R. O. daughter of **King Pontiac Jupiter** who was by **King of the Pontiacs** from one of the many good daughters of **Hengerveld De Kol**. The sire of this heifer was **Clever Model Glista**, whose dam **Glista Coreva**, has twice made over 31 lb. butter in seven days, has a record of 34 lb. and has two daughters that have each made over 30 lb. butter in a week.

Maple Grove herd is accredited and has a fine reputation for individuality and producing ability. Although handled from the standpoint of all the year round production, a number of good official records have been made and practically every animal they offer is backed by official dams in every line of the pedigree.

COLORADO HERDS COMBINED

George T. Sinton, of Colorado Springs, exhibited at the Huerfano County Show at La Veta late in December, taking practically all the ribbons in the Holstein division. Mr. Sinton, besides having his own herd, has leased the **Columbine** herd owned by **Spencer Penrose** since last October. It is announced that the combined herd will contest for show honors only within the state, and will be tested for records.

\$150 takes pair yearling heifers. Sire—**Clever Model Glista** whose dam is a 34 lb. cow, twice over 31 lb. with 83 lb. milk daily. Dams are producers and by son of 31 lb. cow. Herd Accredited. **Maple Grove Stock Farm**, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

Of two evils it is natural for a small boy to choose the one that makes the most noise.

**VARSITY BULL HEADS FOUR
HERDS**

Four Nebraska Holstein breeders, **Herman Engle**, **Fred Engle**, **Robert Engle**, and **Frank Baltz**, of Fremont, combined forces to purchase a high-class bull. He is **U. Neb. Klaver Gelt**. The bull was a year old the last of December and weighed 1,000 lb. at fourteen months. He is a stylish fellow of high class dairy conformation, is light in color and well marked, a very attractive animal.

His sire, **King Segis Pontiac Klaver**, was a consistent blue ribbon winner and a former grand champion of the Nebraska State fair.

The dam, **Varsity Derby Gelta**, is one of the best cows of the University herd. Two successive years she has produced over 1,000 lb. butter. As a four-year-old she made 25,010 lb. milk in 365 days and the next year made 24,227 lb. She has eight sisters whose year records average 888 lb. butter.

CHAMPION OF MICHIGAN

Community Inka Queen De Kol No. 35688, owned by **Dr. T. C. Tiedelbohl**, of Coloma, is the champion milk and butterfat cow of the Michigan Cow Testing Associations. In ten months she produced 25,141 lb. of milk, 864.8 lb. fat and during the year made 26,330 lb. of milk and 986.6 lb. of butterfat. During the ten months period, **Community Inka** consumed \$145.65 worth of feed and made a return of \$429.45 above feed cost. She is a large strong looking cow about two-thirds white and well marked. The butterfat average for the entire **Tiedelbohl** herd is 567.8 lb. and the average return above the cost of food for the ten months period is \$214.31.

GILTHERS EXPORT TO HAWAII

A recent shipment of purebred stock exported by **Giltner Brothers** of Eminence, Kentucky, to the Hawaiian Islands, included a Holstein bull sired by **King Pontiac Hengerveld Fayne**, formerly at the head of the **Cold Stream** herd. The dam of the young bull was **Star Belle De Kol Lyons**, 681.3 lb. milk, 33.12 lb. butter in seven days, Kentucky champion of the mature class.

LEADS ENTIRE STATE

The annual report of the Licking County, Ohio, Association shows that during the year ending February 28th, there were no less than thirty cows averaged 7,175 lb. milk, 338.5 lb. fat. A three-year-old Holstein owned by **B. G. Dawes**, Newark, attained the production of 27,584 lb. milk, 904.1 lb. fat, winning the state championship. The **Dawes** herd of fifteen registered Holsteins averaged 12,479 lb. milk.

Business Builders!

Breeder and Dairyman ads. are Business Builders because the readers of this journal are men who milk cows for a living, who buy bulls to head their herds, purebred and grades, and who, desiring to increase the producing capacity and improve the individuality of the animals they own, are in the market for purebred Holsteins.

To get in touch with this large and rapidly increasing market at a very low cost, just tell us your problems. We'll do the rest.

Please mention THE HOLSTEIN BREEDER AND DAIRYMAN when writing to our advertisers

HORNLESS HOLSTEINS

Keystone Plum Johanna

is an example of the individuality and producing ability combined in hornless Holsteins. She produced 1,052.9 lb. butter, 22,190.7 lb. milk in a year and in two consecutive years produced 1,938.06 lb. butter, 40,236.9 lb. milk. Her full sister, Keystone Beauty Plum Johanna, was the former world's champion four-year-old for yearly production. This cow, like other members of the family carried a superb udder. It was photographed eight months after freshening by a Pennsylvania State College Professor who lectured upon it as an example of intensive development and perfect shape.

Let us give you a price on a hornless bull.

R. C. MELVIN SALE

150 Registered Holsteins 150
April 15-16, 1924

Sale will be held at my Cold Spring Farm, which is two miles east of Baldwinsville and five miles west of Liverpool, on Syracuse-Baldwinsville State Road.

Herd under State and Federal Supervision—animals sold subject to 60-day retest. Sale held under cover, rain or shine, and must start promptly at 10 o'clock each morning.

Note carefully these splendid offerings

One 31.20-lb. cow with 606 lb. of milk; one 30.70 lb. four-year-old with 617 lb. of milk (made with second calf); one 28. lb. cow, and her daughter by an Ormsby bull; three others above 24 lb; several others from 19 lb. at two years old and up.

A herd of proven producers—the profitable kind at the pail—in excellent condition—fine individuals, and the 10,000 to 20,000-lb. a year milk kind—that turn your losses into profit.

The herd bull, from a 34-lb. cow that averaged 108 lb. of milk a day for 30 days also goes at your price.

SIX

YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIREs are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—*THE HAMPSHIRE ADVOCATE*—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs.

FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

The Holstein Breeder and Dairyman—Two years for One Dollar

GENTLEMEN:—I enclose One Dollar for a two years' subscription to "THE HOLSTEIN BREEDER AND DAIRYMAN."

W. M. HOLT'S DISPERSAL SALE

30
HEAD

MAY 8, AT HARRISON VALLEY, PA.

RAIN OR SHINE

30
HEAD

Having sold his farm, Mr. Holt is compelled to disperse this herd of splendid purebred Holsteins.

The offerings include one of the best bred bulls in the State of Pennsylvania, and ten of his daughters. The bull is COLANTHA SEGIS HOMESTEAD DE KOL, No. 365207, born January 25, 1921. His two nearest dams average 1,158 lb. butter, and nearly 28,000 lb. milk in one year. Both have averaged well over 100 lb. of milk a day for 30 days. He is by that great young sire, Sir Walker Segis Homestead, No. 220007, a son of Piebe Laura Ollie Homestead King, and that great cow Beauty Beets Walker Segis, butter 1,230.33 lb., milk 30,814 lb. in one year. Her dam made over 1,000 lb. butter in one year. The dam of Colantha Segis Homestead De Kol is Colantha Fobes Helen De Kol, No. 321748, butter 7 days, 31.48 lb., milk, 681.3 lb.; butter one year, 1,076.86 lb., milk, 25,107.5 lb. Her sire is Sir Hengerveld Oak De Kol, whose dam made over 36 lb. butter in 7 days, over 900 lb. in one year.

There are 26 females in the sale, sixteen of them sired by bulls whose dams made over 30 lb. butter in 7 days. There are only 4 cows over 6 years old. Some of the offerings are from A.R.O. dams; some are sisters of 30-lb. cows, and a number are daughters from sisters of 30-lb. cows. They are all splendid individuals. This is a breeder's herd as, with the exception of 3 head, one of which is the foundation cow, Mr. Holt has raised all of this herd.

This is a chance to buy some splendid stock at your own price. Every animal sold subject to a 60-day retest.

FARM MACHINERY WILL BE SOLD IN FORENOON

Auctioneer, HARRY SCOTT, Canaseraga, N. Y.

Sales Manager, L. S. DIBBLE, Westfield, Pa.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

No. 8

Should Consignors to a Sale Have a Right to Bid

Whether consignors to a public sale should or should not be allowed to bid on animals entered in that sale by other consignors is the question raised by Dr. L. M. Thompson in his open letter to the breeders reproduced on page 247 of the April 8th issue of the HOLSTEIN BREEDER AND DAIRYMAN. The Susquehanna County Holstein Breeders Association, at its auction sales, has endeavored to keep sale ethics to the highest possible plane. The consignors signed an agreement that they would not bid or have anyone bid for them and last year they signed an additional agreement that neither they, nor any of their representatives would bid on any of the animals in this sale.

In Susquehanna County most of the herds are owned by farmer-dairymen. In several instances a number of these men have purchased bulls in partnership. Occasionally, when one of the partners has offered a daughter of the herdsire at public auction, some of the other partners dislike to see a daughter of their herdsire sell for less than they consider she was worth and think they should have the opportunity to bid on her, regardless of possible criticism that they were interested in boosting the price of animals of this particular family.

Realizing that the success of an auction sale is largely a matter of public opinion, Dr. Thompson, who besides being president of the county association is also president of the Pennsylvania Federation of Holstein-Friesian Clubs, has appealed to the Holstein public to give their opinion on this matter.

When the HOLSTEIN BREEDER AND DAIRYMAN first appealed to the owners of Holsteins for patronage, it nailed its standard to the masthead by placing at the head of its editorial columns, a declaration embodying the principles for which it stood. This declaration has appeared in every issue since and part of it says, "We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally."

In furtherance of this policy and in an effort to ascertain the opinion of Holstein breeders in this matter, this paper published Dr. Thompson's letter and now publishes answers received from men prominent in the Holstein industry, men who we believe have at heart the welfare of the breed and the advancement of the breeders' interests. Your opinion is requested, by Dr. Thompson for the guidance of the Susquehanna

Breeders and by ourselves for the information of sale managers everywhere. Write just what you think about it.

THE ELMWOOD DAIRY FARM

FREDERICK, MD.,
April 12, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dr. Thompson certainly must be a man of high ideals as his ideas for conducting sales are a little above the average. While I do not agree on one particular point that is, I see no objection of consignors of cattle being prohibited from buying at the sale, I agree with him thoroughly that when a man consigns cattle to a sale he is duty bound in justice to himself as well as the public and he has no right to bid on his cattle nor has he the right to have them protected for his own interest. I have attended many sales and I feel the same as the Doctor, that a great many consignors have not acted in good faith.

I am however delighted to know that your organization is composed of men that are trying to set a higher mark for the buying public.

Very truly yours,

CHAS. WERTHEIMER.

April 11, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

In replying to Dr. Thompson's printed letter asking opinions as to "whether consignors of cattle to consignment sales should be privileged to bid on cattle in the same sale" I will briefly state my opinion to you.

Yes, if it is done honestly and in good faith, and the object being none other than the purchase of the animal or animals they desire. If this is strictly adhered to I can see no harm in such practice or dealing, and it might deprive some breeder of an opportunity to purchase an animal which would be of unusual value to him.

On the other hand, if any consignor or breeder is so disposed he can and usually will find ways and means to avoid and get around any rules and regulations that might be adopted by any sales committee. In other words, legislation nor adoption of rules and regulations will never make all men honest. I think the practice of one consignor bidding other consignors' cattle up, merely to create "their price" or fictitious values, is all wrong and should be dealt with in a manner to discourage it as much as possible.

Very truly,

C. W. NEWMAN.

BELL FARM

CORAOPOLIS, PA.,
April 10, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Relative to Dr. Thompson's letter on public auction sales. I do not think it is such a difficult question to answer for the whole thing in a nutshell is simply above board play. I detest by-bidding or any kind of crooked deals in a public sale. But were I consignor to a sale and another consignor had contributed an individual that I felt I would like to own, I can see nothing

whatsoever unethical in my sitting by and buying the animal for \$5.00 more than the other fellow bid. However, I would expect TO TAKE HER HOME AND PAY FOR HER. That is about all there is to public sales. I would not expect him to turn around and buy one from me simply because I bought his cow.

I think the Susquehanna Association is right in their idea of preventing by-bidding so far as they can, but I do not think they can take from anyone his right to buy at his own price anything offered to the public for their appraisal.

Very truly yours,

P. B. MISNER.

April 10, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

I think that a sale for which we recently prepared the catalogues, covers in a very nice way the questions raised by Dr. Thompson. This clause is as follows: "A bond of \$100.00 will be deposited—guaranteed by the animals' owners that there will be no by-bidding. Bond to be forfeited to anyone proving to satisfaction of Sale Committee that by-bidding has been practiced."

Personally I am inclined to think that Dr. Thompson's idea does not help to satisfy the minds of the people that by-bidding has not been tolerated. In many instances the buyers are interested in buying a Herdsire from the same sale; and as a matter of fact I make it a practice of bringing all the consignors to my sales together before a sale—urging them to help boost at the sale. I recall one sale where every consignor agreed to buy one animal—which they did, and I am still of the opinion that it benefitted the sale, and did not cast any suspicion upon the consignors. If we want to inspire the public's confidence I, personally, feel that we should go on back of the sale to the animals back of the sale—to the animals which are offered in the sale. We should make certain that there are no blemishes and other undesirable characteristics covered up, such as: a cow soon due to freshen but actually having only three-quarters, but sold as straight and right, hard milkers and kickers as well as fence jumpers. There are already too many of this class of cattle passing through the auction ring at the present time. The moral responsibility of consignors toward the buying public is what is going to inspire the confidence of the buying public.

A LEADING PEDIGREE COMPILER.

SPRINGFIELD STATE HOSPITAL,
SYKESVILLE, MARYLAND,
April 10, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

I have some very decided views on this question and will convey them to you in very few words.

I am sure were I attending a sale and buying for myself or others, I would take no exception whatever to one consignor bidding on the consignment of another. It has been done at Devon, Pa., last year at both the National Guernsey and Ayrshire sales. There is absolutely no reason whatever why a legitimate bidder should be prohibited from bidding just because he consigned an animal to the same sale.

There is such a thing as reason in all things, and this is one of the places where a person can use a little common sense for the general good for every one concerned in the sale. The only limit to bidding at a public sale which I can suggest is that a man should not bid on his own personal consignment, and even at that he would be the loser should the animal fall to his bid, with his ten per cent commission to pay, and his neighbors and employees teasing him about bringing back his own consignment.

Yours very truly,

FORREST G. FARR, Farm Superintendent.

EAST AURORA, N. Y., April 16, 1924.

Dr. L. M. Thompson,
Montrose, Pa.

Dear Sir:—

It was with great interest that I read your letter in the HOLSTEIN BREEDER AND DAIRYMAN dealing with the subject of what is known as the Susquehanna County Plan—a cattle-sales-

method which has excited considerable interest and comment and, in general, approval.

There are one or two points in that plan which I think, however, are open to criticism and discussion which I believe, if approached with an open mind, will benefit breeders, auctioneers and buyers alike.

Under the Susquehanna plan each consignor signs an agreement that he will not bid on his own cattle nor have a representative bid for him. This is an advance on the custom of allowing the consignor at least one bid. And in so far as it precludes the least shadow of suspicion of by-bidding—which is the killer of many sales—it is all right.

I do not think, however, that a consignor should be barred from bidding for animals in other herds or consignments. Such a plan prevents him from coming into legitimate possession of an animal or animals that perhaps may be necessary to him to complete his herd, and also automatically lessens the list of prospective buyers and thus handicaps the success of the sale.

Seeing that each consignor has already agreed not to have a representative bidding for him I fail to see where his action can be construed into by-bidding, either for himself or another consignor.

A successful cattle sale depends upon confidence largely. To unduly hedge a man—a prospective buyer—around with regulations shows a lack of confidence which is destructive to that healthy competition and spirited bidding which is the life of the sale and which the pedigree man and auctioneer strive to foster.

I am enthusiastic about the Holstein industry and for the sake of better cattle and better auction sales of cattle this letter has been written.

Yours for better sales and more of them,

GLENN R. MEAD.

What Is Ice Cream?

THE Joint Committee on Definitions and Standards for Food Products has proposed a definition and standard for ice cream, with the recommendation that this definition be published for the purpose of discussion and criticism. We don't claim to be experts on "defining" ice cream. We form one of that great crowd termed "the ultimate consumer." Yet in forming this definition the Committee seems to have overlooked evaporated milk as one of the possible constituents unless they intend the term condensed to cover both what is commonly called condensed milk and evaporated milk, the first of which is sweetened while the second is not.

The Committee's definition is as follows:—ICE CREAM, PLAIN ICE CREAM, is the clean, sound, frozen product made from a combination of one or more of the following, viz, cream, milk, condensed milk, sweetened condensed milk, dried milk, skimmed milk, condensed skimmed milk, sweetened condensed skimmed milk, dried skimmed milk, butter, water; with sugar (sucrose), with flavoring, and with or without added stabilizer consisting of wholesome, edible material—such that it contains not less than twelve per cent (12%) of milk fat, not less than twenty per cent (20%) of total milk solids, and not more than one-half of one per cent (0.5%) of stabilizer. It weighs not less than four and three-quarter avoirdupois pounds (4.75 lbs.) per gallon.

When sending along your renewal to the HOLSTEIN BREEDER AND DAIRYMAN why not send along an additional dollar and the name and address of some good dairymen friend? He is bound to appreciate both the act and the paper.

Carroll Farms, a Growing Maryland Holstein Establishment

IN THE story of the Springfield State Hospital herd appearing in the April 8th issue, it was mentioned that one of the men responsible for the establishment of the Holstein herd was Senator Wade H. D. Warfield of Sykesville, Maryland. Senator Warfield with Senator Wolf and State Treasurer, John M. Dennis, are the three trustees who make a specialty of looking after the welfare of the herd and the development of the farm. Senator Warfield, who has just reached his sixtieth birthday was born on the farm where he now resides. He is building up a good herd of his own. His cattle have passed at least two clean tests and we think three.

The herd is operated from the standpoint of commercial production. Some good official records have recently been completed. Houwtje Vale Posch made 27.32 lb. butter, 577.4 lb. milk in a week and her daughter Houwtje Segis Vale produced 600.4 lb. milk, 25.62 lb. butter. More records will be made as a young man who has been studying at Cornell is coming to have charge of the herd which will be milked three times daily and it is planned to put the animals on semi-official test as they freshen.

Carroll Farms, as the establishment is named, is about one mile from town. At present it is reached by a dirt road which is in bad condition, but there is a prospect that an improved road will soon go by the farm which will be a great convenience to visitors and the Warfield family.

The present herd contains a bunch of milky cows, remarkably straight on the back and square of rump. It is possible that Mr. Warfield has been influenced to keep only this class of cattle by the fact that he was formerly a breeder of milking Shorthorns of the Bates strain. He has gradually turned to purebred Holsteins because of their larger production.

The change to strict dairying necessitated a change in the buildings. A bank barn has been altered and one

wall torn away to give lots of light. Although the building is ceiled there is nothing fancy about it except the ornamental stone fence around the barn yard. Mr. Warfield says that he is gradually fixing over the buildings but wants the herd to pay for the improvements.

The head of the herd is Dutchland Creamelle King Change, a light colored bull, little more than a year old. He traces to Creamelle, Changeling and a number of other great cows formerly in the Dutchland herd. His assistant is a bull of King Quality breeding.

Shropshire sheep, several varieties of purebred poultry

Snapshot taken in the barnyard at Carroll Farms. Senator Wade H. D. Warfield, owner, Sykesville, Maryland.

and Berkshire swine are kept at Carroll Farms. The hogs are headed by a handsome boar purchased from the well-known New York State breeding firm, Harpenning Bros.

Senator Warfield is a bright, keen energetic man, of medium weight—a real business man. He owns a feed and grist mill, hardware store, and runs a lumber business. He holds a position in the bank and is an important figure in the community. He is keenly interested in building up a herd that shall be one of the leading Holstein establishments of Maryland.

A Home-Raised Herd of Dairy Producers

MAPLE PARK HERD owned by J. W. Lawton & Sons of Viola, Wisconsin, led the Richland County Cow Testing Association for the month of February with the splendid average of 1,475.2 lb. milk, 52.1 lb. fat for nineteen head. Every member of the milking dairy was bred and raised at this establishment.

The cows in milk included two twelve-year-olds, an eleven-year-old, a ten-year-old, a number of two-year-olds and one heifer that freshened as a yearling. The second highest herd also consisted of Holsteins which are descendants of animals purchased from the Lawton herd.

One member of Maple Park herd, Lady Jewel De Kol Colantha, had a previous record of 870.3 lb. milk in a week made in official test, this is, we believe, the

Wisconsin State record. She freshened again late last fall and in December, she made 95 lb. fat and gave over 105 lb. milk in a day on three milkings. In January she was milked only twice a day and she gave 81 lb. Her udder is so large and capacious that she can give 40 lb. to a milking without any discomfort.

Another member of this herd, Lady Skylark Ormsby Johanna, freshened November 2d. Placed in official test as an eleven-year-old she produced 100 lb. milk in a day; 675 lb. milk and over 24 lb. butter in seven days. During the month of February she gave 1,792 lb. milk, 57.3 lb. fat.

To show the producing capacity of this high-class herd we are printing the February production, giving the amount of milk and fat produced, the age of the animal and the date when fresh. Where the dates are

not given the cows freshened since the first of January.

The Lawtons are doing real extension work in their community for they can show by their own herd the capacity and profit earning ability of purebred Holsteins. They recently started a Brown Swiss breeder, C. E. G. Appleman of La Farge, Wisconsin, in the

LADY JEWEL DE KOL COLANTHA

In January of this year she produced 81 lb. milk a day at two milkings. Bred, developed and owned in the Lawton Herd.

Holstein business by selling him a heifer and an unrelated bull.

The Lawtons recently sold their junior herdsire, Sir Pietertje Ormsby Korndyke 4th, to J. J. Janeczek of Bloom, Wisconsin. This good bull was a son of Sir Pietertje Ormsby Korndyke and therefore, is a grand-

son of the famous old sire, Sir Pietertje Ormsby Mercedes.

The Lawton herd was established in 1906 but purebred bulls have been used in this herd for more than thirty years. They have tested a few of their animals. In October, 1922, they had nine daughters of a former herdsire, Schoharie Sir Colantha De Kol, in test and the nine made a remarkable showing. One produced 32.56 lb. butter in seven days, one exceeded 29 lb., another made over 26 lb. and the others ranged from 21 lb. to 24.81 lb. The lowest milker averaged over 70 lb. milk a day, one produced 870.3 lb. in a week while three of the others exceeded 600 lb. in seven days.

Accredited For Five Years

ONE of the best Holstein herds in western Pennsylvania is on the State Hospital Farms operated in connection with the Warren State Hospital at Warren, Pa. The herd, which contains sixty-two grade and one hundred and two purebred animals has been accredited for five years. Although a number of good records, both long time and official, have been made at this establishment, the production of a maximum supply of milk is the chief object in the development of this herd. As the milk is consumed by the patients, their attendants and the other employees of the Hospital, a uniform supply, both in quality and amount, is required and the herd is managed with this point in view.

There are three herd bulls in use at the hospital farms. The senior sire is King Korndyke Sadie Vale 20th, No. 163935. He is a son of King Korndyke Sadie Vale and of Bloomingdale Hengerveld Elzevere, a 26.19 lb. daughter of Hengerveld De Kol. King Korndyke Sadie Vale 20th has a number of daughters in the herd, several of which have made very good records. Countess Korndyke Warren, as a senior two-year-old, produced 572.6 lb. milk, 25.17 lb. butter in seven days and in a year made a record of 17,655 lb. milk, 781.56 lb. butter. Another daughter, Korndyke Lady Warren, as a junior four-year-old, produced 21,711.8 lb. milk, 952.71 lb. butter in a year. A number

of their sisters are soon due to freshen and will be given an opportunity to make records.

Rag Apple Pietertje King, No. 213919, is the junior herdsire. He is a son of Rag Apple Korndyke 8th from a cow that produced 25.51 lb. butter, 576.3 lb.

CONEWANGO RAG APPLE RUBY

18,378.8 lb. milk, 721.86 lb. butter in a year as a senior three-year-old. She is a daughter of Rag Apple Pietertje King.

milk in seven days. He, too, has a number of good record daughters, one of the best being Conewango Rag Apple Laura. Her year record made as a junior two-year-old was 19,617.5 lb. milk, 760.23 lb. butter. In February of this year she completed her second year record, this time as a senior three-year-old, with a total production of 20,144.6 lb. milk, 828.02 lb. butter. A son of this great young cow heads the herd owned by

the State Hospital at Allentown, Pa. Two other daughters of Rag Apple Pietertje King have year records that exceed 18,300 lb.; one made as a junior three-year-old and the other as a senior three-year-old. The latter heifer, Conewango Rag Apple Ruby, produced 721.86 lb. butter in a year and her picture shows that her individuality is on a par with her powers of production.

Tirania Korndyke 3d, one of the older cows in the herd, has made two large records. At the age of seven

TIRANIA KORNDYKE 3D

23,490 lb. milk, 1,096.4 lb. butter in a year. One of the oldest cows in the Warren State hospital herd.

years her record shows her year production of 21,037.1 lb. milk, 935.2 lb. butter. Then, as a nine-year-old, she produced 23,490 lb. milk, 1,094.6 lb. butter in 365 days; thus her two records average 22,635 lb. milk, 1,015.8 lb. butter.

Adalma Pride De Kol, a daughter of Bonnymeads Pietertje De Kol, as a six-year-old made a year record of 21,633.9 lb. milk, 877.43 lb. butter. She is a cow of great capacity and her picture, taken when she was not milking very heavily, does not do her justice.

The cows on test receive no extra care and attention

than do the sixty other animals in milk except that they, as well as a number of those producing the heaviest, are milked three times a day.

They have a young sire at the Hospital farms. This is A. K. S. King Pontiac, purchased from the Avondale Farms in the summer of 1923. His dam is a daughter of Champion Echo Sylvia Pontiac. The sire of this young bull is Alcartra King Sylvia, a son of Carnation King Sylvia and the famous Tilly Alcartra, 40.78 lb. butter in seven days, 1,323.82 lb. butter, 33,425.3 lb. milk in a year. This was the world's milk record at time of making as was her previous year record of 30,451.4 lb. milk.

The Holstein herd at the Warren State Hospital Farms is only part of the farm activities of that great

ADALMA PRIDE DE KOL

21,633.9 lb. milk, 877.43 lb. butter in a year.

institution. A large herd of purebred hogs is kept, headed by C. C. Bigger Perfection, junior champion O. I. C. Boar at the National Swine Show. Much of the food used at the institution is raised on the farm and most of the work is done by patients under the supervision of the attendants, headed by the farm manager, Mr. K. N. White.

The Harrington Sisters' Herd

ONE of the best Holstein dairy herds of Chenango County is that owned by the Harrington Sisters, a short distance from Sherburne, New York. Many good animals that have made large records in other hands came from this establishment.

Asa Harrington, the father of the present owners, was born near Smyrna, New York, in 1809. His ancestors settled in Rhode Island early in the eighteenth century. In course of time he married and he and his wife settled on this farm in 1837, so it has been in the family for nearly ninety years. Their union was blessed with eleven children, nine daughters and three sons. Mr. Harrington died in 1885 and his wife in 1900. Two of the daughters, Lucy Wilcox Harrington and Jennie R. Harrington are actively managing the fine farm and the herd of purebred Holsteins thereon.

Lucy Wilcox Harrington, the elder of the two sisters, was a practical nurse for a number of years. Her health became impaired, largely the result of overwork. Her partner, Jennie R. Harrington, is the youngest of the family. She compiles the pedigrees of the animals in their herd and can give you lots of information about

the present and former members, for the books have been kept very carefully.

It was in 1903 that the Harrington Sisters started in the purebred business. Their foundation stock was secured from Brothertown Stock Farm, Utica, New York, then owned by the late Quentin McAdam.

Many of the best herds in Chenango County have housed Holsteins that originated at the Harrington establishment. The famous De Kol Queen La Polka 2d, former world's champion for thirty day butter production and the greatest milk producer of her day, was raised here and sold as a three-year-old heifer to Clayton Sisson of the same town, who developed her and with her made a number of remarkable milk and butter records. Another cow of this herd noted for individuality as well as production was Inka Clothilde 2d's Johanna, who made 25.8 lb. butter in seven days as a senior two-year-old, and then as a five-year-old raised her record to 28.84 lb. A number of good records have been made in the herd and animals that went from here have always made good in other hands.

For many years, Marion T. Bryant, a brother-in-law

of the Harrington sisters, has handled the cattle and worked the farm. The stock show that he is a good caretaker and the condition of the barn and fields indicate an excellent farmer. He has tested a number of animals but declining years made it necessary for him to discontinue the hard work connected with the making of Advanced Registry records.

The farm house, which is built of brick, is pleasantly located at the top of a hill and is shaded by beautiful maples. The barns are kept well painted, well lighted with gas, and contains individual pens for the calves and herd bulls. Drinking cups have been installed and spring water runs to all of the buildings. The main barn is one hundred and eight by fifty feet and has plenty of room to house the herd and contain the roughage necessary for its sustenance. Plenty of corn is grown as well as considerable alfalfa. The farm contains 165 acres of which more than 100 are tillable. A large wood lot furnishes an abundance of fuel for home use as well as timber for necessary repairs. The herd is handled as a business proposition, if a cow does not pay a profit at the pail she goes to the butcher.

You would expect to find a uniform lot of cattle in a herd established as long as this and when you see the herd owned by the Harrington Sisters you will not be disappointed. The barn is full of big, deep, straight backed cows with broad rumps and square udders and the young cattle show that they are well-bred as well as well fed.

The milk is hauled with a motor truck. A manure spreader takes the manure direct from the stables to the fields.

The Harrington Sisters own an interest in King Pontiac Hildale, the well-known son of King of the Pontiacs from Hildale Lorie Korndyke, a 29.93 and 625.6 lb. four-year-old. This bull has daughters and sons in many Chenango County herds.

Another sire in this herd that is bound to attract attention is Buello King Pontiac, a magnificent fellow weighing 2,500 lb. in ordinary flesh. Despite his size and age he is very gentle and they lead him with a rope. He is by King of the Pontiacs from Burke Pauline De Kol Bess, 543.6 lb. milk, 29.23 lb. butter in seven days; 2,234.5 lb. milk, 121.41 lb. butter in thirty days. Another sire in service is King Burke Vale Lipkje, a son of Westside King Vale from Aaggie De Kol Burke Lipkje. He is a handsome fellow and is siring a nice bunch of calves.

The coming junior sire is King Sylva Ormsby Lad, a son of Ormsby Korndyke Lad, Jr., from Sylva Beauty Hildale a 21 lb. two-year-old daughter of King Pontiac Hildale. He shows promise of developing into a fine individual.

The Harrington Sisters are members of the Chenango County Farm Bureau and are noted for their public and community spirit. The herd is under State and Federal Supervision and the appearance of the young stock indicates that for years to come it will continue to be one of the leading establishments of Chenango County.

If your neighbor is not a subscriber to the HOLSTEIN BREEDER AND DAIRYMAN you will confer a favor on him, and also on us, if you get him to subscribe.

Retrenchment Is the Demand of the Hour

An Editorial written by a New York State Breeder.

IN this juncture of the affairs of the Holstein-Friesian Association, confronted as we are with the most desperate economical condition that our agriculturists throughout the United States have ever been up against since 1837, which has not only depressed farm and live stock values at least fifty percent, when through our great northwest probably one third of the farms are being sold on mortgage foreclosure, and many of the farmers are being forced into bankruptcy, when cattle values in all kinds of stock have been cut in two, when our dairymen who own pure bred and registered cattle have to veal their bull calves in order to get rid of them, it would seem as though the officers and directors of the Holstein-Friesian Association would see the handwriting on the wall and make a supreme and practical effort at retrenchment, conserve the funds of the Association, reduce the transfer fee back to fifty cents, help out the plain dirt farmer, who is really the backbone of the Association, cut out this so-called extension work, which is of no value whatsoever to the average dairyman nor to any one else, except those who are in the game from a commercial standpoint, or from the viewpoint of a faddist, or because of some man's hobby.

Thousands of dollars have been spent in the last three years in this extension work and it is barren of results. If the few rich men in each state who own registered stock, and there are not over a dozen of them in any one state, want to have an annual public sale of their own good cattle each year, let them have it, but at their own expense, in their own way, in their own name, not at the expense of the hardworking farmer by charging him exorbitant fees for registration or transfer of his cattle and exploiting such sales in the name of the Association, even to the extent of depleting the reserve fund.

We are at a crisis in the affairs of the Association. It needs broad statesmanship in handling the affairs of the nation and just as good business judgment in dealing with the affairs of the Association. We are glad to note that forty-six of the members of the Association have had sense and courage enough to grasp the situation and take the initial steps to cope with the questions involved.

Springfield Animals Lead Maryland

IN OUR issue of April 8th, we called attention to the individuality and capacity of Jessie Fobes Violet Mutual 2d, one of the high class cows in the herd owned by the Springfield Hospital, Sykesville, Md. A day or so after the issue was in the mail, probably before Superintendent Farr received his copy, he sent us word that Jessie Fobes Violet Mutual 2d was in official test, had produced 625.2 lb. milk, 30.60 lb. butter in a week and made the highest seven-day record reported in Maryland, for more than a year. She is gaining steadily and will be kept on test for thirty days under the supervision of Prof. S. H. Harvey.

Jessie now has two daughters in the herd, the younger one, dropped about a week before she started

on her record was sired by SX Cornucopia Vale Korndyke, the handsome bull that won third prize in the three-year-old class at the National Dairy Show last October.

Jessie's yearling daughter is Spring Sykes Fobes Violet, one of the best heifer calves seen on the circuit last

JESSIE FOBES VIOLET MUTUAL 2d
625.2 lb. milk, 30.60 lb. butter in seven days. Now on thirty day test in the herd owned by Springfield State Hospital, Sykesville, Maryland.

year. She was second at Timonium, second at Syracuse, N. Y., and third in a class of forty-four at the great Eastern States Exhibition at Springfield, Mass.

Last year Jessie Fobes Violet Mutual 2d produced 18,022.6 lb. milk, 771.33 lb. butter in nine months. She

was dried off early as she was due to freshen again within the year. Mr. Farr says:—"Some delegates to the National Sale to be held this year at Richmond, Virginia, made the request that should she be consigned they would bid nine hundred dollars to start her. She cost less than one-third of this bonafide offer and has had two heifer calves within the year which are easily worth as much as she is. She has yielded more milk value at Baltimore price above the cost of feed and care in one year than the original purchase price. It is the purchase and proper handling of such livestock as Jessie that will yield a double yearly return which will solve the farmer's present difficulties and do him more good in these times of unrest and uncertain prices than any other known agricultural enterprise."

Sebewaing Flossie Elzevere, No. 826353, born August, 8, 1920, with a production of 538.9 lb. milk, 21.329 lb. butterfat, the equivalent of 26.66 lb. butter the first week in April, becomes the highest producing three-year-old ever tested in Maryland. Entered last year in the Frederick County Cow Testing Association, she returned \$50.00 more than her original purchase price above the cost of feed and care. Her big straight bull calf, sired by SX Cornucopia Vale Korndyke, has gone to improve the purebred Holstein herd of Philip B. Cissel & Brother, Ellicott City, Maryland.

He was the forty-fifth bull calf sold in the past eighteen months from the Hospital herd and the good these calves will do the dairy farmers in Maryland can hardly be computed in dollars and cents.

Crestmont Duchess Ormsby

UNDER date of April 4th, Superintendent Gardner announced that Crestmont Duchess Ormsby, No. 463132 had closed a long time test in the herd of Ralph King of Mentor, Ohio, and was credited with 27,138 lb. milk containing 1,017.42 lb. butterfat in 365 days. She freshened preliminary to this test at the age of five years, five months and one day, and her milk averaged 3.75 per cent fat. Her sire is King Pontiac Alcartra Wayne, No. 124420, and her dam is Fairmont Duchess Ormsby, No. 177868, a daughter of Pledge Spofford Calamity Paul.

Crestmont Duchess Ormsby is a native of Pennsylvania, being bred and raised at Crestmont Farms, Canton, Pa., of which Harry C. Gates is proprietor. She freshened for the first time when two years, one month and twenty-nine days old and at that time made official records of 417.8 lb. milk, 18.16 lb. butter and in twenty-one days produced 1,169.3 lb. milk, 52.48 lb. butter. Her second freshening was at the age of three years, three months and seventeen days when she made a seven day record of 22.85 lb. butter, 562.3 lb. milk, thus averaging over 80 lb. milk a day for the week. She became the Pennsylvania state champion of her class by producing in 305 days, 18,243.1 lb. milk, 806.65 lb. butter, carrying calf 200 days of the time she was on test. It was announced that this was a world's record in the class and we believe it really was but owing to complete details of the record made by a western heifer reaching the superintendent's office before the complete

report of Crestmont Duchess Ormsby's performances, the western heifer received the credit, part of which should have been given to our heroine. On these records she won third prize from the association for milk production and also third prize for fat production. In the early part of the lactation period recently closed, she made an official seven day record of 398.4 lb. milk, 29.52 lb. butter.

She was in strictly official test for ten days of the year and the Superintendent reports that she had twelve

CRESTMONT DUCHESS ORMSBY
27,138 lb. milk, 1,271.77 lb. butter in 365 days.
Owned by Ralph King, Mentor, Ohio.

other test periods, one of which was a retest and that nine different supervisors were employed. She is the seventy-eighth cow to produce over 1,000 lb. fat in 365 days and takes sixty-third place in the order of size of production.

Crestmont Duchess Ormsby is one of a pair of splen-

did full sisters. She was born October 28, 1917, and her full sister, Crestmont Ormsby Alcartra was born October 9, 1918, less than a year later. As a junior two-year-old, Crestmont Ormsby Alcartra produced 15,883.1 lb. milk, 722.98 lb. butter in 365 days, carrying calf 180 days of the time she was on test. By this record she became the junior two-year-old champion of Pennsylvania for the ten months' division and she took sixth association prize for fat production and fifteenth prize for her milk record. Then, as a junior three-year-old, she is credited with 21,552 lb. milk, 1,030.4 lb. butter in 330 days, the seventh highest record reported that year. In the early part of this lactation period she made in seven day test 594.4 lb. milk, 29.14 lb. butter, the second highest butter record ever reported at that time for a Pennsylvania junior three-year-old.

This pair of full sisters were raised in a small herd, for the Crestmont dairy never, at any time, consisted of more than twenty milking cows and generally consisted of about one dozen. For their breeding, development and records much of the credit must go to that good breeder H. C. Gates. It must not be overlooked that

KING PONTIAC ALCARTRA WAYNE
Sire of Crestmont Duchess Ormsby. Photo taken at ten years of age.

their sire, King Pontiac Alcartra Wayne, had very little opportunity for he spent his life in this small herd and he has less than two score A. R. O. daughters. Besides the pair of full sisters, he is the sire of Pauline Mabel Maid, a cow with a number of large milk and butter records. Calving as a junior two-year-old, she made 22.25 lb. butter, 530.5 lb. milk in seven days; calving again in less than a year as a senior two-year-old, she made 28.15 lb. butter, 627.8 lb. milk in seven days. Then as a senior three-year-old, she is credited with 32.76 lb. butter, 753.7 lb. milk in seven days, 132.18 lb. butter and 3,106.7 lb. milk in thirty days. She made seven state records for milk and butter production.

King Pontiac Alcartra Wayne was a son of King Segis Pontiac Alcartra and the 32 lb. cow, Aaggie Grace Beryl Wayne. This bull lived to be nearly eleven years old and the quality of his daughters show that, had he had the opportunity many other sires have had, he would have ranked well toward the top of the standard sire list. The Crestmont herd contained a number of his daughters so that he had very little service the last years of his life. Just before the Crestmont herd was dispersed this bull was purchased by Harry A. Rice, of Wheelersville, Pa. Mr. Rice, saw the daughters of this bull and immediately concluded that he would be a valuable animal to place at the head of the herd he is establishing. But malign fate again intervened, and the bull died without reaching the Rice farm although we understand a number of cows from this herd were bred to him.

Which Really Represents Tennessee?

THE limit of inconsistency has been reached by the two United States senators from Tennessee, says the *Pacific Dairy Review*. Senator Shields is responsible for the introduction to Congress of a bill which provides that the Government shall establish a dairy and livestock experiment station in the State of Tennessee for the purpose of promoting the dairy and livestock business in the South. For this purpose an appropriation of \$250,000 is asked for.

The other Tennessee representative in the Senate is Senator McKeller, who is known as the oleomargarine champion. Senator McKeller is responsible for the introduction of a bill to reduce the tax on oleomargarine colored in the resemblance of butter from 10 cents to one cent a pound.

The *Review* goes on to say that an interesting scrap should develop between the two senators from Tennessee. It also suggests that before introducing these bills the senators should have ascertained just what their constituents wanted, butter or oleo. It is impossible for the two to be friends.

Junior Department

Form Club in Iowa

The Hamilton County Holstein Heifer Calf Club was formed at Webster City, Iowa, March 22d, when fifteen fathers and sons met with F. E. Ferguson, State Dairy Specialist.

On his return visit, which will be in about a month, Mr. Ferguson will score each calf for size, age and general condition. Next fall when the animals are exhibited at the county fair, they will again be scored and prizes will be given for the greatest amount of improvement. Prizes for this will be donated by the Hamilton Holstein Club members and the Hamilton county fair. In addition the Iowa State Association will give prizes for the best developed animals. Prize winners will be exhibited at the state fair and will also go to the Waterloo Dairy Cattle Congress.

There are NO substitutes for butter. The public should be safeguarded and the dairy industry protected from imitation dairy products.

Agricultural Conditions as Seen by Bank Presidents

FARM Loan Commissioner Cooper, of the Federal Farm Loan Board has summarized data supplied by the twelve Federal Land Bank presidents at their recent winter conference. The information furnished by these officials give reason for the belief that the improvement in agricultural conditions during the past year would continue during 1924.

Conditions were described as most satisfactory in almost all sections. There are sections which, on account of partial crop failure, the low price of the principal crop or scarcity of labor are not prosperous but these are only a fractional part of the total farm area. The wheat farmer, the western fruit grower, and the cattle raiser have been hard hit during the past twelve months. Diversified farming has proven more profitable than has specializing in one crop. Both diversification and cooperative marketing are recommended. Perhaps farmers in the various sections may not agree with the views of these financial authorities but we are printing these reports for information and they will undoubtedly be quoted many times by legislators at Washington during the present session of Congress.

1—New England States, New York and New Jersey—The improvement has been general but high wages in industries have resulted in a farm labor shortage. Conditions in the fruit and potato growing areas are not satisfactory. The tobacco crop was good and market gardening was better than normal.

2—Maryland, Delaware, Virginia, West Virginia and Pennsylvania—General conditions are favorable. Prices for farm products have advanced and farmers are meeting their obligations promptly.

3—North Carolina, South Carolina, Georgia and Florida—General agricultural conditions are better than for the past three years.

4—Ohio, Indiana, Kentucky and Tennessee—Agricultural conditions have materially improved, though the cost of farm labor in industrial sections still presents a serious problem. Crops throughout the district have been fairly good although there was some boll weevil damage in Tennessee. Crop diversification is noticeable.

5—Louisiana, Mississippi and Alabama—Conditions are better than a year ago, although cotton has suffered severely from boll weevil and unfavorable weather. The sugar and rice situation is more favorable. Labor is plentiful.

6—Illinois, Missouri and Arkansas—General conditions slightly improved over a year ago. Prices and crop conditions, however, have combined to hinder improvement. The large wheat crop in Missouri likewise brought only fair returns. Arkansas produced only about 50 per cent of its normal cotton crop because of weather conditions and boll weevil damage.

7—Michigan, Minnesota, North Dakota and Wisconsin—Agricultural and economic conditions generally are satisfactory except in the northwest sections of Minnesota and in North Dakota, where wheat was seriously damaged by black rust. Crops, such as flax, sweet clover, hay and corn, are excellent and farmers

with cattle, dairy cows, sheep and poultry are prosperous.

8—Iowa, Nebraska, South Dakota and Wyoming—Conditions are generally satisfactory except in the northern portion of South Dakota, where a poor quality of wheat marked this year's crop.

9—Colorado, Kansas, New Mexico and Oklahoma—Agricultural conditions have materially improved over last year. The cotton section of New Mexico is prosperous.

10—Texas—The general situation is better than a year ago and cotton sections of the state are prosperous in spite of a decreased yield. A low yield of wheat, combined with low prices, disappointed the wheat growing area. Low prices have depressed cattle raising.

11—Arizona, California, Nevada and Utah—Conditions as a whole are not as good as last year. The fruit men of California are making no profit and high freight rates are a heavy tax on agriculture.

12—Idaho, Montana, Oregon and Washington—Agricultural conditions are better than last year. The wheat harvest was the largest in the history of the Northwest and the production of livestock and fruit has set a record.

HILLSIDE RHODODENDRON
35.14 lb. butter in seven days, 147.95 lb. butter in thirty days, Pennsylvania state record at time of making. Dam of the young bull, Hillside Ormsby Lad Pietje, who now heads the good herd at the Ransom Home, Ransom, Pa.

The first cross of a purebred bull on the average dairy herd increased the income \$32 per cow per year, according to figures secured by the Ontario Agricultural College in comparison of 140 herds using grade bulls and 31 using purebreds. These figures show that if a farmer with 20 cows, using grade bulls, received an income of \$1,680, his neighbor with 20 cows who used purebred bulls four or five years ago should receive \$2,320 or \$640 more. In other words, the man using a grade bull is paying a tax of \$640 per year for this privilege. "You have to pay for a purebred bull whether you use one or not."

The best token of appreciation you can give a man who buys a bull calf from you is to present him with a year's subscription to the HOLSTEIN BREEDER AND DAIRYMAN.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

April 22, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The World's Latest Proposal

THE *Holstein-Friesian World*, a periodical published near Syracuse that for several years has ardently championed the speculative side of the Purebred Holstein industry; that has supported the increasing of fees and the taking of money from the Reserve Fund, came out in an editorial in their April 12th issue with a proposal to take additional sums from the pockets of the plain breeders and dairymen.

In the Holstein-Friesian Association of America, for over twenty-five years or up until its annual meeting in Philadelphia in June, 1919, the fee for transferring cattle was twenty-five cents. This sum was not only sufficient, but the Association had accumulated a handsome surplus of over \$220,000.00. Notwithstanding the fact that the association's finances were in such a prosperous state and it had grown to be the largest association of its kind in the world, there were those who proposed and did increase the transfer fee from 25 cents to \$1.00.

The *Holstein-Friesian World* favored this increase. Why? Was it because the *World* would be directly or indirectly financially benefited by moneys collected through the increased fee?

At the annual meeting in 1919, the Board of Directors was increased to sixteen; James A. Reynolds, a politician of Cleveland, Ohio, who joined the association the year previous, was made director and chairman of the Executive Committee and paid \$3,000.00 at the end of the year; D. D. Aitken was voted a salary of \$12,000.00 and expenses as President. Mr. Aitken, with a \$6,500.00 assistant started out on his famous whirlwind campaign using the association's funds to extract

further sums from the breeders, either in money or pledges to build up a political and sale organization in each of the leading Holstein states.

Many thousands of dollars were collected from the breeders and a political organizer and sale manager was placed in charge of the Aitken machine in several states. To keep the organization before the breeders they carried page and double-page advertisements in the *Holstein-Friesian World*, which no doubt is one of the reasons why this publication so heartily supported the increasing of fees at the Philadelphia meeting.

Pennsylvania breeders strongly denounced and bitterly opposed the Aitken whirlwind campaign, with a result that Aitken never entered the state on this famous whirlwind campaign. The breeders were thus able to escape the paying of thousands of dollars in fees, and the Holstein industry in Pennsylvania remained in a much healthier state than did many of the districts where the Aitken political and selling organization was most active.

In 1921, at the annual meeting in Syracuse, the breeders denounced whirlwind campaign methods; the paying of a \$12,000.00 salary to the president, the \$1.00 transfer fee; and, by the largest vote ever cast at any annual meeting, the fee was reduced from \$1.00 to 50 cents.

The *Holstein-Friesian World* bitterly opposed the efforts of the breeders to correct the existing wrongs in the association and published all manner of abuse against those who were instrumental in bringing about the reduction of fees and the denouncing of the \$12,000 salaried president.

Why did the *Holstein-Friesian World* want the fee to remain at \$1.00? Was it because they were being financially benefited?

Why was the *Holstein-Friesian World* opposed to having the fee reduced from \$1.00 to 50 cents? Was it because the *World's* income from the association would be proportionately reduced or entirely cut off?

In 1922, the *Holstein-Friesian World* supported the increasing of fees to \$1.50. Why? Was it because the *World* hoped through the state-paid secretaries to get a part of the 50 cents on each transfer that was to be turned over to the State Association and through the Extension Department would be placed on the Association's pay-roll?

When the proposal was made to take \$93,000.00 from the Reserve Fund to do "so-called" Extension work, the *Holstein-Friesian World* did not oppose it. Why? Was it because the *Holstein-Friesian World* hoped to be financially benefited?

The *Holstein-Friesian World* has given its assistance and support to the political millionaire group to the extent that this group has been able to increase the fees and divert the association's funds and the association's activities to the promoting of public sales of a State and National character, where only animals such as the political millionaire group own are eligible to enter.

The "so-called" large breeding establishments that are owned by the millionaire group and that are being operated largely as a hobby or pastime at an enormous expense and which have been carrying large display advertisements in the *Holstein-Friesian World* evidently have conceived the idea of trying to offset some

of their loss by creating a special market to sell their milk at \$.25 or \$.30 a quart under the trade name of "White Nectar," and, as in the advertising and selling of their cattle, they are saddling the expense of helping to create a market for their special milk to be sold under the trade name of "White Nectar" at the expense of the association.

Not content with saddling the expense of conducting State and National Sales on the association; not content with saddling the cattle advertising expense on the National Association; not content with trying to use the Association's funds to advertise a "Special" milk under the trade name of "White Nectar," the *Holstein-Friesian World* in their recent editorial proposes that the express charges and shipping expense of cattle that

are consigned to the national sale be defrayed by the State Associations which we know are financed through a tax of \$.50 on each transfer fee.

In view of the above proposal, THE HOLSTEIN BREEDER AND DAIRYMAN is tempted to offer the suggestion that The Holstein-Friesian Association of America assume all of the operating expenses in connection with the large breeding establishments owned and operated by the present officers and directors. This proposal of course, not only to include the expense of conducting the present Extension Department and the Association's advertising that appears in *The Holstein-Friesian World*, but to cover the advertising that appears in the *World* under the name of these particular officers and directors.

The Cost of Making Yearly Records

WE are reprinting an article which appeared in the March 28th issue of the *Hoard's Dairyman* under the title "The Cost of Making Yearly Records" written by Mr. C. M. Long, of Illinois, in which he gives some interesting figures compiled at the Dixon Test Plant, a coöperative enterprise undertaken by the Illinois State Holstein-Friesian Club.

It seems from the way that bulls from yearly record cows have been selling lately that no one has figured on the cost of making these records. All admit the desirability of having a bull from a yearly record cow. However, we must not expect to continue to be able to purchase such bulls unless we are willing to pay for them in proportion to the cost of making the record.

It is with the belief that we would appreciate these bulls more if we knew the cost of making these records that I submit this article.

When the committee of the Illinois Holstein Association on plans for a cow testing plant began to look around for figures on which to base their estimates, the only ones of any value that they could find came from the Illinois Agricultural College. These figures showed the amount of feed and the hours of labor required to make yearly records on eighteen Holsteins. The resulting records were from about 16,000 lb. to 25,000 lb. milk.

These records were divided into various classes according to the production and from these figures the following estimate of the cost of making records at the plant was deducted:

Estimated Cost of Records at Testing Plant, two months fitting, ten months record.

	15,000- lb. cow	17,000- lb. cow	20,000- lb. cow	25,000- lb. cow
Labor	\$165	\$165	\$165	\$165
Feed	243	185	249	351
Official test	20	20	20	20
Overhead	158	158	158	158
Total	\$586	\$548	\$592	\$694

Prices current at that time (1921) were used.

In the following summer a questionnaire was sent to about forty men who were doing yearly work. This questionnaire was worded in such a way as to bring out the cost of the records. It was quite surprising to note the great variation in the answers. Some said frankly they had no idea; all the others either said their answers were mere guesses or estimates. The reports covered 745 cows. The cost of seven-day records ran from \$30 to \$100, with an average around \$50. The wage for milkers averaged about \$75, and they cared for seven cows on an average. They considered 600 lb. to 900 lb. butter as a creditable record. The majority thought 625 lb. to 750 lb. creditable. About eight to ten per cent of the cows started on

record were discontinued because of death or failure to make a creditable record. In answer to the question, "How much will a 1,000-lb. record enhance the value of a cow?", the replies ran from seventy-five to 300 per cent. In dollars and cents from \$300 to \$600. On 600-lb. records the replies were from nothing to 150 per cent. The answer as to the cost of making a 365-day record showed even a greater variation. They ranged from \$60 to \$450. The average would probably be around \$300.

WHAT THE RECORDS DID COST

We will now submit the report on thirty cows whose records were made at the Dixon testing plant. These cows were all on test at practically the same time so that the cost figures are comparable. These were started in October, 1921, which makes the costs comparable with those submitted in the questionnaire. This group of cows averaged 20,903 lb. milk which sold for only \$320.70 or about \$1.53 per hundred. Crediting the cows with this milk, the net cost (*or Loss Ed*) of the average record was \$441.55 exclusive of the cost of the seven-day records. Not all these cows had a seven-day test. The average cost for those that did was \$19.21. This represents merely the tester's fees. It is true these records would not cost as much if they were being made now, as feed is about the same as then, while milk is worth about seventy-five cents per hundred more. This on a 20,000-lb. cow is \$150. They were on test 13.3 months. This gave a fitting period of 1.3 months, as all made 356-day records. The average gross cost, not including seven-day test charges, was \$762.23 or \$57.30 per month. Of this monthly charge, \$27.77 or 48.5 per cent was for feed; \$13.58 or 23.7 per cent for labor; \$14.26 or 24.9 per cent overhead which includes herdsman, rent, water, light, stenographic help, etc. The remainder, \$1.66, or 2.9 per cent was distributed between semi-official test charges and veterinary services.

These figures compare quite favorably with the estimate of the test plant committee. Their figures for a 20,000-lb. record was: feed, \$20.07, labor, \$13.75, overhead, \$13.17, and official test, \$1.66 per month. It will be noted that the difference in the totals is due to the fact that their estimates were for ten months while the cows were at the plant 13.3 months on the average.

There was not the direct variation between the records of various amounts that the committee expected. There was variation but it did not run with milk production. The highest milk record made was 28,283 lb. milk, the gross cost of this record was \$779.55, and the net cost (*or Loss Ed*) \$396.21. The lowest record was 15,742 lb. milk, with a gross cost of \$731.35, and a net cost (*or Loss Ed*) of \$492.05. You will note that there is a difference in gross cost of only \$48.20, while there was a difference in production of 12,541 lb. milk. This difference is due entirely to the difference in efficiency of the two cows.

A record was kept of every pound of feed of the various kinds eaten by these cows, which is perhaps the most complete and extensive cost figures to be found anywhere. It may be of interest to know what they ate. The following report on

one cow is fairly typical. It includes the feed for just the twelve months she was on test but does not include the feed during the fitting period. Molasses, 933 lb., corn chop, 444 lb., oats, 1,490 lb., bran, 17,36 lb., cottonseed meal, 630 lb., linseed oil meal, 1,186 lb., gluten, 730 lb., distillers grain, 572 lb., beets, 440 lb., beet pulp, 1,742 lb., silage, 9,125 lb., alfalfa hay, 4,380 lb., soy bean meal, 32 lb., Champion feed, 183 lb., and Purina, 16 lb.; 7,920 lb. straw and 525 lb. shavings were used, or about 23 lb. per day. These cows were in nine by twelve box stalls.

It will be well for you to have these figures in mind the next time you go to buy a yearly record bull. Even these figures do not tell the whole story. Not every cow that is put on test makes a creditable record. The experience of those doing testing estimate this loss about ten per cent. If you are figuring on a thousand-pound bull there is a much greater difference. Of this lot of thirty cows, just four crossed the thousand pound mark, and ten more produced records which were according to their ages, equivalent to 1,000 lb. This makes the cost of the records of a thousand-pound two and a fifth times as high, or around \$750. When you consider that the cows on test do not breed as readily as the cows which have not been tested, it is pretty hard to figure just what the cost of a high yearly record bull really is.

The above article discloses many interesting factors.

First: That thirty purebred Holstein cows selected from representative herds in Illinois when assembled under one roof at the Dixon Test Plant, fed and cared for in accordance with the principles advocated by Advanced Registry enthusiasts and under the supervision of the officers of the Illinois Club and Mr. C. M. Long, who is now with the Extension Department of the Holstein-Friesian Association, failed to produce enough milk when sold at market price to pay the cost of maintaining the plant.

Second: That thirty cows kept under Advanced Registry conditions such as existed at the Dixon Test Plant that produced on an average of 20,903 lb. of milk showed an average loss of \$441.55.

Third: That the total loss on a dairy of thirty selected cows, that produced on an average of 20,903 lb. per year kept at the Dixon Test Plant, was \$13,246.50.

Fourth: That a cow producing 28,823 lb. milk, the highest record made at the Plant, showed a loss of \$396.21.

Fifth: That a cow capable of producing 15,742 lb. per year showed a net loss over the value of milk sold at market price of \$492.05.

Sixth: That cows when kept under conditions that prevailed at the Dixon Test Plant required in round numbers practically \$2.00 worth of feed and labor to produce \$1.00 worth of milk.

The Advanced Registry enthusiasts have broadcast propaganda to the effect that through the work the Holstein cow has done in the Advanced Registry Department, she has gained the reputation of being the most profitable dairy cow in the World.

Is there anything about Mr. Long's figures that would demonstrate that the Holstein-Friesian cows kept at the Dixon Test Plant in Illinois were profitable dairy animals?

Mr. Long in his article not only discloses that the cows kept at the Dixon Test Plant were maintained at a loss but he also advises his readers:

"When you consider that the cows on test do not breed as readily as the cows which have not been tested, it is pretty hard to figure just what the cost of a high

yearly record bull really is." Again Mr. Long has opened up a very interesting question. If an animal does not breed readily, is it not a rather serious defect and should be taken into consideration when selecting bulls to guard against this defect being transmitted to succeeding generations?

If the defect is not transmittable but was a direct result of forcing the animal to produce the record, is it not quite possible that this same forcing might be reflected in many ways and particularly in a loss of vigor and vitality on the unborn bull calf that is being carried by the mother at the time she is making the record?

We do not wish to conclude our comments of Mr. Long's article without paying our respects to the thirty cows whose records are covered by the figures given, because we have reason to believe that the animals were all of excellent quality.

Our only regret is that we have not the figures available so that we can show the costs of making Advanced Registry records generally. It would seem that from an economical standpoint the present Advanced Registry System or the present method of making records is not a sound or economical proposition. Surely the figures that Mr. Long quotes would indicate that the System was unsound. For surely no one would continue to select breeding stock from cattle that were not capable of producing milk economically.

The Dairy Farmer must take into consideration the efficiency of the cow and her economical milk producing qualities and any System that attempts to measure the value or capacity of a dairy cow must incorporate economical production.

A breeder of Holsteins in writing to our office expresses himself in the following terms with reference to Advanced Registry records:

"I'm going to make a confession to you. I wouldn't give 5c for an A. R. O. record test of a cow under the conditions under which most of them are tested. The worst buys I ever made in my life were high record cows tested where I thought there could be no question of the fairness of the test. When I test (and this is true of all the testing I have ever had) the official tester walks into the barn and I point out the cows that are then available for testing and I say, 'Go ahead.' My records are all on the basis of the actual normal performance of the cow. Any other record is fraudulent just to the extent that that cow was fixed up for the special occasion. The purpose of a test is not to see what a cow can do for seven or thirty days under abnormal conditions. It ceases to be a true test or a legitimate test the moment the cow is pushed beyond her ordinary, normal, production ability."

Each American farmer and farm laborer, on the average, is feeding nine people other than himself in this country and also another person living in foreign lands.

Children cannot grow properly on the proteins of cereals, beans, tubers, roots and fruits. It is essential they have a liberal allowance of milk protein.—J. E. Lyman, Prof. of Chemistry, Ohio State University.

CLUB ACTIVITIES

WILL HAVE PAID ORGANIZER

An organizer to sign up Holstein owners as members of the Mower County Holstein Breeders' Association was decided upon at the annual meeting of the county association held at Adams, Minnesota, March 29th. The plan was advocated by State Secretary, Robert Geiger. There are about one hundred owners of Holstein cattle in Mower County and the drive is scheduled for some time in May.

At the election of officers, F. E. Gleason was reelected president; Art Wright, vice-president; B. J. Huseby, secretary and treasurer. The directors were Joe Goetsch of Waltham; A. O. Starks, Dexter; V. S. Culver, Austin; O. A. Lunde, Adams; Thomas Lien, LeRoy; and L. M. Eggen of Lyle.

IOWA ASSOCIATION CHANGING ORGANIZATION

When the Iowa Holstein-Friesian Breeders Association met at Waterloo, March 20th, the new field secretary, H. W. Gleim, reported that breeders organizations in ten counties have adopted the county-state plan, Black Hawk County being the only one to which the plan had been presented that has not gone along. The sum of \$300 was appropriated by the state club as junior prizes in addition to \$200 coming from the National Association. The Holstein-Friesian Association of America will be invited to hold its 1925 convention at Des Moines.

A purebred sire campaign will be put on and every agricultural instructor in the high schools or consolidated schools will receive copies of true type Holstein pictures and the revised Holstein score card. This proposal was made by P. P. Stewart of Maynard.

FOND DU LAC BREEDERS' MEET

The Fond Du Lac County Holstein Breeders Association held their annual meeting at the sale pavilion, April 5th, and elected directors, the other officers not coming up for election this year. Those elected were S. H. Bird, E. H. Korner, Francis H. Boyle, C. M. Corcoran, S. M. Randall, Flint Jones, E. C. Peebles, C. H. Bruger and S. C. Stanchfield.

The association favored Fond du Lac County adopting the Area Tuberculosis Eradication plan. Three of the counties adjoining Fond du Lac County namely, Green Lake, Winnebago and Sheboygan Counties, have already adopted this plan.

A Crow Club was proposed. This is to be composed of boys, sons of association members, for the purpose of killing crows

which are quite a pest in this county. If the plan is adopted the association will offer prizes to the boys turning in the most crow heads.

The Association will sponsor a social to be held at the sale pavilion each month during the summer; also a fall carnival to be held next November.

President S. H. Bird presided at the meeting. He will appoint a committee to confer with officials of the county fair associations in regard to fair premiums this fall. The Association voted that the show committee should be allowed to enter the barns of any member of the association and take any animal or animals which they desired to exhibit with the county herd, which would be shown at the county fair and at the state fair. The Association will furnish transportation and care for all animals during the fairs unless the owner prefers to make individual exhibits.

ORGANIZE COUNTY CLUB

At a recent meeting in Northwood, Iowa, Holstein breeders organized a Worth County organization and adopted a constitution and by-laws. Work to be sponsored by the association will be the advancement of the breed through the use of better sires, cow testing associations, organization and assistance of calf clubs, tuberculosis testing and possibly the organization of bull rings.

Hilmen Gaarder, of Kensett, was elected president; O. H. Thompson Northwood, vice-president, and C. R. Doebel, of Manly, secretary-treasurer. H. B. Logeman, of Manly, was elected state director to represent the county. Other directors are: G. E. Cooper, Manly; James Purcell, Joice; O. H. Anderson, Northwood; J. H. Hogan, Kensett; and A. O. Westland, Lake Mills.

MICHIGAN BREEDERS LISTEN TO REED

Fifty members attended the banquet and meeting of the Washtenaw Holstein Breeders Association held March 6th, at the Chamber of Commerce Inn, Ann Arbor, Mich. The principal speaker was Prof. O. E. Reed of the Michigan Agricultural College, who recently returned from a trip through the British Isles and he told of the Holstein herds he had inspected. He contrasted the British dairy industry with the industry in this country and said that as long as the American imports of dairy products exceed the exports, the industry has nothing to

fear. People in the country and city are, because of the recent discoveries in nutrition, becoming more and more interested in the use of milk and milk products. He recommended that Holstein owners affiliate with cow testing associations and keep records of dairy production.

Henry Latson of Ann Arbor, who won the \$25 appropriated last year for the best Holstein calf exhibited at the county fair, gave an account of his trip to the National Dairy Show last October.

L. A. Watts, County Club Agent, review the work of the Washtenaw Calf Clubs while county agent H. S. Hosler explained the benefits of cow testing associations. He said there were two now operating in the county and three more under way.

Wm. Austin of Saline, was elected president and Glenn Bird of Ypsilanti, who had been president for several years, was elected vice-president. W. L. Spaulding of Chelsea, is secretary; A. A. Snyder, treasurer and the directors were, O. J. Feldkamp, Saline; Frank Geiger, Rushton and Arthur Lutz, Saline.

It was decided to appropriate \$25 to send a calf club boy to the National Dairy Show next fall and also to give a prize of \$5 to the boy showing the first prize calf at the county fair. The showing of two reels of Holstein pictures belonging to the Quaker Oats Co. closed the program.

ALLEGHENY BREEDERS DINNER AND MEETING

The annual dinner and meeting of the Allegheny County Holstein-Friesian Association was held at the Fort Pitt Hotel, Pittsburgh, April 8th.

Professor T. E. Elder of the Mount Herman School was the principal speaker. He told of his trip to South America and the dairy industry there.

The activities of the Association was one of the subjects of discussion. A cow testing association is now being formed, and tuberculosis eradication on the area plan is in contemplation.

There was a strong sentiment in favor of holding a County consignment sale.

A number of members of this Association plan to attend the doing at Richmond and Allegheny County will send a consignment to the National Sale.

All officers were reelected. They are: President, John A. Bell, Jr., of Coraopolis; Vice-President, Ed. Hayes of Imperial; Treasurer, F. R. Babcock of Gibsonia; Secretary, A. B. Craig of Pittsburgh; and Directors, G. F. Williams and Chas. Scott.

SECRETARY TO MAKE SALES

A new office, that of sales secretary, was created at the recent meeting of the Board of Directors of the Washington County Holstein-Friesian Breeders' Association held at Kewaskum, Wis. The office was filled by the appointment of Paul A. Horlamus of West Bend. Mr. Horlamus will attempt to sell animals from the herds of the members and will charge 4% for sales of females and 10% for sales of males. Non-members pay 5% and 10% respectively. Of this amount 3% for the females and 8% for the males goes to the sales-secretary while the rest goes to the association and will be used in advertising Washington County cattle.

The officers elected were:—President, Wm. Gruhle, West Bend; Vice-President, Herbert Lepien, Hartford; Treasurer, David Rosenheimer, Kewaskum; Directors, H. F. Schroeder, Paul Bast, and J. C. Mayer.

IOWA CLUBS ORGANIZING

The Wright County Holstein Breeders' Association was organized at a meeting in Eagle Grove, Iowa, March 28th. County Agent Edwards, was temporary chairman while Field Secretary, H. W. Gleim, talked on the state association and the purpose of the county organizations.

Officers elected were as follows: A. E. Martin, president; W. R. Schultz vice-president; G. C. Baker, secretary-treasurer. The directors elected are: E. G. Hauge, Belmont; W. W. Helmke, Renwick; F. E. Newbrun, Eagle Grove; J. S. Bell, Clarion; Henry Loux, Woodstock; state director, A. D. Severe, Dows.

Dues were set at fifty cents per head for all purebred females, six months or more of age; twenty cents for all grades; the fees collected will be divided equally between the state and county association. Those who do not have cattle can belong by paying the associate fee of \$5.

FARM CONDITIONS IN PENNSYLVANIA

The condition of winter grains and pastures in Pennsylvania is the lowest this spring for any April 1st period during the last six years, according to Paul L. Koenig, state agricultural statistician. He said the winter weather, until the last week of February was not favorable to the best interests of grain growers in this State, but that March conditions were more favorable because of the protective snow covering which served to check any further damage from alternate freezing and thawing.

On April 1st the wheat crop was estimated to be eighty-three per cent normal, as compared with eighty-four per cent in April, 1923, and eighty-eight percent, the average condition for the past ten years. The principal factors responsible for the low condition were dry weather last fall, the consequent late seeding, and the lack of snow covering when the crop most needed protection. The condition of wheat in the entire U. S. on the same date was eighty-three per cent normal, compared with 75.2 last year and 82.5 per cent, the ten-year average for April 1st.

The condition of rye on April 1st was eighty-six per cent normal as compared with eighty-nine per cent last April, and ninety per cent, the ten-year average for conditions on the same date. While it was considered early to gauge the actual condition of pasturage, and in many cases snow prevented an accurate report, the condition was reported as being eighty-two per cent normal.

It is estimated there are 129,000 breeding sows on Pennsylvania farms as against 137,000 on April 1st last year, a reduction of six per cent. In the United States, there are 11,751,000 breeding sows, or eighty-nine per cent of the number in 1923.

The farm labor supply was reported as seventy-nine per cent normal in Pennsylvania on April 1st, and the demand eighty-nine per cent normal, the supply therefore being eighty-nine per cent of the farmers' needs. Average wages paid by farmers are \$39.50 per month with board, \$59.00 without board.

WHY INSTITUTIONS PREFER HOLSTEINS

"Milk produced by purebred Holsteins is not more healthful than is the milk of any other cow but the breed has so many good qualities that it is easily the best for general purposes" is the conclusion of Ralph Huling, steward at the Iowa State Hospital at Mt. Pleasant. In a recent paper Mr. Huling gives his observations gathered from years of experience with the Mt. Pleasant herd, one of the best in the state. Mr. Huling says:—"We prefer Holsteins from the fact that they produce a large quantity of milk and of excellent quality. At this institution we use whole milk and do not use the separator. We believe the Holstein is the most economical milk producer of any dairy breed and the most profitable from a financial standpoint. They are the most profitable dairy breed in the United States to-day and any surplus is salable. When a Holstein has finished her usefulness as a milk producer or if you have a cow that does not milk up to the standard you set, her value on the block is more than that of the ordinary dairy animal. The only place the scrub is of any value is on the butcher's block."

Eighteen years ago the Mt. Pleasant herd was composed of seventy or eighty head of Shorthorn cattle. John Connie was then a member of the Board of Control. He was firm in the belief that Holstein cattle were better adapted for institutional purposes than were Shorthorns and purchased two carloads of Holsteins for the institution. At that time the authorities began to test for tuberculosis. Only a few animals of the two carloads did not react and in the herd of 120 Holsteins and Shorthorns less than seventy-five passed. Grade Holsteins were secured but only high class bulls were used.

About seventeen years ago they began to weigh the milk night and morning. A weeding out process was started and cows that did not produce 7,000 lb. milk yearly were sent to the butcher shop. For twelve years this was continued and by the use of good bulls and the elimination of poor milkers Mt. Pleas-

ant Hospital had possibly the best herd of grade Holsteins in southeastern Iowa.

Senator McColl became a member of the Board of Control and realized that if a grade was good a purebred was bound to be better. He headed a movement to buy purebreds. The herd was handled along the same lines and poor milkers eliminated, only the best being kept.

When weighing was started there was considerable trouble with the dairymen who claimed that it was impossible to weigh the milk night and morning from sixty to seventy cows yet, after sixteen or seventeen years of this practice the dairymen state that they would not think of milking without weighing, they not only know how each cow produces but can tell by the number of pounds of milk whether she has been milked properly and if she is in perfect health.

The institution herd is composed of about 150 purebreds and thirty-five grades. These will be gradually eliminated and it is expected that in another year the herd will be entirely purebred.

Two years ago yearly test work was started and a supervisor from Ames College comes monthly to test the milk. During this two year period two cows in the institution herd have each produced over 1,000 lb. butter in a year while one cow, Korn-dyke Precious, now on year test has produced 150 lb. butter in thirty days and will make well over 1,000 lb. in 365 days. There are now sixteen head of purebreds on long time test.

Mr. Huling says:—"Too much cannot be said about feeding, as breeding alone will not bring results. The dairy cow requires a great amount of various foods. I have heard people say that they could not afford to buy the feeds needed. The institution keeps an accurate account of the feeds of each cow, and if it did not pay to buy these feeds the institution would not do so. Any person who will take the trouble to weigh the milk from their cows and feed properly will soon find out whether their cow is a boarder or a money maker."

KING HERD WINS MANY PRIZES

On January 28th of this year the Kansas National Livestock Show opened up with the Winter Circuit for this section of the country with as fine a selection of cattle, the well-known judge, Col. Haeger, said as he had ever seen together.

As our herd, numbering fifteen head was a part of this selection, we feel that we have a right to a certain amount of pride in their winnings.

Our senior yearling bull, Triune Ormsby Piebe 4th, No. 381502, was first in his class and awarded Junior Championship and Grand Champion over all bulls. This makes him seven times Grand Champion.

The cow Crescent Beauty Star Belle, No. 601024, was first in cows three years and under five. The heifer Bock Diamond Pontiac, was first in the senior yearling class with Bock De Kol

Gerda Girl first and Junior Champion in her class. We were much gratified to have our herd placed second among the many good ones exhibited, and our cow Pietertje Ringwood Canary given second place in the milk contest.

At Oklahoma City we duplicated the Kansas performance adding several more ribbons to the increasing string, and at Fort Worth, from where we have just returned, we were even more fortunate, being in the money in all classes, with Triune Ormsby Piebe 4th again first and Junior Champion, Crescent Beauty Star Belle getting all honors, First, Champion and Grand Champion, our son of "41st" Hollyhock Sir Pete Rhoda Korndyke, No. 40444, being undefeated in first place at all three

TRIUNE ORMSBY PIEBE 4TH
Show bull who is meeting with great success at the Southwestern Fairs. Owned by A. J. King, Kansas City, Mo.

shows. Charlevoix Marbury De Kol was placed first in her class of three year old cows and our Bock De Kol Gerda Girl again met with the Junior Champion honor.

In the groups we had first in aged herd, first in young herd, second in calf herd, and Crescent Beauty Star Belle again came to the top of the line as being the handsomest A. R. O. cow under five years.

Altogether this gives us Champion and Grand Champion twice, with Junior Champion five times, twenty-two first and ten seconds. Isn't this really a remarkable showing for a herd to make! We think this entitles our herd to the distinction of having won more honors and ribbons than all the other herds showing, and should bring the people of this section to realize with pride that, very close to home, they have animals that are a credit to the Holstein breed.

Yours truly,

A. J. KING.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

AGAINST KILLING TO PREVENT DISEASE

The piece in the BREEDER AND DAIRYMAN, February 22d, reminded me of my experience with the Foot and Mouth disease in 1878 in which I proved two things. One was that it is not always necessary to kill cattle infected with it, and that killing them is not a sure preventative of a recurrence.

I imported some Holsteins that year. They had not been exposed to it in Holland and were perfectly healthy on landing in Elgin. After a few days the disease appeared in my old stock and was communicated from them to the new cattle.

Being short of stableroom, I had arranged with a neighbor dairyman to keep a few yearlings for me a while. The vet, that I employed was an Irishman, who had had experience with the disease in Ireland. He said I must quarantine *closely* till the disease had had its run. I told him of moving the yearlings and he went with me there and sure enough, those showed they had contracted the disease. We told the dairyman he must quarantine his place *thoroughly* that he must not sell any milk or any thing that could possibly contain infected matter.

I said I would pay him for any loss resulting. He kept a close quarantine, the disease went through his whole herd as it did mine and in a few weeks both herds were entirely free from any signs of it. I sold one bull on the way home and delivered him off the train at Erie, Pa. No sign of the disease appeared there.

During the next few months my cattle were sold in different states and no sign of the disease ever appeared in any place where they went. I was satisfied that I must have brought the infection in some of my outfit and the new cattle had not come in contact with it. That also proved that killing cattle does not surely remove the dangers for some infected article may remain.

I don't care what any government vet, or official may say I *know* that many thousand dollars worth of cattle were needlessly killed. They might have been saved if properly quarantined as mine were. The case at the Chicago stockyards also proved that a proper quarantining would check the disease. No doubt there are cases where killing is necessary. If the government would distribute bulletins describing the disease and see that they were widely distributed it would also be a help.

Aurora, Ill.

GEO. E. BROWN.

WAUKESHA DAIRY SHOW

The sixth annual Dairy Show was held March 18th-21st at Waukesha, Wis., and was very successful. Thirty-seven different breeders within a sixteen mile zone exhibited 151 head of dairy cattle. Many of these were in as good condition as you would find at a state fair; in fact, some of them had won prizes at state fairs. Besides the stock there was a splendid display of corn, legumes, grain, dairy products, fancy work and commercial exhibits. There were also a few sheep, and hogs on exhibition. The judging was done by Prof. H. H. Kildee of Ames, Iowa. The Holstein prizes were as follows:

Aged bulls—1. A. Finkler, Hartland, on King Valdessa Pontiac Prince.

Bull, two years and under three:—1. Baird Bros., Waukesha, on Nockdair Canary Daisy; 2. Albert Steinke on City Farm Buttermen Nephew.

Yearling bull:—1. Henry Schlicher on Prince Abbekerk Johanna Ormsby; 2. Ben Peacock & Son and H. Piltz, on Marathon Estata Salo Burke.

Senior Bull Calf:—1. Norris Farm on unnamed; 2. Robert Green on unnamed; 3. Baird Bros. on Nockdair Prilly A. Model.

Junior Bull Calf:—1. Wm. Basting on Basting's Bonheur Perfection; 2. Norris Farm on Prince Victor Netherland; 3. Muckleston Bros., on Ouida King Sylvia.

Aged Cow:—1. Bair Bros., on Floss Pontiac Walker; 2. Aitken Bros., on Hilda Korndyke Segis; 3. Aitken Bros., on Candé De Kol Westview.

Cow, three years and under four:—1. Ben Peacock & Son, Big Bend, on Carolyn Lady Abbekerk; 2. Aitken Bros., on Ormsby Parthena Bess; 3. Norris Farm, Mukwonago, on Nellie Queen Alba.

Heifer, two years and under three:—1. Aitken Bros., on Amanda Ormsby Johanna; 2. Muckleston Bros., on Ouida Pontiac Sadie; 3. Norris Farm on Lady Elba Ormsby Hengerveld.

Senior yearling:—1. and 2. Muckleston Bros., on Ouida Pontiac Mollie; and Ouida Pontiac Olga; 3. Norris Farm on Ouida Pontiac Fayne.

Junior yearling:—1 and 2. Baird Bros., on Nockdair Canary Westview Walker and Nockdair De Canary Walker; 3. Aitken Bros., on Ormsby Black Lady.

Senior Heifer Calf:—1. Norris Farm on Fanny Heilo Elba; 2. Baird Bros., on Unnamed.

Junior Heifer Calf:—1. Baird Bros., on Nockdair Model Canary Parthena; 2d, Muckleston Bros., on Ouida Pontiac Aaggie.

Senior and Grand Champion Bull:—Nockdair Canary Daisy, Baird Bros.

Junior Champion Bull:—Norris Farm on unnamed bull calf.

Senior and Grand Champion Female:—Floss Pontiac Walker, Baird Bros.

Junior Champion Female:—Nockdair Model Canary Parthena, Baird Bros.

WASHINGTON MILK SURVEY

Approximately 50 per cent of the price of milk retailed in Washington, D. C., goes to the producers, the remaining 50 per cent being divided among the agencies of distribution.

United States Department of Agriculture made an extensive survey of the situation during the last nine months of 1923 and says that this condition is about the same in most cities for which information is available.

About 39,000 gallons of milk come into Washington daily. There are 40 distributors but 92 per cent is handled by nine of the number while 90 per cent comes through a producers' organization with approximately a thousand members. About 1,700 dairy farms, most of which are in Fairfax, Loudoun and Prince William Counties in Virginia, and in Frederick County, Maryland, are within a 60-mile zone. The Department says that the bulk of the milk sold contains 3.9% butterfat.

A bonus averaging 1/4c a quart for varying standards of sanitation and cleanliness has been paid all distributors since November, 1923, while some dairies operating under special conditions receive an additional bonus from some of the distributors.

For milk handled on routes or sold through single-unit grocery stores and delicatessens the producers receive 7/4c for milk retailed at 15c a quart. The chain stores sell for 13c of which the producers get 6/4c. One cent per quart goes to the distributors' country plant and the average cost of transporting a quart of milk to market is 3/4ths of a cent. Where the distributor operates a milk route 6c a quart is allotted for the city plant, about 3/4c in the case of milk sold through small stores and a little over 3c on a quart of milk sold through chain stores. The chain store margin is something less than 1/4c a quart while 2/4c a quart goes to the single stores.

Between country plant prices and f. o. b. Washington prices there is a differential of 7c per gallon of which 3c is used for transportation and 4c for the operation of the distributors' country plant where the milk is received, tested, cooled and loaded in iced cars for shipment. Nothing is said about standardizing the milk.

Most of the data used was furnished by the principal distributors, the Maryland-Virginia Milk Producers' Association and the District of Health Department.

POWDERED MILK EXPORTS

Exports of powdered milk for February, 1924, amounted to nearly 100,000 lb. more than the exports of the corresponding month of 1923, the totals being 304,253 lb. for this year and 208,794 lb. last year. The total for the first two months of the year, however, is only about 13,000 lb. more than the amount of the first two months of 1923, the figures then being 506,169 lb. while for the first two months of the current year it amounted to 519,001 lb.

Our largest customer by a long, long way was Japan, 175,883 lb. going to that country; 28,222 lb. went to Canada and exactly 25,000 lb. to France and 21,850 lb. to Germany. Cuba took 12,424 lb. and Peru 5,100 lb. The only European countries buying this product were France, Germany and the United Kingdom.

Cow Testing Association Reports

TESTER REVIEWS COUNTY CONDITIONS

Boiling Springs herd consisting of nineteen purebreds owned by Ivo V. Otto, Carlisle, Pa., averaged 1,506 lb. milk, 47.7 lb. fat and headed the Cumberland County Testing Association for the month of March, reports A. A. Raudabaugh, tester. In second place is a nine cow dairy owned by L. D. Nailor. This purebred Holstein herd averaged 1,430 lb. milk, 46.6 lb. fat. A grade herd of J. M. Conrad is in third place with an average of 1,237 lb. milk, 44.5 lb. fat for eleven milkers.

The highest producer was Whitey of the Conrad herd with 2,055 lb. milk, 90.4 lb. fat. A purebred of the G. W. Strock herd was second with 2,148 lb. milk, 85.9 lb. fat. Ivo V. Otto had a representative in third position and E. H. Otto had one in fourth place. Both of these were above 80 lb. fat. A member of the Nailor herd is in fifth place; Conrad had another grade in sixth place; Strock's purebreds held seventh and ninth positions and each are above 70 lb. fat, an I. V. Otto cow is eighth, while Adeline, owned by Paul C. Gible was in tenth place with 2,040 lb. milk, 69.4 lb. fat.

Eight purebreds and two grades in the leading ten cows have an average production of 2,217 lb. milk, 77.6 lb. butterfat. The leading milk producer is from the Ivo V. Otto herd and is credited with 2,592 lb. milk, 70.5 lb. fat.

There are twenty-six herds containing 310 cows in milk enrolled in this association. There were 63 cows above 50 lb. fat; 117 over 40 lb.; and no less than 103 cows exceeded 1,200 lb. milk. This is the highest report ever made in the Cumberland County Association. Mr. Raudabaugh says the slogan of the members is

"more milk per cow at a lower cost per hundredweight and the higher they go the cheaper they produce it."

Two purebred bulls were purchased. E. C. Ludt and J. H. Lear bought a good bull in partnership while A. N. Lehman of Carlisle purchased the herdsire at the Gible partnership dissolution sale. This bull was by Lothian De Kol Korndyke and from a cow that has made a good record in C. T. A. work.

Mr. Raudabaugh says that cattle sold well at all spring sales in Cumberland County where the owner had C. T. A. records of production and then sold the cattle for exactly what they were, telling the amount of milk and butterfat they had produced and also telling their defects and everything that goes with the cow. "This brings out the fact that better sale ethics is an advantage in selling cattle at auction." At the sales of herds in this association, 174 head averaged \$108 with a very large percentage of the offerings male and female calves. There were thirty-five animals that averaged \$200 per head. The stock was sold in farm condition without any heavy expenses for selling, and without any high priced auctioneer, and most of the stock remained in the county.

PUREBRED HOLSTEIN FIRST

With a yield of 2,015 lb. milk, 88.7 lb. butterfat, a purebred Holstein owned by C. Elmer Johnson, Center City, Minnesota, led the Chisago Lake Association for the month of March. Mr. Johnson's herd of twelve cows carried off herd honors with an average of 1,154 lb. milk, 42.8 lb. fat. Twenty of the twenty-six herds enrolled in the association averaged more than 25 lb. fat.

WESTERN TESTING

Utah takes first position for high average in the cow testing associations under the jurisdiction of the Western Dairy Division Office. There is only one association in Utah and this contains fifty herds which in turn contains 487 cows. These cows averaged during February, 30.3 lb. fat. There is very little difference between the average in Washington, Colorado and California, the figures being about 29 lb. fat in each instance. Idaho stands next with 28.74 lb.; Arizona and Montana show an average above 27 lb. and Oregon and Nevada above 25 lb. There are 48 associations in which 1,318 herds are enrolled and these herds contain 36,322 milkers.

Leading the herds containing fifteen cows or less is a Kern County establishment. This herd of seven animals, grade and purebred Holsteins, averaged 1,910 lb. milk, 60.8 lb. butterfat. It is owned by J. L. Sebastian, of Wasco, Cal. Holstein herds occupy the next seven places. The highest producing large herd consisted of nineteen grade Jerseys with an average of 1,021 lb. milk, 54.2 lb. fat. It is enrolled in the Ferndale, California, Association. The Pellissier herd with twenty-three registered Holsteins is second with 51.5 lb. fat, 1,243 lb. milk. Grade Holsteins are next; a registered Holstein herd comes next and then comes two more grades while in seventh position is the 115 animal herd owned by Helm Farms, Corcoran. This large registered herd had an average of 1,232 lb. milk, 42.5 lb. fat.

Three cows are credited with producing over 100 lb. fat in the month. Nettie Wayne C. the leader, owned by the Washington State Hospital at Steilacoom, produced 2,482 lb. milk, 121.6 lb.

fat. Aurelia a registered Holstein in the Sebastian herd produced 3,063 lb. milk, 101.1 lb. fat. A representative of the Pellissier herd is third with 2,970 lb. milk, 100.9 lb. fat; Freda Bess, a registered Holstein owned by E. W. Looney of Modesto, Cal., is in fourth place with 2,178 lb. milk, 95.8 lb. and the next three places are filled by California registered Holsteins.

A GROWING ASSOCIATION

There are twenty-nine herds enrolled in the Clinton-Pleasant Mt. Preston Cow Testing Association and during the month of March there were 430 cows in milk and 110 dry. No less than ninety-six cows exceeded 40 lb. fat in the month while twenty-three made over 50 lb. and twenty-eight exceeded 1,200 lb. milk.

A grade Holstein called Old Ballon, owned by H. K. Stone, led for both milk and fat. She is credited with 1,959 lb. milk, 78.4 lb. fat. A grade Holstein owned by I. L. Bennett was second with 1,417 lb. milk, 65.2 lb. fat. A grade Jersey was third and in fourth place was a registered Holstein owned by I. W. Cooperthwaite with 1,981 lb. milk, 60.4 lb. fat.

The list of the ten leading cows included grade Holsteins, registered Holsteins and registered Jerseys of which there are a number of herds in this Association. J. W. Decker of Pleasant Mt., Pennsylvania, is tester, and reports that several dairymen have joined the association lately.

ONE, TWO, THREE

The three highest producing cows enrolled in the Park Rapids, Minn., Testing Association were members of the Holstein herd of Glantz Bros., Canary, in first position, produced 77 lb. fat from 2,139 lb. milk; Jennie in second place with 73.3 lb. fat from 1,984 lb. milk; and Beets in third place with 70.2 lb. fat from 1,801 lb. milk.

TESTING IN SOUTH CAROLINA

Although Cedardale Alice Korndyke Posch, heads the list of cows tested in South Carolina during March, the real honors should go to one of her stablemates Lady Rooney Mary Korndyke 2d, for while Cedardale produced 104.3 lb. fat yet her test was abnormal and she only had 1,600 lb. milk while the Lady with 81.2 lb. fat produced 2,449 lb. milk as junior four-year-old. In seven days' test Cedardale is credited with 29.64 lb. butter from only 363.7 lb. milk, her fat percentage being 6.52.

Segis May Polly Posch, a junior two-year-old of the Montgomery herd is credited with 83.8 lb. fat, 1,607 lb. milk; five other members of the Montgomery herd produced over 60 lb. fat; three more over 54 lb. and another 44.8 lb. in her sixth lactation month as a senior three-year-old.

J. T. Willard's herd has seven on the honor roll headed by Ocean Queen Korndyke De Kol 2d with 1,895 lb. milk, 66.7 lb. fat. Kai Schwensen has two on the honor roll, Sigsbee Farm Mechthilde, as a senior four-year-old making 64.3 lb. fat, 1,563 lb. milk in her ninth lactation month and "Echo," a junior two-year-old, being credited with 57.4 lb. fat, 1,423 lb. milk. Clemson College has five over 40 lb. fat, led by Helen Queen Ona, 1,674 lb. milk, 62.8 lb. fat. During the month thirty-seven Holsteins were tested of which twenty-six made the honor roll.

PENNSYLVANIA TESTING

Twenty-seven associations report that during February, 7,362 Pennsylvania cows were tested, of which 1,253 produced more than 1,000 lb. milk and 1,003 exceeded 40 lb. fat while 348 exceeded 50 lb.

The four highest fat producers were all registered Holsteins. A cow owned by F. W. Gorham, Wysox, and enrolled in the Laurel Hill Association was first with 96.3 lb. Second high cow was owned by Chas. Chaffee of Ulster in the same as-

sociation and she produced 95.3 lb. fat. H. A. Freed, Racine, owned the animal in third position. She is enrolled in the Westfield Association and produced 91.3 lb. fat while in fourth place stands "Tuts" a representative of Mast Stoltzfus's herd with the same amount of fat. She is enrolled in the Goodville Association. The Freed cow was first for milk production with 2,610 lb.; a grade Holstein was second with 2,418 lb. This animal was owned by G. S. Henry & Son and enrolled in the Edinboro Association. A purebred Holstein in the Stoltzfus herd was third with 2,403 lb.

The Laurel Hill Association stands first for high ten cow average with 74.3 lb. butterfat while second place went to the Cumberland County Association with 71.7 lb. This association led for number of cows above 40 lb. and for number above 1,000 lb. milk, the figures being 93 lb. and 135 lb. respectively.

The Pennsylvania State College gives notice that the next Testers Short Course will start at 10 A. M. May 5th and continue until noon, May 10th. Good testers are in demand and here is an opportunity for the boys on the farm to obtain a position which pays good wages and at the same time offers possibilities for education advancement.

WISCONSIN TESTING

In the March Wisconsin *News Letter*, Dairy Extension Specialist A. O. Collentine graphically depicts the Wisconsin dairy cattle trade during 1923, and says 55,000 dairy cattle were sold out of the state. The months of September, October and November experienced the greatest trade. October went to 8,018, the months on each side being almost a tie with 6,151 for September and 6,139 for November, while August has 5,359. May leads the spring months with 5,116. The variations in the business is quite interesting. Starting with February there is a steady climb until May then a falling until July with only 2,592 and then the

columns rapidly mount to October and fall from then until January.

The letter reports the highest producing cows in 140 associations. Holsteins make a good showing as 56 associations are led by registered Holsteins and 46 by grade Holsteins while in 23 instances the leaders are grade Guernseys.

The high producer is a registered Holstein in the Pulaski Association, owned by J. R. Minahan of Green Bay. She is credited with 106.7 lb. fat. A grade Holstein, owned by W. C. Wurthmann and enrolled in the Cherokee Association, was second with 98.8 lb. fat. Grade Holsteins occupy third and fourth positions with 95 lb. and 94.4 lb. fat respectively while in fifth position is another registered black and white owned by J. F. Mayer and enrolled in the Richfield Association. She is credited with 91.7 lb. fat.

The herd holding the honor position for high average is an 18 cow dairy consisting of grade Holsteins and Guernseys owned by Richard Behnke, Arkansaw, and enrolled in the Clintonville Association. This herd is credited with an average of 73.2 lb. fat, 1,855 lb. milk. A grade Holstein herd owned by Chas. Schultz and enrolled in the Eau Galle association stands in second place with 64.7 lb. fat, 1,595 lb. milk. A ten cow mixed dairy in the Granton Association is in third place with 61.8 lb. fat, 1,567 lb. milk while 14 registered Holsteins owned by J. W. Lawton is in fourth place with 61.6 lb. fat, 1,819 lb. milk.

LAWRENCE COUNTY TESTING

Jewel, a purebred Holstein owned by H. A. Freed, Racine, is the February leader of the Westfield Cow Testing Association which operates in part of Lawrence County, Pa. H. R. Smith reports that twenty-six herds containing 260 cows were tested, of which thirty-two produced more than 40 lb. fat, five more than 50 lb., while eight exceeded 1,200 lb. milk. Jewel led for the production of milk and fat with 1,948 lb. milk, 66.2 lb. fat her average test being 3.4% fat. Jerseys were second and third. Brightie, a purebred Holstein, owned by H. W. Dubbs was in fourth position with 1,578 lb. milk, 53.7 lb. butterfat; a three-year-old, named Greer, owned by H. B. Chambers, was fifth with 1,575 lb. milk, 53.6 lb. fat. E. B. Vensel had a purebred Holstein, a three-year-old, in the list of the ten highest producers.

The Volant Association which operates in the same county contains twenty-seven herds composed of 275 cows. There were sixty-three that produced over 40 lb. fat, seventeen over 50 lb. and twenty-four exceeded 1,200 lb. milk, reports the tester, Paul J. Stonebraker.

A purebred Jersey headed the list with 59.2 lb. fat but she produced only 987 lb. milk. A purebred Holstein in the herd owned by W. McMillin & Son was second with 1,695 lb. milk, 55.9 lb. fat; a grade Holstein was third with 54.6 lb. fat. T. S. Minor, who owned this cow, had a purebred in the list of the ten highest producers with 52.9 lb. fat, 1,603 lb. milk to her credit. C. L. McMillin also had one on the list with 51.8 lb. fat.

BLACK AND WHITES LEAD

Seven black and white cows in the herd of E. A. Vischer, and enrolled in the Preston, Minn., Testing Association carried off high herd honors for March with an average production of 1,374.1 lb. milk, 43.8 lb. fat. Second high herd was also composed of seven Holsteins and owned by Earl Lichty, their average being 41.1 lb. fat, 1,312.6 lb. milk.

Miller Crest Concordia Avarda, owned by Mr. Lichty was high individual with 64.2 lb. butterfat from 2,142.1 lb. milk to her credit.

FIRST IN HER COUNTY

The first cow in Lee County, Illinois, to produce over 1,000 lb. butter in a year is Johanna Segis Marjorie, a five-year-old Holstein owned by Henry Hey of Hill Den Farm, near Dixon. Her record for the full year was 1,010 lb. butter, 24,650 lb. milk. The Hill Den dairy now numbers seventy head of Holstein and this herd recently passed a clean tuberculosis test. Mr. Hey formerly owned one of the best Brown Swiss herds in the country.

ANOTHER HOLSTEIN FOR PENN STATE

Leona Johanna Pieterfje 4th is a four-year-old Holstein of excellent dairy type and good breeding. She was recently purchased by the Washington County Holstein Breeders' Association from W. S. Grimes of West Brownsville and was presented to the Pennsylvania State College. The Dairy Department of State College recently acknowledged her receipt.

VACCINATION ADVISED

Dr. T. E. Munce, head of the Bureau of Animal Industry of Pennsylvania, has advised livestock owners of the Keystone State to vaccinate their herds this spring to avoid possible outbreaks of anthrax, blackleg, and hemorrhagic septicemia. These are dangerous diseases which cause heavy lossess before treatment can be instituted.

ON RUMPUS RIDGE

Jake—"I hear your wife's maw had some trouble t'other day with a pedler." Gap—"Well, no, not ter say trouble, precisely. She jus' sorter slapped him out of the door, kicked him half way across the yard, jumped on him and threw him over the fence. If she'd been right well, I reckon she'd a' handled him tol-able rough."

He: "What do you do for a living?" She: "I'm a dairy maid in a candy kitchen." He: "Dairy maid in a candy kitchen! What do you do?" She (bashfully): "Milk chocolates."

REGISTERED HOLSTEIN YEARLING BULL cheap. 30-lb. dam, 32 lb. sire. Also heifer calves. ALEX. MURDOCK & SONS, Wyoming, Pa.

GOOD DEMAND FOR GRADES

A good sale of grade Holsteins was reported March 27th, when the Jasper Mitchell herd was dispersed, near Blue Springs, Nebraska. Twenty-five cows in milk were sold for an average of \$145 and a number of yearlings brought \$75. The grand total for the fifty head of cows and calves was \$5,000. The herdsire brought \$275. All of the animals with the exception of the bull were raised on the Mitchell farm. The sale was well attended by dairymen from southern Nebraska and northern Kansas.

STEPHENSON COUNTY SALE

A sale of purebred and grade Holsteins was held under the auspices of the Stephenson County Holstein-Friesian Association at Freeport, Ill., March 27th. Thirty-eight head of purebreds averaged \$132.90 and nine grades averaged \$110, the grand total being \$6,040. The offerings included a number of calves, male and female. The top price was \$210 for a cow consigned by Hammond & Reiland, Stockton, and purchased by Hoefer & Paulhill, Pearl City. The highest priced grade was consigned by L. M. Swanzy & Son and purchased by Chas. Maaske of Orangeville, for \$170. Purchasers of purebreds were:—Albert Stanley, Seward; Homer Hitchcock, Pocatonia; Leo Keller, Freeport; Loudon & Demel, Rockford; R. Winchester, Pocatonia; and R. E. Tapley, Elizabeth.

HOLT HERD TO BE DISPERSED

On May 8, at Harrison Valley, Pa., the W. M. Holt herd will be dispersed at public auction, Mr. Holt having already sold his farm.

The Holt herd consists of thirty head of cattle. It is headed by Colantha Segis Homestead De Kol, one of the best bred bulls in Pennsylvania. This three-year-old bull is by Sir Walker Segis Homestead, a son of Piebe Laura Ollie Homestead King and Beauty Beets Walker Segis, 1,230.34 lb. butter, 30,814 lb. milk in a year. This cow was from a dam with a 1,000 lb. year record and is one of the three 30,000 lb. daughters of King Segis Pontiac Count. As the Piebe bull has two 30,000 lb. daughters including the American champion for year butter production, May Walker Ollie Homestead, it can be seen that Sir Walker Segis Homestead combines the blood of two great transmitting sires.

Colantha Segis Homestead De Kol is from Colantha Fobes Helen De Kol, 25,107.5 lb. milk, 1,076.86 lb. butter, in a year, 681.3 lb. milk, 31.48 lb. butter in seven days. She is a daughter of Sir Hengerveld Oak De Kol, whose dam made over 36 lb. butter in a week and over 900 lb. in a year.

Colantha Segis Homestead De Kol has a great combination of producing blood

PEDIGREE EXPERT

Get our R. Austin Backus for your sale—in the box at more sales during the past six months than any other pedigree man. Book your date before it is too late.

BACKUS PEDIGREE CO., MEXICO, N. Y.

in his pedigree. His two nearest dams averaged in year test 1,158 lb. butter, and nearly 28,000 lb. milk. Each of them average well over 100 lb. milk a day in thirty-day test. He is closely related to many wonderful producers. This bull has ten daughters in the sale and they show splendid promise.

In this dispersal sale there are 26 females, 16 of which are sired by bulls whose dams made 30 lb. or more butter in 7 days official test. Some of the offerings are sisters to 30 lb. cows and have a number of daughters in the sale. Many have A. R. O. backing on both sides of the pedigree. The herd is young. There are only four cows that are over six years old and one of these is the foundation cow of the Holt herd. This is a breeders' herd as with the exception of three head Mr. Holt has raised all of his cattle. Mr. L. S. Dibble of Westfield, Pa., is the sale manager. He informs us that the sale will be held rain or shine and that the farm machinery will be sold in the forenoon. The auctioneer is Harry Scott, Canaseraga, N. Y., and the animals will be sold subject to a 60 day retest.

STROCK PARTNERSHIP DISSOLUTION

Seven different animals exceeded \$200 in the Strock Partnership Dissolution Sale held March 25, 1924, on the farm at Mechanicsburg, Pa. There were a number of very small calves and if these and their dams were counted as one offering, following the usual custom, the average was \$103.03 for fifty-five lots. The top price was \$290 which G. Weir Strock paid for Corliss Farm Josephine Alcartra, a four-year-old with a large cow testing association record. Mr. Strock took Boiling Springs De Kol Segis, a daughter of Lothian De Kol Korndyke for \$265; L. D. Nailor of Carlisle, paid \$251 for Dutch Lyons Aaggie Segis, a fine milky heifer sired by King Aaggie Segis De Yong from a cow with a good C. T. A. record.

The herdsire King Aaggie Segis De Yong, just seven years old went for \$121 to James Davis, Jr., Mechanicsburg, who certainly got a bargain in this handsome son of King Aaggie Segis and a 30-lb. double granddaughter of Dutchland Colantha Sir Inka.

Four grade cows sold for \$338. The total amount of the sale was \$7,490. The other purchasers are:—H. S. Albright, Lisburn; A. C. Sheets, Geo. B. Livingstone, C. C. Farence, East Berlin; C. H. Brunner, Eugene Rider, H. E. Stoner, J. L. Bashaugh, H. A. Weber, Mechanicsburg; C. C. Kimmel, Albert Thomas, N. F. Stam-

IRWIN HERD TO BE SOLD

John B. Irwin, prominent Holstein breeder of Minneapolis, Minnesota, on April 5th, sold his Wood Lake Farm to be subdivided for residential development. We understand he retained the house and some of the buildings. In consequence the Holstein herd, numbering 150 head will be offered at public auction, May 12th and 13th.

The Wood Lake herd was established in 1885 by Everett F. Irwin, father of the present owner. John Irwin purchased Wood Lake Farm together with twenty-five cows from his father in 1900. Holstein breeders have always associated the name Ormsby with Wood Lake Farm. At this establishment Pietertje Maid Ormsby made two world's records for thirty day production; one as a three-year-old and the other at full age and since then descendants of this cow have always been the leading members of the herd. Duchess Skylark Ormsby made

her world's record for year butter production in this herd. She was purchased when a heifer at the R. P. Young dispersal and was developed in the Wood Lake herd under the care of Axel Hansen.

It is announced that Mr. Irwin will not be actively engaged in the Holstein breeding business for at least a year and may enter some other branch of the dairy industry.

"IT PAYS TO BUY THE BEST"

Registered Holstein Heifer Calves from son of first prize bull of New York State. Beauties \$60 each. Registered, transferred and express prepaid east of Mississippi. NU-BORN FARMS, Jasper, N. Y.

Don't forget one thing and it is this: All that glitters is not gold, and, furthermore, all that bubbles is not beer and all that kicks is not whisky.

**Rag Apple Korndyke**

Let me sell you grandsons and granddaughters of this famous sire who was by Pontiac Korndyke and from a former World's champion, a 31-lb four-year-old and a full sister to the first cow to make 1,000 lb. fat in a year.

Herd Accredited. Prices Reasonable.

KING MEAD SEGIS PONTIAC

has the right to sire producers, for his pedigree includes the names of some of the greatest transmitting sires the breed has ever known, including: King Segis, Pontiac Korndyke (eight times), Hengerveld De Kol (eight times), King Segis Pontiac, King of Pontiacs, King Pontiac Champion, Aaggie Cornucopia Johanna Lad. The herds he heads are ACCREDITED.

Let us price you one of his sons.
LENKERBROOK DAIRY FARMS
R. D. 4, HARRISBURG, PA.

HE COMBINES AMERICAN AND CANADIAN BREEDING

Calamity Segis King De Kol has been the junior herdsire at Waldron Farm, owned by Mrs. Maud Dwight of South Otselic, New York. This bull, who is well grown and nicely marked, is splendidly bred. His sire, De Kol Plus Raymondale, is the son of the world's champion for one year and for two years butter production, De Kol Plus Segis Dixie, 1,686.64 lb. butter in a year strictly official test, world's record over all ages and breeds. In two successive years this cow has averaged over 30,000 lb. milk and has produced 3,126 lb. butter. De Kol Plus Raymondale is by a son of May Echo Sylvia, the only cow ever credited with making over 1,000 lb. milk in seven days. The records of this cow and her near relatives are too well known to need repeating here. We may say in passing that the two nearest dams of De Kol Plus Raymondale have seven-day official records that average well over 40 lb. butter.

Calamity Segis King De Kol is from Raymondale Calamity Segis. This young cow as a two-year-old produced 55 lb. milk in a day at two milkings and she tested 4% fat. She is from Calamity Kate Pontiac, 515.4 lb. milk, 25.94 lb. butter in seven days when just past her fourth birthday, a daughter of Pontiac Korndyke Het Loo, one of the very best sons of Pontiac Korndyke, whose 30 lb. daughters include the former world's champion junior two-year-old for both seven- and thirty-days butter production, Het Loo Pietertje, 30.32 lb. A. R. O.

Raymondale Calamity Segis is by a son of Korndyke Queen De Kol 6th. This cow was American bred but made her remarkable records in Canada. Three different years she made seven day records above 31 lb. butter and 700 lb. milk, her highest record being 37.36 lb. butter, 781.5 lb. milk, in seven days, 150.95 lb. butter, 3,099 lb. milk in thirty days. Year after year, this cow made splendid records both as a heifer and as a full aged cow and she is the best daughter of Korndyke Queen De Kol, who in turn is the best known daughter of the famous old time matron, Belle Korndyke, dam of Pontiac Korndyke and a number of other good transmitting sons and daughters.

Mrs. Dwight has a small herd of high quality and to avoid inbreeding it is necessary to dispose of this bull. In his veins flows the blood of some of the greatest record Canadian cows, some whose records were also recorded in the American registry and some recorded only in the Canadian registry but all good.

Waldron Farm is one of the many high-class Holstein dairy establishments in Chenango County, which in turn is one of the greatest dairy counties in New York State. Waldron herd is under state and federal supervision, the last test showed the animals in perfect state of health, so that in every way Calamity Segis King De Kol is desirable.

WANTED—A bull of good breeding and good individuality at a reasonable price. One ready for immediate service preferred but not essential.
C. L. DEERING, Lancaster, N. H.

OUT OF LUCK

Gee Whiz! I want to go fishin'
While the fishin's good,
But, Dad he says that I must help
Split up the summer's wood.
Gee Whiz! that's just the way it goes!
When Saturday comes 'round,
Dad never fails to mention
Some new job he has found.

Gee Whiz! the wiggly angle worms
Are big and fat this spring;
An' I guess there are plenty frogs
By the way I hear 'em sing.
But what's the use of talkin',
Gee Whiz! or even wishin'?
Dad never seems to think at all
About me goin' fishin'.

Soon I'll have to mend the fence
And weed the garden patch;
By that time the law won't leave
A fish that I dare catch.
Gee Whiz! I have to go to school
Five days out of a week
And on my way see other boys
A fishin' in the creek.

And every Sunday morning
I must go to church, Gee Whiz!
And so I lose the only chance
Of fishin' that there is.

DO YOU KEEP HOGS?

Our readers' attention is called to the advertisement of The Poland China Advertiser appearing in this paper. The Poland China Advertiser is in many ways a remarkable paper. It has between four and five hundred owners, practically all living in Michigan, Ohio, Pennsylvania and other eastern States, being particularly strong in Ohio and Pennsylvania.

These owners of Poland Chinas have formed a company which publishes a bright, newsy little paper, devoted to the interests of the Poland China breed and owners of Poland China hogs. The men who own this paper are practically all farmers, men who manage their own farms and do part of their own work. Consequently the cost of advertising in this paper as well as the subscription price is kept as low as possible, yet the paper is clean, up-to-date and interesting reading. It will pay owners of hogs to investigate this journal. Sample copies and full information will be cheerfully sent upon application.

DIDN'T LOOK RIGHT

A Negro, a new assistant on a farm down South, was asked to hold a cow while the farmer, a cross-eyed man, was to hit her on the head with an ax. The darky, observing the man's eyes, in some fear inquired:

"Is you gwine to hit whar you is lookin', boss?"
"Why, certainly," answered the farmer.
"Well, den, you hold de cow yourself, sah."

In the matter of shoes a woman can always wear a size smaller if it comes to a pinch.

YOUNG BREEDER TESTS GOOD COWS

Ideal Farm is owned by Cecil L. A. Resseguie of Kingsley, Pa., son of the well-known Holstein breeder, Frank Resseguie. Naturally, we would expect to find that Cecil was a lover of Holsteins and a mighty good hand with cows. Under his care some fine records have recently been made by members of the Ideal Farm.

Pietje Alcartra Fayne freshened January 4, 1924, with a big, square, robust calf. She had a seven day official record of 25.16 lb. butter, 632.7 lb. milk made as a five-year-old and in cow testing association work as a three-year-old is credited with 718 lb. butter, 17,168 lb. milk in a year. Despite the fact that she retained the afterbirth she milked 103 lb. on February 3d. Still Mr. Resseguie hesitated to order a tester. But on February 7th she had produced 685.5 lb. in the previous seven days; on February 9th, 702.5 lb.; and on February 11th, 708.5 lb. The

CECIL L. A. RESSEGUIE
Manager of Ideal Farm, Kingsley, Pa.

tester was wired for and arrived at noon on February 13th.

On February 23d, Pietje Alcartra Fayne completed a seven day record of 30.03 lb. butter, 707.7 lb. milk. She had averaged 101 lb. milk a day for two weeks. Mr. Resseguie says that had the test started ten days sooner he would have completed a thirty day record on this cow and on the barn milk sheet she is credited with 2,826.6 lb. for thirty days. The high day was 104 lb.

Pietje Alcartra Fayne is a daughter of King Pontiac Alcartra Pietje, Susquehanna County's famous son of King Segis Pontiac Alcartra and the former world's record junior four-year-old, Fairmont Zerma Segis Pietje, 35.61 lb. butter, 608 lb. milk. She becomes his highest record daughter for both milk and butter, his first 30 lb. daughter and the second to produce more than 700 lb. milk in a week.

The dam of Pietje is a 20.95 lb. three-year-old daughter of King Hengerveld Aaggie Fayne and the next dam is a 23 lb. cow. Pietje is a splendid animal, has

a straight top line, level rump, plenty of depth and capacity, and a well shaped udder.

At Ideal Farm they put individuality first, production second and breeding third. All three are nicely combined in Pietje Alcartra Fayne.

Pietje Alcartra Fayne is a heavy feeder and also a heavy drinker. Some days she consumed a milk can of water (40 quarts) every six hours. This was warm when given to her. She was given 16 lb.

PIETJE ALCARTRA FAYNE

30.03 lb. butter, 707.7 lb. milk in seven days, a daughter of King Pontiac Alcartra Pietje. Owned by Cecil L. A. Resseguie.

of beet pulp daily. This was weighed dry and then wet with hot water and molasses. She received 1½ bushels of small potatoes together with 20 lb. of corn and clover silage and all the clover hay she would eat up clean. In addition, some days she had 40 lb. of a mixture composed of the following:

400 lb. Distillers Grain
200 lb. Diamond Gluten
100 lb. Oil Meal
100 lb. Bran
100 lb. Ground oats
100 lb. Hominy
100 lb. Sweet feed (Alfalfa Hay and Molasses)
12 lb. Salt

Miss Korndyke Clothilde freshened on January 24th, giving birth to a bull calf by King Pontiac Alcartra Pietje. Although this cow also retained her afterbirth she produced 26.09 lb. butter, 558.7 lb. milk in seven days. She is full sister

MISS KORNDYKE CLOTHILDE

26.09 lb. butter, 558.7 lb. milk in seven days at twelve years old. A daughter of Walker Korndyke Copia. Owned by Cecil L. A. Resseguie.

to Spring Brook Clothilde 2d with 30.17 lb. butter, 641 lb. milk in seven days; 127 lb. butter, 2,705.1 lb. milk in thirty days and 105 lb. milk in one day. This pair of full sisters are sired by Walker Korndyke Copia, he by Walker Korndyke Segis, a son of King Segis.

On August 30, 1923, the cow, Imperial Clothilde De Kol Korndyke, was purchased at the Susquehanna County Breeders' Sale from the consignment of Fred Scott. This cow freshened on January 22d with a bull calf and she made a seven day official record of 27.34 lb. butter, 544.2 lb. milk. She is a small cow but a very good individual and, although she has no high record animals close up in her pedigree, she has proven herself a good producer.

Pietje Alcartra Fayne's latest offspring was a bull calf sired by Dutchland Konigen Creamelle Boy. Ideal herd contains two full sisters to this calf, one a three-year-old and the other a two-year-old. Dutchland Konigen Creamelle Boy was by King Segis Pontiac Konigen and from Dutchland Creamelle Colantha Vale, 26 lb. butter in seven days with an average of 90½ lb. milk a day. She has a year record of 20,701.7 lb. milk, 881.23 lb. butter. Her dam, Dutchland Colantha Vale, has a year record of 1,082.37 lb. butter, 27,625 lb. milk, is a daughter of Creamelle Vale with 1,082.37 lb. butter, 29,590.4 lb. milk in a year and she in turn is from old De Kol Creamelle, credited with producing 26,280 lb. milk in a year and averaging over 100 lb. milk a day for 100 days.

Mr. Resseguie plans to retain the young bull calf for a future herdsire. Last year the oldest daughter of Pietje Alcartra Fayne was bred back to her mother's sire, King Pontiac Alcartra Pietje. On October 5, 1923, she gave birth to a heifer calf. Mr. Resseguie further plans to mate this heifer calf with the bull calf just born thus intensifying the blood of King Pontiac Alcartra Pietje and Dutchland Konigen Creamelle Boy.

Choice Bull Calves

Sired by

**King Ormsby Veeman Korndyke**

who is by the 1,346 lb. year-record sire, King Ormsby Ideal, and from a record daughter of King Korndyke Sadie Vale, her dam by Sir Korndyke Pontiac Artis from a 30-lb. daughter of Sir Veeman Hengerveld. Our herd has passed two CLEAN tests, is under State and Federal Supervision and has never had a reactor. For stock of this quality write CLARENCE H. TITUS, Tunkh: smock, R. D. 2, Wyoming Co., Pa.

**Type,
Size and
Butter Production**

are the main points I kept in view when I selected **KING IDEAL FAYNE ORMSBY** to head **SUN SET VIEW HERD**.

His dam recently closed a year record of 21,194.9 lb. milk, 805 lb. butter, calving at twenty-five months old and is a daughter of King Sadie Vale Hengerveld.

His sire, King Ormsby Ideal, was by King of the Ormsbys from Emeretta Korndyke De Kol, 1,346.93 lb. butter, 28,035.7 lb. milk in a year.

Herd under State and Federal Supervision.

Wm. Benning

Susquehanna Co. Kingsley, Pa.

**ECHO BELLE MODEL KING**

heads our herd. He is by **CHAMPION ECHO SYLVIA PONTIAC** and from a 28-lb. daughter of 36-lb. cow whose dam made over 37-lb. butter in a week. Our bull has 87½% the same blood as **ECOSYLVY BELLE PIETJE**, 41.27 lb. butter in 7 days as a junior four-year-old. Can spare a few bred or fresh two-year-olds.

Herd numbers 85 head and is under State and Federal Supervision.

WARD D. LOOMIS

R. D. 4, Bainbridge, N. Y. Chenango Co.

AT THE LOS ANGELES COUNTY FARM

The Los Angeles County Farm has just completed three nice two-year-old records. Fobes Clothilde Ormsby Skylark in one year made 18,136 lb. milk containing 763 lb. butter. During the early part of this same lactation period she made 20.57 lb. butter in seven days. With her first calf as a senior yearling she made 20.09 lb. butter in seven days and a ten-months' record of 575 lb. She is a daughter of Sir Ormsby Skylark out of a 31-lb. daughter of Fobes Tritomia Homestead De Kol. Her son by Sir Ormsby Buffalo Mercedes was recently sold to E. F. Weaver of Norwalk.

Karlray Pietertje Pontiac in 12 months made 626 lb. butter from 14,657 lb. milk, while L. A. County Aralia De Kol Mead made a ten-months' record of 624 lb. butter from 15,482 lb. milk. This record was made mainly on three time milking schedule with twice a day milking for the last one hundred days. She is an excellent type of heifer and one of the best prospects in the County Farm herd for future records. Her seven-day record (age 2 years, 7 months) was over 18 lb. butter from 471 lb. milk. She is by a grandson of De Kol of Valley Mead 2d, and will qualify in the 305-day class to the service of a son of Whittier Pontiac Netherland 4th, the 1,139-lb. four-year-old that broke the State Record for the County Farm two years ago.

Dora Jeek Pontiac, another first calf heifer, made a ten-months' record of 578 lb. butter from just under 15,000 lb. milk, carrying calf 200 days. This is a daughter of the well-known foundation cow, Dora Jeek 2d, who now has four A. R. O. daughters, including two over 28 lb., a 19-lb. two-year-old, and a 24 lb. two-year-old. She is the first A. R. O. daughter of her sire, a three-quarter brother to Rosamaines Pontiac Netherland, who is making a name for himself at the Pot-tenger Sanitorium, Monrovia, Cal. Her son is heading the herd of Mr. Frank Geddes in the Palo Verde Valley and is developing into a splendid individual.

WILLIAM R. HARRIMAN,
Superintendent, L. A. County Farm.

BIBLE COLLEGE BUILDING HERD

A herd of purebred Holsteins is gradually being built up in Grantham, Cumberland County, Pa., by the Messiah Bible College. At the present time this herd contains about one-half grades but it is the intention to increase the purebreds both by purchase and by raising the purebred offspring until the herd becomes all purebreds. The president of the college, is Enos H. Hess, who has had considerable experience with purebred cattle and at one time had charge of a purebred Ayrshire herd. He is also quite a bee man so that students at the college will have an opportunity to partake literally of milk and honey. All readers of the BREEDER AND DAIRYMAN will join with the editors in wishing this institution and its president success in their enterprise.

Experience is a good teacher. It shows us what fools we used to be.

MICHIGAN HOLSTEINS

are Healthy.

MICHIGAN HOLSTEINS

are persistent producers

From this herd you can obtain Heifers sired by a 34-lb. bull from daughters of a 30-lb. bull and bred to a bull whose dam produced 35 lb. butter in 7 days.

Can sell one female or a carload, and a few real good bulls.

DAVID FALCONER

Scottville, - - Michigan.

SIR PONTIAC AAGGIE ABBY

My junior herdsire, is a son of

COLANTHA RAG APPLE PONTIAC whose dam made 601.5 lb. milk, 35.26 lb. butter in 7 days at 3½ years old. Her dam, 33.06 lb., is from a 31 lb. four-year-old. His five nearest dams have seven day records averaging 33.89 lb. butter, 617 lb. milk.

Herd Under State and Federal Supervision.

We have just what you want.

heifer calves.

Particulars on application
to

Eugene B. Bennett,
Allamuchy Post Office

Warren County New Jersey

A HANDSOME PAIR

Cloverland Kittie Beets No. 284501 was bred and raised by the late Edwin T. Gay of Attica, New York. She became the property of Judge C. R. Savidge of Milton, Pennsylvania. The cattle superintendent of the Savidge herd was Leon Gay, son of Edwin T., naturally, he took quite a lot of pains with Cloverland Kittie. On February 20, 1924, she dropped twin bull calves by Butter Boy Korndyke Johanna, the senior herdsire of the Savidge farm. She will be put in test and looks like making 30 lb. butter and 600 lb. milk in a week. As a six-year-old she produced 26.77 lb. butter, 588 lb.

**LEONA PONTIAC SPOFFORD**

102.4 lb. milk in a day; 651 lb. milk, 24.78 lb. butter in seven days at eleven years old. Owned by Judge C. R. Savidge, Milton, Pennsylvania.

milk in seven days and as a junior two-year-old made 20.51 lb. butter, 432 lb. milk in a week.

At eleven years old Leona Pontiac Spofford No. 227732 produced 102.4 lb. milk in a day; 651 lb. milk, 24.78 lb. butter in seven days. Previously as an eight-year-old she had a seven-day record of 487 lb. butter, 22.90 lb. milk. She is a daughter of Korndyke Pontiac Pet 9th and Leona De Kol Spofford.

**CLOVERLAND KITTIE BEETS**

Bred and raised by the late Edwin T. Gay of Attica, New York. Now owned by Judge C. R. Savidge.

On December 9th Leona Pontiac Spofford dropped a nice heifer calf by Butter Boy Korndyke Johanna. This handsome bull, who was the grand champion at the 1923 Milton fair, was sired by Colantha Johanna Lad 8th and was from May Butter Girl De Kol, 690.8 lb. milk, 30.92 lb. butter in seven days and 25,594.2 lb. milk, 1,067.53 lb. butter in a year. Butter Boy Korndyke Johanna has three full sisters with splendid records. Butter Girl Johanna made 588.4 lb. milk, 32.55 lb. butter in seven days as a junior four-year-old; Butter Girl Johanna Korndyke,

602.8 lb. milk, 24.23 lb. butter in a week as a senior two-year-old while the third full sister, Butter Girl May Korndyke as a junior four-year-old produced 659.8 lb. milk, 26.63 lb. butter in a week and 22,823.8 lb. milk, 955.47 lb. butter in a year.

SEVENTY HEAD ON EIGHTY ACRES

On 80 acres of land F. S. Borrer & Son of Tipton, Cal., keep 70 head of purebred Holsteins. They sell sweet cream and a little whole milk in Tipton. In this herd is Princess Evelyn Wayne Hengerveld. Last year this cow led the mature class in the ten-months' record Sub-Division B by producing 14,895.3 lb. milk, 704.31 lb. butter. Her average test was 3.7%.

In this herd Belle Korndyke Pontiac Daisy, a junior four-year-old daughter of King Korndyke Pontiac 2d, recently completed a seven-day record of 540 lb. milk, 30.24 lb. butter. As a junior two-year-old she made a year record of 21,000 lb. milk, 805 lb. butter and is again in long time test. This heifer has had three heifer calves all sired by Sir Aaggie Mead. One daughter of this bull is due to freshen this month.

BUREAU MERGER

The Pennsylvania Bureau of Foods and the Bureau of Chemistry are being merged. State Secretary of Agriculture Willits expects the merger to bring increased efficiency and economy in the campaign against unlawful sale of misbranded and adulterated food materials. It is expected that there will be a considerable saving by the merger.

Director James Foust, who for a number of years has been director of the Bureau of Foods, will be head of the combined Bureau for the present but will resign in April, 1925, when he will have completed twenty-five years in the State's service. He will be succeeded by James W. Kellogg, who is now assistant director and chief chemist and has been at the head of the Bureau of Chemistry for the last five years.

PAINTED FISH NOW

Did you ever hear of painted fish? John M. McKee, deputy secretary of agriculture for Pennsylvania, reports that agents of the State Department of Agriculture have found white salmon, dipped in coal tar to give them a reddish tint, sold as red salmon in the Philadelphia sea food markets. The Philadelphians will pay considerably more for red salmon than they will for the white variety and to meet the demand the fish were doctored in Chicago and shipped to Philadelphia. The State authorities are taking vigorous steps to stop any future traffic in painted fish.

\$150 takes pair yearling heifers. Sire—Clever Model Glista whose dam is a 34 lb. cow, twice over 31 lb. with 83 lb. milk daily. Dams are producers and by son of 31 lb. cow. Herd Accredited. Maple Grove Stock Farm, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

KEEP THEM GOING

One step won't take you very far, You've got to keep on walking: One word won't tell folks who you are, You've got to keep on talking: One inch won't make you very tall, You've got to keep on growing: One little ad won't do it all, You've got to keep them going.

THE TWO BARRED PROFESSIONS

Retired Gunner Officer, twenty-five, in need of funds; will do anything except robbing and office work.—Write Box W 402, the Times.—Classified ad in the London Times.

—“You love her for her wealth. What a base confession!” “Base? Not at all. It shows my democratic breadth of ideas, combined with respect for tradition. Beauty, intellect and refinement are mere accidents of birth, but money is evidence of ancestral and possibly hereditary foresight and force of character.”

whose sire and dam are both from cows that made over 31 lb. butter in 7-day official test.

The blood of several of the breed's greatest sires runs in his veins.

Our cows are producers and select individuals.

Herd under State and Federal Supervision, passed first test 100 per cent clean.

MURRAY A. MILLER

Sunny Lawn Stock Farm,
—Milton, R. D. 3, Pa.—
The oldest Herd in Northumberland Co.

Our Senior Herdsire King Pontiac Maple Knoll Ormsby

is by King of the Pontiacs from a daughter of King Korndyke Hengerveld Ormsby. She made 33.16 lb. butter in seven days and two different years exceeded 30 lb.

His daughters are producing profitably in the general dairy as well as making splendid official records.

His sons carry this great producing blood. We offer one, weight 800 lb., ready for service, from a 27.58-lb. daughter of a 24.85-lb. cow, for only \$175.

Hillside and Springbrook Farms
Trucksville Penna.

TIDY ABBEKERK PRINCESS MADALINE

This splendid daughter of the noted century sire, Tidy Abbecker Prince, is the dam of our junior herdsire.

He is by King Korndyke De Kol Changeling whose dam made 40.26 lb. butter in a week and was from a 30 lb. cow with over 600 lb. milk.

Get our prices on quality stock.

Herd under State and Federal Supervision. Established 1901.

BULL CALF from ACCREDITED HERD

Born, February 8, 1924

SIRE: WALKER LYONS COLANTHA, whose seventeen nearest dams average 31.17 lb. butter.

DAM: ALLIS FARMS ESTHER PONTIAC, 19 lb. butter in seven days as a junior three-year-old.

Calf is nicely marked, more white than black and a fine individual. First check of \$75 takes him.

Can spare a few heifer calves from A.R.O. dams.

L. L. ALLIS
Rummerfield, Pennsylvania

Best quality, Maple Syrup, \$2.00 per gallon, f. o. b. Wysox, Pa.

HOW TO BUILD A HOLSTEIN HERD

In 1911, Prof. A. L. Haecker, then head of the dairy department of the Nebraska State University, purchased an untested purebred cow, Miss Anna Gerben, No. 102680. She was a beautiful animal of excellent dairy type and she was a half sister of Katy Gerben, the most famous cow of Nebraska. Miss Anna Gerben was mated with King Gerben Lyons. Three daughters of these two animals are in the herd owned by the Nebraska School of Agriculture at Curtis.

Anna Topsy Lyons has just closed a year record of 25,281.3 lb. milk, 1,083 lb. butter and is the new milk and butter champion of western Nebraska. Early in the lactation period she made a seven day record of 576.9 lb. milk, 30.12 lb. butter and as a senior three-year-old she produced 23,032.5 lb. milk, 932.18 lb. butter in a year. One of her full sisters, Rose Gerben Lyons, has made over 108 lb. butter in thirty days tested as a full aged cow, while as a junior three-year-old she produced 15,025 lb. milk, 653.7 lb. butter in ten months. The other sister, Jane Gerben Lyons, as a senior three-year-old made 28 lb. butter in a week and 17,025 lb. milk, 635.8 lb. butter in ten months as a junior two-year-old.

The foundation for the dairy herd at Curtis was built by purchasing four purebred cows possessing dairy type and good backing but they did not have individual fancy records. Good bulls have always been used at the institution. King Gerben Lyons left thirteen daughters in the Nebraska School of Agriculture herd, ten of which are still living. These ten daughters, the oldest of which is seven years of age have long-time records that average 17,136 lb. milk, 710 lb. butter. This average will probably be materially increased as four of the ten are not yet full aged and are on test and giving every evidence of exceeding their former records.

AN IOWA HERD FROM ONE COW

In 1912, Charles A. Mark, of Iowa Falls, Iowa, purchased a ten-year-old Holstein cow, Florence Jewel De Kol 2d for \$175. This cow then weighed about 1,400 lb. and she had an official seven day record of 20.98 lb. butter, 514 lb. milk. At the same time Mr. Mark secured a third interest in a purebred Holstein bull, paying \$60 for his share.

From this start and without the purchase of any other females, a herd of forty head has been built on his 190-acre farm. Old Florence dropped three heifers before she ceased to be a producing member of this herd. Florence Jewel De Kol Rauwerd, one of the daughters of this foundation cow made 30.93 lb. butter in seven days, 120.37 lb. butter in thirty days as a five-year-old. A granddaughter of the old cow in C. T. A. work, produced 77 lb. butterfat in a month as a two-year-old and another made over 65 lb., evidence enough of their quality.

So far no females have been sold from

the Mark herd. There has been five pairs of twins dropped and nine of these calves were heifers. Seventeen bulls have been sold for an average of \$100 and a few others have been slaughtered. Besides the third interest in the first sire, four other bulls have been purchased to head the herd and the investment in the entire four has been just \$1,000 so that, viewed from any angle, the herd has been run at a profit.

The dairy production has been marketed in the form of cream sold to the cooperative creamery. The skim milk was fed to the hogs of which there is 100 raised each year. Home grown grains and skim milk make ideal hog feed.

STOCK AT SOUTH DAKOTA INSTITUTIONS

On March 8, 1918, the cow Redfield Colantha Alewin was purchased from the State School and Home for Feeble Minded at Redfield, S. D., by representatives of the Yankton State Hospital. In the Yankton herd she produced 706.9 lb. milk, 30.12 lb. butter in seven days as a seven-year-old and she has a year record of 22,215.2 lb. milk, 903.91 lb. butter. She is the fourth cow in the Hospital herd to produce over 100 lb. milk a day for a week while her highest day's record was 104.2 lb.

At the time of her purchase she had been bred to the bull Sioux Joh Lyons and in due time dropped a heifer calf which was named Yankton Colantha Alewin. This cow, as a five-year-old, made 540 lb. milk, 27.27 lb. butter in seven days, tested the same time as her dam. As a three-year-old she made 518.87 lb. butter, 13,436.3 lb. milk in a year. It is to be regretted that she has only three-quarters of an udder and is the only tested daughter of Sioux Joh Lyons.

The senior herdsire at the Hospital is King Pietertje Ormsby Fobes, a son of the famous old show bull, King Pietertje Ormsby Piebe. He has won a number of prizes and his pedigree shows a number of remarkable production records.

Through the courtesy of the Carnation Milk Farms, the Hospital will be given the opportunity to use the bull, Colantha Matador Delma, for ten months. He is a show bull, light colored and very handsome. He is a grandson of the noted Segis Pietertje Prospect.

The record of 30,753.4 lb. milk, 1,328.12 lb. butter recently reported for Piebe Laura Veeman Artis calls attention to the fact that her son, Sir Pietertje Laura Piebe, is in service in the herd owned by the State School and Home for the Feeble Minded. These two institutions are fortunate in having sons of big producing cows at their head and the result is seen in the quality of the young stock.

A teacher entering a street car saw a gentleman whose face seemed familiar, and she said, "Good evening."

He seemed somewhat surprised and she soon realized that she had spoken to a stranger. Much confused she explained: "When I first saw you I thought you were the father of two of my children."

RAISING DAIRY CALVES

The third article in the series on care of dairy calves deals with feeding. Two previous articles appeared in our issues of March 22d and April 8th. This series of five articles is prepared by the Pennsylvania State College.

The amount of milk to feed depends somewhat upon the animal, its vigor, appetite and size. The amounts given are for animals of the larger breeds, Holsteins, Ayrshires and Shorthorns. Calves of the Channel Island breeds, Jerseys and Guernseys, will take from one-quarter to one-third less.

		Whole Milk Per Feed
1st to 5th day	Morning	3 lb.
	Noon	3 "
	Night	3 "
6th day	Morning	4 "
	Night	4 "
7th to 9th day	Morning	5 "
	Night	5 "
10th to 12th day	Morning	6 "
	Night	6 "
13th to 16th day	Morning	6½ "
	Night	6½ "
17th to 21st day	Morning	7 "
	Night	7 "

At the end of the first three weeks it is advisable to change the feed gradually eliminating the whole milk and replacing with skimmed. Allowing two feedings a day the following proportions are suggested for each feed:

	Whole Skimmed
22d day	7 lb. ½ lb.
23d "	7 " 1 "
24th "	6 " 2 "
25th "	5 " 3 "
26th "	4 " 4 "
27th "	3 " 5 "
28th "	2 " 6 "
29th "	1 " 7 "
30th "	0 " 7-9 "
30-180th day	0 " 7-9 "

Growing calves should have all the clean, bright, mixed hay they can eat and in addition a grain feed. The following is a guide:

1-30 days	Morning	All they will eat
	Night	do
30-40 "	Morning	¼ lb.
	Night	¼ "
40-50 "	Morning	¾ "
	Night	¾ "
50-60 "	Morning	½ "
	Night	½ "
60-70 "	Morning	¾ "
	Night	¾ "
70-180 "	Morning	1 "
	Night	1 "

It costs from \$80.00 to \$100.00 to raise a heifer until she freshens and takes her place as a producing cow in the herd. It is important that she is well grown before she starts giving milk. It is the big cows that are the high producers and it is the high producers that are profitable. Therefore, develop the heifers into big strong individuals before they freshen.

It's all right to give the devil his dew. It's mighty scarce where he comes from.

MOVABLE MILK HOUSE

Many dairy farms are operated by tenants. The sanitary boards, departments of health and milk commissions of the cities have adopted regulations that call for the erection of milk houses, separate from other buildings. Where the tenant has operated the farm for a number of years and there has been no agreement as to whom should stand the expense of new buildings, the landlord considers that by building a milk house he would be adding to his investment without any corresponding return while the tenant does not feel like erecting a building which would become the property of the landlord.

Recognizing this state of affairs, the Philadelphia Inter-State Dairy Council has requested a firm of architects to design a transportable milk house so when the tenant finds it necessary to move to another farm he can take this building with him.

This milk house is constructed of eight inch yellow pine, either tongue and groove boards or ship lap, and can be put together in five sections—the four walls being each in a separate section and the roof making the fifth section. This permits the milk house to be taken apart and moved.

The entire milk house is light in construction, weighing only about one thousand pounds when completed. The roof is made of the same material as the sides with the cracks stripped in order to make them weather tight. Twelve bolts placed in the corners and in the corners of the roof join the entire house together and make a substantial building.

There are two windows in this milk house, besides the tight fitting door which is made of the same material as the remainder of the house. Ventilation is obtained by opening the windows.

The plans do not include a floor. In localities where the drainage is good and the soil sandy, earth floors may be used. Board floors are permissible providing they are smooth and tight while a concrete floor can be put in at very little expense.

The dimensions of the house are six feet by eight feet. It is six feet in height in the rear and about seven and one-half feet in front so that there is sufficient slope to the roof to insure good drainage.

Almost any farmer who is handy with tools can construct a building of this type. It contains ample space for the cooling tank which must be in the milk house and which has a capacity for taking care of a dairy of from fifteen to eighteen cows. It also permits sufficient room for a can rack for drying and airing the cans and utensils. The can rack can be placed on the outside of the milk house in order to permit the sun to have access to cans and utensils.

A little boy who was very much puzzled over the theory of evolution questioned his mother thus:

"Mamma, am I descended from a monkey?"

"I don't know," the mother replied. "I never knew any of your father's people."

With \$175 You Can Buy Calamity Segis King De Kol Born October 22, 1922

Sire:—DE KOL PLUS RAYMOND DALE, whose two nearest dams are De Kol Plus Segis Dixie and May Echo Sylvia, the two greatest producing cows known.

Dam:—RAYMONDALE CALAMITY SEGIS. On two milkings daily as a two-year-old, she produced 55 lb. milk, testing 4% fat. She is from a 25.94-lb. junior four-year-old and by a son of the 37.26 lb. cow, Korndyke Queen De Kol 6th, three records above 31 lb. butter and 700 lb. milk.

Besides being splendidly bred this choice bull is large for his age and nicely marked.

A NEW YORK HOLSTEIN DEALER

An avowed dealer is Linn Skinner of Norwich, New York. Mr. Skinner is now thirty-two years of age and says he started dealing in dairy cattle when he was sixteen and with the exception of the time he was in the army, he has continued to deal.

At the head of his herd is Colantha Paul Korndyke Lad. This bull is just five years old and was sired by Colantha Johanna Lad 8th from Wolfspring Korndyke Topsy, 26.32 lb. butter, 523.1 lb. milk in seven days with an average test of 4.03% fat. She is a daughter of Wolf-spring Corintha, 26.44 lb. butter, 588.1 lb. milk and her dam is Corintha 6th with 25.52 lb. butter, 663.4 lb. milk. Colantha Paul Korndyke Lad is a very handsome bull, deep bodied and straight, a typical son of Colantha Johanna Lad 8th.

Besides having a few grades, Mr. Skinner has thirty or more purebreds that include daughters of Pontiac Perseus, King Lyons and King Joh. There are also a number of daughters and granddaughters of King Pontiac Hengerveld Aaggie. He was by King of the Pontiacs from Allen-vail Hengerveld, a daughter of Hengerveld De Kol and Aaggie Sarcastic. There are also a number of other granddaughters of King of the Pontiacs. Some of these are sired by King Pontiac Boon Lilith, he by King of the Pontiacs from a 30.22 lb. cow.

DAM OF HERDSIRE INCREASES RECORD

Fairmont Lyndon Alcartra owned by Central Poor District of Luzerne County Farm at Retreat, Pennsylvania, is in test as a junior four-year-old. On April 9th she had completed a seven day test and had made just over 29 lb. butter, was gaining and is expected to go over the 30 lb. mark. She is the dam of Retreat Taxpayer, one of the bulls in the Retreat herd.

Fairmont Lyndon Alcartra as a senior two-year-old made official records of 21.41 lb. butter in a week, 88.83 lb. butter in thirty days. She is a daughter of King Segis Pontiac Alcartra and her dam is Lyndon Alcartra Polkadot, 33.03 lb. butter in seven days, 131.85 lb. butter in thirty days. She in turn is one of the three 30 lb. daughters of the noted Alcartra Polkadot, 29.09 lb. butter in seven days.

Uncle Henry Jones had died very suddenly, and a distant relative of the relict was offering her condolences. Finally the lady got round to the point where she felt she could decently ask a burning question.

"And what did poor Henry leave?" she inquired sweetly.

"Leave?" snorted the widow. "He left the barn only half painted, just as I told him he'd do!"

"I don't understand it," said the city man. "This seems to be a very modest looking cow, but the farmer said she was fresh."

PAY FOR QUALITY

There is said to be 12,000 head of dairy cattle in the Star Valley which is in Lincoln County, Wyoming, and borders Idaho. This valley is about 35 miles long and varies in width from one-fourth to six miles. The Snake River which flows through it furnishes an abundance of water for irrigation purposes and is fed by numerous springs and creeks which have their source in the mountains bounding the valley on the east and west. So far there is no railroad in this valley and everything purchased out or produced inside must be freighted in or out.

The dairymen of this district have concentrated on Holstein-Friesians. The Extension service of the State Agricultural College and the two creamery companies located there have helped to bring in purebred and grade cows from other states.

During 1922 the eight cheese factories in this valley produced 1,693,877 lb. cheese. This is shipped to Salt Lake City and the Pacific Coast. At present only enough butter is made to supply the local demand.

On May 1st of the past year a system of grading and classifying all milk for cheese-making was instituted. Under the new system the creameries pay five cents per pound more on the butterfat basis for first grade milk than for second grade. For the butterfat in second grade milk they pay the regular price as quoted for butterfat in No. 1 sour cream. A card showing the defect is attached to every can of milk that fails to pass for cheese-making. Milk with any of the following defects is graded as a second class product:

1. Sour milk.
2. Warm milk with a temperature about sixty degrees F.
3. Dirty milk.
4. Gassy milk.
5. Milk containing colostrum.
6. Milk which has been skimmed or watered.

WANTED COMPENSATION

A city attorney wrote a rustic justice of the peace asking him about a judgment that had been entered against a client in the latter's village and enclosing a 2-cent stamp for reply. Several days later there came back a postcard bearing the message:

"Your inquiry received. I beg to inform you that my time is mighty valuable just now. Corn-cutting is most high here, politics is sizzling and the bass-fishing is fine. If you would enclose a dollar bill it might stimulate me some. I paid \$10 once to a lawyer for answering a question and all he said was 'No.'"

If you are going to scatter seeds of kindness, don't wait for the winds of adversity to blow them away.

Mrs. D.: "I heard you talking to yourself while you were taking your bath, John. That's a bad custom."

Mr. D.: "I wasn't talking to myself; I was talking to the soap. I slipped on it and fell."

INFORMATION ABOUT ANCESTORS

Many of our readers have filled out insurance blanks where the insurance company seemed to take delight in asking questions about things to which the average person never gives a thought. The *British Medical Journal* has made a collection of answers to insurance questions and the following are taken from the list:

"Mother died in infancy."

"Father went to bed feeling well, and the next morning woke up dead."

"Grandfather died suddenly at the age of 103. Up to this time he bid fair to reach a ripe old age."

"Applicant does not know anything about maternal posterity, except that they died at an advanced age."

"Applicant does not know cause of mother's death, but states that she fully recovered from her last illness."

"Applicant has never been fatally sick."

"Applicant's brother, who was an infant, died when he was a mere child."

"Grandfather died from gunshot wound, caused by an arrow shot by an Indian."

"Applicant's fraternal parents died when he was a child."

"Mother's last illness was caused from chronic rheumatism, but she was cured before death."

QUEER LANGUAGE TO FRENCHY!

"Good morning," said the Yankee to the Frenchman who was visiting this country and believed he had mastered our language. "How do you do?"

"Do what?" he asked in a puzzled manner.

"I mean, how do you find yourself?"

"Saire, I nevaire lose myself."

"You don't understand me. I mean, how do you feel?"

"How do I feel? Oh, I feel smooth. You just feel me and see."

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

S. F. K. P. 6th BEAUTY

Notice the size, shape and type of this four-year-old daughter of Spring Farm King Pontiac 6th.

Her dam as a junior four-yr.-old, produced 609.3 lb. milk, 28.29 lb. butter in 7 days. A.R.O.

Our female herd, numbering 85 head, is under State and Federal Supervision and is T. B. Free.

They are bred to THE POTENTATE whose three nearest dams have official records that average 38.83 lb. butter, 612.9 lb. milk.

PRODUCERS IN IDAHO HERD

Near Rupert, Idaho, is a good Holstein herd owned by A. E. Ross. Several members of this herd are producing heavily. Princess Mollie Rupert recently made 2,551 lb. milk, 89.23 lb. butterfat in thirty days. De Kol Elderwood Dody made 1,882 lb. milk, 64 lb. fat.

While Princess was on test she received daily four pounds ground oats, six pounds ground barley and twenty pounds mangels together with all the alfalfa she would eat.

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published weekly at Harrisburg, Pennsylvania, for April 1, 1923.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared HOWARD C. REYNOLDS, who, having been duly sworn according to law, deposes and says that he is the business manager of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BREEDER AND DAIRYMAN PUBLISHING CO., Harrisburg, Pa.

Editor, Not any.

Managing Editor, HOWARD C. REYNOLDS, Harrisburg, Pa.

Business Manager, HOWARD C. REYNOLDS, Harrisburg, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

OWNER: THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

STOCKHOLDERS OF THE BREEDER AND DAIRYMAN PUBLISHING COMPANY are:

EUGENE B. BENNETT, New Haven, Connecticut.

G. H. TRUCKELL, Harrisburg, Pa.

HOWARD C. REYNOLDS, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is..... (This information is required from daily publications only.)

SWORN TO AND SUBSCRIBED BEFORE ME,

this 31st day of March, 1924.

HOWARD C. REYNOLDS,
Managing Editor.

[SEAL] RAE FREIBERGER, NOTARY PUBLIC.
My commission expires March 6, 1927.

THE TELEPHONE'S MONOLOGUE

I am a telephone. While I am broke I am in the hands of a receiver. I have a mouthpiece, but unlike a woman I never use it. Fellows use me to make dates with girls and girls use me to break said dates. Husbands call up their wives over me and wives call their husbands down over me. I never get to call anywhere, but sometimes the company comes and takes me out. I am not a bee but I often buzz. I am the bell of the town and while I do not get jewelry, I often get rings.—*The Northwestern Bell.*

The members of the excursion party gathered around the guide eager to hear any legends of the mountain which they had been climbing.

"They call this yere bluff Lover's Leap," he said. "I sorter fergit just why, but 'pears like the story goes that an old maid proposed to a feller on this spot, and he give a yell and jumped off."

Willow Brook Stock Farm

CREAMELLE KORNDYKE KONIGEN

heads a herd of real producers. Twenty head, of which half were heifers with first or second calf, averaged 10,211 lb. milk in the calendar year on twice a day milking.

The first Susquehanna County cow to produce 100 lb. milk in a day, the first 26 lb. junior three-year-old and the first 30 lb. cow of this county were all bred at Willow Brook.

A. L. BOWELL & SON

Accredited Herd Thompson, Penna.

Cows that produce and calves that rapidly grow into money can be obtained here at reasonable prices.

In everyday work our cows return a profit over cost of care and feed. They also make creditable records in A. R. O. test.

Come and see them.

Herd under State and Federal Supervision.

HORNLESS HOLSTEINS

Keystone Plum Johanna

is an example of the individuality and producing ability combined in hornless Holsteins. She produced 1,052.9 lb. butter, 22,190.7 lb. milk in a year and in two consecutive years produced 1,938.06 lb. butter, 40,236.9 lb. milk. Her full sister, Keystone Beauty Plum Johanna, was the former world's champion four-year-old for yearly production. This cow, like other members of the family carried a superb udder. It was photographed eight months after freshening by a Pennsylvania State College Professor who lectured upon it as an example of intensive development and perfect shape.

Let us give you a price on a hornless bull.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the Spotted Poland China Journal, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Bred in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

No. 9

The Kennedy Establishment

A Growing Holstein Herd of Bradford County, Pennsylvania

BETWEEN Rummerfield Mountain and the Wyalusing Creek in Bradford County, Pennsylvania, lies a stretch of good land which has been cut up in dairy farms. One of these farms belongs to W. B. Kennedy & Son, who keep thereon a well bred, good producing Holstein herd.

W. B. Kennedy, the senior member of the firm,

was formerly a breeder of Guernseys. He purchased his first purebred Holsteins June 30, 1911 but did not become a member of the Holstein-Friesian Association of America until 1915. We find this is the usual practice, a man buys a few purebreds, registers calves for two or three years at non-member rates and then realizing that he can cut the amount of the registry fee in half, pays his \$25.00 and becomes a member, not so much for the fact of being a member as because he figures it will be to his financial advantage to join the association. In other words, membership is financial rather than social.

The first member of the herd was Aruna Belle, No. 119704. She was purchased from Ellsworth and Stevens who were, at that time, actively engaged in breeding and dealing in purebred cattle. The cost of this cow was \$150.00. Her sire was Rauwerd Pietertje Paul, a son of Mutual Pietertje Paul and the 30 lb.

cow, Beauty Rauwerd De Kol. Aruna Belle left only one daughter and she, too, had only one daughter but yet there are in this herd animals descended from this cow in a direct female line.

THE KENNEDY HOMESTEAD, NEAR WYALUSING, PA.

Like most dairymen who start breeding purebred Holsteins, Mr. Kennedy had some grades as well as purebreds. In the early history of the herd the purebreds were bred to bulls owned by his then next-door neighbor, Charles W. Newman, owner of Merryall Farms. The grades were mated with Paul Korndyke Ken, a son of Korndyke Abbekerk Jo-

hanna Lad and Lilith Calamity Pauline. The herd has gradually been built up by the occasional purchase of one or two good animals and by the natural increase and occasionally animals have been sold. Mr. Kennedy, while not a dealer, has set prices on his stock when visitors asked for them and he has occasionally been taken up, yet we believe everyone of the first half dozen cows are represented in the present herd by one or more descendants.

One of the best cows in the present herd is Pauline Lilith Netherland now seven years old. She is a

daughter of Lilith Calamity Pauline 2d and Korndyke Abbekerk Netherland, a son of Korndyke Abbekerk and the wonderful producer and former world's champion, Milanhurst America De Kol with a year record of 26,443.4 lb. milk, 1,231.35 lb. butter made in strictly official test as a junior four-year-old. Pauline Lilith Netherland has an official record of

TRAVERSE ECHO SYLVIA KING

His three nearest dams have seven days' records averaging 33.05 lb. butter. Photo taken as a yearling.

19.77 lb. butter, 375.3 lb. milk. She was running at a 25 lb. gait and milking 80 lb. a day but went off feed so that her record does not indicate the limit of her capacity. Pauline is medium size, a very milky

looking animal, and Mr. E. P. Kennedy tells us, a rather delicate feeder. This cow has two daughters in the herd.

Another large cow in the herd is Wynola Pietje Wandermeere, a daughter of Sir Pontiac Wander-

MR. AND MRS. W. B. KENNEDY AT WORK

meere. As a senior four-year-old she produced 24.15 lb. butter, 497.4 lb. milk in a week. She is a good big cow with a splendid constitution.

The herd contains a number of good granddaughters of the well-known sire, Judge Hengerveld De Kol. These are fine, big cows and good producers. One of these is Betsy Hengerveld Fayne who has two young daughters in the herd and has an official record made as a three-year-old of 20.33 lb. butter with well over 60 lb. of milk a day. There is not much choice between this cow and her sisters, they are all good.

Like many other good Pennsylvania herds there are several animals of the hornless breeding, stock descended from the George Stevenson herd which has had a wonderful influence in this state. Aaggie Napol Korndyke Ken is one of these although she was bred and raised in this herd. She is one of its most promising two-year-olds.

Prilly Christine Echo Pontiac and Prilly Christine Sylvia Pontiac are twin heifers, big-boned, strong individuals. Their sire is Woodmont Echo Sylvia Champion, first prize three-year-old bull at the 1922 New York State Fair, a son of the 30 lb. cow, Butter Boy Empress, first prize mature cow and grand champion female at

the New York State Fair in 1921. These heifers are very promising.

Among the younger stock are five daughters of King Sylvia Johanna Pontiac who now heads the noted herd of Bernhard Meyer, Finderne, New Jersey. He is a son of King Echo Sylvia Johanna from Otego Valley Christmas Belle 651.2 lb. milk, 40.51 lb. butter in a week, dam of a number of good record daughters. At present there are twenty-one purebreds more than a year old and five heifer calves in the herd.

The present herdsire is Traverse Echo Sylvia King, a real handsome bull purchased at the Loyalsock herd dispersal by the Kennedys in partnership with their next neighbor, A. L. Burlington. He is a real handsome bull, deep bodied and straight and he has a wonderful pedigree. His

sire Echo Sylvia King Model, although young has a number of good record daughters including a 32-lb. junior three-year-old and he was by Champion Echo Sylvia Pontiac from Belle Model Pietje 36.13 lb. butter in a week as a junior four-year-old and three different records above 33 lb., two of which were made as a heifer.

The dam of this herdsire is Traverse Inko Johanna 33.27 lb. butter, 736.4 lb. milk in a week. She has

NEAR THE CLOSE OF THE DAY
The senior member of the firm bringing the Kennedy herd from the shady pasture.

twice made over 30 lb. of butter in seven days and has five A. R. O. daughters above the 34 lb. mark, one of which made 35.50 lb. butter in seven days and 950.75 lb. butter in ten months while another is a 32.92 lb. cow.

Traverse Inka Johanna is from a 29.71 lb. cow, Traverse Princess Inka, who has a year record of 940.80 lb. butter, is from a 25.56 lb. cow and is dam of three good record daughters, one of which made 37.94 lb. butter in seven-day official test.

Traverse Echo Sylvia King has a remarkable pedigree. His three nearest dams have seven day butter records that average 33.05 lb., his five nearest dams average 34.49 lb. and his ten nearest dams have a seven day average of 33.67 lb. butter. Fourteen of the fifteen dams appearing on a five generation chart have been officially tested and the average of their records is 33.175 lb. butter.

Included in the ancestors of Traverse Echo Sylvia King are many famous sires and producing dams.

His own dam who averaged 102 lb. milk a day for thirty days, is a granddaughter of Sarcastic Lad and of Homestead Hengerveld Crown De Kol. His sire is a son of Champion Echo Sylvia Pontiac, and, therefore, a grandson of May Echo Sylvia and of K. P. Pontiac Lass, the first 44 lb. cow and former world's champion. Three different years the sire's dam made

over 33 lb. butter in seven days and is from a cow that two different years exceeded the 37 lb. mark in seven day official test. The sire's dam is a daughter of Prince Hengerveld Pie'je, at one

time regarded as the greatest Canadian sire, a grandson of the great imported cow, Pietje 22d and a son of Princess Hengerveld De Kol, the highest record daughter of the century sire, Hengerveld De Kol. The dam has two daughters above 32 lb., the sire's dam has

a 35 lb. four-year-old daughter and the dam's dam has a 33 lb. and a 37-94 lb. daughter and four other dams, whose names appear on a five generation chart, have one or more daughters that have exceeded 30 lb. butter in seven day official test.

While a number of official records have been made in the Kennedy herd, yet there has been very little official testing done, the herd has been operated from a dairy standpoint. The only figures we have on everyday production were compiled in January

1923. The entire bunch of animals in milk averaged 55 lb. milk a day when the official tester was at the farm.

The Kennedy firm consists of W. B., the senior member and E. P. This young man was formerly in charge of a farm located near Pittsburgh and was in active service during the late unpleasantness. A third member of the firm is Mrs. Kennedy and a visit to the

house or a glance around the garden shows that to her is due a considerable part of the credit for the success of the Kennedys as farmers, citizens, and true type Holstein dairymen.

BETSY HENGERVELD FAYNE
20.33 lb. butter in seven days as a three-year-old. A granddaughter of Judge Hengerveld De Kol.

A "CLOSE UP"
of the milking herd owned by W. B. Kennedy & Son of Wyalusing, Pennsylvania.

Phenomenal Shorthorn Smashes World's Butter Record

"ALL records for butterfat production in long time test have been shattered by the wonderful performances of Melba 15th of Darbalara," is the official announcement of the New South Wales Department of Agriculture. This good cow is a Milking Shorthorn and is owned by the Scottish-Australian Investment Company of Gundagai, New South Wales. In only 300 days on three times a day milking this great cow is credited with a production of 29,755 lb. milk, 1,395 lb. butterfat or 1,743.75 lb. butter on the 80% basis. She is being continued on test for a year which will end in June.

In 300 days, Melba has produced practically as much butter as did the deposed world's champion, the Canadian cow De Kol Plus Segis Dixie, whose record as reported by Superintendent Gardner is 33,464.7 lb. milk, 1,686.64 lb. butter while her record as reported by the Canadian Association is 33,529.5 lb. milk, 1,730 lb. butter, the difference being that the reported Canadian record is made under government supervision

and under rules very similar to those of our semi-official test while the record as reported by the American Association was made in strictly official test with supervisors, either Canadian or American, present at every milking. Dixie's record was made on four times a day milking.

Melba 15th of Darbalara really regains the championship. She produced 29,423 lb. milk, 1,656 lb. butter in a year in a former lactation period on three times a day milking. This performance supplanted the great record of 1,587.50 lb. butter made by Bella Pontiac but before the details of the Australian record was published in this country, Agassiz Segis May Echo completed her record of 1,681.25 lb. butter and so regained the championship for the black and white breed. As Melba's record was completed before that of the Agassiz cow it is plain that, for a short time, she held the world's record for year butterfat production.

When Melba 15th of Darbalara was a four-year-old, she weighed 1,700 lb. when she was in milk and it is

safe to say that in condition she will weigh at least a ton. As a four-year-old, she produced 21,635 lb. milk, 954 lb. butterfat in 365 days on twice a day milking, becoming the champion of the Shorthorn breed for fat production and also the world's champion for year record made on milking twice a day.

Melba 15th of Darbalara comes from an intensely inbred family of milking Shorthorns, noted for remarkable production. Her dam Melba 7th was formerly champion of the Milking Shorthorn breed. Her sire was a noted Australian show bull and one of his daughters, Melba 17th of Darbalara, last November completed an Australian official record of 29,297 lb. milk, 1,173 lb. butterfat on three times a day milking. The Melba family has been owned for generations by

MELBA 15TH OF DARBALARA
Phenomenal Milking Shorthorn. Record in 300 days, 29,755 lb. milk, 1,743.75 lb. butter. Photograph by Professor H. H. Wing, Cornell University, N. Y.

Mr. J. T. Cole who, by skillful mating and selection, developed a herd of big producing cows from a very few original animals and without introducing any new blood. When the Scottish-Australian Investment Company was formed, they purchased the Cole ranch and Mr. Cole was appointed manager of the concern. Dairymen everywhere will watch with interest for the able cow, who will hold World's Records for production of butter for one, two and three year's tests, consecutive or otherwise.

Annual Meeting of the National Holstein Friesian Cow Swapping Association at St. Paul, Minn., June, 1920

MR. GEO. E. STEVENSON, former vice-president of the Holstein-Friesian Association of America, in a letter to the editor published elsewhere in this paper, commends the policies adopted by the Susquehanna County, Pennsylvania, breeders in the matter of conducting their sale. Mr. Stevenson also refers to his analysis of the buyers at the First Coöperative Sale held at St. Paul in 1920 at the time of the annual meeting of the Holstein-Friesian Association.

Mr. Stevenson read this paper at a meeting of the Pennsylvania Breeders at State College, June 24, 1920, when Mr. Aitken was making a concerted effort to

come into Pennsylvania with his famous whirlwind campaign and was defeated.

We are printing Mr. Stevenson's comments on the First Coöperative National Sale for the benefit of our readers.

"I have just been looking over the June copy of the *Holstein Friesian World* containing an account of the annual meeting and the *Minnesota National Holstein Sale*. From the report of the sale contained in the issue above named, in the limited amount of time that I have been able to devote to it, I gather the following facts:

Of the 258 animals catalogued, 236 were sold in the auction ring, and in addition three bull calves, making a total sold of 239 head. From the totals in the said article, I find that California sold 11 animals for \$124,950 and bought 2 animals for \$44,300.

Minnesota sold 36 animals for \$132,125 and bought 66 animals for \$155,900.

Wisconsin sold 26 animals for \$93,050 and bought 72 animals for \$236,475.

Iowa sold 14 animals for \$48,875 and bought 9 for \$21,250.

Washington sold 23 animals for \$66,925 and bought 20 for \$46,625.

New York sold 35 animals for \$84,700 and bought 3 for \$7,800.

Canada sold 12 animals for \$26,000 and bought 1 for \$50,000.

Ohio sold 15 animals for \$32,425 and bought 4 for \$12,800.

Michigan sold 11 animals for \$20,050 and bought 9 for \$18,900.

Massachusetts sold 3 animals for \$12,050 and bought none.

Delaware sold 2 animals for \$6,000 and bought none.

Pennsylvania sold 7 animals for \$19,700 and bought 17 for \$48,625.

Colorado sold 7 animals for \$13,075 and bought 3 for \$4,850.

Illinois sold 7 animals for \$12,075 and bought 8 for \$12,750.

North Dakota sold 4 animals for \$6,725 and bought 6 for \$10,550.

Nebraska sold 8 for \$11,650 and bought 1 for \$2,000.

Texas sold 1 for \$1,450 and bought none.

Connecticut sold 5 for \$6,725 and bought 2 for \$7,400.

New Jersey sold 5 for \$5,200 and bought 11 for \$32,276.

South Dakota sold 5 for \$4,950 and bought none.

Indiana sold none and bought 1 for \$7,200.

Missouri sold none and bought 1 for \$3,300.

Kansas sold none and bought 1 for \$1,150.

From the individual sales, I dig out the following facts:

Seventy-two of the 239 animals sold were bought by consignors; at least 5 animals additional were bought by dealers; 15 other animals were bought by prominent breeders and probably a great many more were bought by breeders whose history I am not familiar enough with to identify them as prominent breeders.

The highest priced animal of the sale was bought by a prominent consignor associated with another breeder, which will be severely criticised as not a bona fide sale at actual value.

The second highest priced animal in the sale was sold to a prominent breeder in the same state that the consignor came from, under the circumstances that will also be questioned as to bona fides.

The highest priced female in the sale consigned by an officer of the National Association was purchased by his brother, under the circumstances that will also be questioned by the observant dairyman.

A prominent Pennsylvania officer of the National Association sold 5 animals for \$19,700 and bought 9 animals for \$24,550.

Another prominent Pennsylvanian, who recently conducted a sale in Pennsylvania to which he consigned quite a number of his animals from his own herd purchased about \$24,000 at this sale.

One of the great dairy farms and condensed milk companies sold 11 animals for \$31,350 and bought 17 animals for \$48,525.

A director of the Association and consignor sold \$48,250 and bought 5 animals for \$16,350.

I don't believe the best interests of the Holstein Friesian Breeders of the country is served by transferring the Holstein Friesian Association of America into a National Cow Swapping Association. I don't believe it is proper for a National Breeders Association to be organizing State Associations for the selling or swapping of purebred Holstein cattle, nor that the best interests of the real breeders will be served by any such performance. I am informed that the animals to be offered at these sales are subject to inspection by the officers conducting the sale, and it is very natural that both the National Organization and the State Organization, will sell animals from the herds of those members who approve of their methods and support them and will discard and reject animals from the herds of members who oppose the ideas of the National Manager and the officers of the National Association and the State Association. I can't believe that the best interests of the Holstein dairy farms of the country are going to be served by any such performance as evidently took place at St. Paul."

GEORGE E. STEVENSON.

Tilly Alcartra Slaughtered for Foot-and-Mouth Disease

THE evening papers of April 29th, carried the news that the high class Holstein herd owned by Fred Hartsook of Lankershim, California together with the famous Tilly Alcartra was infected with foot and mouth disease and was at that time, slaughtered or being slaughtered. The trouble broke out a week previous in the calf barn. As this barn is some distance from the general dairy, and operated with a separate set of men, it was hoped that the rest of the herd might escape but this was not to be and on the 28th a number of the cows were found to be infected. The herd was headed by Sir Aaggie De Kol Mead while Sir Pietertje Ormsby Mercedes 37th had been leased, and the cows

included animals that had made tremendous records during the past two years.

A little more than a week previous the herd of D. L. Wright of Pasadena, valued at \$35,000 had been slaughtered. In the herd was Prince Beauty Walker Beets for whom \$8,000 had been paid.

The Hartsook herd represented a big investment as Mr. Hartsook has been purchasing for some time past and if he attended a sale generally took a number of the highest priced animals. This herd generally stood very near the top in the Los Angeles Cow Testing Association monthly reports. Many of the cows were on long time test and remarkable records had been made. The latest to receive special notice from the office of the Advanced Registry was the record of 28,966 lb. milk, 1,280.05 lb. butter made in a year by Bessie Snowball De Kol who was also credited with a seven day record, made in the commencement of her lactation period, of 40.37 lb. butter.

While the slaughtering of Tilly Alcartra and Sir Pietertje Ormsby Mercedes 37th was a distinct loss to the breed yet we believe the destruction of more than 300 good purebreds, many of them young, was a much greater catastrophe. Tilly Alcartra was over fifteen years old. Had she lived until October 2nd of this year, she would have been sixteen and her usefulness was about over. Her record of 1,189.03 lb. butter, 39,451.4 lb. milk in a year, world's record when made, was made as a five-year-old. Her record of 1,323.02 lb. butter, 33,425.3 lb. milk, again world's record when made, was made as a nine-year-old and her record of 40.78 lb. butter was made in the earlier part of that lactation period. She had been sent to Los Angeles by the Morris Corporation to be bred.

Sir Pietertje Ormsby Mercedes 37th was an old bull, attaining his eleventh birthday on the 27th of last December. The performances of his daughters in the general dairy, in the show ring and in test work show that he was a remarkable sire—one of the greatest the breed has ever produced.

The latest reports from California are of an encouraging nature. The infection is still confined to a limited area. The disease has been found on 240 farms and, in round figures, 52,000 animals, cattle and swine, have been slaughtered, many rather to prevent the disease than because they were infected. The veterinary authorities report the fullest coöperation from dairymen and cattle owners. It is the custom in many parts of California to take beef cattle and dry dairy cattle to the hill pastures for the summer months. All herds are inspected before they are moved and the roads are patrolled in order to see that no cattle are moved at night or without a veterinarian's certificate to show that they are in good health. Everyone seems optimistic that the disease will be confined to already infected districts and that before very long the trouble will be entirely stamped out.

"Never lose an opportunity of seeing anything that is beautiful; for beauty is God's handwriting—a way-side sacrament. Welcome it in every fair face, in every fair sky, in every fair flower, and thank God for it as a cup of blessing."—Ralph Waldo Emerson.

The Susquehanna County Sale Plan

(Concluded from a previous issue.)

A SECOND interesting series of letters have arrived in the BREEDER AND DAIRYMAN office in answer to the letter of Dr. Thompson regarding the Susquehanna County plan of prohibiting consignors from bidding in a sale to which they have consigned. Perhaps the chief criticism that can be made is that practically all the letters come either from people who are interested in promoting sales or else from breeders who are selling part of their surplus stock through consignment sales even though they buy in such sales. It might be argued that auctioneers, pedigreemen and sale managers would naturally endorse present practices in the consignment sale business.

On the other hand, a vigorous endorsement of the Susquehanna County Plan comes from George E. Stevenson, veteran Holstein breeder and former vice-president of the Holstein-Friesian Association of America. Mr. Stevenson has severely criticised practices that prevailed in some of the great consignment sales of the past. His objections to "deals" between consignors are well known. Men who are building their herds, do not have anything to consign and have not had experience from the consignors' angle, naturally hesitate to put their opinions in print yet such men constitute more than 50% of the purchasers at public auctions. The questions raised by Dr. Thompson and the letters appearing in the BREEDER AND DAIRYMAN are evidently interesting owners of Holsteins and we hope to have more letters on this subject appear in future issues.

Mr. S. R. Miller, who has had many years of experience as a public sale manager, mentions one evil that cannot be too strongly condemned and that is, "auctioneers or pedigree directors making a deal with one or two consignors to go fifty-fifty with them on all over a stipulated price." It is impossible for anyone connected in any way with such a deal to give equal service to all consignors to say nothing of service to the public. An auctioneer or pedigreeman who enters into such an arrangement should be shunned by sale managers and should, for the good of the sale industry, be driven out of the business. Such trickery could easily work to the disadvantage of the seller for a deal of this kind could be made with prospective purchasers to whom stock could be struck off before all bidding on those particular animals had ceased.

The letters will be read before the Susquehanna Breeders at their next meeting and the decision reached in regard to the next sale will be communicated to the Holstein press by Dr. Thompson. Read over the letters appearing in our issues of April 22 and May 8, and write in your own opinion on this important subject.

The utmost that the Managers of a Sale can do is to guarantee that the sale will be absolutely clean and above-board. The reputation of the enterprise is primarily established thru the reputation of the men conducting the same, supplemented by the experience of buyers in previous sales. It is my firm opinion that consignors to a sale should have the privilege of bidding

on animals consigned to the said sale. Why not? There is everything to be said in favor of this and I can think of nothing substantial against it.

It is very probable that a man's neighbors know more about the value of his cattle than the distant public, and there is no rule or reason that ought to prevent his profiting by this knowledge of breeding, etc., just because he happens to be of the same locality or dealing in the same breed of cattle. Personally, I could have no greater compliment to my herd than to find my neighbors eager bidders for my cattle.

Very truly yours,

JOHN M. DENNIS.

TUNKHANNOCK, Pa., R. D. No. 2.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Relative to a consignor bidding on cattle in a sale would say:—"I see no reason why a breeder consigning cattle to a public sale should be denied the privilege of placing a value on said cattle; it possibly would be the better plan to limit this to one bid. I can see no reason that just because a breeder has consigned cattle to public auction he should be compelled to salvage any particular animal, or the whole outfit.

I do think it rather objectionable for breeders to be allowed the privilege of side-bidding on each other's cattle and thus making it appear that an animal brought an exorbitant price. Thieves will creep in.

Respectfully,
C. H. TITUS.

With reference to consignors at auction sales having the privilege of bidding on animals consigned by other parties, I should say, personally, that I am not in favor of restricting the buyers of public auction to any particular person or persons, who are able and willing to pay for their purchase.

We often find consignors putting in auction sales, a few animals to help the sale along, when at the same time they are not overstocked, and really may be in the market for cattle, or as Dr. Thompson says, may wish to add to the herd some females of a particular blood line.

Take the case of consigning a well bred bull,—something better than we often find new breeders buying. We would then be obliged to look to some of the older breeders for a market, with the suggested rule in effect, the breeder wanting the animal would be debarred from bidding, and thereby work a hardship on both the consignor and the prospective customer.

My idea is, don't put your cattle in an auction, unless you are willing to accept such prices as they will sell for, and agree before hand that you will of course accept such values as the public places on them. I feel confident that any locality offering cattle at either private or public sale, that are healthy and honestly represented, will soon gain a reputation that will enable them to market their surplus animals to advantage. We breeders and the public as a rule don't return to the same party for cattle year after year, if we don't get satisfactory stock at prices that will show us a profit, either in the dairy or as a breeding proposition.

Very truly yours,

ARTHUR DANKS.

April 23, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Regarding the question raised by Dr. Thompson and the Susquehanna Holstein Breeders Association,—

First, I want to say that it would be extremely difficult to make a hard and fast rule that would fit each and every instance. Neither should one, without very serious consideration, attempt the formulation of a set of rules to govern all buying

May 8, 1924

and selling. The Good Book says something to the effect that we must first cast the beam out of our own eye that we may see more clearly to cast out the mote which is in our brother's eye. Following the dictates of a clear and thorough working conscience one will not go far wrong but that man assumes a stupendous task who assumes to dictate the actions of another.

Dr. Thompson and his associates are to be highly commended in their effort to conduct their sales along the highest plane. Such a plan as is suggested of allowing no consignor to bid on any cattle in the sale might work out for the best in the long run but I cannot see that such a measure is entirely called for and it might work out as an injustice to others than the seller and be a detriment to the industry. I will say that I am very glad that such a practice has not been in vogue at all sales for, had such a plan been carried out at all sales of the past, many truly great transactions would never have transpired.

Just because a man has occasion to sell something, it does not follow that he has no immediate need of something else. I might have a dozen very high class bulls for sale and yet be in immediate need of a bull myself, not caring to use any that I have because of the intense inbreeding which it would occasion. This is but one of many perfectly legitimate reasons why a consignor might have an immediate need or market for something the other fellow is consigning. It is a discrimination which a liberal minded buyer would hardly ask and which is unnecessary to deprive one of taking advantage of a bargain simply because he has offered something else in the same sale.

Just plain criticism may be nothing more than general fault-finding, whereas constructive criticism may be highly commendable. Many a seeming virtue has been exercised to a point where it became deplorable, if not a distinct vice. There is much that might be said on either side of this subject. Such a regulation as is suggested is more drastic than at first might seem. I have only briefly touched upon the matter and I believe the advantages and disadvantages should be carefully weighed before such a rule is adopted. Yours very truly,

S T Wood, Liverpool, N. Y.

CHAMBERSBURG, Pa.,
May 1, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dr. Thompson's letter on public sales of registered cattle interests me. For fifteen years I have been a pedigree director at public sales. Sales conducted on the square, no boosting on by-bidding, are always the best. I see no reason one consignor should not buy from the other if it is done honestly and in good faith. One other feature of public sales I consider a great evil is auctioneers or pedigree directors making a deal with one or two consignors to go fifty-fifty with them on all over a stipulated price. Only good ones should be put in consignment sales.

As a breeder of Holsteins for nineteen years I believe our motto should be better Holsteins and better treatment of the buying public.

Very truly yours,

S. R. MILLER.

HOLSTEIN BREEDER AND DAIRYMAN,
HARRISBURG, PA.

In answer to Dr. L. M. Thompson's article in your paper of April 8th, I will try to give you my views of the Auction ring from my experience derived from a number of past years.

In the first place auctions are held to offer and dispose of stock, be it surplus, dispersion or consignment sales. The seller is 'supposed' to represent his stock just as they are and the bidder has the privilege of bidding as high and paying just whatever he may think they are worth to him. Right here let me say I can not see where it makes one bit of difference to this bidder who is bidding against him so long as he is not compelled to bid any more than he thinks the animal is worth to him.

I have read and heard about 'crooked sales' but I would like to have some one explain fully to me just what one is. You may have your suspicions but that is not proof of the matter. If there was much less talk about 'crooked sales' by some that no doubt have nothing but suspicion for their foundation, this matter of 'crooked sales' would soon die a natural death.

My observation has been that it is the 'novice' or ring side spectator that think and suggest the 'crooked sale' and not the real buyer.

The auction sales have been a means of establishing market values on our cattle for years and to-day a good brisk sale in a community does more to stimulate the business than all the printer's ink and all the expert advice that you can pour out to the people.

Bye-bidding and how are you going to prevent it?

What if you do make rules to prevent a seller from by-bidding any of his own animals or those of some other consignors, what is to prevent him from getting some total outsider to do this bidding for him?

As to one consignor bidding or buying an animal from some other consignor, I think it is perfectly all right and just. Why should a consignor be prevented from buying some animal that he may consider well worth the price it is sold at? At the same time where is there anything unjust to the other bidders. They can stop bidding when they think the animal has reached its value to them. Bidding of this kind usually stimulates the sale and also should add confidence to the outside bidder as to the real merits of the animal.

The whole sum of the auction ring reverts back to the honesty in the representation of the stock being sold by the consignor. Far too many consignors in their greed for money have tried to sell 'calico for silk' in the sale ring and this is, in my opinion, about the only real crooked place I have found around the auction ring. Misrepresentation.

None of us know 'just' what any animal is worth and what it should sell for exactly, so if the breeders will consign good straight animals and represent them just as they should be and take some pride in seeing that their customers are satisfied and that they are, I think this hearsay of "crooked sales" would soon be forgotten. R. E. HAEGER, *Algonquin, Ill.*

CENTRAL POOR DISTRICT
OF LUZERNE COUNTY
Wilkes-Barre, Pa.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

I believe to deprive a consignor the privilege of bidding on cattle of another consignor, would be a vital factor in discouraging auction sales.

There is no doubt that some very good animals pass through the ring and are bid off at prices that seem ridiculously high but such an animal is wanted and absolutely needed to complete the constructive breeding operations of this particular party. And, we find the reverse conditions, animals struck off at ridiculously low prices. Here we have an animal that is either undesirable or one whose line of breeding is possibly not so popular but very often fits into one particular herd. No sale has yet been held in which the two classes do not exist and any man should have the right to buy cattle when offered at public appraisal.

Very truly yours,
J. O. VAUGHAN.

SCRANTON, PA.,
May 2, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

I have read with much interest the article by Dr. L. M. Thompson, page 247, of your April 8th issue, and am very glad of the opportunity to once again express my strong objections to either National or Local Holstein Breeders Associations conducting or endorsing, aiding or abetting in any way consignment auction sales, which have degenerated in the past to cow swapping orgies among the consignors. If Breeders Associations are to conduct such sales I believe it to be essential to success to insist that the consignors do not under any circumstances bid on their own or other consignors cattle. You probably will recall my open attack against Ex-President Aitken's proposition to organize the State of Pennsylvania into a Holstein Selling Organization, which I expressed as forcibly as I knew how at the January 1920 meeting of the Pennsylvania State Association, reading at that time a letter addressed by President Aitken to E. B. Bennett, president of the State Association, advocating the organization of the State Association to employ someone "To look after their business of buying and selling animals" which President Aitken stated was "what we are putting these campaigns on for."

In my letter to him of February 14, 1920, among other things I stated "My own personal opinion is, that when you mix a National Association or a State Breeders Association with the selling game, you make a very serious mistake, as far as the best interests of the breed are concerned." "I believe the question of selling should be left to the individual breeder and the Breed Papers and it is a mistake for either the National or State Associations to take it up. I spoke openly against it at the meeting (refer to meeting of January 1920 at Harrisburg) and my attitude was sustained by a very large majority. I think if the manager of the State or National Organization makes it his business to introduce the purchasers to the breeders in the association in the buying and selling, it will surely work against the interest of the breeders who are least active in promoting the Breeders Organization. Let the sales end take care of itself?"

Again you may recall at a meeting at State College, I think in the summer of 1920, at which Mr. Aitken and Mr. Pollock were present and were the chief speakers advocating a State Organization, I again voiced my sentiments against the cow swapping orgies that were indulged in at the St. Paul Sale in the spring of 1920 and cited instances where noted breeders had swapped cattle at high prices by bidding on each other's consignments.

You probably recall my discussion of this subject at the annual meeting of the State Federation of Holstein-Friesian Clubs at Harrisburg in January 1923 and the incidents I cited of consignors bidding upon their own and other consignors cattle at consignment sales. Personally I decline to participate as consignor or bidder at any sale where bidding on or buying

of each other's cattle is permitted on the part of the consignors. The bidding and purchasing by consignors of each other's cattle have, in my judgment, done more to retard the best interest of the Holstein-Friesian breeders than even the crooked falsified advanced registry records alleged to have been made and that have attracted such very wide attention.

The last sale of the Susquehanna County Breeders Association in September last year was, in my judgment, one of the cleanest, most honestly conducted sales that I ever attended, and on my faith in its cleanness I placed a number of bids and purchased a couple of animals simply to show my appreciation of the high character of that particular sale. Therefore, I hope to see future sales in Susquehanna County, whether conducted by a group of individual breeders as individuals or as a State or County Organization, conducted along the lines of the last sale and an agreement made by the consignors that there will be no bidding upon each others or their own cattle.

Very truly yours,

(Signed) GEO. E. STEVENSON.

In Service Thirty-Three Years

FOR thirty-three years ending March 17th of this year, S. R. Miller of Chambersburg, Pa., has carried the mails. Through storm, wind, rain and mud, regardless of roads, Mr. Miller has carried to the rural dwellers, messages of importance, interest, love and affection.

Old and young alike have looked for his coming. Little children have eagerly watched from house, porch and stone wall for the first sight of his conveyance. First of all it was the faithful old horse and the sturdy buggy or sleigh and in recent years, the familiar flivver, but no matter what the vehicle, the driver was always welcome on account of the messages he carried.

Think of the happenings during the past thirty-three years. In March, 1891, Harrison was president. To many of those along his route, Mr. Miller brought the first authentic news of the presidential election of Cleveland, McKinley, Roosevelt, Taft, Wilson and Harding. During this third of a century one president was assassinated and another died in office. The German empire rose to be the greatest military nation and in a mad effort to dominate the world fell prone in the dust. European monarchs have lost their thrones; dynasties have been overturned; empires have been wrecked; and the United States of America has grown to be the World's mightiest nation. During this period this well-known Holstein breeder has been carrying the daily news to those living on his rural route.

On March 17th, Mr. Miller retired and will from now on confine his activities to managing sales and looking after his farm and accredited herd of thirty-five purebred Holsteins. Mr. Miller is in evidence at practically all the sales held in Maryland and southern Pennsylvania. He prepares the material for catalogs, sees that all the registry papers are up-to-date and transfer applications made out in due form, attends to the sale arrangements, is on hand sale day to explain the pedigrees and call attention to good points of the animals, and oftentimes supervises part of the shipping. One of his sons has been in charge of the Miller farm but we understand that, Mr. Miller himself intends to reside on the farm and will be right on the job from now on.

Few breeders in any community enjoy the confidence and esteem which the breeders of Southern Pennsylvania and Northern and Central Maryland extend to their friend and fellow breeder, "Simp" Miller.

I Need a Bull—

from a dam of Type and Proven Performance. He must be backed on both sides of his pedigree by producing lines of breeding, but Individuality will be considered before Records. No slopers considered, no matter how high the backing.

Address X. Y., care of

The
Holstein Breeder and Dairyman
Harrisburg, Pennsylvania

A Galaxy of Brunette Star Producers

By J. H. LEWIS

CONSTRUCTIVE breeding, based on a conscientious ambition to produce animals of true breed type is the fondest hopes of the Holstein breeder who has at heart the welfare of his profession as well as any material returns it has to offer.

The field I write about cannot afford hobbies—they are hard working folks who farm the stubborn glebe that they may sustain themselves and their families, and where dairy farming is important business, because it is an adjunct of that same stern necessity every honest man feels who tries to get by in this old world decently and honestly.

Purebred Holsteins owned by J. H. Fuerstenberg, Lancaster, Wis.
This herd averaged 433.8 lb. butterfat in C. T. A. work.

The John H. Fuerstenberg Holstein farm is on Route 5, out of Lancaster, the county seat of Grant County, Wisconsin. This breeder started on the bottom rung and is happy now since he has put class into his herd both for the results obtained on herd product as well as dairy product.

Pontiac lines are reflected in the breeding. Sir Ormsby Albina, No. 324996 is herdsire. He weighs about 2,300 lb. and is now in his fourth year. His two nearest dams averaged 1,100 lb. butter for a year. Heavy butterfat production is shown on both sides of the herdsire, especially notable records being attached to the dams on the sire's side, while as high as 38 lb. butter in seven day official is recorded on the dam's side.

Colantha Aaggie Korndyke, has a record of 12,902 lb. milk and 500.2 lb. butterfat, in 10 months and 22 days in the Lancaster Cow Testing Association. Another Fuerstenberg Holstein cow, Lady Onyx Belle Johanna IV, has a record of 15,340 lb. milk and 485 lb. butterfat in 11 months of association work. It is hardly necessary to repeat the cows all run true to standard form as the record of the herd in the year's work in cow testing association drawn down by the fieldman, Blaine G. Paulson, shows a butterfat production for the year of 433.8 lb. taking first place on high herd average for this association.

A fairly accurate description of the type brought out on this farm may be obtained from a close up of the photograph which shows cows of almost uniform size and conformation, more black than white with clean limbs, good udders, and a generally fresh appearance indicating both health and good care.

It took time, patience, care and real labor to bring the herd up to its present standard. One inured to hard knocks and hard work looks for the grind to continue and in that outlook is the same grounded am-

bition to continue the good results obtained, yes even to better them. Such a state of mind and mood is interesting to the close observer since there are other things to be noted as well as top class in the cattle themselves. It is the sincerity of the men and the women engaged in this work in following out high ideals for which the world may never give them credit but which is as much entitled to notice as that given the writer of a good book, or he of the cloth who preaches an excellent sermon. They do win the admiration of those in sympathy with these farmers, and their work will not go unnoticed. The pioneers in a great industry have a voice in the great economic foundations of a people and future generations will recognize they owe as much to those who till the soil and tend the herds as they do to teachers, doctors, lawyers, preachers and all others who cater to our needs, for the first great consideration in life is food, and without it we must seek its production.

Don't Increase Parcels Post Charges

POSTMASTER GENERAL NEW is reported to be in favor of the proposal to increase present Parcels Post rates by five cents on every package up to eight pounds in the first three zones. An attempt will be made to have Congress authorize such an increase. Some of the big wholesale merchant and grocery organizations are back of the movement. The extra receipts are to be used to pay higher salaries to postal employees, say those who are advocating the extra charge.

One of the big ideas back of the parcels post movement was to enable the farmers to sell and the city dwellers to buy, produce direct from the farms. With the exception of eggs, we doubt if the trade from farmer to city consumer came up to the expectations of the proposers, although the trade is considerable. Vegetables are bulky and heavy, fruit and meat perishable and the idea, have fresh farm produce delivered at your door by the postman was not always workable.

But the parcels post was a boon to the great mail order houses and their customers and the farmers have been able to buy city goods by mail and have them delivered right at their doors. The parcels post system was slow in getting started in this country, other countries had it in operation years before we did, but it has proved a convenience to the dwellers in the rural districts as well as to many living in the cities. It has helped bring many of the conveniences of the cities to those living on the farms and we trust that the effort to add to the charges for this service will fail.

The Influence of Bovine Art

ONE of our readers who evidently believes in prenatal mental impressions writes: "If the Holstein people expect to accomplish the most in upbuilding the type of their stock through the agency of 'true type or putty cows' they should have good pictures of the true type hung on the wall in front of the stanchions so that the breed cows may look upon them all the time. Such study of bovine art by bovines would surely have its influence upon the unborn calf."

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

May 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Basis of Breed Popularity

BY most dairymen and by many breeders of Holsteins the records made by animals enrolled in the various cow testing associations in the different states are construed as being of more value, that is, more indicative of the normal production of dairy cows, than are the records made under the A. R. O. and A. R. S. O. rules. There are several reasons for this. In the cow testing associations as at present conducted, the records are supposed to be what the cows actually produce in their everyday work in the dairy. The records recorded in the Advanced Registry office are believed to be and are the performances of the cows when given extra feed, extra care and, in some cases, every possible advantage that money can buy or man can connive. In the cow testing association records, profit is kept in mind; in the National Association records profit from the milk produced is utterly lost sight of and the aim is to make phenomenal records regardless of expense, trusting to get back the investment many times over by the sale of the animal herself or of her offspring thus basing the purebred livestock industry on speculation instead of economical dairy production. Dairymen who have to figure closely have come to the conclusion that the ability to produce under forced feeding is not transmitted nor is the ability transmissible to animals who pass their days under normal care and with normal feeding rations. Even should this producing capacity be transmitted it is not shown unless the descendant is placed in a test and given extraordinary care and large amounts of feed.

The dairyman has to produce milk and butterfat at a profit over the cost of feed and labor, plus interest

on investment and allowance for depreciation. If he cannot do this he is unable to stay in business. Men who are financially able to operate dairy herds or breeder's herds and lose money on them have other businesses or incomes independent of farm operations. They are not *true* dairymen. They are simply in the dairy business as a pastime or hobby.

In our everyday life we are inclined to let the spectacular overshadow the real and this is tremendously true of the men who own purebred Holsteins or who are in lines of business allied with the dairy industry, such as feed dealers, auctioneers, pedigreemen, writers of breed histories and contributors to agricultural journals and breed papers. Someone has said that "happy is the land that has no history" meaning that where there are no spectacular happenings there is usually steady progress. So in the Holstein business, it is not the sensational records made at great expense by selected cows given care and attention superior to that received by the majority of children but it is the everyday work of the everyday Holstein in the true dairymen's herds on hillside, plain and valley, that shows the progress of the breed and demonstrates its worth.

These remarks are called for by the splendid showing made during March by Holsteins, purebred and grade, in the cow testing associations. Maryland is not usually considered a Holstein state. Perhaps the men who have formed this opinion simply take things for granted and have never investigated, yet the ten high producers enrolled in Maryland Cow Testing Associations during the month of March were all black and white cows, grade or purebred. In the Upper Montgomery Association all ten of the leading herds were Holsteins. While we do not have the figures for the whole state, three associations of the seven reported were led by Holstein establishments and we believe that Holstein herds are everywhere very near the top.

The great dairy state of Wisconsin stands second in the Union for number of purebred Holsteins. Of 144 associations reporting their leaders no less than 103 reported that they were headed by a black and white cow and 53 associations report that the leader was a registered Holstein. The five highest producing cows in the state are black and whites, the first three of the five being registered cows. The herd standing in the lead for high average consisted of registered Holsteins a ten cow dairy with the splendid average of 67.2 lb. butterfat.

In Virginia, not generally regarded as a Holstein state, we have a similar story. The leader for the month is a grade Holstein with 104.3 lb. butterfat and an average of 90 lb. milk a day while the previous month she made slightly more fat and about 100 lb. less milk. Of the ten high cows five were purebred and two were grade Holsteins while the high herd for the month consisted of a dairy of ten purebreds with an average of 1,533 lb. milk, 52.7 lb. butterfat. The second high dairy, although consisting of only nine animals, included both grade and purebred Holsteins and eight of the ten high herds were black and whites.

It is the exception to find anything but a Holstein, grade or purebred, leading the Supervisor's report of the Dairy Improvement Associations of New York

State. Generally the five highest producers are black and white in color. While perhaps this is to be expected, considering the preponderance of the black and white cow in the Empire State, yet the uniformity of the reports indicate that it is not alone in numbers that the breed leads.

Another noteworthy thing about the cow testing association reports in the great dairy states is that, with scarcely an exception, the leading cows and the leading herds are owned by men who operate a dairy for their livelihood, again bearing out our contention that the popularity of the Holstein breed is due to the fact that Holstein cattle, properly handled, make a substantial profit over the cost of care and feed.

"A Wrong Policy"

THE *New England Farms*, which is published at New Haven, Connecticut, printed in their April 26th issue under "Holstein Notes," which we understand is edited by Frederick M. Peasley, Secretary of the Holstein-Friesian Breeders Association of Connecticut, the following article:

"When the Advanced Registry system was established the purpose of it was to make known to the owners of great producing cows and the public generally the facts about them. 'Advanced Registry Official,' abbreviated to 'A. R. O.,' was to be the sign of unusual excellence, and so it has been. As time passed and wise breeding resulted in more efficient producers, and feeding methods improved, it was found that the production that once was unusual and marveled at had become common and it was found necessary to raise the requirements in order to make 'A. R. O.' retain its distinguishing value. For the purpose of this article cows may be arranged in four classes:

- "(1) Untested.
- "(2) Meritorious, or those making former but not present A. R. O. requirements and entitled to a certificate of merit.
- "(3) Superior, or those having A. R. O. records; and
- "(4) Superlative, or those having records very substantially in excess of A. R. O. requirements.

"There are very many cows that remain in the first of these classes simply by reason of lack of opportunity and many others who could not qualify for any of the more advanced classes.

"In the conduct of a sale there are those sale managers who demand that every animal consigned shall be of the highest of these classes and those who are to-day arranging for the next annual sale at Richmond have made the requirements 25% higher than our present A. R. O. requirements. Taking the full-aged cows as an example: In the former A. R. O. requirements, for the purposes of this article called the meritorious class, 15 lb. butter in 7 days was required. Present A. R. O. requires 20 lb. butter. Present National Sale requirements are 25 lb. butter. It will be noted that there is no requirement for quantity of milk. Everyone who has been interested in Holstein cows for seven days or more knows that by having a Holstein cow freshen in high condition that she releases an abnormal

amount of fat into her milk for a considerable length of time and that her real dairy value cannot be accurately determined by weighing this excess of fat thrown off in this way, but that a very good indication of her quality in the amount of milk she produces. A few questions very naturally arise from the foregoing:

"Are meritorious cows desirable? If so, why exclude them from sales either National or otherwise?

"Are superior cows who meet our highest A. R. O. requirements good enough for National sale? If not, have we outgrown our latest A. R. O. program? If they are good enough why are they excluded?

"In making requirements twenty-five per cent above the superior class are the sales managers benefiting or injuring the A. R. O. system? In ignoring milk requirements for sale contracts and limiting requirements to fat production regardless of whether it is produced normally or otherwise are these managers really doing the breeders or the buyers a real service?

"Can these sale managers reasonably expect that breeders will cheerfully part with their necessarily limited number of superlative animals?

"Should sales of cows at our National sales be thus limited to buyers with superlative pocketbooks?

"Does such a policy advance or retard the progress of the breed?

"Are our sales managements really keeping up with the progress of the present day or are they still groping along under the old delusion that the rich men at sales of superlative cows are setting the prices that we may expect to get back at the farm for our untested, meritorious and superior animals? It has been said that any fool can ask questions, but that it takes a wise man to answer them—Please page the wise man."

The management of the Holstein-Friesian Association of America is directly or indirectly responsible for the condition referred to in the above article.

Since the taking over of the Association's management in Philadelphia in 1919 by the "Sale Millionaire Political Group" the Association has become increasingly active in supervising sales of a State and National character.

The first National sale after the Philadelphia meeting in 1919, which was held at St. Paul in June 1920, and every succeeding so-called National Sale has been, to an increasing extent, under the supervision of the National Association through its Extension Department and the State-Paid-Secretaries. Both the Extension workers and the State-Paid-Secretaries are now financed through the increased transfer fees.

We have persistently condemned the present policy of the National Association, contending that it should not function as a selling organization or act as a "go between" for the buyer and seller. We have told our readers many times that we did not believe that the breeders and dairymen should be taxed through increased fees to create a market or help to sell the kind of cattle which the so-called "Big Breeders" raise and develop.

If the "Big Breeders" wish to create a market for their cattle or hold consignment sales, let them do it at their own expense and in their own name, the same as the small breeder has always done, and not at the expense of the National Association.

True-Type Model Confined to Holstein Breed

A JERSEY enthusiast in writing to our office and referring to the Holstein True-Type Models and Trade Mark says, "I am informed The American Jersey Cattle Club claims they need no trade mark, that the Jersey cow supplies her own trade mark. I have also been reliably informed that they are little concerned relative to the need of improving the type, preferring to leave that to breeds that need it more."

We sometimes think that it is a shame that the men high in authority who represent the Holstein breed feel that the Holstein cow is not good enough to represent herself and that an Artificial Putty cow should be used in her stead. The True Type Model seems ridiculous saying nothing of the expense of preparing the Model which we believe must have cost far in excess of the average value of ten or a dozen food dairy farms.

Did a group of wise men or prophets, two thousand years ago, formulate a True-Type Model. Is that True-Type Model what we have been building to for the last two thousand years? Is the present type of the Holstein cow the result of following some brazen image or is it the result of developing her many useful qualities and characteristics? Should the future generations in breeding purebred Holstein cattle follow nature in their efforts to develop and further improve the breed or shall they adhere to the Artificial Putty cow regardless of conforming to nature or building for efficiency?

The True-Type Model might be the imaginary end of efficiency in Holstein breed development but what is the real end of efficiency? Would it not be better for breeders generally to be reaching out for new truths and new characteristics with the hope of improving the breed than to follow one beaten path? What group of men has the wisdom to predict or formulate a true picture of what the most efficient dairy cow will look like two thousand years hence? Shall we build for efficiency by patterning after a Putty Model made by men or shall we build for efficiency by following nature and further developing natural instincts? Shall we let the Model follow efficiency or shall we sacrifice efficiency for the Model?

How the Money Goes

ENJOYING a wide circulation in the great agricultural states of the center west, the Capper publications exert a tremendous influence among the rural population. While many of our readers may differ in politics from Senator Arthur Capper, yet we believe all will give him and his papers credit for sincerity and, when the Capper publications quote figures, they usually can be depended upon.

A recent editorial in *The Nebraska Farm Journal*, one of the Capper papers, draws attention to the tremendous expense of "drives," whirlwind campaigns and similar efforts to obtain funds from the general public. The National Liberty League, an anti-prohibition organization, levied an assessment of a quarter-million dollars on the State of Nebraska. This sum was to be

collected from those who were against the Volstead Act and the prohibition movement and was to be used in an effort to have Congress lift the bar on wine and beer. The head of the Nebraska branch of the organization was sued and, according to newspaper reports of the case, the testimony of this man showed that promotion expenses ate up 90% of the receipts. The leader was state organizer and secretary-treasurer and he received for his work fifteen cents of each dollar collected, the state manager got twenty-five cents and the local manager fifty cents, so that only one dime of each dollar collected was available for the purpose for which they were subscribed.

The history of the Nebraska branch of the National Liberty League resembles very much the history of the famous whirlwind campaign organized by D. D. Aitken, ex-president of the Holstein-Friesian Association of America. Mr. Aitken staged one of these campaigns in the New England States. He was assisted by Mr. R. C. Pollock, who was receiving \$6,500 per year and expenses while Fred Koenig, the present extension director, went along as publicity agent and for this received a salary of \$4,000 per year and expenses. Two or three other employees of the Association appeared at different meetings. The campaign cost the National Association over \$5,400. The outfit were able to obtain some \$6,800 in money and pledges from the New England breeders, which sum was to be used to employ a fieldman as sale manager to look after the buying and selling interests of owners of Holsteins living in the New England States. We do not know how much of the money was actually paid; we do know however, that some of the pledges were never redeemed and we are unable to tell just how much money was actually collected. Even if the entire amount, \$6,800, was collected it would be easily seen that after the expenses were deducted only \$1,400 or only a trifle more than one-fifth, was left.

As to the expenses paid it must be remembered that, whether the state association paid the bills or whether the salaries and expenses were paid from the funds of the National Association, yet all the money came originally from the pockets of the breeders.

What Aitken and his band of paid Silver-Tongued orators and propagandists tried to coax out of the New England breeders in his campaign of 1920 is now forced out of them in increased fees. In 1920 it was optional, now it is compulsory.

The industrial output of this country is constantly increasing in variety and quantity. In this respect the production of manufactures is quite different from agricultural production, particularly the production of things to eat. There is a definite limit to the consumption of foodstuffs; consumption may be shifted from one kind of food to another, but the aggregate does not exceed the digestive capacity of the population. On the other hand, manufactures and marketable services are offered in infinite variety and appeal to insatiable wants and tastes. The proportion of the population engaged in producing food is a constantly diminishing one, although of course the production of food must increase with the growth of population.—*National City Bank, New York City.*

CLUB ACTIVITIES

FORM COUNTY CLUB IN KENTUCKY

Dairy cattle breeders met at Mayville, Kentucky, March 29 and organized the Mason County Dairy Cattle Breeders Association. A. L. Glascock was elected president and the directors selected from the various dairy districts are:—Frank Perraur, George Sedden, Geo. Dodson, J. Ed. Parker, Jr., A. L. Glascock, and S. C. Shepherd.

A constitution and by laws will be adopted at the next meeting of the directors and a plan of work submitted. It is expected to hold a banquet some time this spring with Prof. J. J. Hopper, head of the dairy department of the Kentucky Experiment Station as the principal speaker.

MAINE BREEDERS ANNUAL

The annual meeting of the Maine Holstein Breeders Association was held the closing day of Farmer's Week at the College of Agriculture Orono, Me. C. L. Pike, Lubec, was elected president with C. L. Blackman manager of the Summit Farms at Davidson, as secretary-treasurer. Mr. Blackman was formerly field secretary for the New England States.

M. C. Peabody, the present field man of the New England Association spoke on the extension program of that club. Mr. Blackman talked on the Holstein-Friesian type and Duntley Alleman, editor of the Maine Farmer talked on general Holstein conditions in the state.

FITCH ADVISES CAUTION

Over expansion of the dairy business among men who do not know anything about it was the prospect predicted by Prof. J. B. Fitch, of the Kansas State Agricultural College, speaking before the members of the Kansas Holstein-Friesian Association. "If men who do not know how to treat cows start in the dairy business," said Prof. Fitch, "they will make a failure, give the industry a bad name, and thus completely spoil the dairy market."

Ira Romig of Topeka was elected president; John Van Horn of Sabetha, vice-president; and Dr. W. H. Mott of Herington, secretary-treasurer. In Dr. Mott's report he said that 1,654 letters have been mailed from his office answering questions about Holstein-Friesian cattle. Last year more than 4,000 letters went from the office.

Ex-Governor W. R. Stubbs, who is a member of the asso-

ciation and is now a candidate for the gubernatorial nomination on the Republican ticket, was one of the speakers, as was Robert Good, assistant state business manager.

Directors of the association are: George B. Appleman, Mulvane; C. W. McCoy, Valley Falls; J. B. Fitch, Manhattan; Carl Goodin, Derby; C. A. Branch, Marion; Ernest Chestnut, Fort Leavenworth; O. W. McCoy, Glen Elder; Walter McMurray, Darlow; Walter A. Smith, Topeka; Doctor Mott.

Three hundred attended the eighth annual sale at the Kansas Free Fair Grounds. Here eighty head of cattle were sold to thirty-five buyers. There were twenty consignors. The total receipts were \$12,000, the highest price was \$300 for a heifer consigned by Mr. Romig and purchased by R. C. Obrecht of Topeka. The principal buyers were from Kansas with a few from Missouri.

PLAN SUMMER PICNIC

The annual meeting of the Mini-Cassia Holstein Breeders Association was held at the home of Joe Walker of Delco, Idaho, April 7th. Officers for the coming year were elected as follows: L. M. Savage, Burley, president; A. E. Ross, vice president; J. B. Redford, secretary and treasurer; Joe Walker, Dee Hillis, Thad Hausen and E. L. LaRue, directors.

The committee was appointed to make arrangements for a summer picnic to be held when President Upham of the University of Idaho is in the county which will probably be some time in July.

MONTANA HAS STATE ORGANIZATION

The Montana Holstein-Friesian organization was formed at a meeting held on the closing day of Farmers' Week at the Montana State College.

The Organization started with twenty charter members. Membership fee was placed at \$5.00 and the only requirement is the use of a purebred bull at the head of the herd.

There are approximately 50 breeders of purebred Holsteins in Montana and about 3,000 head of cattle. There are five breeders doing yearly official testing and a few more seven day testing.

Despite the comparative healthiness of Montana stock, a large number of Holsteins, both purebreds and grades, have been purchased outside of the State to supply the Montana

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

trade, in many cases at much higher prices than the stock could have been bought for at home. It is said that this was due to the fact that intending purchasers were not familiar with the sources of supply within the state nor of the fact that Montana cattle were remarkably free from tuberculosis, a recent monthly report showing that out of almost 8,000 head of cattle tested only 24 re-acted—approximately three-tenths of one per cent.

In the organization meeting Dr. Joseph Piedalue, Bozeman, was elected president; F. E. Huddleston of Billings, vice-president; E. J. Haslerud of Montana State College, secretary-treasurer; and C. H. Wright of White Sulphur Springs; J. H. Hofstetter of Lewistown; David Lea of Stevensville, and Miss Louise Maier of Butte were elected as additional members of the board of directors.

ADVOCATES PREMIUM FOR MILK FROM TESTED HERDS

At a meeting of the Racine County Breeders Association, held at Rochester, Wis., April 5, Harvey Nelson was re-elected president and J. C. Cook, secretary-treasurer of the club. There were about twenty members present. Reid Murray, secretary of the Wisconsin Livestock Breeders Association urged the adoption of the county area tuberculin testing plan and suggested that a premium should be paid for milk coming from tested herds. His proposal was seconded by Tom Champion, secretary of the Milwaukee County Breeders Association, who also advocated the formation of an inter-county sales association.

In order to raise funds for association work, it was decided to give a supper to Holstein breeders and friends at Yorkville Church, the evening of May 9.

The following were elected as township vice-presidents: Caledonia, Reuben Klafonda; Mt. Pleasant, De Grove Bull; Dover, Stanley Overson; Raymond, Ives L. Walker; Burlington, William Robers; Waterford, Leonard Halbach; Rochester, George Ela; Norway, George W. Draugt; Yorkville, Clinton Skewes.

TRIALS OF A CLUB SECRETARY

The associate member of the HOLSTEIN BREEDER AND DAIRYMAN is also secretary of the Dauphin County Holstein Breeder's Club. As is the case with most club secretaries, he experiences considerable difficulty in getting his club members to pay their dues on time. Recently he wrote the delinquent members suggesting that they remit the usual \$3 and at the same time apologizing because the annual club turkey dinner had been indefinitely postponed, owing to illness of several prominent members of the organization. One of the letters received in reply is as follows:

MY DEAR MR. TRUCKELL:—

Well, well here you are! I done gone thought you done left these parts with the funds, but I see you want \$3.00 more, I suppose you are wanting a new bull and \$3.00 is what you expect to land me for.

Now I want to tell you I don't ever remember of this here Dauphin Cow Society and I sure can't figure how I ever joined this here bunch of so-called turkey eaters. I am returning your notice of assessment, and hope you have better luck with the other suckers.

I might consider going in on this if you will split 50-50. Let me hear from you on this.

Yours very truly,

CHEQUAMEGON MAY NOT SELL

About thirty members of the Chequamegon Holstein Association attended the annual meeting, March 26 at Ashland, Wis. The principal topic of discussion was whether the Association should sell its stock next year at the end of the five year period or whether the time should be extended because of the good work of the organization. The meeting was adjourned without coming to any definite conclusion except that an outside man will be brought in to inspect the cattle and the work of the association and his recommendations will decide whether the time limit will or will not be extended.

The officers and directors of the association were re-elected for the coming year. They are Ed Carlson, president; D. W. Emerson, secretary, Henry Rogers, vice president; Roy Prince treasurer and James Good, Otto Olson, Carl Rudquist, directors.

BREED ACTIVITIES IN RHODE ISLAND

Members of the Rhode Island Holstein Friesian Association visited the State Home and School at Providence, March 13th and after inspecting the purebred stock were guests of Dr. A. G. Briggs, superintendent of the institution. The following addresses were delivered: "Proper Ethics of Breeding," by Prof. John E. Ladd of the Rhode Island State College; "Cow Testing and its Advantages to Dairymen" County Agent Thomas E. McLaughlin; "Farm Economics" E. K. Thomas; "Eradication of Tuberculosis" by John J. Dunn, Secretary of the State Board of Agriculture.

The Association will be represented at the State Fair to be held at Rocky Point next fall. The state Ayrshire and Guernsey Associations will also be represented.

The Assembly has been asked to appropriate money for purebred cattle awards. The Association will urge county fair managers to provide means of keeping tuberculin tested and nontested cattle separate.

WHY THE PRICE OF BUTTER FELL

By A. M. LOOMIS, Secretary, National Dairy Union

There is every indication that the two major factors responsible for the slump in the price of butter during the past six or eight weeks are the large increase in the amount of Oleomargarine made and sold and the large amounts of imported butter received on the eastern seaboard. An increase in the domestic production of butter was expected and inevitable. The dairy trade had been advised by statistics from the Department of Agriculture that the dairy industry had reached a point of almost exact balance between production and consumption. Upon the sensitive market thus created came the repeated hammering of steadily mounting use of oleomargarine and steadily mounting imports of foreign butter.

The figures on oleomargarine production for the past 3 months as indicated by the oleo tax stamps sold by the Bureau of Internal Revenue are as follows:

	Colored		Uncolored	
	1923	1924	1923	1924
January	673,654	1,000,904	19,959,300	22,839,980
February	658,106	1,050,844	19,064,100	22,565,800
March	755,437	1,077,588	18,967,000	22,267,320

This increase came as a culmination of an increase of lesser extent through the previous years shown by comparative figures as follows: The first three months of 1922, 1,165,661 pounds colored and 43,179,020 pounds uncolored as compared with the same period of 1923; 2,087,197 pounds colored and 57,990,400 pounds of uncolored.

This situation no less than the situation which was disclosed at the recent tariff hearings indicate the constant menace which the traffic in butter substitutes holds over the American dairy industry. Figures produced at the tariff hearing indicate that out of vegetable oils and fats, the imports of which are chiefly from the Philippines and the East Indies, more than a billion pounds of lard substitutes are made, every pound entering into competition with both American lard and butter. It is the old story of substitution and the manufacturers of the substitutes seeking the cheapest source of raw material irrespective of the influence upon American dairy or hog products, American agriculture or American prosperity.

A REVIEW OF MARKET CONDITIONS

April brought no encouragement to producers of condensed and evaporated milks. As a whole the market has been dull and depressed, buyers have been conservative and few goods have moved. Buying for relief purposes was unimportant. Exports during March was slightly in excess of twelve and a half million pounds (condensed and evaporated combined, about eight million pounds less than February of this year or March 1923).

Looking at the markets from a statistical viewpoint, April 1 total holdings of 126,041,000 pounds represent a reduction of about 10% during March. Compared with last year this looks good, for during March 1923, stocks increased around 20%, but the stocks this year are heavier than April 1, 1923 by close to 25%. As may be remembered, there was a steady increase in 1923 stocks from the first of the year up to October. Since then there has been a tendency in the other direction. For comparative purposes the April 1, total stocks the past few years may be of interest. They were as follows:

April 1, 1920	237,004,787 pounds
April 1, 1921	102,390,363 pounds
April 1, 1922	141,853,845 pounds
April 1, 1923	100,890,256 pounds
April 1, 1924	126,041,566 pounds

During March 1924 the exports of powdered milk was 222,542 lb. as against 337,737 lb. during the corresponding month of last year. Japan was our best customer taking 65,490 lb.,

France being second with 46,571 lb. The exports figures for the first three months of this year were 741,543 lb. as against 834,906 lb. for the first quarter of 1923.

During March of this year, the exports of butter amounted to 484,430 lb. and the imports were 3,268,336 lb. The imports of cheese were 4,264,467 lb. and the exports only 350,162 lb. During the month 53,965 lb. of oleomargarine were sent abroad while in March 1923 there was more than six times that amount exported.

SHEFFIELD FARMS PRICE FOR MAY

The Group Members of the dairymen who ship to the Sheffield Farms Co. met at 524 West 57th St., New York City, on April 25th for the purpose of negotiating the sale of milk for the month of May 1924. Besides the official representatives of the sixteen groups, there were present one visitor from Route 3 and three representatives of the Sheffield Farms Company, Inc.

After discussion the president appointed as price committee, K. A. Shaule, Cobleskill, N. Y.; Walter E. Clark, Vergennes, Vt.; Frank M. Tiffany, Norwich, N. Y., and C. W. Halliday, North Chatham, N. Y. The committee recommended a price of \$2.00½ per one hundred pounds for 3% milk in the 200-210 mile zone with the usual freight and butterfat differentials. A deduction of one half cent per hundred pounds is to be paid the treasurer to meet the expenses of the group representatives. The report was unanimously adopted.

Because we have a large surplus of milk we are obliged to reduce the price. The Sheffield Farms Co., Inc., is manufacturing into cheese thousands of pounds of our milk and milk made into cheese is bringing an average price of about \$1.25 to \$1.30 per hundred for 3% milk. The Company, however, is taking all our milk regardless of the use made of it at \$2.00½ per hundred which will be found to be, as heretofore, the top price received by any group selling in this market.

C. W. HALLIDAY, Secretary.

THE LAMB CROP

According to the statement issued late in January by the United States Department of Agriculture, there was a decrease of nearly four per cent or about 160,000 in the number of sheep and lambs on feed in the corn belt January 1, 1924, as compared with January 1, 1923.

The total shipments of feeding sheep and lambs into the corn belt from public stockyards during the period from August to December, 1923, inclusive, were nearly 300,000 more than during the same period in 1922.

Reports from California indicate that the long continued drought threatens to reduce materially the size of the lamb crop and to delay its marketing from six weeks to two months as compared to last year. In Kentucky and Tennessee a small decrease in the number of ewes kept for lambing in the spring is reported but to date the winter has been favorable and sheep are in good condition.

MILK POOL PRICES FOR MARCH

The Dairymen's League Coöperative Association's March gross pool price for 3 per cent milk at the 201-210 mile freight zone is \$1.88 per 100 pounds, with 8 cents deduction for expenses and 5 cents for certificates of indebtedness. The net pool price, therefore, is \$1.80, and the cash payment is \$1.75.

"Mamma," exclaimed little Mary, bursting into the room, "they're teaching domestic science at school now." "You mean domestic science, dear," corrected her mother. "Perhaps," interposed father mildly, "the little darling means what she says."

"I'm willing to admit that marriage broadens a man," said the old bachelor.

"Yes, by the flattening process," replied the henpecked husband.

"He is discovering how to live who learns to use good books and make friends with his neighbors."

You will be interested when you learn our low prices on good young cows and heifers.

BAUMBERGER SALE GOOD

Despite weather conditions which made autoing impossible, the sale of Holsteins owned by Fred Baumberger of Rice Lake, Wis., April 3rd was a success. The forty-six head sold for \$4,700 although fifteen were below one year of age and five were grades.

On account of the weather and the roads, there were not many outside buyers although five head went to Ladysmith and three went to Verona, Dane County. The bull went for \$200 and the buyer said that the Pabst and Carnation people were asking \$1,000 for animals of similar breeding.

The high cow brought \$355, the second high cow \$225, a yearling bull brought \$200 and a 15-months bull went for \$165.

DEMAND FOR PUREBRED HOLSTEINS

At Edon Onsrud's auction sale held at Stoughton, Wis., early in March, there was a good demand for registered Holsteins. The *Stoughton Hub* says that grade cows in that district must be pretty good to average \$60 apiece. The Onsrud herd consisted of twenty head, one grade cow and nineteen purebred Holsteins of which five were calves, three two-year-old heifers and two yearling heifers.

The average price was well over \$100 a head. John McComb purchased the two high priced animals giving \$177.50 for a four-year-old and \$167 for a mature cow. Emerson Ela of Madison, an attorney, purchased one cow for \$147.50 while Ed Johnson of the firm of Emery & Johnson gave \$110 for an eleven-months-old heifer calf.

Despite disagreeable weather, the auction was well attended.

BIG CROWD AT COLLEGE SALE

The recent stock sale at the Utah Agricultural College was the most successful sale of dairy cattle ever held around Salt Lake City. There were approximately 500 farmers from Utah and Idaho in attendance. Twenty-one breeders had consigned 24 animals, consisting of seven yearlings and two bred grade heifers, nine

BACKUS PEDIGREE CO., MEXICO, N. Y.

purebred heifers ranging in age from four months to one year and six bulls from six months to a year old.

The average price for the grades was \$79, and the top price \$150 for a heifer consigned by C. Z. Harris of Richmond and purchased by Frank Burns of Fielding, Utah. She was sired by a purebred bull and her dam had a cow testing association record of 566 lb. All the grade heifers were from dams with C. T. A. records exceeding 300 lb. fat.

The average price for the purebred heifers was \$158, the top price was \$225 for a heifer bred by C. L. Funk of Richmond and sold to Harry Parker of Wellsville, Utah, who purchased four other heifers.

The six bulls were selected from A. R. O. dams with large cow testing Association records. The average price was \$148, the top price was \$205 paid for the youngest bull calf in the sale. He was bred by J. H. Schenk of College Ward and was purchased by a bull association of Sanpete County, Utah. On both sides of his pedigree there was records of production and several of his sisters had made splendid records as two-year-olds.

The auctioneer was Colonel Walter of Filer, Idaho while Professor George B. Caine of the Utah Agricultural College handled the pedigrees.

GOOD IDAHO SALE

Late in February a noteworthy sale of Holsteins was held on the Johnson & Shambough Farm near Notus, Idaho. The sixteen head of purebred Holsteins brought \$2,637.50. The top price was \$355 paid for a two-year-old heifer by Emil Kable. F. W. Osterkamp paid \$305 for a three-year-old heifer while another three-year-old went to C. D. McCullough for \$250. A yearling bull went for \$170 and a two-year-old for \$150. There were five males in the sixteen head and the price realized was considered very satisfactory especially as one real old cow and a two-weeks old calf brought only \$45 each. Johnson and Shambough farm implements brought \$3,800, the horses \$380 and the purebred Duroc Jersey hogs \$1,200.

DOUBLE DISPERSAL AT ELKHORN

The Rockwell Farms herd of thirty-two purebreds and the Westville herd owned by Westphall Bros., was dispersed at the fair grounds, Elkhorn, Wis., April 9. There was a good attendance, most of those present being from Wisconsin although there were a few bidders from Illinois and they took three head.

In the Rockwell herd there were twenty cows, four calves, four yearlings and four bulls. The cows averaged \$168.50; the calves \$60; yearlings \$96.25; and the bulls, \$113.75. The herdsire King Pontiac Fayne Butter Boy, sold at one time for \$1,500, went for \$110, practically beef price, to Frank Ludwig of Douseman, Wis.

The Westphall animals averaged slightly less than did those from the other herd. There were twenty-three head, thirteen cows, three calves, four yearlings and three males. The cows averaged \$145.50; calves \$36.66; yearlings \$72.50 and the bulls, \$96.66.

The auctioneers were R. E. Haeger of Algonquin, Ill., Eugene Mack of Fort Atkinson, Wis., and R. T. Wiswell, Elkhorn, while J. G. Voss of Elkhorn read the pedigrees.

BIDDING BRISK AT SPARTA

Late in March a Holstein consignment sale was held at Sparta, Wis. The offerings were good, the bidding was brisk and the prices were considered satisfactory. The top price was \$280 for a cow consigned by the Tomah Indian School. The top price for a grade was \$125.

Sixteen purebred females over two years of age averaged \$147.25. Calves out-sold yearling heifers, the five yearlings averaging \$70 and the sixteen calves averaging \$71. There were ten grade cows and their average was \$80.

There were ten bulls, seven over and three under a year old. The yearling bulls averaged \$95 and the bull calves averaged \$50.

All the grades went to Illinois or Minnesota but most of the purebreds remained in Wisconsin. The largest individual buyer was Will Nasset of Bloomer, Wis., who purchased twenty-one head.

BACKUS STAGES SALE AT EARLVILLE

The only sale to be held this spring in the pavilion at Earlville, New York, will be staged May 14th and 15th by R. Austin Backus who will offer 160 head of registered Holstein cattle, many from fully accredited herds and all from herds under state and federal supervision.

There will be more than one hundred cows, naturally heavy milkers. Some of these are just fresh and others soon due to freshen. One of these cows produced 112 lb. milk in a day and another 104 lb. and quite a number have large official butter records.

About fifty high class yearling heifers will be offered. They are bred to bulls backed by big producers. A large number of these heifers are due to freshen in the fall and so are ready now to go right on pasture so that the investment which now buys them is practically all the purchaser will have tied up in a producing young cow by fall.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 317.)

When the pasture season is commencing there is always a demand for young bulls ready for service. Mr. Backus will offer a dozen young service bulls some of them from 30-lb. cows, one backed by three generations of 30-lb. producers and one from a cow that made nearly 1,000 lb. butter in a year as a four-year-old.

Mr. Backus has not confined himself to New York State although he has obtained animals from some of the best herds in the Empire State. The noted Bell Farm will send seven head from Pennsylvania. Bell Farm animals are always well bred and in this consignment there are three or more daughters from cows that have made over 29 lb. butter in seven days. A dozen head come from Dr. E. Hogg, Wilkes-Barre, Pa., and one of these is a bull, a son of a twice 29-lb. cow by Colantha Denver Champion.

The New York State consignments are of unusually high quality. From Essex County, a district from which tuberculosis is practically absent, will come a carload. Fred Watkins of Penn Yan, sends a 29-lb. four-year-old gr. daughter of King of the Pontiacs and a 25-lb. two-year-old daughter of the noted bull, Sir Pontiac Waldorf Pietje; the A. A. Hartshorn Holstein Company will send nine head headed by a son of Betty Lyons. This cow has a 31-lb. seven day butter record, her dam and dam's dam are both 34-lb. cows and were noted for remarkable individuality. There will also be a son of a 25-lb. two-year-old, her dam made 23 lb. butter in seven days as a three-year-old and her next four dams are all above 30 lb., the maternal ancestor at the end of the line being the famous Beauty Pietertje. In this consignment there are six daughters of King Echo Sylvia Model. His daughters are making splendid records, his dam is a 28-lb. daughter of a cow that three different years has made over 33-lb. butter in seven days, her dam a twice 37-lb. cow. King Echo Sylvia Model is by Champion Echo Sylvia Pontiac, that splendid transmitting son of the wonderful producer May Echo Sylvia. In this half dozen daughters of King Echo Sylvia Model there are three whose dams produced 29 or more pounds butter in seven days and more than 100 lb. milk in a day while on official test.

Mr. Backus has prepared a folder which gives a summary of each consignment and this can be obtained by writing him at Mexico, New York. If you mention the HOLSTEIN BREEDER AND DAIRYMAN your request will be sure to be given immediate attention.

STATE-OWNED HERDS IN WASHINGTON

The state of Washington owns a number of herds at the six public institutions, having in all 247 animals in milk. For the month of January, 1924, these cows averaged 1,113.5 lb. milk, 41.72 lb. fat.

	No. of cows	Aver. Milk per cow	Aver. Fat per cow
Northern state hospital, Sedro-Woolley	37	1,340	45.7
Western state hospital, Fort Steilacoom	60	1,169	43.6
Eastern state hospital, Medical Lake	56	1,124	42.42

Boys' training school, Chehalis	32	1,039	35.4

SUPPLEMENT EARLY PASTURAGE

During the latter part of April or the first part of May, most dairy herds will be turned to pasture. It is common knowledge that pastures should be given a good start before the cows are turned on them. However, the feed supply usually runs short and the cows are turned out too early in a good many cases. If the supply of silage and hay was insufficient this year, now is a good time to prepare for the coming year. Give the cows the usual morning feed the day they are turned to pasture. It is advisable to leave them on the pasture only for a short time during the first day and gradually lengthen the pasture feeding period until they are out all day. It is also desirable to give them whatever portion of their regular feeds they care for. Such a practice will tend to keep the cows from scouring out as badly as they sometimes do when they are first turned on pasture. It is a good practice to feed

high producing cows some grain to supplement good pastures. Cows producing small quantities of milk will need little if any grain while the pastures are good. For the highest producing cows, feed one pound of grain per day for every five or six pounds of milk produced. A grain mixture consisting of two parts ground corn or barley and one part ground oats or bran will be satisfactory. If the cows appear to be loose some cotton seed meal may be added.

C. S. Rhodes, Illinois News Letter.

AND THEN SHE TURNED PAIL

The dairymaid pensively milked the goat,
And, pouting she paused to mutter,
"I wish you brute, you'd turn to milk!"
And the animal turned to butter.

To touch a man's heart sympathize with him. To touch his pocketbook flatter him.

Cow Testing Association Reports

HOLSTEINS PROMINENT IN WISCONSIN TESTING

There were 497 cows tested in the West Salem-Bangor Association during March; 127 of these produced more than 40 lb. fat while 37 went over 50 lb. Twenty-one herds averaged more than 30 lb. fat. Fred C. Miller of West Salem, had the high producer, a registered Holstein with 1,839 lb. milk, 68 lb. fat to her credit.

A grade Holstein owned by Charles Batteen took first place in the Cataract Association by producing 1,419 lb. milk, 61 lb. fat. A registered Holstein, owned by George Van der Schaff was second with 1,788 lb. milk, 60.8 lb. fat.

Eleven black and whites owned by J. W. Leverich won high herd average by producing an average of 42.8 lb. fat.

A four-year-old registered Holstein, owned by Henry Schlizer Hartland and enrolled in the Merton Association, was the leader with 1,829 lb. milk, 80.5 lb. fat to her credit. The registered and grade Holstein herd belonging to M. Weber & Sons, had high herd average, their figures being 1,293 lb. milk, 46 lb. fat.

During March, 324 cows were tested in 28 herds in the Medford Association. Forty-four of these were on the honor roll by producing 40 lb. or more fat while ten herds averaged a pound or more of butterfat a day.

Seven registered Holsteins owned by Ed. Peissig, topped the high herd list with an average of 1,137 lb. milk, 42.9 lb. fat. A registered Holstein owned by Otto Lueck was high individual with 1,750 lb. milk, 63.7 lb. fat.

Purebred Holsteins carried off the honors in the Oconomowoc-Hartland Association during March. George Gibson of Nashotah, Wis., owned the leader which had 1,922 lb. milk, 74.9 lb. fat to her credit. J. A. Hurtgen of Hartland owned the animal in second place, her production being 1,717 lb. milk, 73.8 lb. fat. Mr. Hurtgen's herd carried off high herd honors with 1,362 lb. milk, 42.8 lb. fat. Lester Brown is the official tester.

Four hundred and twenty-eight cows in 31 herds were tested in the Mishicot Association. Eighty-five of these produced more than 40 lb. fat and the average of all the cows tested was 835 lb. milk, 28.7 lb. fat.

The leader, a purebred Holstein owned by Albert Johannes, produced 1,938 lb. milk, 81.3 lb. fat.

Sixty-eight cows enrolled in the Genesee-Eagle Association produced between 40 and 50 lb. fat; twenty-three exceeded

50 lb. and eight exceeded 60 lb. while three went over 70 lb. in March.

South & Sons of North Prairie, Wis., own the high herd, their fourteen black and white cows averaged 1,218 lb. milk, 44.2 lb. fat. A member of this herd carried off high individual honors with 1,463 lb. milk, 79 lb. fat.

A registered Holstein owned by the Clark County Asylum was the March leader of the Curtiss-Green Association. She produced 2,425 lb. milk, 80 lb. fat. This institution had four animals, three registered and one grade Holstein above 70 lb. fat.

High herd in this association was owned by Richard Wiegman and consisted of registered and grade Holsteins, their average production being 1,319 lb. milk, 47 lb. fat.

CAULFIELD HERD IS LEADER

Dr. Christopher Graham of Rochester, Minn., owned the highest producer in the Byron-Rochester Testing Association during March. She is a purebred Holstein and is credited with 2,697 lb. milk, 97 lb. fat. A purebred Holstein owned by Harold Caulfield was second with 1,821 lb. milk, 63.7 lb. fat.

Mr. Caulfield had the high herd, his seventeen purebreds averaging 1,155 lb. milk, 36 lb. fat.

Twenty-eight herds containing 546 cows were tested during the month and their average was 820 lb. milk, 28.5 lb. fat.

Twenty of these herds averaged more than 25 lb. fat while 70 cows produced 40 lb. or more fat.

KLINGBEIL OWNS BEST HERD

Three hundred and forty-one cows in 29 herds enrolled in the Southern Dodge Co. Testing Association produced an average of 727 lb. milk, 26.82 lb. fat during March.

R. A. Klingbeil of Blooming Prairie, Minn., owned the high producing herd. His nine black and whites averaged 1,252.1 lb. milk, 47.31 lb. fat.

Alois Boudoin had the high individual, a grade Holstein, with 1,162 lb. milk, 68.5 lb. fat to her credit.

LAST YEAR'S WORK

Cumberland County dairymen led the cow testing associations of Pennsylvania for milk production during the year 1923. The average production of the Cumberland County cows enrolled in test association work was 8,713 lb. milk; York county cows were second with 8,345 lb.; and Wayne County Association was third with 8,310 lb. average.

First place for fat production went to Lawrence County Association with an average of 332.3 lb. fat; Wayne County was second with an average of 320 lb. while Cumberland County was third with an average 312.6 lb.

DAIRY IMPROVEMENT IN SOUTH DAKOTA

Several new high records were made in South Dakota Cow Testing Association activities during March. Tests were reported for 2,622 cows, 141 of them showing a gross income of less than the cost of their feed. Forty-three cows were sold for beef and their places taken by 24 high grade dairy cows. There were 314 cows producing more than 40 lb. butterfat and 446 more than 1,000 lb. milk.

The Penitentiary Farm of Sioux Falls established a new record in butterfat production with Sioux Homestead Rue producing 2,536 lb. milk containing 98.9 lb. butterfat. She also returned the greatest net income of any cow in the state. It amounted to \$34.62 after deducting the cost of feed. Her daily ration was 25 lb. silage; 5 lb. alfalfa; 5 lb. upland hay and 18 lb. mixed grain.

Bob Ear, with 2,120.4 lb. milk, 78.45 lb. fat was second. She is a grade Holstein owned by Roy Spurling of the Brookings Association. A purebred Holstein owned by Gage & Kurtz of Groton, Brown County, was third with 2,294 lb. milk, 78 lb. fat and Johanna, owned by F. E. Johnson of Hetland was fourth with 75.85 lb. fat.

A grade Guernsey herd led the association for average production with 50.64 lb. fat with four Holstein herds following. This is the first time the fifty lb. mark has been reached in the state. The twenty-three purebred Holsteins in the Sioux Falls Penitentiary Farm herd averaged 1,324 lb. milk, 48.41 lb. fat and the Johnson herd with twenty-one purebreds stands in third place with an average of 1,227.9 lb. milk, 44.85 lb. fat. Two other Holstein herds exceeded 40 lb. for average production as did one Shorthorn establishment, reports H. M. Jones, dairy specialist.

ILLINOIS TESTING

Rock River Farms furnished the leader of the Illinois Cow Testing Associations for the month of March by reason of a purebred Holstein that produced 2,294 lb. milk, 98.6 lb. butterfat. That good young Holstein breeder, Ray Angle of Dakota, had a purebred Holstein in second place with 2,700 lb. milk, 97.2 lb. fat. Two grade Holsteins were each above 90 lb., a grade Guernsey was fifth with 89.7 lb. and a purebred Holstein of the Harry M. Wood herd was sixth with 2,866 lb. milk, 86.1 lb. fat. A purebred owned by A. W. Fischer, of Bensonville was seventh with 2,192 lb. milk, 85 lb. fat, and another purebred of the Angle herd was in ninth place with 2,400 lb. milk, 81.6 lb. fat.

An eleven cow dairy of purebred and grade Holsteins owned by George Mohrman of the Whiteside County Association

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

Springfield, Ill.

tion held the high herd average, 1,351 lb. milk, 48.1 lb. fat. The list of the ten highest herds contained the nineteen purebreds of A. D. Cornue of Hebron and the seventeen cow purebred dairy of Patterson Farm as well as a nine cow dairy owned by C. E. Warford & Son. There also were three dairies consisting of both purebred and grade Holsteins. All ten of the leading herds produced over 43 lb. fat in the month.

Six of the seventeen associations reporting were headed by purebred Holsteins while four other leaders were grade Holsteins. The figures for the leaders range from 51.7 lb. fat in the Wayne Association to 98.6 lb. in the Ogle County Association.

BREED MAKES GOOD SHOWING

Ninety six cows finished the year's work in the Osage County, Kans., Testing Association. The average production of all the cows enrolled in the association was 6,967 lb. milk, 248.3 lb. butterfat. The cows consumed an average of \$66.19 worth of feed and produced \$131.59 worth of butterfat and milk each.

The highest producing herd consisted of thirteen cows owned by A. M. Roney & Son. This herd averaged 9,731 lb. milk, 319.4 lb. butterfat. The value of the produce of these cows was \$177.21 each.

Tula, a purebred Holstein, owned by Bauer Bros., was the highest individual producer. She was milked 322 days and produced 11,944 lb. milk containing 434.2 fat. The value of her product was \$228.01; the cost of her feed was \$110.66. Rose a purebred Holstein owned by Roney & Son was second high producer with 415.7 lb. fat.

CORONA AGAIN LEADS

"Corona," noted purebred Holstein owned by A. H. Smithson of Holtville, California, produced 601.5 lb. fat in 305 days. She freshened again January 25, 1924 and in February produced 91.4 lb. fat in twenty-nine days, leading the Imperial County Farm Bureau Cow Testing Association. A purebred stablemate was second with 78.3 lb. fat. The five highest cows in the Smithson herd produced 338.2 lb. butterfat in the month. A number of other purebred Holsteins made large records in this Association.

During February 100 herds were tested, containing 3,546 cows. The average production was 686 lb. milk, 26.4 lb. fat.

LEADS FOR THIRD SUCCESSIVE MONTH

A grade Holstein, Julia, owned by Oliver Pritchard led the Kane County, Ill., Testing Association No. 1, for the third consecutive month, her production being 2,260 lb. milk, 81.6 fat. Since January 1, W. K. Bullock, the tester, reports that this animal produced 5,840 lb. milk, 249.9 lb. fat. Mr. Pritchard has a four-year-old in second place with 2,582 lb. milk, 69.7 lb. fat to her credit. Six hundred and three cows were tested with an average production 31.8 lb. fat, 903 lb. milk in this Illinois Association.

NEW YORK STATE TESTING

J. B. Harbeck & Sons of Black Creek, New York, whose purebred Holstein cow led all the cows enrolled in the New York Dairy Improvement Association for January, started dairying twenty years ago with eighteen head. At present they have forty head of purebreds and for two years an average production of 10,000 lb. per cow has been made by this dairy. An eight-year-old cow of this herd produced 106.7 lb. fat, 3,140 lb. milk during January in the Western Allegheny Association. The Harbeck herd usually leads this association for average production.

A purebred in the dairy of Houghton Farms, Mountainville, is credited with 102 lb. fat, 2,876.4 lb. milk and is in second place. In third place is a grade Holstein owned by E. M. Bull of Monroe, with 95.2 lb. fat, 1,221 lb. milk. Premier Glista Nancy, a four-year-old, owned by F. H. Thompson of Holland Patent is in fourth place with 1,905 lb. milk, 91.5 lb. fat. In fifth place is Ollie Roxie Korn-dyke, owned by the Laurel Stock Farm, Goshen, with 82 lb. fat, 2,343 lb. milk. Orange County cows stand in second, third and fifth places.

The Holstein herd of C. W. Halliday of Northern Chatham averaged 995 lb. milk during the month of January and 886 lb. during December. The fat average for January was 1.43 lb. and the average amount of milk per cow daily was 38.4 lb. Mr. Halliday is secretary of the organized farmers shipping milk to the Sheffield Farms.

TO BE FILMED

A carload of registered Holstein cows is now on the Moab Ranch, one of the properties of the Newman Lake Ranch Company, Spokane, Washington. They were selected by H. J. Shinn, president of the company, and Fred Umbach, superintendent of No. 2 ranch. The animals were loaded at Mt. Vernon.

The shipment included a six months old bull calf obtained from the Carnation Company.

Mr. Shinn has two ranches of 11,000 acres each near Newman Lake. Besides 45 Holsteins, he has some Guernseys and about 300 head of Aberdeen Angus and 75 head of Herefords. He expects to market 150 head of fat stock in May.

Mr. Shinn says that his company does not sell any grain or hay and raise all their own feed with the exception of some grain fed the cattle. The Pathé cameramen are scheduled to visit the Moab Ranch in the near future and take pictures of the herd and buildings.

GOOD SHOWING IN MONTANA

Twenty-nine herds containing 267 cows were tested in the Sanders County, Mont., Testing Association for March, the first month of the Association's work. Eighteen animals exceeded 40 lb. butterfat while two went over the 50 lb. mark.

Holsteins took first and second places, a grade owned by Willard Willis being in first position with 52 lb. fat and a registered animal, owned by William Craig in second place with 51 lb. fat.

A YEAR'S WORK IN FAIRFAX COUNTY, VIRGINIA

In the fall of 1919, the Fairfax County Cow Testing Association was started in the northwestern part of Fairfax County, Virginia, about thirty miles from Washington, D. C. The herds composing this association are practically all found around the town of Herndon and a district known as Floris. The result of the first year was not very satisfactory but when George Carey was secured as tester, he by hard work and executive ability gave the association its real start and the dairymen realized that properly conducted, such work is almost indispensable to the profitable development of the dairy business.

The third year L. P. Emmerick was tester and that year the first printed report put out by any Virginia Cow Testing Association was published. The cows

SADIE, CHAMPION GRADE COW OF THE SOUTH
Over 40,000 lb. milk and almost a ton of butter in 24 months of C. T. A. work in Virginia.

enrolled averaged over 300 lb. butterfat. Mr. Emmerick continued to be tester until July of the fourth year when he was promoted to take charge of all Virginia Cow Testing Association work. The present tester is T. V. Armstrong, a graduate of the State College. The first year the average production was around 6,000 lb. milk and less than 250 lb. butterfat while in 1923, the average for the 623 cows was 8,066 lb. milk, 323.7 lb. fat. The herds enrolled consist of Ayrshires, grade and purebred Holsteins, Short-horns, Grade Guernseys, while a number of herds have animals of different breeds or natives.

For 1923, the high herd for butterfat production consisted of twenty-four cows, grade Holsteins owned by Ben Middleton of Herndon. This herd averaged 10,962 lb. milk, 432.9 lb. fat. His milk brought an average farm price of \$3.27 per cwt. not including premiums, and the average value of the product per cow was \$357.86. The cost of feed was \$157.78 leaving an income above feed cost of \$198.08 per cow. He received \$2.24 for every dollar expended for feed. It cost him 37 cents to produce a pound of butterfat and \$.46 to produce 100 lb. milk. Last year the Middleton herd averaged 8,544 lb. milk, 337.8 lb. butterfat showing an average production gain of 2,418 lb. milk, 95.1 lb. butterfat in the year. This herd had the first and second high cows and the class

leaders in the two-year-old, three-year-old and four-year-old and mature cow classes, as well as the first and second high cows for two years' work.

The wonderful grade Holstein, Sadie, repeated her triumph of last year and is the undisputed champion grade cow of the south. Her record for the full lactation year is 23,157 lb. milk, 915.9 lb. butterfat or 1,144.9 lb. butter. For the cow testing year which includes the dry period, she was credited with 21,589 lb. milk, 847.5 lb. butterfat. Last year her cow testing record was 18,490 lb. milk, 729.6 lb. fat so that in the twenty-four months she made over 40,000 lb. milk and almost 2,000 lb. butter.

During her cow test year the cost of her roughage including pasture was \$67.86 and the cost of her grain \$187.72, making a total feed bill of \$255.58. Her milk was shipped to Washington as fluid milk bringing an average farm price of

the past year was the herd of fourteen purebred Holstein cows owned by Mr. P. B. Crandall of Herndon, Va. This herd averaged 11,764 lb. milk, 404.2 lb. butterfat. This is the second year in succession that Mr. Crandall's herd has led the association for milk production. Last year his herd averaged 11,096 lb. milk, 375.1 lb. butterfat. This shows a gain of 668 lb. milk, 29.1 lb. butterfat per cow over last year. Considering the high production of last year this is a very creditable gain. This herd had the third and fifth high cows for the year, also one of the five cows to make over 1,000 lb. butterfat in two years' time; and one of two cows to make over 30,000 lb. milk during a like period.

Very few members of this association have good permanent pastures. The pastures are included in their crop rotation. As a rule there is good pasture for a limited time in the spring and then grass gets short and dry. Last year almost the reverse of these conditions were true. Due to a dry early spring, pastures were poor and at the beginning, and with the hot and dry early summer became short and parched. Late summer rains made the pastures pick up again and September, usually the worst month of the year, was probably the best.

Every member has one or more silos and there are fifty in use in this association. Corn does well and besides corn silage there is a limited amount of beet pulp.

Legumes are grown by every member. Only a limited amount of alfalfa is grown, the soil not being very well

Calamity Segis King De Kol

Born October 22, 1922

Sire:—DE KOL PLUS RAYMOND-DALE, whose two nearest dams are De Kol Plus Segis Dixie and May Echo Sylvia, the two greatest producing cows known.

Dam:—RAYMONDALE CALAMITY SEGIS. On two milkings daily as a two-year-old, she produced 55 lb. milk, testing 4% fat. She is from a 25.94 lb. junior four-year-old and by a son of the 37.26 lb. cow, Korndyke Queen De Kol 6th, three records above 31 lb. butter and 700 lb. milk.

Besides being splendidly bred this choice bull is large for his age and nicely marked.

MRS. MAUD DWIGHT
Waldron Farm South Otselec, N. Y.

We have just what you want.

WHITMAN A. FOLLETT,
Chenango Valley Stock Farm
Chenango Co., North Norwich, N. Y.

adapted to this crop. Soy beans make good yields and there is a considerable acreage of clover and mixed hay.

There were three silver cups offered for competition. Sadie took that for high cow by a wide margin, her stablemate, Flora being second. The Middleton herd won the cup offered for her management with a figure of 28.3% against 26.5% for the nearest competitor, R. L. Harrison & Sons. The competition for the herd prize was very close, 10 points were allowed for every 1,000 lb. milk and ten points for every 40 lb. butterfat. The Crandall herd had the high milk average with the Middleton herd high for butterfat and Mr. Crandall won by a figure of 218.69 against 217.85 and the herd of F. M. Mohler was third with 211.7.

The report is very comprehensive and covers so many things that we shall undoubtedly have occasion to refer to it several times in the near future.

THREE-YEAR-OLD LEADER

A three-year-old registered Holstein, owned by William Cornish, was the leader in the Fayette County, Iowa, Testing Association during March. She is credited with 1,785 lb. milk, 62.4 lb. fat. Two other members of the Cornish herd produced more than 60 lb. fat; one a four-year-old being credited with 60.9 lb. fat, 1,965 lb. milk; and the other with 60.6 lb. fat, 1,686 lb. milk.

The leading herd was owned by Walter Turner, his herd of 8 grade and purebred Holsteins having the average of 39.9 lb. fat, 1,785 lb. milk. Fourteen grade and purebred Holsteins, owned by Jim Hanson of Mayard, was second with an average of 37.5 lb. fat, 1,080 lb. milk.

There were 416 cows in twenty-nine herds tested; thirteen produced more than 50 lb. fat, and 37 more than 40 lb.

PUREBRED LEADS

Nannette Cornucopia Wayne Boone carried off the honors for March in the Skagit County, Washington, Testing Association by producing 94.3 lb. fat, 30.42 lb. milk. Inka Vale Pietertje 2d, was second with 91.3 lb. fat, 2,348 lb. milk. They are both mature cows in the purebred Holstein herd owned by the Northern State Hospital. This herd is credited with the highest average production, their figures being 1,350 lb. milk, 44.4 lb. fat. The average production for the 897 cows tested was 94.3 lb. milk, 32.9 lb. fat. Two hundred and fifty-eight cows produced more than 40 lb. fat, while ninety-three exceeded 50 lb. There were 65 herds tested.

RETURNED NICE PROFIT

Bob-Ears, a grade Holstein owned by Roy Spurling, led the Brookings, S. D., cow Testing Association for March. She also returned the highest income over feed cost. Her production of 78.45 lb. fat was valued at \$36.87. Her daily feed which consisted of 31 lb. silage, 12 lb. alfalfa, 15 lb. ground oats and corn and 1 lb. oil meal, was valued at \$10.91, leaving a net value of \$25.96 for the butterfat.

HONORS DIVIDED

Sixteen registered and grade Holsteins owned by Tarpping & Brinton of Gooding, Idaho, led the Gooding Co-operative Cow Testing Association for February with an average production of 769.6 lb. milk, 31.02 lb. butterfat reports the test supervisor, C. E. Herrington. In the herds of fifteen cows or less the leader consisted of ten grade Holsteins owned by Sherman Fordyce also of Gooding with an average of 1,129.6 lb. milk, 38.25 lb. butterfat. A grade Holstein, Viche, owned by R. W. King of Wendell was high cow with a production of 1,441 lb. milk, 67.7 lb. butterfat.

There were thirty-six herds containing 411 cows tested by Mr. Herrington. These cows averaged 636.8 lb. milk, 26.90 lb. fat. The average per cent was 4.22 and the average profit was \$7.98. The three high cows averaged \$26.68 for the month. Strange to say, one was a grade Holstein, the second a grade Guernsey and the third a grade Jersey. A purebred Holstein owned by W. H. Fowler was fourth with a production of 1,192 lb. milk, 54.8 lb. fat and a net profit of \$25.76.

IN OPERATION FIFTEEN YEARS

The oldest association of its kind in the state of California is the Ferndale Cow Testing Association now in its fifteenth year of continuous work. In 1923, four thousand one hundred and thirty-seven cows were tested for an average of 278 days and they averaged 341 lb. butterfat. The cow testing year covers a period from March 1, 1923 to February 29, 1924. Official tester A. L. Kelly says that 46% of the herds stay in the association two consecutive years and therefore each year the association must be made up of 54% new herds or herds that will test intermittently. This militates against constant and steady improvement.

SEVEN IN FIRST TEN

Seven of the ten leading cows in the Buchanan County, Ia., Testing Association, during March were black and whites, either grade or purebred. The leader, a grade Holstein, owned by Fred Comfort was credited with 1,351 lb. milk, 67.5 lb. fat.

The leading herd was owned by L. Pieplow of Aurora, his fourteen Holsteins averaging 1,656 lb. milk, 44.2 lb. fat.

Twenty-six herds composed of 356 cows were tested. The average production of all the cows tested was 792 lb. milk, 29.2 lb. fat.

WHEN THEY STARTED

The first cow testing association to be formed in the United States was organized in Newargo County, Michigan, in 1905 and at the end of four years the average production per cow, including all the cows owned by members of the organization had increased by 16 per cent in milk and 23 per cent in butter and profit over cost of feed had increased by nearly 100 per cent.

TESTING IN VIRGINIA

By L. P. EMMERICK

During the month of March there were thirteen active Cow Testing Associations in Virginia with a total of 5,472 cows reported. Of this total 719 cows produced over 40 lb. butterfat, 221 over 50 lb. 58 over 60 lb. 16 over 70 lb. and 5 over 80 lb. butterfat.

The high cow for the month was "Flora" a grade Holstein owned by Mr. Ben Middleton of Herndon, Va., a member of the Fairfax County No. 1—Cow Testing Association. Her record for the month was 2,717 lb. milk and 104.3 lb. butterfat. Last month her record was 2,617 lb. milk and 105.5 lb. butterfat. This is the first time in the history of Virginia Cow Testing Association work that any cow has produced over 100 lb. butterfat two months in succession. Of the ten high cows, five were purebred Holsteins, two were grade Holsteins, one was a purebred Jersey and two grade Jerseys.

The high herd for the month was the herd of ten purebred Holsteins owned by H. D. Butler & Sons of Culpeper, members of the Culpeper C. T. A. This herd's average production was 1,533 lb. milk and 52.7 lb. butterfat. The second high herd is owned by H. J. Hardesty of Berryville, a member of the Northern Valley C. T. A. This herd of nine grade and purebred Holsteins averaged 1,326 lb. milk and 48.7 lb. butterfat. Eight of the ten high herds were Holsteins, one was a Guernsey herd and the other a Jersey herd.

The average production of all cows including dry cows was 595 lb. milk and 24.1 lb. butterfat. The Fairfax County No. 1—C. T. A. had the highest association average. The 604 cows in this association, including dry cows, averaged 710 lb. milk and 28.9 lb. butterfat.

There was a total of 111 unprofitable cows sold during the month. Five purebred bulls and 28 purebred cows were bought by members of Va. Cow Testing Associations during the month.

Mr. Ralph Gowl the tester for the Rockingham County C. T. A., with a total of 120 points was the winner of the first prize for the month in the Va. Cow Testers "Efficiency Contest." Mr. J. B. Fink the tester for the Orange County C. T. A. was second with 107 points and C. A. Buck, the tester for the Southside Va. C. T. A. was third with 103 points.

WISCONSIN COW TESTING DURING MARCH

Purebred Holsteins staged an exciting race during March in the Wisconsin Test-Associations and there was only one-tenth of a pound of fat between the leaders at the finish. A representative of the Swarty Stock Farm enrolled in the Waukesha Association was first with 100.6 lb. butterfat while a purebred Holstein of the F. H. Boyle herd of Peebles, and enrolled in the Byron Association was second with 100.5 lb.; in the third place was another purebred Holstein

owned by T. Mathiew of Chippewa Falls. This cow, in the Eau Claire No. 3 Association, produced 97.8 lb. fat. A grade in the Unity Association was fourth with 97.2 lb. while in fifth place was a purebred owned by Max Kleman of Caroline. In the Marion Association this cow produced 96.4 lb. fat.

The Kleman herd consisting of ten purebreds led the entire state with the splendid average of 67.2 lb. fat. Al Moths of the Farmington Association had nine milkers, grades and purebred Holsteins that averaged 60.7 lb. fat while eleven cows, grade Holsteins, were in third place with 59.2 lb.

Black and White cows furnished more than one hundred of the leaders in the 147 associations reporting their leaders. In fifty-three cases these were registered Holsteins and in forty-eight the leaders are reported as being grade Holsteins while in two other instances the tester reports his leader as a Holstein and does not mention whether she is grade or purebred. The nearest competitor from a breed standpoint was Guernseys, there being four registered and twenty grade Guernsey leaders.

REGISTERED COWS IN FRONT

Olga, a purebred Holstein, owned by G. H. Douglas & Son of Meridian, Idaho, took first place in the Alda County Testing Association with 2,031 lb. milk, 97.5 lb. fat. Prilly, a purebred Holstein owned by Thomas Killen of Boise, is second with 1,972 lb. milk, 92.7 lb. fat. Inka, another registered black and white, owned by T. Van Kuiken, Meridian, is third with 2,364 lb. milk, 70.9 lb. fat.

Mr. Killen owned the high herd, his thirteen registered Holsteins averaging 1,332 lb. milk, 47.4 lb. fat. G. H. Douglas & Son's herd of eight registered and grade Holsteins averaged 1,101 lb. milk, 44 lb. fat.

There were 264 cows tested during March and their average production was 799 lb. milk, 30.4 lb. fat. Twenty-four cows exceeded 50 lb. fat.

HOLSTEINS LEAD IN MARYLAND

Black and white cows carried off most of the honors in Maryland March Testing as the highest ten animals reported were either grade or purebred Holsteins. Rose, a grade, owned by J. M. Kemp and enrolled in the Northern Montgomery County Association led by the production of 90 lb. butterfat. Speckle, owned by J. H. Remsburg of Middletown and enrolled in the Frederick County Association is second with 2,242 lb. milk, 80.7 lb. fat. Jewel, a purebred, owned at Essex Farms, Riderwood, the property of John M. Dennis, is third with 1,792 lb. milk, 80.6 lb. fat while a purebred owned by Wade H. D. Warfield, Sykesville, is fourth with 1,829 lb. milk, 80.4 lb. fat. J. F. Lupo, Sparks, as a purebred Holstein in fifth place with 1,969 lb. milk, 76.8 lb. fat. Wm. J. Lewis is the owner of a purebred Holstein, Lady, 1,996 lb. milk, 75.8 lb. fat. An Essex Farms representative is seventh with 1,953 lb. milk, 72.3 lb. fat. A grade Holstein is eighth with 72.5 lb. fat and the pure-

Choice Bull Calves

Sired by

King Ormsby Veeman Korndyke who is by the 1.346 lb. year-record sire, King Ormsby Ideal, and from a record daughter of King Korndyke Sadie Vale, her dam by Sir Korndyke Pontiac Artie from a 30-lb. daughter of Sir Veeman Hengerveld. Our herd has passed two CLEAN tests, is under State and Federal Supervision and has never had a reactor. For stock of this quality write CLARENCE H. TITUS, Tunkhannock, R. D. 2, Wyoming Co., Pa.

bred Queen, owned by Harry Webb Mt. Airy, is ninth with 1,506 lb. milk, 72.2 lb. fat while Mr. Remsburg has a purebred in tenth place with 2,169 lb. milk, 71.6 lb. fat.

Purebred Holsteins were first, second and third, fifth, sixth and ninth in the Baltimore County Association; third in Cecil County; second in Frederick County, a grade stablemate being first; first, third and fourth in Howard County; second, third and fourth in Upper Montgomery County; second in Northern Montgomery County.

Holstein herds were second in Baltimore County; first in Northern Montgomery County and all ten of the leading herds in Upper Montgomery County consisted of black and white cows.

The tester for the Del-Marvia Association which operates in Cecil County reports the interesting fact that a purebred Holstein herd owned by Raymond Connell produced the cheapest milk and fat during the month. Mr. Connell ran out of roughage and had to use beet pulp in place of hay until the pasture season. The actual feed cost on 100 lb. milk was \$1.14 and per lb. of fat was 32.7c. The cows utilized some of the energy and food stored in their bodies. The tester justly observes that this is not a good plan to follow.

CHAMPIONS ENROLLED

A three-year-old purebred Holstein owned by B. G. Dawes won the Ohio State championship of her class by the production of 27,584 lb. milk, 909.9 lb. fat while the Dawes herd of fifteen registered Holsteins averaged 12,479 lb. milk. The high cow in the entire Association was the noted Jersey champion, Fair Play's Princess, owned by M. C. Harter. She produced 16,207 lb. milk, 964.5 lb. butterfat. Harter cows were third and fourth and registered Holsteins owned by Mr. Dawes fifth and sixth while registered Holsteins owner by D. O. Lees stand seventh and ninth, the Lees herd averaging 10,358 lb. milk.

The Licking County Association has a number of purebred herds consisting of Holsteins and Jerseys.

RAISED HERD FROM IMPORTED COW

Although he has been connected with the purebred Holstein industry for twenty years J. W. Bunnell of Dimock, Penna., did not become a member of the Holstein-Friesian Association of America until 1919. He now has nineteen head of purebreds. The first cow of the Bunnell herd was imported. Her name was Franchette and she was purchased from F. S. Wells of South Montrose, who at one time was one of the most noted owners of purebred Holsteins in northern Pennsylvania.

Husband—"Your extravagance is awful! When I die you'll probably have to beg!" Wife—"Well, I should be better off than some poor woman who never had any practice."

TUTS IS A PUREBRED HOLSTEIN

Tuts, a purebred Holstein owned by Mast Stoltzfus of Morgantown, Pa., led the Goodville Testing Association during the month ending April 14 by the production of 2,415 lb. milk, 89.4 lb. fat, her average test being 3.7%. Grade Holsteins with 72 lb. and 69.3 lb. respectively,

TUTS, PUREBRED HOLSTEIN-FRIESIAN
2,415 lb. milk, 89.4 lb. fat in one month.
Owned by Mast Stoltzfus, Morgantown, Pa.

each over 2,100 lb. milk were second and third while Ethel, a purebred of the Stoltzfus herd was in fourth place with 1,977 lb. milk, 67.2 lb. fat and Becky, a grade Holstein in the same herd is next with 2,163 lb. milk, 67.1 lb. fat. John A. Styer owned a purebred in sixth place with 1,779 lb. milk, 60.5 lb. fat. The leading ten were all black and whites, their average was 1,931 lb. milk and exactly 66 lb. fat while the average test was 3.42%.

Luke W. Martin, tester in charge, reports that twenty-five herds containing 300 cows were enrolled in the Goodville Association. During the testing month, thirty-six animals produced over 40 lb. fat, and fifteen over 50 lb. while thirty-six cows exceeded 1,200 lb. milk.

MAY BE A WORLD CHAMPION

Linden Clara Pasma, owned by Henry Bouchard of Hanaford Valley, Washington, is the champion cow of the Lewis County Testing Association. She freshened April 6, 1923 and in her year, during which she was milked only twice daily, produced 24,603 lb. milk, 849.4 lb. butterfat, a wonderful showing for a cow milked only twice a day.

During the last month of the test, Clara produced 59.5 lb. butterfat. This cow was on pasture eight months and in addition consumed 2,700 lb. beets, 5,850 lb. hay, 7,640 lb. grain. The grain was home mixture that consisted of, by weight, five parts oats, three parts wheat and vetch, one of oil meal and two of mill run. The value of the ration was \$84.75 and of the grain \$117.20 a total of \$201.95. The total value of her product was \$442.95, so that she made above the cost of feed \$351.

Linden Clara Pasma No. 294777 was born March 10, 1915. Her sire was Model Mutual and her dam Sadie Fayne Concordia. Her breeder was H. W. A. Tramm, Chehalis, Wash., who sold her in his sale as a heifer to Mr. Bouchard. In addition to the record just completed this cow as a six-year-old made 14,762 lb. milk, 518.7 lb. butterfat in ten months. Clara is due to freshen again in August.

Mr. Bouchard has a twenty-five cow dairy about one-half of them being purebred Holsteins. He says that he would

keep all purebreds but for a time his cows produced male calves almost exclusively and he would rather raise his cows than buy them.

We are unable to find any record reported of a cow producing more milk than Clara in the year on twice a day milking. When the great Shorthorn cow, Melba 15th of Darbalara produced 21,634 lb. milk in a year as a four-year-old, on twice a day milking, it was hailed as a world's record. Can any reader of the Breeder and Dairyman tell whether or not, Linden Clara Pasma is a World Champion?

JOHANNA LEADS

Johanna Aaggie Homestead, a registered Holstein, owned by O. K. Iverson of Kalispell, Montana, led the Flathead Testing Association for March with 2,573 lb. milk, 69.5 lb. butterfat. Mountain View Elfreda De Kol Posch, in the purebred Holstein herd of W. H. Voelker, also of Kalispell, is second with 1,990 lb. milk, 65.7 lb. butterfat. Queen, a graded Holstein owned by Rex Grier of Creston is third with 1,457 lb. milk, 62.7 lb. fat.

There were 312 cows tested in the month with the average of 764 lb. milk, 28.5 lb. fat. Forty cows produced more than 40 lb. fat.

WORLD'S CHAMPION COW DEAD

Rolo Mercena De Kol, holder of the world's highest record for production of butterfat in seven day official test was slaughtered at Lexington, Kentucky, March 22d, because she had re-acted to the tuberculin test.

Rolo Mercena De Kol is credited by the Canadian Record of Merit with the production of 738.9 lb. milk, 51.93 lb. butter in seven days; 2,930.6 lb. milk, 201.17 lb. butter in thirty days. Her best day's milk is 119.1 lb. She was then the property of J. B. Hammer of Norwich, Ontario, who consigned her to the Moyer National Sale held at Philadelphia June 1919 where she was struck off for \$26,000 to C. R. Schafer of Chicago, Illinois, and was sent to his Coldstream Farm at Lexington, Kentucky.

When the Coldstream Farm was dispersed two months ago Mr. Schafer retained the champion. Since he parted with his Holsteins he has again started with thoroughbred horses.

DAIRYMAID AGAIN IN TEST

Adirondac Wietske Dairy Maid, the wonderful producer in the Bridgford herd is seven months along on her fourth yearly test and so far is ahead of the amount of milk and butterfat produced in the same period last year. It is apparent that, barring accidents, she will for the fourth consecutive year make over 1,000 lb. butter, and over 30,000 lb. milk.

\$150 takes pair yearling heifers. Sire—Clever Model Glista whose dam is a 34 lb. cow, twice over 31 lb. with 83 lb. milk daily. Dams are producers and by son of 31 lb. cow. Herd Accredited. Maple Grove Stock Farm, F. Jones, Mgr., Centerville, Pennsylvania, R. 4.

NEW HERD SIRE AT HOLLINS

The Holstein herd of Hollins College, Hollins, Va., is now headed by a bull bred and raised by John Erickson, Wampaca, Wis. The new Hollins herdsire was born February 13, 1923. His dam, Princess Colantha Maud 2d, is sired by Sir Pietertje Ormsby Mercedes 37th from a daughter of Sir Piebe Aaggie Hengerveld and Princess Colantha Jewel 4th. Tested as a senior three-year-old, Princess Colantha Maud 2d, produced 934.65 lb. butter, 18,440.50 lb. milk in a year.

The Hollins bull is sired by Ambassador Fobes 2d, he by Ambassador Fobes, a son of Sir Pietertje Ormsby Mercedes 37th and Wisconsin Fobes, 1153.05 lb. butter, 24,535.5 lb. milk in a year, whose daughters are famous for production.

It can be seen that the Hollins herd bull has a combination of breeding found in a number of great producers. He has a double cross of the blood of "37th," being both a son and a grandson of that famous sire, whose dam, Spring Brooke Bess Burke 2d, four different years made over 1,000 lb. butter and has four seven-day records ranging from 30.22 lb. to 38.23 lb. Her most famous daughter, Bess Johanna Ormsby, has three separate ten-months-records, each above 1,000 lb. butter and recently closed a year record of 1,497.61 lb. butter, 30,143.3 lb. milk.

The Erickson bull will be bred to the daughters of Colonel Pietertje Ormsby, a son of Sir Pietertje Skylark Ormsby, a grandson of Duchess Skylark Ormsby and of Sir Pietertje Ormsby Mercedes. Sir Pietertje Skylark Ormsby is a son of Miss Pietertje Colantha Ormsby, 940.16 lb. butter, 18,452.9 lb. milk as a two year old, a daughter of Miss Colantha Korndyke Ormsby 1,089 lb. butter as a four-year-old, whose dam made 1,255 lb. butter in a year and was a daughter of the former world's champion for thirty days butter production, Pietertje Maid Ormsby.

Colonel Pietertje Ormsby is a son of Queen Pietertje Mercedes Ormsby, 673.12 lb. butter, 15,540.2 lb. milk in a year, calving at thirty months of age. She is by Sir Pietertje Ormsby Mercedes and from a high record daughter of Sir Korndyke Hengerveld De Kol 36th and Queen Ormsby Pietertje, a 993 lb. year record daughter of old Sir Pietertje Ormsby Mercedes.

The twelve nearest dams of Colonel Pietertje Ormsby have year records that average 918.79 lb. butter.

In announcing the purchase of the new herd bull, Joseph A. Turner, general manager of the Hollins herd says that he was not able to purchase a bull with as many records as he would like but he had obtained exactly what he wanted in the way of breeding. The dam of this young bull carries a cross of blood lines that is producing so many of the really great cows of America. His dam has a splendid record made as a three-year-old. He goes to "37th" on both sides. Mr. Turner says, "Individually the bull is certainly one of the best I ever looked at. I am particularly impressed with his length, his top line and his splendid quality."

JUST A SAMPLE

PAULINE LILITH NETHERLAND
80 lb. milk a day, is one of the choice animals in our herd which produces milk and butterfat at a profit over cost of feed and care.

Such animals are bred to
TRAVERSE ECHO SYLVIA KING
whose three nearest dams have official seven day records averaging 33 lb. butter.

Come and see Them and Him.
W. B. KENNEDY & SON,
Bradford Co., Wyalusing, Pa.

ABOVE 12,000 LB. C.T.A.

Two members of our herd produced over 12,000 lb. milk in a year of Cow Testing Association work. Each returned well over \$100 profit above feed cost.

Calves from such cows and sired by KING ALCARTRA RAG APPLE POSCH—Grand Champion three successive years at the Susquehanna County Fair, are bound to prove profitable investments for you, especially when they come from an Accredited Herd which has never housed a reactor.

TIDY ABBEKERK PRINCESS MADALINE

598 lb. milk, 32.12 lb. butter, average test 4.3%, is the dam of our junior herdsire.

She is the 12th 30-lb. daughter of the noted century sire, Tidy Abbekerk Prince and possesses the size, constitution, individuality and producing capacity characteristic of the descendants of that famous old bull.

Come and see her, her daughters and her son, whose two nearest dams now average 591.2 lb. milk, 36.19 lb. butter.

Herd under State and Federal Supervision. Established 1901.

HOMER N. LATHROP

Chenango Co. Sherburne, N. Y.

K. P. A. P. GELSCHÉ

By the completion of a record of 15,349.2 lb. milk, 687.06 lb. butter in 305 days as a junior two-year-old, K. P. A. P. Gelsche No. 635313 became the Maine state champion of her class. She carried calf 189 days of the time she was on test and was owned at the Clover Lane Stock Farm, Oxford, Me., of which Joseph Robinson is the proprietor and H. S. Bole, manager.

K. P. A. P. Gelsche was bred by F. F. Resseguie, South Gibson, Pa. She freshened for the first time at the age of two years, two months and twenty-three days. Placed in official test she produced 22.63 lb. butter, 422.2 lb. milk in seven days, 1,760.7 lb. milk, 93.23 lb. butter in thirty days.

K. P. A. P. Gelsche is a daughter of King Pontiac Alcartra Pietje and Gelsche Walker 3d. Her sire is probably the leading herd bull of Northern Penn-

K. P. A. P. GELSCHÉ

15,349.2 lb. milk, 687.06 lb. butter in 305 days as a junior two-year-old. Maine State Champion of her class. Owned at Clover Lane Stock Farm, Oxford, Me.

sylvania. He has two 30-lb. daughters, two daughters that have each made over 700 lb. milk in seven days and a number of other daughters with creditable records. His sons head some of the best herds in Pennsylvania; his daughters are found in good herds in several states and they are noted for their straight topline, splendid udders, production and individuality. Sons and daughters of this bull have won high honors in many show rings. He has a number of high record cows close up in his pedigree. His dam was Fairmont Zerma Segis Pietje, 35.61 lb. butter, 608 lb. milk in seven days, former world's champion junior four-year-old. His sire was King Segis Pontiac Alcartra, well known to all students of A. R. O. work, with over a hundred tested daughters; one of the noted bulls of his day; and a son of K. P. Alcartra, former world's champion three-year-old for both seven and thirty day butter production and former junior two-year-old champion for year butter production. He was by King Segis Pontiac, the oldest son of Pontiac Clothilde De Kol 2d, whose records of 37.21 lb. butter in seven days 145.29 lb. butter in thirty days; 1,271.60 lb. in a year were all world's records at time of making. This great cow was the first animal in the world to make over 30 lb. butter in seven days official test at three successive lactation periods.

Gelsche Walker 3d, the dam of our heroine, is a cow of high class individuality and producing capacity. She has

a comparatively low record, 21.57 lb. butter, 493.3 lb. milk made as a senior three-year-old. She has been denied the opportunity of another test but is an easy thirty-pound cow. Her three direct maternal dams are each above the 30-lb. mark. Her dam, Gelsche Walker, has official records of 638.7 lb. milk, 30.54 lb. butter in a week, 2,576.9 lb. milk, 125.39 lb. butter in 30 days. She is from Mary Walker Pietertje, 603.5 lb. milk, 31.81 lb. butter in 30 days. Mary is a daughter of Buttercup Clothilde Pietertje 576.7 lb. milk, 32.92 lb. butter in a week; 2,445 lb. milk, 129.17 lb. butter in thirty days. Buttercup is from Daisy Pietertje Hartog, 322.7 lb. milk, 13.84 lb. butter in seven days as a junior four-year-old and she in turn is from Kate Pietertje H. This cow tested when thirteen and one-half years old is credited with an official record of 510 lb. milk, 21.15 lb. butter in seven days and she in turn is a daughter of Kate H., a famous old cow of central New York, that never had an opportunity to make an official record.

It can thus be seen that K. P. A. P. Gelsche and her maternal ancestors represent seven direct generations of officially tested cows. The heifer herself has a remarkable pedigree as her thirty-two nearest dams have seven-day records that average over 30 lb. butter. She is in a high class herd and the Advanced Registry office may expect to record future large records made by the present Maine champion of the baby cow class.

LATHROP FEELS ELATED

In the herd of Homer N. Lathrop of Sherburne, New York, one of his greatest cows, Tidy Abbekerk Princess Madaline has just been credited by Superintendent Gardner with the production of 598 lb. milk, 32.12 lb. butter in seven days, her average test being 4.3%.

For several reasons the announcement of this record is of interest to owners of Holsteins. She is the twelfth daughter of Tidy Abbekerk Prince to cross the 30-lb. mark and is his third highest in size of record.

Tidy Abbekerk Princess Madaline has daughters and granddaughters in the Lathrop herd and is dam of the junior herdsire, who was by King Korndyke De Kol Changeling, a son of King Korndyke Sadie Vale Wayne and Ruby Pietertje Butter Boy, 584.4 lb. milk, 40.26 lb. butter in a week; her dam, Ruby Perfection De Kol Pietertje 2d, has a seven-day record of 601.7 lb. milk, 30.68 lb. butter.

The records of the dam and sire's dam of the Lathrop junior herdsire average of 591.2 lb. milk, 36.19 lb. butter. Better still, he has the individuality and constitution of the descendants of Tidy Abbekerk Prince, who was one of the greatest of the century sires. This bull spent his life in small herds and the fact that he has more than one hundred tested daughters is evidence of his quality, longevity, and prepotency, desirable characteristics that have been transmitted with a remarkable degree of certainty to his descendants.

BROKE WISCONSIN MILK
RECORDS

Inka De Kol Lyons Pontiac No. 513485 owned by John F. Mayer & Sons of Polk, Wisconsin, recently completed an official test during which she broke three Wisconsin State records for milk production as a senior four-year-old. She freshened at the age of 4 years, 11 months, 20 days. She produced 838.8 lb. milk, 29.2 lb. butter in seven days and surpasses the former State record in her class by 117.2 lb. milk. In thirty days she produced 3,406.3 lb. milk, 119 lb. of butter, her best day's milk being 124.1 lb. She is being continued on semi-official test. She freshened four times before she was five years old and has never been dry since she first freshened with the exception of four weeks previous to starting her last lactation period.

The test ration feed of this cow consisted of 30 lb. silage, 30 lb. mangels, 12 lb. hay, 7 lb. oil meal, 7 lb. gluten, 4 lb. cottonseed meal, 2 lb. bran, 8 lb. ground oats and 2 lb. corn.

ONE THOUSAND DOLLAR DONATION

"There is nothing more important to the dairy industry than the improvement of the dairy herds. This prize money should encourage the formation of more County Breeders' organizations and stimulate the growth of those already formed," was the statement written by United States Senator, Medill McCormick, in donating \$1,000 for prizes for the development of better dairy herds in Illinois. The donation was announced by Frank T. Fowler, Lake Villa, on behalf of the Milk Producers' Association.

The Illinois Holstein-Friesian Association will have supervision of the prize money. It will be competed for by County herds consisting of ten animals not more than five to be chosen from any one herd.

Senator McCormick is the owner of Rock River Farms at Byron and is the largest milk producer in the State, exclusively supplying certified milk for invalids and babies.

PENNSYLVANIA HERDS ARE
HEALTHY

Pennsylvania herds are gaining an enviable reputation for freedom from tuberculosis. Last year 17,038 herds were tested and of this number 15,773 or 91% were passed as being free from disease. This is a decided improvement on the showing in 1896, the first year when tuberculosis testing was reported. That time there were only 44% of the tested herds found uncontaminated. There were 180,170 head in the herds tested during 1923.

"If you're building a house, and a fellow will show you where you've got the foundation wrong, you'll thank him. But if you're building an organization, and he shows you a fault at rock-bottom, why, dern him, he's a knocker!"

CANADIAN OFFICIAL REPORT

Eight different cows are reported with 30 lb. seven-day butter records in the March Canadian Official List. Vera Lantorth with 724.8 lb. milk, 35 lb. butter is in first position. She is owned by Orton Kobb, Branchton, Ont. Cobequid Mercena Grace Fayne of the Nova Scotia Agricultural College, Truro, N. S., is second with 640 lb. milk, 33.78 lb. butter. Topsy Korndyke Segis, Canadian champion four-year-old in long time work, is third with 809.2 lb. milk, 33.29 lb. butter. She is owned by Duncan Mc Naughton, Winchester, Ont., who also owns Richfield Inka Korndyke, 745.3 lb. milk, 30.09 lb. butter.

One of the greatest records reported, age considered, is that of Colony Topsy Pauline of the Colony Farm, Essondale, B. C. This senior two-year-old is credited with 502.8 lb. milk, 27.37 lb. butter.

Dutchland Mercena, with 21,235 lb. milk, 982.5 lb. butter, heads the mature class for year production. She is owned by J. B. Hammer of Norwich, Ont. Ophelia Segis, the property of R. R. Stevens, Bowmanville, Ont., is the leading four-year-old with 26,692 lb. milk, 946.25 lb. butter. The leading three-year-old is Hengerveld Pearl Nephele 5th, 18,903 lb. milk, 941.25 lb. butter. She is owned by the Department of Agriculture, Edmonton, Alberta. The two-year-old class is led by Englewood Pontiac Echo, 18,296 lb. milk, 836.25 lb. butter, the property of Dr. H. A. Clark, Brockville, Ont.

In the ten months' division, the leader is Pietje Keyes Hengerveld, owned in the R. R. Stevens herd, with 19,705 lb. milk, 917.5 lb. butter. Cobequid Mercena Grace Fayne before making her 33-lb. seven-day record freshened as a three-year-old and in ten months produced 20,027 lb. milk, 981.25 lb. butter.

KING P. O. P. BULLS IN DEMAND

Hargrove & Arnold experience a big demand for the sons of King Pietertje Ormsby Piebe, their famous sire and show bull. A half interest in King P. O. P. 48th, was recently purchased by Ludvik Petrak of Cedar Rapids, Iowa. The bull will form part of the Hargrove & Arnold show herd the coming season and will then be delivered to his new purchaser. This young fellow is claimed to be the only close relative of King P. O. P. in Linn County.

King P. O. P. 33d, was recently purchased by the Dairy Department of Purdue University, Lafayette, Indiana. His dam is Forbes Hengerveld Colanthus 2d, with a seven-day record of over 31 lb. of butter and 927 lb. of butter in a year. Her dam made 920 lb. in a year.

King P. O. P. 33d, will be used as junior herdsire in the Purdue herd and will be bred to the daughters of Paul Forbes Butter King, the present senior herdsire.

It is reported that during the last five years descendants of King Pietertje Ormsby Piebe have won 254 first prizes and 91 championships at State fairs and National shows in this country and Canada.

DANKS PLANS BIG SHOW

Arthur Danks of Winterthur Farms will be superintendent of the Delaware State Fair and is planning a campaign in order to get a big show of Holsteins as the bulk of Delaware's milk supply come from animals of this breed. The Delaware Holstein-Friesian Association will duplicate every dollar the State Fair Association offers as Holstein prize money and the National Association will contribute 40% of the combined totals of the Fair and Delaware Association.

PIONEER IOWA BREEDER

One of the pioneer Holstein breeders of Iowa is Marion C. Miller of Ostedock. Mr. Miller started farming on a small scale in 1878. His first farm was only 4½ acres and he resided on that land until 1881 when he bought 40 acres. It was all timber and he had even to clear a place to build his log house. Later on he purchased 40 acres more and he and Mrs. Miller worked hard and gradually cleared the land, still living in their log house. Later they bought another 80 acres, making a total of 160 acres and then they built a two-story frame house, their present home.

In the year 1907, Mr. Miller started dairying. He decided upon Holstein-Friesians because they were the heaviest milkers so that he would have skim milk for pigs and calf feed. His new enterprise was successful. In 1909, he entered two purebred cows in the Iowa cow contest. One of these was the third best Holstein for actual production, producing 14,600 lb. milk, 680 lb. butter. The other, a heifer, milked over 12,000 lb. milk and made over 500 lb. butter. Mr. Miller became a member of the National Association in 1910.

In 1910 the Millers built a three-story barn, the basement being used for cattle, the second floor for machinery, grain and workroom. The cow barn is cemented with tile in each stall, open to the gutter and every second one runs to the wall to take care of seepage from the bank. This seepage empties into a gutter and is taken by tiles outside the barn so that the floor is dry at all times. The cows stand on a three inch elevation above the driveway which helps to keep them clean and shows them off well. There are twelve windows in the barn, six on a side, three feet long by two feet wide. The barn is built north and south in order to get more sunlight which shines across the barn twice a day. It has a good ventilating system. Mr. Miller has allowed 448 square feet for each cow which he says is not quite enough but is more than most of the barns allow in his neighborhood. In 1912, a silo was erected and is the best paying investment on the farm.

The Millers have always kept all the cattle, horses, and hogs the farm will accommodate. The hogs are purebred, big-type Poland Chinas. There are still forty acres of timber but it has a number of open places and is pastured.

Mr. Miller says that when he and his wife started farming he only had 4½ acres of land and no money but he had good health and with hard work and the help of his family, he has made a fairly good success. The Millers have raised six boys to manhood and two girls to womanhood but had the misfortune to lose one son when he was nearly 23 years old. The shock of his loss was partly the reason that his mother followed him within a month. After her death, Mr. Miller rented to his youngest living son who took one half interest in his cattle and the rest, thirty-eight head, were sold.

The present herd bull is backed by pro-

ducers as he has twenty-two dams in his pedigree that have seven-day records of 30 lb. or more.

Mr. Miller says, "My success comes from a long life of careful dealing, perfect economy and looking ahead before investing. All I have is clear with no debts. It is not what a man makes each year that puts him ahead but what he saves, that means plenty at the end of a long lifetime when he is not able to do the work of his youth."

HIGH CLASS CAROLINA HOLSTEIN FARM

Jefferson Penn is a prominent Buffalo business man with offices at 205 Ellicott Square. He is also owner of one of the leading North Carolina Holstein-Friesian breeding establishments. Chinqua-Penn Farm is about two miles from Reedsville. Mr. Penn has made a considerable investment in his farm. The dairy barn contains two sections, thirty stalls to a section. The cows are milked by machinery. There are two silos each with a capacity of two hundred tons. An electric hoist loads and unloads feed in the mixing room while even the hay forks are operated by electricity.

Chinqua-Penn dairy is on the accredited list and has been for a number of years. The milk is cooled down to 48 degrees within five minutes from the time the cow is finished milking. Then it is held in a refrigerator at a temperature of 33 degrees. Connected with the main refrigerator is an ice plant which turns out six tons of ice every twenty-four hours. Water is obtained from a well 306 feet deep and is stored in a 5,000 gallon pressure tank. In the feed mixing room there is a fire hose with one-hundred pound pressure.

Purebred Holsteins and the Chinqua-Penn dairy are the main hobbies of Mr. Penn. Allen W. Ayres is general manager of the entire establishment.

FOOTBALL PLAYER IN DAIRYING

A few years ago C. P. Morgan of Wasco, California, was a football player at Colorado College. Now he is a dairy farmer.

The Morgan ranch consists of 80 acres. There are 65 acres of alfalfa which is used both for pasture and for hay. The 50 head of black and whites make a beautiful picture when grazing in the green alfalfa fields.

The head of the herd is King Korndyke Mutual Pontiac, a son of King Korndyke Pontiac 20th and Miss Fobes Starin. She has a record of 900 lb. of butter in a year made as a three-year-old.

The Morgan milking dairy consists of eighteen cows which are milked by machine. Last year the ranch income was \$4,000 while the year before it reached \$5,000.

A shoe firm received a shipment and found that all the shoes were lefts. On the outside of the box, beneath the trademark, was the line: "All rights reserved."

PRICES THIRTY-FOUR YEARS AGO

In an issue of the Chehalis Bee dated March 21, 1890, B. N. L. Davis of Mt. Vernon, Wash., offered for sale forty head of registered Holsteins. For bulls, one month to one year old, his price was \$25 to \$75; heifers, one month to one year, \$50 to \$100; bulls one to four years old, \$100 to \$150; cows two years of age and upwards, \$120 to \$150. Mr. Davis stated in urging the merits of his animals that "A good Holstein cow will produce 1,500 gallons of milk and 350 pounds of butter annually."

It's mighty well-trained conscience that can be taught to speak only when it is spoken to.

CANADIAN BULL HEADS WALDRON HERD

A choice young bull recently journeyed from Canada to New York State there to head the good Holstein herd at Waldron Farm, owned by Mrs. Maud Dwight of South Otselic. He is of royal blood and is a show bull. His dam, tested six weeks after she freshened, produced 19-02 lb. butter in seven days as a two-year-old, averaging 55.6 lb. milk per day. Her dam, Princess Dixie of Annandale 2d, has a seven day record of 26.09 lb. butter averaging 82 lb. milk daily and has four good tested daughters. She is from the great foundation cow Princess Dixie of Annandale who has five tested daughters, four over the 24 lb. mark while one of her sons is Sir Segis Dixie, sire of the world's champion Holstein, De Kol Plus Segis Dixie.

The sire of Mrs. Dwight's new herd bull is from Sylvia Tensen Echo 729.5 lb. milk, 27.57 lb. butter in seven days as a junior three-year-old. She is a daughter of Champion Echo Sylvia Pontiac and her dam is Alice Tensen 29.12 lb. butter, dam of Alice Tensen's Canary 30.22 lb. butter in a week as a four-year-old. The sire's sire is from Lulu Keyes, famous show cow and producer with 36.05 lb. butter 785.4 lb. milk in a week, dam of a 27 lb. four-year-old and four sons with tested daughters.

Despite the fact that Dixie Korndyke Keyes, his dam, is only a two-year-old, yet the six nearest dams of Mrs. Dwight's herd bull have seven day rec-

ords averaging 28.98 lb. butter, 638 lb. milk. Many of his near relatives have made splendid milk and butter records in official work and have won high honors in the show ring. He will head a producing, milky herd and his daughters have every right to be animals that will make a substantial profit at the pail.

STEVENSON'S WORK WELL KNOWN

In a recent issue of the Republican, published at Fresno, California, there appeared pictures of two polled Holsteins, King Prilly De Kol Jetze and his dam Lady De Kol White Rose. The bull is herdsire for G. N. Huffer of San Joaquin and the dam was formerly owned by H. L. Fortney of the same town. Commenting upon these animals and the fact that they were naturally hornless, the Republican refers to the fact that the well-known Pennsylvania breeder George E. Stevenson had developed an extensive herd of polled Holsteins which were also noted for their type and conformation and for their large and persistent production.

Four thousand, four hundred years ago, according to reliable history, the people of Crete had water piped into their homes to supply the comforts of the bathroom and similar refinements. Why, then, with our present boasted civilization, must so many farm families carry all the water they use, and still dread the recurrence of Saturday night.

DEMAND FOR ASYLUM HERD CALVES

J. Schneider of New Franken, Wis., recently purchased the handsome young bull, Sir Ormsby Abbekerk Korndyke 6th, from the Brown County Asylum. The calf was born July 3, 1923. His sire was Sir Ormsby Abbekerk Korndyke, whose two nearest dams have records that average 35 lb. butter in seven days, 1,227 lb. butter in a year. The dam of this calf has a seven day record of 24.36 lb. butter and a year record of 910 lb.

Two other bull calves from good producing dams was recently sold from the Asylum according to H. F. Wittig, superintendent. One was purchased by Peter Meulmans, Wrightstown and the other by W. H. Thielens, New Franken.

CARRYING A JOKE TOO FAR

"Prisoner, you are accused of stealing a purebred Holstein calf."
"Yes, your honor."
"Did you take it?"
"Yes, your honor."
"You plead guilty of theft?"
"No, your honor; I took it for a joke."

A thoughtful frown crosses the judicial brow. "How far did you carry that calf?"

"Just over to my house—a matter of two miles."
"You carried that joke entirely too far."

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

No. 10

Published Semi-Monthly. Price, 75c. Per Year

TIDY ABBEKERK PRINCE No. 37770

The greatest sire ever in the Lathrop herd and one of the really great sires of the Holstein-Friesian breed.

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922 at the post office at Harrisburg, Pennsylvania, under the Act of March 3, 1879.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

The Holstein Breeder and Dairyman

VOL. III

HARRISBURG, PA., MAY 22, 1924

NO. 10

The Lathrop Herd

One of the Best Bred Holstein Dairy Herds of New York State

CLOSE to the pleasant village of Sherburne, New York, is the home of Homer N. Lathrop, owner of a high-class herd of Holstein cattle with an enviable reputation for individuality and producing ability. This herd contains three daughters of the famous century sire, Tidy Abbekerk Prince, and as far as we can ascertain, is the only herd in the country of which this can be said. But, perhaps, it would be better to tell more about how the herd was started and how it grew.

Away back in 1901 a start in the purebred business was made by the purchasing of a cow, Bessie Mayflower Bessie, from N. F. Sholes of Earlville. This cow had only two quarters but she did so well that more animals were gradually added.

The first high-class herdsire was Prince Korndyke Johanna, a son of Sir Korndyke Manor De Kol, from Johanna Korndyke, a 31.65 lb. four-year-old granddaughter of De Kol 2d's Butter Boy 3d. This bull has a number of good record daughters and granddaughters and some of the best members of the present herd are among his descendants.

Homer N. Lathrop was a college man as well as a practical farmer. He attended many sales and before then he had been a test supervisor for a short time and had seen a number of herds of different breeds.

The work of the daughters of Tidy Abbekerk Prince came to his attention. In the winter of 1914-15, five daughters of this bull made records ranging from 30 to over 32 lb. of butter in seven days with a good milk flow. Five new thirty-pound daughters in five months is a showing that, up to that time, no bull had ever equalled, in fact, we do not recall any that have surpassed that showing since then. The work was all the more noteworthy as Tidy Abbekerk Prince had never stood at the head of any noted herd. He was obtained from Canada by Mr. W. M. Hallock of Spencer, New York. Mr. Hallock lived not far away from George F. Blewer of Newark Valley. The Blewers owned Changeling Butter Boy and Mr. Hallock and Mr. Blewer arranged to exchange the services of Tidy Abbekerk Prince for those of Changeling Butter Boy. After Mr. Hallock died the Stevens Brothers Company purchased the Hallock herd and after keeping them a short time sold their daughters of Tidy Abbekerk Prince to H. M. Dunham & Sons. The first two 30-lb. daughters of Tidy Abbekerk Prince were developed by the Dunhams while they were employees of the Stevens Brothers Company and the next five when they were on their own farm at Marcellus, New York. The

daughters of this bull were big, handsome, light-colored cows with large udders, animals that had capacity stamped all over them. Mr. Lathrop knew that Tidy Abbekerk Prince was not in the Stevens Brothers herd and ascertained that they sold him but that they still retained an interest in him of which they were making very little use. He set out to ascertain if the bull could be bought.

At that time Tidy Abbekerk Prince was ten years old and it was quite an undertaking for a young breeder to purchase a high-class old sire. However, this was done and he stood in the Lathrop herd for two years or more, dying in the summer of 1917.

The purchase was a good investment, for the Lathrops raised thirty-five daughters of this grand old sire. Tidy Abbekerk Prince was by Sir Cornelia Posch and was from Tidy Abbekerk, a great Canadian show cow, whose record of 27.29 lb. made in 1903 stood at the head of the Canadian test list for a number of years. On account of this record, the fact that she was a show cow and the fact that her daughters were producers gave her the title of "The Canadian Champion."

Tidy Abbekerk has five sons with tested daughters some in Canada and some in this country although all of the daughters of Tidy Abbekerk Prince were raised in the United States. One of her sons is Prince Abbekerk Pauline, sire of the famous Canadian cow, Madam Posch Pauline 34.28 lb. butter, 835.6 lb. milk in seven days and 1,123.53 lb. butter, 27,597.4 lb. milk in a year. This record was made in strict official test. Another son has one 32 lb. daughter and several others with very creditable long time records.

The greatest cow in the present Lathrop herd is Tidy Abbekerk Princess Madaline who was by Tidy Abbekerk Prince from a daughter of Prince Korndyke Johanna. A recent Gardner bulletin informs us that, tested when nearly nine years old, she made a seven-day record of 598 lb. milk, 32.12 lb. butter, her milk averaging 4.3% fat. She freshened one year and 22 days previous, at which time she made a seven-day record of 611.6 lb. milk, 30.50 lb. butter. She is a large, handsome, light-colored cow, in form, size, color and udder, a typical daughter of her famous sire. There are two other daughters of Tidy Abbekerk Prince left in the herd. One is Tidy Abbekerk Princess Madaline 2d. She is not quite as handsome as her mother but is a real producer as well as a real good cow. The other is Tidy Abbekerk Princess Adeline. All three of these cows are very much of the same type and

TIDY ABBEKERK PRINCESS ADELINE
Her size and evident producing capacity is typical of the daughters of Tidy Abbekerk Prince.

look capable of going into any herd and holding their own with the best.

The present junior herdsire is a son of Tidy Abbekerk Princess Madaline and was sired by King Korndyke De Kol Changeling, the senior herd bull, a son of King Korndyke Sadie Vale Wayne and Ruby Pietertje Butter Boy, 40.26 lb. butter, 584.4 lb. milk in a week. She is a daughter of Colie Change and was from Ruby Perfection De Kol Pietertje 2d, 601.7 lb. milk, 30.68 lb. butter in seven days. King Korndyke Sadie Vale

TIDY ABBEKERK PRINCESS MADALINE
598 lb. milk, 32.12 lb. butter in 7 days. This daughter of Tidy Abbekerk Prince has made over 30 lb. butter in 7 days two different years.

Wayne was by King Korndyke Sadie Vale and was from Queen Veeman Wayne, a daughter of Sir Veeman Hengerveld that made 522.1 lb. milk, 29.27 lb. butter in seven days as a four-year-old. The dam and sire's dam of the junior herd bull have seven-day records that average over 36 lb. of butter and 600 lb. of milk.

A number of good official records have been made at this establishment. The first cow to make a 30 lb. record at this place was Bessie Netherland Baroness No. 110321, a daughter of De Kol Paul Baron D and Bessie Netherland May, she a daughter of Bessie Mayflower Bessie the first cow to be owned by the Lathrops.

Bessie Netherland Baroness was tested in the spring of 1911 and at that time made 520.4 lb. milk, 30.12 lb. butter in seven days, 2,398.2 lb. milk, 119.36 lb. butter in thirty days.

The present owner of this establishment is Homer N. Lathrop. He is well under forty years old, took a special course at the New York State Agricultural College, Cornell University, and then spent a year at the University of Wisconsin. He is active in all local movements for the betterment of farm and dairy conditions, is a member of the Dairymen's League and the Lathrop family is regarded as one of the leading families in the vicinity of Sherburne. His father, Henry Lathrop, the owner of the original Lathrop herd, still resides on the farm and to his wise counsel much of the present success of this establishment can be credited. Mr. and Mrs. Homer Lathrop have two sons, Henry 2d aged nine and George aged six. Henry 2d was an exhibitor at the National Dairy Show last fall at Syracuse and he and his heifer were awarded eighth prize in the calf club classes. Quite a feat considering the competition from a number of different states.

The Lathrop farm contains 240 acres of good New York farm land, located on a good road a short distance

from the village of Sherburne. The main house is built of stone and, as the picture shows, is large and handsome. The buildings are lighted with electricity furnished from a power line. The best of water comes from springs and is piped to all the buildings and the houses of Mr. Henry Lathrop and Homer Lathrop are equipped with bathrooms and hot and cold water.

The district around Sherburne is noted not only for dairying but also for the production of cabbage and about 100 tons are grown every year. Modern farm machinery is used and in every way this establishment shows that it has progressive, energetic and wise management. The herd is run under the accredited herd plan and, we understand, it is the intention to gain a place on the accredited list. It is run as a strictly dairy establishment, and as far as we know, the only official test made the past winter was on Tidy Abbe-

A PROMISING PAIR
Henry Lathrop 2d and the young son of Tidy Abbekerk Princess Madaline.

kerk Princess Madaline and, as she is dam of the young herd bull and has a number of daughters and granddaughters in the herd, there was certainly enough reason for any owner desiring to see this grand old matron increase her official record.

By the test completed this year Tidy Abbekerk Princess Madaline becomes the third highest record daughter of her famous century sire, who has just a dozen daughters that are credited with official seven-day 30 lb. butter records. While we are not certain on this point we believe she is the only daughter of Tidy Abbekerk Prince to make a 30 lb. seven-day butter record two different years and, as mentioned before, she made these at two successive freshenings, practically twelve months apart. The Lathrops, father and son, have a right to feel elated over the performances of this great cow for she was bred, raised, developed and tested in their own herd.

"The farm has a social value which cannot be overestimated. It is the natural home of liberty and the support of courage and character. In all the nation it is the chief abiding place of the spirit of independence."—President Calvin Coolidge.

Uncle Ab says his best friend is the one who expects so much of him that he's ashamed not to live up to it.

In the University of Arizona Herd

UNDER the care of J. B. Quick, formerly of Meshoppen, Pa., and well known as a breeder of high class Holsteins, the nine-year-old cow, Madison Martha 2d, No. 307782, is producing 100 lb. milk a day in the University of Arizona herd, a remarkable showing as she freshened January 25. She was officially tested early in February before Mr. Quick took charge of her and she made 833 lb. milk, and very nearly 30 lb. butter in seven days. She was placed on semi-official test and her record for February was 110 lb. fat, 3,451 lb. milk; for March her total was 112 lb. fat, 3,472 lb. milk, and for April, 105 lb. fat, 3,150 lb. milk. When Mr. Quick wrote on May 5, Martha was still milking 100 lb. daily. She and a number of Jerseys are the only cows now on test in the University herd.

As a six-year-old, Madison Martha 2d is credited with 698 lb. milk, 20.74 lb. butter in a week; 22,031.5 lb. milk, 672.4 lb. butter in a year. She is state record cow for milk production and is a real show animal; was first in the mature cow class and was senior and grand champion female at the 1923 Arizona State Fair.

MADISON MARTHA 2d 307782

In semi-official test she has produced in three months 10,073 lb. milk, 327 lb. butterfat, in the University of Arizona herd.

Her picture, which is made from a small snapshot, gives some idea of her splendid dairy type.

Madison Martha 2d is on a ration of sorghum ensilage, alfalfa hay, and a mixture of 300 lb. rolled barley, 150 lb. cornmeal, 100 lb. cotton seed, 200 lb. wheat bran, 36 lb. oil meal, and 6 lb. salt. She eats about 26 lb. of this per day.

The University herd contains Theresa Belle 3d, No. 236394, Arizona State Champion in the thirty-day and three hundred and sixty-five-day classes. In seven days she produced 790 lb. milk, 29.37 lb. butter; her thirty day record is 3,262.6 lb. milk, 123.78 lb. butter; and her year record is 26,320 lb. milk, 1,015.1 lb. butter. She weighs around 1,600 lb. and it is said that she has never been off feed, retaining her health in test at home, or when exhibited at fairs or shipped on the railroad. Changes of weather, feed and other conditions seem to have practically no effect on her temperament.

Another member of the University herd is Miss Pell Pietertje whose butter record for ten months stands

at the head of the list. She is credited with 19,002.1 lb. milk, 810.9 lb. butter as a seven-year-old. It is interesting to note that she succeeds herself as state champion as her record, made as a six-year-old of 18,041.5 lb. milk, 797.51 lb. butter, is still the second highest in the ten months division. There was only one year and three days between her two freshening dates.

The Holstein herdsire is Idaho Matador Conqueror, a son of Matador Violet Idaho and Idaho Segis Ormsby Girl. This bull was obtained from the University of Idaho herd. His three nearest dams have year records that average 1,018.41 lb. butter, 22,531 lb. milk.

Nearly all the dairy cows have official seven-day records and semi-official ten months and yearly records. There are about eighteen Holsteins including young stock and about eighteen Jerseys, also small herds of Herefords, Poland China and Duroc hogs and a nice flock of Rambouillet and Shopshire sheep. All the livestock is kept principally for feeding experiments for the University. The milk from the dairy, which is used at the University, is produced under conditions that would comply with the rules for producing certified milk. The cows are never in the barn excepting at milking time and to be fed grain and ensilage, alfalfa hay is fed in the corrals.

The many friends of Mr. and Mrs. Quick will be glad to learn that they like Arizona very well and report that the health of Mrs. Quick is rapidly improving. They greatly enjoy the sunny climate. On May 5 they report it was 95 degrees in the shade. Mr. Quick concludes his letter by saying: "It sure seems good to see the HOLSTEIN BREEDER AND DAIRYMAN twice a month, the only trouble it does not come more often."

Superintendent Gardner and the Thirty-Day Test

THERE seems to be some misunderstanding among our breeders as to the status of the 30-day test under the proposed revision of the rules for advance registration. Some seem to think that it is proposed to discontinue that test, but I know of no such proposition. As far as the revision has gone, the 30-day test stands just where it always has stood; for it never had had any status as a basis for admission to advanced registration. No certificate has ever been issued for a 30-day test, unless that 30-day test was the continuation of some 7-day test. The tests entitling cows to entry in the Advanced Register are the 7-day, ten-months and yearly records, all other records recognized being supplementary to these. The Association has always encouraged the continuation of cows in strictly official tests continuing during the year, while we have a large number of 60-day, 90-day and 120-day tests. As the matter now stands all such tests will be reported just as they have been reported in past years; they not being considered as the basic tests for advanced registration, but supplementary.

MALCOLM H. GARDNER, Supt. A. R.

Putting dairying on a business basis requires the keeping of production records of each cow and her heifers.

Limestone as Cattle Food

By A. C. SLIFER

SEVERAL times I have noticed articles in your paper advising that lime in some form should be fed to cattle. Believe the articles stressed the point that it was especially needed in growing young stock and high producers and especially so where they did not have a fair amount of leguminous plants.

I tried out an experiment last year that worked out so wonderfully well for me that I want to pass it along hoping that it may benefit some of your readers.

Three years ago I rented a 75-acre cut over timber tract of mountain and bottom land as pasture for my young stock. There was some blue grass and wild grasses so that they always had something to eat but they did not thrive. One pair of heifers, bred at fourteen months just before being put out to pasture, lost their calves just before coming home. The older females carried their calves all right but they themselves did not grow and when the calves came they were undersized and not as husky as they should have been. The second year they all carried their calves all right but otherwise the results were about the same. Two dry cows in the bunch seemed to fare better than the growing heifers. I was ready to quit but caring for the young stock off of the farm seems almost a necessary evil with us so decided to make a little change and give it another try.

I mixed three pounds of finely pulverized ground limestone and a little salt to 100 lb. of grain and made arrangements with some boys to have the cattle fed about three pounds per head of this grain three times per week. The boys were a little negligent sometimes but I believe the cattle averaged to get about a pound per day of the grain and what a transformation in results.

They all did fine regardless of age and grew just as well as several that I kept in the barn and gave special attention and which cost me several times as much in time and money. The herd attracted quite a little attention on the way home for we are not used to seeing

cattle come in from that kind of pasture in such good shape. One old drover was especially inquisitive and advised me that he had never seen a bunch look like that just coming from pasture in all his life. The pasture season last year was one of the poorest, too.

To sum it all up and give you a recipe in a few words. I found that our cattle did not care for the grain when the limestone was added in much greater quantity and that I believe this mixture and wild grasses equal to our home grown legumes.

Give the Cow a Chance

By A. L. HAECKER

WE have twenty-five million dairy cows in the United States. Some of these are very good but more are poor, and their average yearly production is far short of what it should be. Many states are now planning a campaign to better dairy conditions and to increase the production of the average cow is a large and important task.

Many of the poor records of our cows are not due to the quality of the animals but rather to the poor feeding and care they are receiving. The average cow on the average farm has a poor chance, and we make a great mistake to condemn and discard her without first giving her a square deal. It is wonderful what a little extra feeding will do in the way of increasing production and profit. To illustrate this truth an interesting experiment was recently reported by the Indiana Agricultural College.

Having in view that many cows called poor were made so because of their care and feeding, the Indiana Experiment Station selected five animals from different herds where improper feeding was practiced. The records of all these animals were known through the report of a Cow Testing Association. These five cows were given an adequate balanced ration and the records for the two years resulted as follows: Cow number one produced with better care 392 pounds of butterfat and increased her record 59 per cent. Cow

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the Spotted Poland China Journal, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

number two produced 311 pounds of butterfat and increased her record 94 per cent. Cow number three produced 252 pounds of butterfat increasing her record 104 per cent. Cow number four yielded 293 pounds of butterfat and increased her record 125 per cent. Cow number five produced 335 pounds of butterfat and increased her record 98 per cent. This shows an increase for the five of 96 per cent, and certainly the average production was far above the average for most of the herds.

The three seasons of the year when the greatest damage is done to the producing cows of the country is early spring, mid-summer and late fall. Early spring and late fall may be classed as the season between hay and grass or grass and hay. Cows are either turned out too early on the pasture or are kept on pasture too late in the fall; in both cases the animals fail to receive sufficient feed, and an unnecessary shrink and loss is the result. The mid-summer season, however, is by far the worst and causes the greatest damage. From the middle of July to the first September is a period known as the fly season, and the discomfort of the animal is intensified by a short burned-up pasture. A prominent dairy educator once said: "If August were long enough all of our cows would be ruined." It is not a difficult matter to prevent the damage caused by these three unfavorable seasons. Feeding liberally an adequate ration would correct nine-tenths of the trouble.

It has been estimated that the cow-keepers of this country last year received two and a half millions of dollars for dairy products. Think what an opportunity we have to double this amount by simply giving our animals better feeding and care. There is much to be gained by culling out the poor and unprofitable cows from our herds, but we must first determine whether or not the cows in question are having a fair chance.

The Susquehanna County Sale Plan

Great interest has been shown by our readers in the letters on the Susquehanna County plan appearing in the April 22d and May 8th issues of THE HOLSTEIN BREEDER AND DAIRYMAN. Copies of these letters were sent to Dr. L. M. Thompson, president of the Susquehanna County Holstein Breeders' Association and by him they were read before the members of the Sales Committee on the evening of May 5th.

At that time it was decided that during the 1924 sale which will be held on September 1st, at Montrose, Pennsylvania, to follow the practice adopted last year. Each member will refrain from bidding on any animals offered in the sale. Intending purchasers will not only have the assurance that there will be absolutely no by-bidding but will also know that their only competitors will be parties who are not consignors. We understand that Glenn R. Mead of East Aurora, New York, "The Live-Wire Auctioneer," has already been booked for the occasion.

In his letter which is herewith appended, Dr. Thompson brings out strongly the feeling among the Susquehanna County Holstein Breeders. As he says, they

are not endeavoring to reform the whole sale business, they are simply trying to ascertain the feeling of the men who visit Susquehanna County in search of pure-bred Holsteins. Upon the patronage the event receives on the first of next September will depend the continuance of the plan which is regarded by many as not only an innovation but a long step forward in auction sale ethics and practices.

MONTROSE, PA.,
May 6, 1924.

HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

At a meeting of the Sales Committee of our Susquehanna County Holstein Breeders Association held last night (May 5th) it was decided that we would hold our annual County Sale at Montrose, on September first, and that in spite of the many letters opposing the "Susquehanna County Plan," that we would again this year sell under the same conditions as last year, viz., that consignors would pledge themselves not to bid on any cattle in the sale. The response of the public to this experiment in this year's sale will determine the future course of our County Organization.

We fully realize that at many auction sales this so called "Susquehanna County Plan" could not very well be used, especially in the larger sales where cattle are gathered together from different sections of the country. In those cases we can see no reason why a consignor should not be permitted to bid on cattle which he would not otherwise have an opportunity to buy, and we do not in any way pretend or attempt to lay down any rules of etiquette for the conducting of sales by our fellow breeders. We are merely trying to inspire the buying public with the confidence that we are doing everything possible to conduct a square and honest sale. We realize that in many sales where the buying has been limited very largely to the consignors, that the public has very justly felt that the sale prices did not represent true values and that where every consignor was taking one of his neighbor's cattle home with him, it was simply a case of "You take mine and I'll take yours, and the higher the price the better." The pedigree compiler who wrote on this question in your paper frankly admitted having arranged such a demonstration amongst consignors and seemed to consider it was good business and helped the sale. We cannot agree with him in this, and should be very sorry to have to bid against any such organized ring in case we were buying animals. I wish as you say, that we could have the opinion of prospective buyers of cattle regarding this question, for, as you point out, most of the replies have come from men interested in sale promoting and we have not had any wide expression of opinion from the buyers.

I wish again to thank you for your kind interest in this question and the space you have so cordially devoted to its discussion, and your kindness in sending to me copies of the letters received by you on the subject. Some of your readers apparently took the ground that we were attempting to reform the whole world, when we were in reality merely seeking information as to the opinion of the buying public regarding our method of selling cattle in our little local sale.

Very sincerely yours, L. M. THOMPSON.

"No other human occupation opens so wide a field for the profitable and agreeable combination of labor with cultivated thoughts, as Agriculture.

"Every blade of grass is a study; and not grass alone, but soils, seeds and seasons—hedgcs, ditches and fences, draining, droughts and irrigation—plowing, hoeing and harrowing—reaping, mowing and threshing—saving crops, pests of crops, diseases of crops, and what will prevent or cure them—implements, utensils and machines, their relative merits, and to improve them—hogs, horses and cattle—sheep, goats and poultry—trees, shrubs, fruits, plants and men—each a world of study within itself."—Abraham Lincoln.

As Nations Are Managed by Politicians

A well-known Holstein breeder of Missouri, who has a herd of eighty head of cattle under State and Federal Supervision and who sells his animals subject to a sixty-day retest guarantee, in renewing his subscription to THE BREEDER AND DAIRYMAN sends along the money for us to send the paper to two other Missouri parties interested in Holsteins, an action that the editors heartily commend from every angle.

His letter which is on file at this office also says, "Your ads and articles are a little distant for dairymen in Missouri, but I enjoy the tone of them because I feel so much like you do in regard to feeding cows for the purpose we are concerned as dairymen and farmers.

"Our National Association is managed in the same manner and for the same purpose, as the Nations are managed by the Politicians, who are always ready to fill their pockets first. Go on with your good work."

Remarkable C. T. A. Record

PAULINE ORMSBY DE KOL CANARY, a six-year-old registered Holstein recently completed a 323 day cow testing association record which entitles her to be termed the second highest record C. T. A. cow in Wisconsin. Her record for 323 days is 839 lb. butterfat from 22,914 lb. milk. This is the highest record so far for 1924. Her 1923 record was 19,881 lb. milk, 802 lb. fat.

Leo Kuhl & Son, Hazel Green, are the proud owners of the champion. Clarence Kuhl, the twenty-year-old son, has had charge of the feeding and milking of Canary as she is called.

Canary freshened December 11, 1923. She is a large and well formed cow weighing about 1,200 pounds. Her picture appeared on page 8 of the January 8, 1924 issue of the BREEDER AND DAIRYMAN.

The testers report shows that she has produced

\$499.29 worth of butterfat for the year. Her feed cost \$125.96, leaving a return of \$373.33 above cost of feed. Her record, computed on the 80% basis, would be 1,048.75 lb. butter.

Her daily feed on last month of the association year at which time she was retested, April 25, 1924, consisted of 26 lb. silage, 5 lb. wild hay, 10 lb. alfalfa, and 21 lb. of a grain mixture made up of two parts bran, two parts corn and cob meal, two parts oil meal, one part oats, one part hominy feed, and one part gluten meal.

Figures of the tester, M. J. McCrackin, show that the Kuhl herd of thirteen registered Holsteins is the highest averaging herd in all the 165 cow testing associations in Wisconsin. A year's production from the thirteen cows was 196,544 lb. milk containing 6,948.5 lb. butterfat. This is an average of 15,118 lb. milk, 534.5 lb. butterfat per cow, with a test of 3.54%. The income was \$293 per cow and the feed cost was \$97 per cow giving a return of \$196 above feed cost.

I have loved to feel the grass under my feet and the running streams by my side. The hum of the wind in the treetops has always been music to me, and the face of the fields has often comforted me more than the faces of men. I am in love with this world because by my constitution I have nestled lovingly in it. It has been home. It has been my point of look-out into the universe. I have not bruised myself against it, nor tried to use it ignobly. I have tilled its soil, I have gathered its harvests. I have waited upon its seasons and always have I reaped what I have sowed. While I delved I did not lose sight of the sky overhead. While I gathered bread and meat for my body, I did not neglect to gather its bread and meat for my soul. I have climbed its mountains, roamed its forests, felt the sting of its frosts, the oppression of its heats, the drench of its rains, the fury of its winds, and always have beauty and joy waited upon my goings and comings.—John Burroughs.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

"The World Do Move"

ON May 3, 1904, the *New York Tribune* reported that Livingston Biddle of Philadelphia was fined \$10 the day previous by Magistrate Chas. Whitman in the Jefferson Market Police Court. The charge was for speeding an automobile in excess of the legal eight miles an hour. Mr. Biddle protested vigorously saying that he was not aware he was violating any law, human or divine.

What will be the legal rate of speed in 1944, twenty years from now? The change in traffic during the past twenty years seems almost incredible when looking backward and would have seemed incredible to look forward. What has the next twenty years in store for us?

How a Dairy Industry Was Built

FOR many years the farmers of Tipton County, Tennessee, had specialized on cotton growing. After the war there was a great fall in price and for a time there was a very little demand for cotton. There was one man in Tipton County who was shipping cream and in return receiving monthly checks averaging \$80.00. This fact aroused considerable interest among the neighbors for they had been used to getting their crop money once a year and had very little income the rest of the time.

Early in 1921 some of the farmers, with a few business men of the county and County Agent G. S. Hollingsworth met to make plans for the extension work of the year. Mr. Hollingsworth strongly recommended the gradual development of other sources of farm income. Further investigations showed that there was a good near-by market for cream which could use a much larger quantity than it was receiving. It was decided to try to supply that market.

The beginning was quite modest. In March and April 1921, talks on dairying were given at several points in the county and visits were made to farmers who had sufficient feed facilities to carry on such an

enterprise throughout a year. A few men, willing but doubtful, agreed to try what looked to them an uncertain business. The plan was to use the cows already on the farm and feed these for production and the only money outlay required was for the purchase of cream separators.

In July there was a week of dairy meetings. By this time the business men were catching the enthusiasm which those who were already shipping cream were spreading. From 7 to 20 storekeepers and others were present at every meeting during the week. Plain talks on dairying were given and were illustrated with dairy motion pictures, the agent's automobile furnishing motive power.

Actual results obtained by the farmers who had made a start were convincing proof that the enterprise was practical. Hardware dealers offered to sell separators for a small cash payment and a percentage of the monthly cream check until the full price was paid. Then a creamery representative offered to sell cream cans on a 30-day trial plan, the price to be deducted from the cream checks at the expiration of that time if satisfactory to the farmers.

By the end of the lecture week a considerable number of farmers agreed to try dairying. A dairy landslide was, however, carefully avoided. No one was advised to go into dairying exclusively but the farmer was induced to milk a few cows, from five to ten, according to the size of his farm, the amount and condition of his pasture, the help he had and general conditions. A few who were interested but did not have pasture were induced to provide for them during the first year so as to have feed in order that they could start the next year on a sound basis.

By the end of the year there were 105 regular shippers of cream in Tipton County instead of one and not a man who had taken up dairying had quit. There were larger and better pastures and leguminous hay was being grown, particularly lespedeza.

In 1922 the agricultural leaders and the County Agent emphasized feeding. Considerable cow testing was done in order to eliminate unprofitable animals.

In 1923 feeding was still the main dairy topic for there are many things a cotton planter needs to learn about balanced rations and management of dairy stock before he completely changes his system of farming and invests very heavily in an entirely different line. The herds were still tested in order to ascertain and weed out the unprofitable producers. A bull club was formed and seven bulls of record pedigree were brought into the county while several bulls of known performance have been bought by individuals.

To-day more than 440 farmers are shipping cream from some 3,000 cows, all native to the county. The dairy income for 1923 was a quarter of a million dollars. This is expected to be increased as the heifers from the best producing and most profitable cows and by the high-class sires come into milk. In just about three years a quarter of a million dollar farm industry has been built up from material already on hand, with a minimum investment, a minimum hazard and a maximum degree of satisfaction.

Minnesota Butter Under Trade Mark

"Land-O'-Lakes" is the brand name adopted by the Associated Minnesota Coöperative Creameries to designate the butter they manufacture. An advertising campaign will be put on to acquaint consumers with this particular brand of sweet cream butter. A contract has been made with representatives of the government to supply the United States Navy with sweet cream butter for the next year. This calls for 480,000 lb. Three hundred thousand pounds will be shipped to Norfolk, Virginia, and the government will pay for it 9.65 cents above the price of "extras" on the New York market. One hundred and eighty thousand pounds will be shipped to the Navy Yard at San Francisco and for this the government will pay 10.24 cents above the price of New York "extras."

This premium price is because the butter is to be of a higher grade than New York "extras." The specifications call for a maximum of 13% of moisture while New York extra may contain 16%. The butter has to score very high in every particular.

This is the first time the Navy has ever placed such a contract with one agency. Minnesota coöperative dairymen are proud of the work of H. F. Myer, director of sales for the association. It is said to be the first time in history that the San Francisco Navy Yard has ever been supplied with butter from outside California.

A Mark-Down of Eighty Cents

PENNSYLVANIA State Secretary of Agriculture F. P. Willits announces that there was a small decrease in the average value of Pennsylvania cows during 1923. There is a falling off of exactly 80c per head. It is estimated that the farm of the Keystone State supported 862,835 dairy cows. On January 1st of this year, their value was \$57 per head while last year the number was 862,467 and the value was \$57.80 a head. The cow wealth of the Keystone State was estimated on the first day of this year to be \$49,227,321 while the value on the first day of January 1923 was \$49,861,263. The valuation is certainly low enough and in Pennsylvania there must be a mighty lot of poor animals to bring the average price down to \$57.

Merchants Refuse to Handle Oleo

PRACTICALLY all the merchants of Tillamook County, Oregon, have recently signed an agreement not to sell oleomargarine on the grounds that this product is detrimental to the interests of their dairymen patrons.

It is reported that the great packing firm of Swift & Co., threatened retaliation by refusing to act any longer as distributor of the Tillamook brand of cheese which has a splendid reputation in the West.

It is to be hoped that the difficulty can be straightened out without any loss to the dairymen. Any loss of trade by Swift & Co. on account of their being unable to sell oleo in Tillamook County would be very small in proportion to the operations of that great packing and distributing firm.

Our Herdsire

Dutchland Konigen Hengerveld Lad

is a son of King Segis Pontiac Konigen the noted Field bull; is a grandson of King Segis Pontiac and Colantha Johanna Lad; and a great-grandson of King Segis, King of the Pontiacs, Hengerveld De Kol and the two former World Champion cows, Pontiac Clothilde De Kol 2d and Colantha 4th's Johanna.

Breeding and Production show in every line of his pedigree. His sons and daughters will please you.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

May 22, 1924

The *Holstein Breeder and Dairyman* was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

The Association Business Year

DURING the year 1923 a total of 115,132 certificates of registry were issued from the office of the Secretary as well as 91,666 certificates of transfer and 1,758 certificates of membership. The Extension Service Department, in sending out this information claims that the figures show an upward trend in the Holstein industry. This claim is like many of the statements issued from the Chicago office and is based upon rather unsubstantial grounds.

During the year 1922 there were issued from the Secretary's office 113,772 certificates of registry so that we have a gain of 1,360 for 1923. One would almost think the natural increase would show a greater gain.

During 1922, a total of 1,726 were added to the membership so that the figures compared with last year showed a gain of exactly 32. While these gains are small they do show an increase. But when it comes to the number of transfer certificates issued there is a falling off, slight it is true, but still a decrease, for the total for 1922 was 91,830 or 164 more than was issued during the year for which the Secretary will report at Richmond. Just why the Extension Department should claim that "this increase? indicates an upward trend in the Holstein industry," is rather hard to figure out. It must be somewhat disappointing to the members of the Extension Department, if they are at all sensitive, to note that after their year's work and the large amount of money they have spent in literature, advertising, traveling expenses, etc., to say nothing of their own salaries, that the number of animals sold by owners of purebred Holsteins show a decrease instead of a material increase. No wonder the rank and file of the membership question the advisability of the present day

expenditures and are also anxious for a change in the management of the National Association and its Extension Department. Any business man or even an office boy or grocery clerk would not find source of congratulation in the fact that the enterprise with which he was connected had not enjoyed as large a sale turnover as it did the previous year.

Of the 115,132 cattle registrations made in the past year 86,043 were for females and 29,089 were for males. During 1922, 83,141 females and 30,631 males changed owners.

The number of transfers recorded was 91,666. The Central States show the largest number of transfer certificates issued, followed in order by the Middle Atlantic States with 24,573; Pacific Coast States 5,157; New England States, 4,849; Western States, 2,209 and Southern States, 1,442.

Of the 1,758 new members the Central States again contributed the largest number with 1,069. The Middle Atlantic States follow with 409, the Pacific Coast States with 92; New England, 77; Western States, 62; and Southern States, 46. Wisconsin shows the largest growth among individual states with 325. New York is next with 189, followed by Pennsylvania with 152; Minnesota, 146; Michigan, 132; and Ohio, 130.

Progress in Foot and Mouth Eradication

DURING the prevalence of foot and mouth disease in California, infection has been found on 309 places. In all 31,689 head of cattle have been destroyed together with 10,658 hogs, 14,358 sheep and 318 goats, a total of 57,023 animals. Since May 12, eleven new cases have been found and these are scattered over seven counties. The veterinary authorities continue to send out reassuring bulletins.

Cattlemen in the state of Washington greatly fear the introduction of the trouble into their state and have appointed a big committee to do what they can to enforce a strict quarantine. Among the five members of the executive committee is H. C. Stimson of Hollywood Farms.

By invitation of Governor F. W. Richardson of California the states adjoining California will send representatives to a conference in Sacramento for studying conditions, with a view to ascertaining all facts concerning foot and mouth disease in the state. Invitations have been accepted by the states of New Mexico, Arizona, Nevada and Oregon. The territory of Hawaii also will be represented.

An Undeveloped Market

CULTURED buttermilk and other cultured products have been found by many milk distributors to offer a profitable way of utilizing surplus milk and at the same time satisfy the desire of many of their patrons for a healthful, palatable beverage and food.

Southern cities have gone away ahead of the north in this respect. In Birmingham, Ala., the ratio of cultured buttermilk sold to the milk and cream output is 46.3% while the ratio in Washington is 6.5%; in Chicago 4.9%; in Philadelphia, 3.6%; while in the

Government Costs Money

THE *Washington Farmer* recently published as an editorial some information compiled by the Washington State Federation of Tax Payers Associations, showing the cost of the American Government, federal, state and municipal, that is interesting if not encouraging.

During 1921 the total cost of government of incorporated villages, towns, cities, counties, states and the federal government was almost \$8,500,000,000. This does not count such "sidelines" as money raised for educational purposes, road building, etc., except as the federal government contributes to these purposes.

This enormous sum is made up as follows, with the federal government costing more than all the others combined.

Cost of maintaining the federal government	\$4,666,671,954
Cost of maintaining 48 state governments	1,008,540,232
Cost of maintaining 253 municipal governments in cities of more than 30,000 inhabitants	1,638,296,052
Cost of maintaining the municipal governments of all towns and cities of from 2,500 to 30,000 population	431,287,059
Cost of maintaining municipal governments in 12,905 incorporated communities of less than 2,500 population ..	123,147,687
Cost of maintaining county governments in the 48 states	592,068,972

Total cost of American government in 1921

George Case in Final Court

THE argument before the Court of Appeals in the George case took place at Albany, New York, on May 12th and 13th. The breeders everywhere will await with anticipation a decision in this case, hopeful that their rights and privilege to manage the Holstein-Friesian Association of America as a business organization, will be restored. It is to be hoped that a decision will be handed down at an early date.

Retaining friendships at the price of principles is too costly.

Real friends try to make others think more of us; they would have us abandon nothing which tends to make us better.

There are so-called friends who would have us adapt ourselves to their interests, that their ends might be met.

No consideration is given to our loss of position and self-respect.

When anyone asks you to overstep the bounds within which you consider it necessary to remain, to preserve your honor, and the respect you desire to hold, that person is not honest in the friendship he asserts.

True-blue friendship is above rubies.

When you have found a friend who regards your honor as he does his own, grapple him to your soul with hoops of steel.—*Pittsburgh Sun*.

New England States it is only 1.4%. Evidently there is a great margin of possible development in the northern regions.

The price of buttermilk varies greatly in the different cities. In Birmingham the price is 9 cents per quart; in a number of other southern cities it is only 8 cents; while in Dallas, Texas, in which nearly one-fifth of the milk sold is in the form of cultured buttermilk, the price is 12 cents per quart; in Washington the average is 15 cents; Philadelphia, 13 cents; Chicago and New England, 10 cents. One is tempted to believe that if the price in the northern cities was reduced and more effort made to merchandize this dairy product, the demand could be greatly increased and the so-called summer surplus decreased. We believe that special attention should be given by dairy producers and milk distributors to this situation.

Conference on New York Milk Prices

REPRESENTATIVES of the rival organizations of dairymen producing milk for New York City met at Utica, N. Y., May 14 in an effort to stabilize prices in the wholesale milk market which has for some time past, been in an almost chaotic condition. About sixty were in attendance at the conference which was called to order by John J. Dillon, editor of the *Rural New Yorker*. Many took part in the discussions but no conclusions were reached. Finally a resolution was passed appointing a committee of fifteen representing the Dairymen's League Cooperative Ass'n, Inc., Non-Poolers Association, The Eastern States Milk Producers, Inc., The Sheffield Farm Producers and the Independents, each association to have three representatives. This committee will meet at Utica on Saturday, May 24.

It is to be hoped that some arrangement can be made to avoid the war between the various bodies of dairymen which has helped to disorganize the wholesale milk market and which works hardship upon all producers as milk is selling for less than the cost of production. The fullest publicity should be given to the deliberations of the committee so that the public can tell how much in earnest the leaders are in their expressed desire to end the disputes and arrive at some satisfactory marketing arrangement.

Farm Mortgages

FARM mortgages have always been popular as investments for the funds of life insurance companies and for many years such corporations have played enormous part in the development of American agriculture. In recent years, however, the rapid growth of cities and the general housing shortage have led to a marked change in their general investment policy.

In 1919, for instance, 91% of the mortgage loans made by insurance companies were on farm property. In 1920 and 1921 out of a total of \$706,500,000 but 63% went to borrowers outside cities. In 1922, the city borrowers took the lead with 51% of the loans aggregating \$303,196,000. Last year the volume of mortgage loans was largely increased, but farmers took only 45% of the total.

SOME OF UNCLE SAM'S HOLSTEINS

The Farm Colony is the name of the farm and breeding establishment connected with United States Disciplinary Barracks, at Ft. Leavenworth, Kansas. A splendid Holstein herd is kept at this institution which preaches to farmers and dairymen the belief that the purebred Holstein cow is the best dairy animal.

Animals from this herd have won high honors at leading shows in the Southwest. At the Kansas State Fair at Topeka, last September, U. S. Johanna Homestead Dyke was first prize two-year-old heifer; U. S. Johanna Bonheur Sadie first senior yearling heifer and junior champion; first prize was received for calf herd; second for yearling bull and senior yearling heifer; and third for senior yearling bull.

At the Ozark Stock Show the next week, at Springfield, Mo., this herd again won junior championship and first on senior yearling heifer and first on aged cow as well as the

U. S. JOHANNA BONHEUR SADIE

first prize senior yearling and junior champion at the Kansas State Fair, Topeka, and at the Ozark Stock Show, Springfield, Mo. One of the splendid heifers owned by the Farm Colony, Ft. Leavenworth, Kansas.

following: second for two-year-old bull, senior bull calf, junior bull calf, three-year-old cow, graded herd, breeders' young herd and produce of dam; third on two-year-old heifer; fourth on yearling bull, junior bull calf, two-year-old heifer, and get of sire; and fifth on senior yearling and junior yearling heifers, and seventh on senior yearling heifer.

The week of September 22, the herd was shown at Memphis, Tenn. at the Tri-State Fair. Second place was won in the following classes—two-year-old bull, senior bull calf, two-year-old heifer, and senior yearling heifer; third in junior yearling bull, aged cow, three-year-old cow, junior yearling heifer and get of sire; fifth place in senior yearling heifer, graded herd, young herd, produce of cow; and sixth in calf herd.

At the Oklahoma Fair held at Muskogee, the first week in October the following prizes were won; first place on senior yearling bull, senior bull calf, junior yearling heifer and produce of dam; second place in three-year-old cow, senior yearling heifer, young herd and get of sire; third place in aged cow, two-year-old heifer and senior yearling heifers, fourth place in two-year-old bull and two year-old heifer.

The week of October 8, the Arkansas State Fair was staged at Little Rock, Ark. The Colony herd won first place on senior yearling bull, aged cow, and two-year-old heifer; second place in junior yearling heifer, three-year-old cow, graded herd, yearling herd, get of sire and produce of dam; third place in two-year-old bull, yearling bull, senior yearling heifer, senior heifer calf and calf herd.

The Farm Colony herd is furnishing many purebred sires which will take the place of scrub bulls and the present management headed by Major Hugh H. Broadhurst is advocating bettering the cattle industry by destruction of the scrub bull wherever he may be found. The present head of the Farm Colony herd, which consists of 118 animals, is Marathon Bess Burke 14th, who succeeds the noted show bull, Johanna Bonheur Champion 2d, who was grand champion at the National Dairy Show in 1918 and who left many daughters and granddaughters

in the herd. The crossing of the blood of Spring Brook Bess Burke and Sir Pietertje Ormsby Mercedes 37th (grandsire of Marathon Bess Burke 14th) on the daughters of the 1918 National Dairy Show Grand Champion is bound to produce good stock. In this herd are daughters of the 40-lb. bull, Sir Veeman Ruby Vale Wayne, Ormsby Skylark Champion and Sir Homestead Bess Ormsby. The females carry a good percentage of Colantha, Ormsby and Homestead blood and the herd is noted for individuality. There is a reason for this. Inferior stock are sold for slaughter only. No poor individuals are allowed to stay in the herd or are sold as breeding stock.

The herd is clean and is under state and federal supervision. Sales of stock have been made to parties in Kansas, Missouri, Iowa, Texas, Oklahoma, Arkansas, California, Tennessee, Arizona, New York and Washington, D. C.

POOLERS ACT IN EMERGENCY

What can be done by earnest coöperation when necessity drives was exemplified by an incident recently occurring at Pierrepont Manor, New York. The Northern New York Milk Corporation operates a condensary at that town and have been buying both pool and non-pool milk. It announced that no milk would be purchased from pool patrons after May 1. The poolers secured possession of an old emergency League plant at Adams, six miles distant. Farmers worked as mechanics and laborers in putting things to rights. On the night of April 30, it was discovered that the long disused boiler would not work. At midnight a call was made on Ross Collins, a farmer, who owned a steam tractor that had been laid up for the winter. This tractor was overhauled and brought six miles to Adams where pipe connections were made with the plant. After hours of hard work for which many farmers eagerly volunteered, the plant was in readiness to receive milk when the first load was delivered in the morning.

That day 28,000 lb. milk were received and separated from 134 men who remained loyal to the pool. In the four locals only one man did not go along.

SPECIAL MEETING DURING NATIONAL DAIRY SHOW

On Wednesday evening October 1, a general meeting of all branches of the dairy industry will be held at Milwaukee under the auspices of the American Dairy Federation. This has been decided upon in response to letters received from executives of member organizations who desire to have one day reserved for this purpose during the National Dairy Show. The program is to be worked out by a special committee but the executive committee voted to secure the presence, if possible, of one speaker of national and governmental prominence, one of business or financial prominence, and one to represent the welfare and public health side of the industry. These have not yet been decided upon.

I Need a Bull—

from a dam of Type and Proven Performance. He must be backed on both sides of his pedigree by producing lines of breeding, but Individuality will be considered before Records. No slopers considered, no matter how high the backing. Address X. Y., care of

USE MOVIES TO FIGHT CATTLE TICKS

Operated by a representative of the United States Department of Animal Industry, a one-ton truck carrying a complete movie outfit is traveling through Florida. It had toured Madison, Gadsden, Leon, and Jackson counties and early in May was working in Holmes County. The principal motion picture shown is entitled "Mollie of Pine Grove Vat," a three-reel picture which tells in story form how the people of a community where cattle were infested with blood-sucking cattle ticks got rid of these pests, largely through local public sentiment and the heroism of a young woman.

Since January 1, about eighty showings of this picture have been made in school houses, churches and before out-of-door audiences. The pictures shown are all educational films produced by the United States Department of Agriculture and they are shown before audiences in outlying rural localities.

The outfit is in charge of Dr. John F. Fahey. A short talk is a supplementary feature of the performance. No charge is made for admission nor is there any collection permitted.

Dr. Fahey has made a careful study of the cattle tick and dairy situation in Florida and estimates that the state is losing each year more than five million dollars worth of milk by feeding cattle ticks. He bases this estimate on a 42% reduction of milk flow due to the tick and a short lactation period of only 200 milking days in a year. The estimated loss per cow is \$60 annually or more than five million dollars for the 97,000 dairy cows in the state.

Information on the food value of milk interests the women who attend and this is one of the important reasons for eradicate cattle ticks. "Too many of us," Dr. Fahey states in his lectures, "think of bone and teeth as permanent structures, whereas they change in character from day to day and from year to year as do other cells in the body. In addition to other constituents of milk the mineral salts contained are indispensable to sound teeth, which are in turn indispensable to good health, energy and endurance."

THIRTY-FOUR COUNTIES ON BETTER-SIRES HONOR ROLL

Thirty-four counties in the United States have the distinction of containing 100 or more farms where purebred sires are used exclusively for all kinds of livestock raised and whose owners are using breeding methods leading to still further improvement.

The list of counties, which is contained in a recent report issued by the Federal Bureau of Animal Industry, shows that the counties are located in the following States: Virginia, Ohio, Kentucky, West Virginia, Washington, Vermont, South Carolina, and Nebraska. The activity of the various counties in livestock-improvement work has been encouraged largely by county agents. Of the 34 counties having more than 100 farmers enrolled in the "Better Sires—Better Stock" campaign, eight of them each have more than 200 purebred-sire users. Those counties and the county agent are as follows:

County	County agent	Persons enrolled
Pulaski, Va.	E. C. Grigsby	589
Rockingham, Va.	Chas. W. Wampler	384
Greene, Ohio	Ford S. Prince	359
Union, Ky.	S. C. Brewer	347
Oldham, Ky.	Gordon B. Nance	248
Hardin, Ohio	F. S. Hagy	236
Upshur, W. Va.	H. G. Sturn	235
Miami, Ohio	C. M. Stenn	220

DAIRYMEN'S LEAGUE DIRECTOR NOMINATIONS

Conventions of the dairy farmers enrolled in the Dairymen's League were held in the various districts early in May and the representatives of the present League management were nominated for directors by delegates who had been elected by the members of the locals. They are as follows: Chester Young, Napanoch, N. Y. for District No. 5, comprising Ulster, Greene, Schoharie, Albany, Fulton, Schenectady, and Montgomery Counties; Fred H. Sexauer, Auburn, N. Y. for district No. 12, comprising Oswego and Cayuga Counties; H. J. Kershaw, Sherburne, N. Y. for District No. 13, comprising Chenango County; John Rosenbach, Buffalo, N. Y. for District No. 16,

comprising Erie, Niagara, and Orleans Counties; Herbert L. Seeley, Academy Corners, Pa., for District No. 20, Steuben County, N. Y. and Tioga County, Pa.; Paul Smith, Newark Valley, N. Y., for District No. 21, Tioga, Chemung and Schuylers Counties; G. W. Slocum, Milton, Pa., for District No. 24, Bradford, Columbia, Lycoming, Montour, Northumberland, Snyder and Union Counties. For District No. 11 Madison and Onondaga Counties, N. Y., Henry Burden of Cazenovia, was nominated to succeed D. F. Putnam who was not a candidate for reelection.

Of these renominated, President Slocum, Paul Smith, Fred H. Sexauer are members of the Executive Committee. Chester Young is treasurer of the Association.

All the members in the twenty-four districts in the Association's territory will have an opportunity to vote on all the eight candidates on May 26.

COMING TUBERCULOSIS ERADICATION MEETING AT ALBANY

Leading veterinarians and livestock experts will discuss the progress and problems of tuberculosis eradication at the fifth annual conference of the Eastern States on the eradication of tuberculosis in livestock, to be held at Albany, N. Y. June 10, 11 and 12. The headquarters of the conference will be at the Ten Eyck Hotel and meetings will be held in Chancellors Hall, State Education Building.

The conference will be under the auspices of Livestock Sanitary Officials of Eastern States, New York State Veterinary Medical Society, New York Department of Farms and Markets, and the Bureau of Animal Industry of the United States Department of Agriculture.

Livestock sanitary officials and medical authorities will report on the problems of tuberculosis eradication with particular reference to those of their respective States. Among the speakers will be Nathan Strauss, Jr., of New York City; United States Senator R. S. Copeland of New York; A. J. Glover, representing the agricultural press; Dr. J. R. Mohler, chief of the United States Bureau of Animal Industry, and Dr. J. A. Kiernan, chief of the Tuberculosis Eradication Division of the same bureau.

The sessions and discussions will be open to the public. Both the economic and health aspects of tuberculosis will receive consideration.

RADIO PROMOTES TUBERCULIN TESTING

Radio is acknowledged to be quite an educational force. Dr. W. T. Conway, a veterinary inspector stationed at Pittsburgh, reports to the United States Department of Agriculture an instance where it led to the detection of a cow suspected of being tubercular.

A farmer near Wilkensburg, Pa., had been a regular listener in on the series of talks being broadcasted from Pittsburgh on the activities of the Bureau of Animal Industry. One of the talks was on the subject of tuberculosis eradication. His interest thus aroused turned to one of his own cows which had been noticeably unthrifty and affected with a bad cough.

He went to the local office of the Bureau of Animal Industry for advice. The inspector in charge informed the State representative of the case. The State man then made three futile attempts to reach the farm by following the directions which the farmer left. Failing to reach the inquirer in this manner, the farmer was "paged" by radio from station KDKA. It was announced that efforts had been made to reach him and if he were listening in to get in touch again with the office.

Two days later the farmer came into the office. Arrangements were then made to conduct the State representative to the farm for an examination of the suspected animal. The symptoms were suspicious and arrangements were planned for a test.

LEAGUE POOL PRICES FOR APRIL

The Dairymen's League Coöperative Association's gross pool price for 3 per cent milk at the 201-210 mile freight zone for April is \$1.835 for 100 pounds, with 8½ cents deduction for expenses and 5 cents for certificates of indebtedness. The net pool price, therefore, is \$1.75 and the cash payment is \$1.70.

Richmond Convention Delegates

Delegates from thirty-eight states have been elected to attend the Richmond Convention, June 4th, and Canada has chosen one representative, making 148 in all. North Dakota, entitled to two representatives, has chosen one. The membership in eleven states have taken no action to be represented and this also applies to residents of the District of Columbia, Mexico also will not be represented. The official list is as follows:

COMBINES HEALTH, TYPE AND PRODUCTION

When Harry A. Rice of Wheelersville, Pa., decided to establish a Holstein herd on his newly acquired farm, he had to start from the bottom for the previous owner of the farm kept only a few cows and these had been disposed of. After becoming thoroughly acquainted with his new home, Mr. Rice looked around for a few good purebred Holsteins. These he purchased mostly from accredited herds getting a few others from herds which had been given a clean bill of health by state and federal authorities. At the Troy-Canton Breeders' Sale held late last fall, Mr. Rice purchased a number of the good ones and then bargained with Harry C. Gates, of Canton, owner of Crestmont Farm, for his noted herdsire, King Pontiac Alcartra

One of the good cows in the herd of Harry A. Rice, Wheelersville, Sullivan County, Pa.

Wayne. Daughters of this bull have made wonderful records, especially in long time tests and even this week there has come a card from Superintendent Gardner telling that Crestmont Duchess Ormsby had made a year record of 27,138 lb. milk, 1,271.77 lb. butter in an Ohio herd. Although, we are sorry to say, King Pontiac Alcartra Wayne died from the result of an accident before he reached Mr. Rice's establishment, we understand that a number of the Rice cows were bred to him.

The picture shown is a snapshot taken at Mr. Rice's establishment last November and shows one of the animals he recently purchased. We are sorry to say we do not know the name of this animal but she is representative of the type of animals with which Mr. Rice is laying the foundation of his high class herd which he intends to have placed on the accredited list.

ANOTHER OVER 30,000 LB.

I am pleased to announce that the Holstein-Friesian cow Silda Creamelle Johanna 332542 has just closed a long-time test, and is credited with 30,567 lb. milk containing 1,006.11 lb. fat in 365 days, thus showing an average of 3.29 per cent fat in the milk. She freshened at the age of 7 years, 2 months, 17 days. Her sire is Dutchland Creamelle Johanna Lad 143835; her dam is Silda Shepard of Oakdale 250283. She was bred and is now owned by Mr. E. A. Baker, Rockingham, N. H. At the age of 4 years, 11 months 19 days, she is credited with 585.6 lb. milk containing 21.809 lb. fat in 7 days, and then continued on long-time test she is credited with 23,062.1 lb. milk containing 806.19 lb. fat in 305 days, carrying a calf 185 days of the time. During the present lactation period the cow has had only two-day monthly official test periods. She had thirteen test periods during the year. Her 365 day fat production of 1,006.11 lb., equivalent to 1,257.63 lb. butter on the 80 per cent basis, gives her 78th place among cows producing above 1,000 lb. fat, she is being the 80th cow to gain the honor of producing above 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, Supt. A. R.

May 17, 1924.

REDUCED RATES FOR RICHMOND TRIP

Delegates and visitors attending the convention of the Holstein-Friesian Association of America to be held at Richmond, Virginia, the first week in June, will be able to avail themselves of the reduced rates which will be offered by the railroads on the certificate plan. The regular, one-way rate is paid at the starting point where the purchasers should ask the ticket agent for a certificate. This certificate is indorsed by

the Secretary of the National Association or by an especially appointed railway representative who will be present at Richmond and this certificate, when indorsed, will entitle the holder to obtain a return trip for one-half the usual fare. The reduced rate will apply for the period from May 29th to June 11th inclusive.

Convention headquarters will be at the Hotel Jefferson where all delegates and visitors are requested to register immediately upon arrival. The reduced rate certificates must be presented for indorsement at that time.

It is highly important that sufficient certificates should be presented to obtain this rate. At several meetings visitors have been unable to obtain the reduced fare return because the requisite number of certificates were not presented.

LEAGUE PRICES REVISED

Producers prices in the Dairyman's League Coöperative Association, Inc., have been revised from the original May schedule and are now:

Classes 1 (fluid milk) price \$2.33 reduced to \$1.86
Class 2-A (cream) \$1.90 plus skim milk value, reduced to 1.70
Class 2-B (plain condensed and ice cream) \$2.05 reduced to 1.85
Class 2-C (soft cheeses) \$2.05 reduced to 1.85
Class 3 (evaporated, sweetened condensed and milk powder and hard cheeses other than American) 1.60
Class 4-A (butter). No change.
Class 4-B (American cheese). No change.

These prices are for 3 per cent milk at the 201-210 mile zone, with the usual differentials for freight, butterfat and quality.

The change in the price schedule is reported to be made to harmonize with changing market conditions.

"Many of the advantages of farm life cannot be hooked fast to the dollar sign."

Perhaps, after all, it is better to have your own hammer out than to be some other fellow's anvil.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

 Quakertown, Pa., May 27.

MONROE SALE AVERAGED \$142.00

The average price for the 48 head of purebred Holsteins sold at Monroe, Wis-
 consin, at the semi-annual sale of the Green County Holstein-Friesian Breeders'
 sale May 1, was \$142.00, an improvement over the average of last year. The high
 price was \$600.00 for a bull consigned by Samuel Ubert, Sr., of Monroe and pur-
 chased by Herman Gempeler of the same city. This is the highest figure reported at
 Monroe sales for six years when a bull was struck off for \$1,035.

W. M. HOLT DISPERSAL

Mr. W. M. Holt dispersed his herd of registered Holsteins on May 8 at the
 Holt Farm near Harrison Valley, Pa. Buyers were present from New York and
 Pennsylvania. The herd bull, Colantha Segis Homestead De Kol, owned in partner-
 ship by Mr. Holt and Mr. L. S. Dibble of Westfield was not sold. Twenty-eight
 animals, including two bull calves and eleven females under two years of age brought
 an average of \$100.80. The fifteen females two years or more averaged \$138, while
 the twenty-six females of all ages averaged \$105.25. The sale manager was L. S.
 Dibble of Westfield and the auctioneer was Harry Scott of Canaseraga, N. Y. The
 animals were sold subject to a 60 day tuberculin test guarantee.

The top price was \$210 which Bert Minard of Harrison Valley paid for Matilda
 Jewess Mechthilde, a five-year-old daughter of Premier Pontiac Clothilde King from
 Mabel Jewess Mechthilde, Jay Smith of Whitesville, N. Y., took Luella Lasso Mech-
 thilde, a five-year-old for \$200.

Among the purchasers were: Perry Hall, Ed. Flewellyn, Alonzo Kibbe, T. J.
 Kibbe, H. C. Stevens, Alfred Dibble, Hiram McCutcheon, all of Harrison Valley;
 Clair Hall, N. F. Hunt, Geo. White, Geo. Knell and Lawrence Hunt of Westfield,
 Pa.; Robert Cook, Wood Hull, N. Y. and Jay Smith of Whitesville, N. Y.

WALTER'S HERD TO BE DISPERSED

On May 27th at the Red Lion Hotel stables, Quakertown, Pennsylvania, the
 Richland herd owned by W. H. Walters will be dispersed. This herd numbers 40
 head and is headed by the well-known sire, King Segis Champion, one of whose
 daughters, Bell Segis Champion, produced 37.15 lb. butter in seven days as a four-
 year-old and was sold in public auction for \$5,000.

King Segis Champion is the sire of King Model, the famous Bloomingdale Farm
 herd bull. King Segis Champion has royal breeding. His own dam, Aaggie Pauline

GOOD SALE OF BRITISH FRIESIANS

The British Friesian herd owned by Miss Guest was practically dispersed April
 15, at Yenstone Farm, Templecombe, Somerset, only a few cows and heifers being
 kept. Yenstone Farm is not naturally very fertile and the animals were in their
 everyday condition. Nine females brought prices of 100 guineas or more, a guinea
 being equal to about \$4.50 at present rate of exchange and a little more than \$5 when
 exchange is normal.

The top price was 135 guineas for a four-year-old cow, Countess De La Roche,
 while a three-year-old went for 130 guineas. A bull consigned by Mr. E. Hayes, a
 nearby breeder, was sold for 45 guineas. The average price for forty-eight cows
 and heifers was approximately \$390. Very few livestock sales are being held in the
 British Isles at the present time owing to the prevalence of foot and mouth disease.

SILAS GODFREY TO DISPERSE HERD

One June 12, 1924, at Pennellville, New York, the Silas Godfrey herd of purebred
 Holsteins will be dispersed at public auction, reports sales manager, R. Austin Backus.
 Mr. Godfrey was at one time connected with R. C. Melvin of Liverpool in the
 management of the Cold Spring herd. Among their herdsires was Funderne Pride
 Johanna Korndyke, three of whose daughters have exceeded 30,000 lb. milk in year test.
 Descendants of this great sire form part of the present Silas Godfrey herd. Mr.
 Godfrey is a high-class dairyman, quiet and unobtrusive, who has many friends in
 New York State and among parties from other states who have met him at Liverpool
 or Pennellville. More particulars concerning the herd will be given in the issue of
 June 8th.

MONTGOMERY COUNTY, MARYLAND, HOLSTEIN BREEDERS' SALE

A joint meeting of the Holstein Breeders' Association and the Montgomery
 County Holstein Breeders' Association was held at Rockville, Md., May 5. The
 following day the Montgomery County Holstein Breeders held their first consignment
 sale. This association plans to hold a Spring and Fall sale each year.

This sale was said to be one of the best ever held in Maryland. Fourteen cows
 and springing heifers averaged \$250, a good average considering only one of the cows
 sold had an official record. Twelve open heifers and calves sold for an average of
 \$116.25. Some of these heifers were thin and for that reason did not bring what
 they would have had they been in shape. Five bulls, consisting of two three-year-olds
 and three under a year sold for an average of \$164. Six grade cows averaged \$157.
 All the animals remained in Maryland.

Verwaalsand Colantha Changeling, consigned by John M. Dennis of Riderwood,
 topped the sale. This granddaughter of Colantha Johanna Lad went to Dr. Thomas
 Kelly for \$455. She was an exceptionally good sized young cow but lacked symmetry
 of udder.

Chip Elms Masetta, consigned by W. H. and H. M. Carroll, Ashland, was probably
 the best individual in the sale. She was struck off for \$355 to Henry Walker,
 Gaithersburg. She will probably be heard from this fall in Mr. Walker's show herd
 which will be shown by his two sons who have been calf club members for the last
 two years.

Another exceptionally fine animal, Rosetta Pontiac Hengerveld 2d, consigned by
 Brooklandwood Farms, went to P. B. Cissel, Ellicott City, for \$400.

Among the purchasers were: R. H. Burdette, R. J. Burdette, A. T. Murray,
 Mt. Airy; J. Montgomery Barnsley, John Lefbridge, Rockbridge; Harvey A. Burrell,
 Monrovia; W. G. Fulton, Poolesville; Mrs. Cora Poolock, Mrs. J. B. Maughlin,
 Chas. E. King, Boyd; J. C. Bonine, Bel Air; W. C. Poole, Sellman; J. D. King,
 Germantown; Douglas Diamond, Mack Walker and Herman Rabbit, Gaithersburg.

Cow Testing Association Reports

TEN PUREBREDS LEAD IN CUMBERLAND COUNTY

Purebred Holsteins carried away the honors during April in the Cumberland County Testing Association for Mr. A. A. Raudabaugh's report shows that the ten highest cows were all registered and that their average was 2,052 lb. milk, 75.1 lb. butterfat. Considering the time of year and shortage of roughage and the late spring which has delayed pasture feed, this is a very good showing. Mr. Raudabaugh says that the cows have wintered well and are still producing very satisfactorily and will, he believes, increase last year's association average.

It has been suggested that the Cumberland County dairymen sow soy beans to provide a good milk-producing roughage in order to save next winter's supply of hay as it is feared that, owing to the very poor condition of the hay fields this spring, there will be a light crop this summer.

The leader for herd average is the sixteen cow Holstein dairy of G. Weir Strock, Mechanicsburg, Pa. This dairy averaged 1,597.5 lb. milk, 53.9 lb. fat. Second is the ten cow dairy of W. W. Pepper with an average of 1,380 lb. milk, 47.1 lb. fat. The herd of Paul C. Gible, Mechanicsburg, consisting of nine cows, is in third place.

The two highest producers are owned by W. I. Sheaffer, Jewel producing 2,088 lb. milk, 82.4 lb. fat and Bess is credited with 1,983 lb. milk, 82.3 lb. fat. Ivo V. Otto, Carlisle, owned the next two, Becky producing 2,022 lb. milk, 81.5 lb. fat, and Margaret having 1,716 lb. milk, 77.7 lb. fat to her credit. Mr. Otto also had two purebreds in seventh and tenth positions with 73.3 lb. fat and 66.8 lb. respectively. G. Weir Strock owned a pair of pure-

breeds in fifth and sixth positions, one making 76.8 lb. fat with 2,400 lb. milk, the highest milk record reported and Swan having 73.4 lb. fat, 2,040 lb. milk. Mr. Strock also owned the pair in eighth and ninth positions, one making 69.8 lb. and the other 67.5 lb.

There are twenty-eight herds in the Cumberland County Association with 269 cows in milk during the month. There are no less than 104 animals that exceeded 40 lb. fat, 47 over 50 lb. and 17 over 60 lb. while there were 128 that made over 1,000 lb. milk and 84 over 1,200 lb.

WISCONSIN TESTING

Approximately two-thirds of the 133 Wisconsin Associations reporting their April production are headed by black and white cows, the leaders in fifty instances being grade Holsteins, in forty-one instances purebred Holsteins while two are reported as Holsteins without any information as to whether they are grade or purebred.

The two highest producers are registered cows. A member of the herd of T. Mathiew of Chippewa Falls, produced 121.4 lb. fat in the Eau Claire Association No. 3 while a member of the herd of G. J. Gillmore of Bristol produced 102.5 lb. fat in the Kenosha No. 1 Association. Grade Holsteins occupy the next two places, Wm. Mehling has one grade with the production of 96.7 lb. fat in the Racine County Association while S. Foster of the Muskego Association has a grade that produced 95.9 lb. fat. The honor position for high average herd is held by Robert Riewesthal of the Saukville Association. Twelve purebred and grade Holsteins in this herd averaged 57.6 lb. fat, 1,561 lb. milk.

NINE PUREBREDS IN FIRST TEN COWS

Over 3,000 lb. milk in a month is the remarkable production of a purebred Brown Swiss cow owned by Hawthorn Farm and enrolled in the Lake County Cow Testing Association. Besides leading for milk with 3,003 lb., she also led for fat production with 96.1 lb. The next nine producers in order of size of record are all purebred Holsteins, animals of the Rock River Farm herd standing in second, fifth and tenth place, one producing 2,541 lb. milk, 94 lb. fat; another 2,508 lb. milk, 90.3 lb. fat, and the third, 2,178 lb. milk, 78.4 lb. fat. A. W. Fischer, Bensenville, has a purebred that is credited with 94 lb. fat, 2,013 milk; H. Vial has one with 2,391 lb. milk, 93 lb. fat; H. M. Wood, Delavan, has a cow in sixth position with 1,820 lb. milk, 83.5 lb. fat; Geyer & Smiley, have a purebred in the McHenry County Association with 2,017 lb. milk, 80.7 lb. fat, she standing in seventh place in the state. A representative of the J. R. Burr herd led Kane County Association No. 3 with 2,274 lb. milk, 79.6 lb. fat; and a representative of the Rawleigh Farm, Freeport, herd is in ninth place with 2,270 lb. milk, 79.4 lb. fat.

In the sixteen associations reporting their leaders, nine are headed by purebred Holsteins, and three by grade Holsteins, a purebred Brown Swiss leads one, grade Brown Swiss another and the other leaders are a purebred and a grade Jersey. In six associations the highest average was produced by a purebred Holstein herd, in three others by grade Holstein herds and in two instances by a herd composed of mixed purebred and grade Holsteins. The Rock River Farm herd consisting of ninety-two purebred Hol-

steins averaged 1,186 lb. milk, 40.2 lb. fat.

The four high producing herds consisted of purebred Holsteins with a grade Holstein herd in fifth position. Twelve milkers owned by C. W. Warford & Son averaged 1,432 lb. milk, 50.1 lb. fat in the Kane County Association No. 2. Ten purebreds owned by J. R. Burr, averaged 1,379 lb. milk, 50 lb. fat in the Kane County No. 3 Association. McHenry County herds take the next two places, 14 purebreds owned by A. D. Cornue of Hebron averaged 1,324 lb. milk, 49.1 lb. fat, while nine cows owned by C. W. Gibbs averaged 1,326 lb. milk, 47.2 lb. fat. The Patterson Farm herd averaged 1,251 lb. milk, 44 lb. fat, in the Lake County Association. The number of animals composing this herd are not given in the official report.

PRODUCING HOLSTEIN HERDS

Mr. R. W. Chamberlain, of Canadea, New York, recently completed some very creditable records.

Inka Veeman Artis at the age of six years made 31.33 lb. butter, 583 lb. milk, this last record makes this cow at the age of six years have three records that average nearly 31 lb. At the age of five years she made 31.84 lb. butter and as a junior four-year-old, 29.47 lb.

In this last test she had one granddaughter finish, at the age of two years, one month, with 20.45 lb. butter and 444 lb. milk. Mr. Chamberlain had another at the age of two years, two months finish with 21.49 lb. butter, 422 lb. milk.

At the head of the Chamberlain herd is Royal Johanna Korndyke a son of Colantha Johanna Lad 8th from a junior two-year-old heifer that made 24 lb. butter in seven days. Royal Johanna Korndyke is one of Allegany County's best proven sires. He has ten A. R. O. daughters and a number of daughters that have cow testing association records above 15,000 lb. milk as two-year-olds and three-year-olds. We plan to show a picture of this bull in an early issue.

Mr. J. B. Harbeck of Black Creek, N. Y., has an interest in Royal Johanna Korndyke. The Harbeck herd has a cow testing association average of 11,402 lb. milk for twenty-four cows, fifteen of the twenty-four being daughters of Royal Johanna Korndyke.

B. E. MULLANEY,
Western Allegany Association.

WHAT'S IN A NAME?

Segis, a purebred Holstein, owned by Ludvik Petrak, Cedar Rapids, Iowa, was the leader in the Linn County Testing Association for April. She is credited with 84 lb. butterfat. Canary, also a purebred Holstein, owned by E. J. Gilmore, Marion, was in second place with 74.5 lb. fat.

Nine black and whites owned by Snider & Scott led for high herd average with 42.3 lb. fat, 1,031 lb. milk Ludvik Petrak followed closely with 41.1 lb. fat, 1,165 lb. fat for seventeen purebred Holsteins.

There were fifty-one cows produced more than 40 lb. fat during the month and twenty-two more than 50 lb.

TESTING IN LAWRENCE COUNTY ASSOCIATIONS

During March purebred Holsteins took the first three places in the Westfield Testing Association which operated in part of Lawrence County, Pa. H. A. Freed owned the two butterfat leaders, Jewel, being in first place for both milk and butterfat with 1,834 lb. milk, 69.7 lb. fat to her credit, while Sue, was in second place for fat but third for milk with 64.2 lb. fat, 1,606 lb. milk in twenty-nine days. Agnes, owned by Balcer Wright, was third with 62.2 lb. fat, 1,637 lb. milk, the second highest milk production.

There were twenty-six herds containing 260 cows tested during the month reports H. R. Smith, tester. Forty-one cows produced more than 40 lb. fat; ten over 50 lb. while thirteen exceeded 1,200 lb. milk.

In the Volant Association 190 cows in 19 herds were tested reports Paul J. Stonebraker, tester. Fifty-three of these exceeded 40 lb. fat; twelve went over 50 lb. while eighteen produced more than 1,200 lb. milk.

A purebred Jersey led the association with 64 lb. fat. A purebred Holstein owned by Wm. McMillin & Son was in second place with 62.2 lb. fat, 1,829 lb. milk, the highest milk production reported. This firm had three in the list of ten high cows; C. L. McMillin had two; while A. E. McCreary had two.

High herd average was won by nine purebred Holsteins in the C. L. McMillin herd, their average being 1,191 lb. milk, 44.6 lb. fat. The fifteen cow dairy, purebred black and whites, owned by McMillin & Son was in second place with 1,215 lb. milk, 43.3 lb. fat; while in third place was thirteen Holsteins, purebred and grades, with 1,138 lb. milk, 42.9 lb. fat. They were owned by J. O. Rodgers.

WOODPECKER HOLSTEIN FARM

A short distance from Harrisburg is the Woodpecker Farm, owned by Dr. H. M. Kirkpatrick, one of the leading dentists of Harrisburg, Pa. Upon his farm Dr. Kirkpatrick is building a herd of producing Holsteins. At its head he has placed a handsome young bull obtained from Pennsylvania State College. This young fellow is Penstate Boelyn Korndyke, a grandson of the great Pontiac Korndyke.

The sire of Penstate Boelyn Korndyke is Sir Beets Korndyke whose daughters are making a splendid showing in the dairy herd at Penn State College and also in official tests. Sir Beets Korndyke has 75% the same breeding as Pontiac Lady Korndyke, the first cow to make over 38 lb. butter in seven days.

Penstate Boelyn Korndyke is from King Esther Boelyn, a granddaughter of King of the Hengervelds with a year record made as a four-year-old of 14,013.9 lb. milk, 622.65 lb. butter. She has an official record made as a five-year-old of 24.76 lb. butter, 518.1 lb. milk in seven days. Penstate Boelyn Korndyke is a very handsome young bull, nearly all

CHOICE BULL CALF

BORN MARCH 15, 1924

His sire is a son of KING VAL-DESSA and the 30.82-lb. cow, Jacoba Hartog Canary, who has three good A.R.O. daughters.

His dam produced 20.4 lb. butter, 443.3 lb. milk in 7 days in my herd and is by Prince De Kol Korndyke from a daughter of De Kol Burke.

Calf is evenly marked, straight and handsome and is PRICED TO MOVE QUICK.

Herd numbers 85 head and is under State and Federal Supervision.

WARD D. LOOMIS

Wm. D. Lenker Dr. J. L. Lenker

COLANTHA NAPOL PONTIAC

A four-year-old member of Lenkerbrook Dairy. A show cow and a producer.

Let us price you a good bull calf from cows of this type and quality and sired by KING MEAD SEGIS PONTIAC

whose dam is a 28.52 lb. granddaughter of King Pontiac Champion while his sire is brother to Ormsby Korndyke Lad.

LENKERBROOK DAIRY FARMS

Accredited Herd

Harrisburg, R. D. 4 Penna.

AT \$75 EACH

Four light colored, nicely marked heifers, two born last year, two in February this year. Their dams are registered, producers and good individuals.

Their sire is IDYLLWILDE KORNDYKE DIONAGEN, whose dam made 31.36 lb. butter in 7 days as a junior four-year-old and is from a 31-lb. daughter of a 30-lb. cow. He is also a high class show bull.

A. E. ROBINSON

Susquehanna Co. Montrose, Pa.

BELLE KORNDYKE DIXIE

A beautiful, polled, show heifer in my herd. Her dam produced 15,000 lb. milk in ten months on twice a day milking and freshened again before the year ended.

Such choice animals are bred to KING PONTIAC ORMSBY PIETJE a son of King Pontiac Alcartra Pietje from a daughter of Ormsby Korndyke Lad.

A. CONRAD SLIFER,
Lewistown, R. D. 3, Union Co., Pa.
Herd has passed second successive Clean Test.

A Place to Find

high-class, heavy producing and healthy Holsteins. Our senior sire is Grand Champion Segis 2d, a double grandson of King Segis Champion, his dam being the great Belle Segis Champion, a 37 lb. four-year-old. His four nearest dams average 32.61 lb. of butter in seven days.

His daughters are fine individuals, good sized and are heavy producers, milking around 70 to 85 lb. per day with first and second calf.

Our herd containing 120 head are under State and Federal Supervision.
VISITORS ALWAYS WELCOME.

L. N. Mack & Son
and Floyd E. Mack
Susquehanna Co., Montrose, Pa.

TIDY ABBEKERK PRINCESS MADALINE

598 lb. milk, 32.12 lb. butter, average test 4.3%, is the dam of our junior herdsire.

She is the 12th 30-lb. daughter of the noted century sire, Tidy Abbecker Prince and possesses the size, constitution, individuality and producing capacity characteristic of the descendants of that famous old bull.

Come and see her, her daughters and her son, whose two nearest dams now average 591.2 lb. milk, 36.19 lb. butter.

Herd under State and Federal Supervision. Established 1901.

HOMER N. LATHROP
Chenango Co. Sherburne, N. Y.

white in color and is a good individual with mellow hide and silky hair that attracts the attention of any visitors at the barn although the bull is in everyday condition and receives practically no extra attention as is the case on practically every dairy farm.

Dr. Kirkpatrick, who is a director of the Dauphin County Holstein Breeders Club, is keenly interested in his Holstein enterprise. He believes that the worth of a dairy cow is shown by her performance at the milk pail under ordinary dairy care and feed and is building a herd from this standpoint.

PORTER COUNTY, INDIANA

During the month of April 353 cows were tested in the Porter County, Indiana, Testing Association. The herd leader for butterfat average consisted of thirteen grade and purebred Holsteins, owned by Charles Zarth, their average being 36.3 lb. fat. Mr. Zarth owned Betty who stood in second place with 73.4 lb. fat, a purebred Guernsey being first with 81.2 lb. Dan Haxton owned a three-year-old purebred Holstein that produced 1,605 lb. milk, 64.2 lb. fat, standing third in this respect. Mr. Haxton had two grade Holsteins on the honor list. Francis Bushore was the owner of Una, a purebred Holstein in fifth place with 1,590 lb. milk, 57.2 lb. fat, while Wilson & Moorehouse owned a three-year-old purebred in eighth place with 1,560 lb. milk, 54.6 lb. fat, this animal being milked three times a day.

There are twenty-seven herds in the association. Of the 353 cows no less than 124 produced a pound of butterfat daily; 36 exceeded 40 lb. fat in the month; nine went over 50 and four exceeded 60 lb.

During the coming summer the majority of the cows in the association will receive a grain ration. Several members who intend to feed grain while the cows are on pasture have never followed this practice consistently other years but realize its value. Owing to the low price of dairy products and the high price of high protein feeds more locally grown grains are being fed following the recommendation of the tester, H. C. Gould of Valparaiso, Ind.

PENNSYLVANIA COW TESTING

Twenty-six Pennsylvania Cow Testing Associations report that during March, 7,139 cows were tested of which 1,267 produced more than 40 lb. fat and 1,525 cows gave more than 1,000 lb. milk. No less than 458 cows exceeded 50 lb. fat and 859 exceeded 1,200 lb. milk. There were thirty-two cows reported on official test; seventy-five cows were culled out because they were unprofitable and members of the associations purchased ten registered bulls.

The highest producer for fat is a purebred Holstein and so are the two highest for milk. The leader for both milk and fat is owned by J. S. Murphy of Woodbine, enrolled in the York Valley Association with 2,651 lb. milk, 95.4 lb. fat to her credit. A purebred owned by Ivo V.

Otto of Carlisle, and enrolled in the Cumberland County Association produced 2,592 lb. milk and a grade Holstein in the Edinboro Association, owned by G. L. Henry & Sons, is third with 2,532 lb. milk. Grade Holsteins are second and third for fat, one owned by Chas. Chaffee in the Laurel Hill Association produced 94.4 lb. fat and the other owned by J. M. Conrad produced 90.4 lb. fat in the Cumberland County Association.

The Cumberland County Association of which A. A. Raudabaugh is tester made its usual splendid showing. It carried off the honors for high average for best ten cows with an average of 77.6 lb. fat, the Butler County Association being second with an average of 77 lb. and the York Valley Association was third with an average of 76.8 lb. In the Cumberland County Association there were 310 cows tested of which 117 exceeded 40 lb. fat and 154 exceeded 1,000 lb. milk, this Association leading for number in each instance.

Farmers' Day will be held at Pennsylvania State College, June 12 and a testers' conference will be arranged for June 11 and 13 at which suggested changes on record forms will be discussed. Lectures will be given on subjects interesting to testers.

A CLEAN SWEEP

Purebred Holsteins held the five leading places during February in the New York Dairy Improvement Associations. An eight-year-old member of the herd owned by J. B. Harbeck & Sons of Black Creek, took first position with 93 lb. of fat, 2,818 lb. milk. Ethel Beets owned by C. W. Halliday of North Chatham, is second with 92.8 lb. fat, 2,607 lb. milk. Mr. Halliday is secretary of the dairymen shipping milk to the Sheffield Farms Company.

Three members of the Laurel Stock Farm of Goshen, occupied the three next positions. Queen Dairymaid is third with 81.4 lb. fat, 2,627 lb. milk. Lady Baroness is fourth with 81.2 lb. fat, 2,540 lb. milk and Ollie Roxie Korndyke is fifth with 79.2 lb. fat, 2,201 lb. milk.

The splendid showing made by these five registered black and white cows in competition with many cows of various breeds and the grades enrolled in New York State testing work once more demonstrates the value of purebred Holsteins as dairy animals and confirms the opinions expressed in our editorial on this subject appearing in the May 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN.

CAROLINA TESTING

Princess Nell Ormsby owned by V. M. Montgomery of Spartanburg, has just completed a 365 day record, producing 678.25 lb. fat and 20,889.7 lb. milk. She becomes the Holstein State leader of the senior four-year-old class. Her record is equivalent to 847.81 lb. butter.

The leader for the month of April is the Guernsey cow, Rachel of Richland, with 95.2 lb. fat, 2,192 lb. milk, Mr. V. M. Montgomery has three cows very

close together in the next three positions. Cedardale Alice Korndyke Posch is credited with 76.9 lb. fat, 2,202 lb. milk. Lady Rooney May Korndyke 2d has 2,589 lb. milk, 76.7 lb. fat to her credit as a junior four-year-old while the junior two-year-old, Polly Korndyke Posch, starts her year with a production of 1,726 lb. milk, 75.5 lb. fat in the first month. Another Montgomery heifer, Segis May Polly Posch, also a junior two-year-old, produced 1,929 lb. of milk, 71.1 lb. fat while Sigbsy Farm Mechthilde, a senior four-year-old, produced 1,701 lb. milk, 71 lb. fat in her tenth lactation month.

Mr. Montgomery has fourteen cows that made over 42 lb. of fat in the month; J. T. Willard, also of Spartanburg, has seven above 41 lb. Mr. Schwensen has two above 53 lb. and the Clemson Agricultural College has three above 45 lb.

During the month there were thirty-seven purebred Holsteins on test of which twenty-six made the honor roll.

BLOOD WILL TELL

C. E. Warford & Sons own the herd of twelve purebred Holsteins that broke all previous records in Kane County, Ill., testing association No. 2, by averaging 50.1 lb. fat, 1,432 lb. milk during April. R. A. Wilkinson had an eighteen cow dairy, grade and purebred Holsteins, with an average production of 1,045 lb. milk, 37.4 lb. fat.

The high individual was owned by Henry Butts of Virgil. Her production was 72.4 lb. fat, 1,575 lb. milk. Mr. Butts recently placed his herd of 50 grade and purebred Holsteins under state and federal supervision. A five-year-old in the Warford herd was second with 69.2 lb. fat, 2,232 lb. milk.

FARMERS' DAY AT PENN STATE

June 12 will be Farmer's Day at Pennsylvania State College and the program will interest any one who attends. There will be a dairy cow demonstration and a judging contest open to everyone, the winner of which will receive a purebred bull calf of whatever dairy breed he desires. Lectures will be given by the leading agricultural teachers and authorities of the state. Special lectures will be given to testers and intending testers on June 11 and 13 and the intention is to make Farmers' Day this year superior to all its predecessors.

FROM NEBRASKA TO PENNSYLVANIA

John A. Flack of Washington, Pa., has received the fine young Holstein bull, University of Nebraska Ormsby Grator. This bull was purchased by Milton L. Flack who is an instructor in the animal husbandry department at the University. University of Nebraska Ormsby Grator a son of King Segis Pontiac Count. His dam is Varsity Piebe Gracia, a heifer that promises to make 10,000 lb. milk and 500 lb. butterfat in a year with her first calf. She is a paternal granddaughter of Piebe Laura Ollie Homestead King.

FEEDING COWS DURING SPRING AND SUMMER

Unfortunately the dairyman's feeding problems do not end with the coming of pasture for the summer feeding problem is one that requires careful consideration. Dairy cows are usually at their best during the latter part of May and June when they have an abundant supply of good pasture. Conditions at that time are almost ideal for the production of milk and butterfat. The grass is palatable and succulent and supplies protein, minerals, and vitamins. During this period only the heavy producing cows need some grain. A grain mixture consisting of corn or barley and oats may be fed. The amount to feed will depend largely upon the condition of the pasture and the amount of milk being produced. One pound of grain might be fed for every five or six pounds of milk produced.

The more serious summer feeding problem comes when the pastures begin to dry up and the weather gets hot and the flies begin to bother the cattle. This is the time of year when it is difficult to keep up the milk flow and keep the cows from losing flesh. Cows cannot do it on dry, dusty pasture alone. They must have some feed in addition to pasture. Either silage, soiling crops, grain, or combinations of these feeds are used on many farms to good advantage. The grain ration, in addition to corn or barley and oats, might well include some protein concentrate such as bran, oil meal, or cottonseed meal. Such crops as Canada field peas and oats, alfalfa, soy beans, clover, cow peas, sudan grass, corn, and sorghums can be cut while green and fed to the cows. The dairyman who in the fall puts enough corn in the silo to last through the summer has his summer feeding problems well in hand. Enough feed should be used in addition to pasture to bring the herd through the summer in good condition and to keep up the milk flow. The dairyman who takes good care of his cows during the summer will be making a good investment which will be realized on during the next lactation period.

C. S. RHODE,
Assistant Professor in Dairying
University of Illinois.

BANKER'S CATTLE MAKE RECORDS

Two heifers on the Glenfield farm owned by J. H. Driessen, a banker at Marion, Wisconsin, have recently been officially tested. Glenfield Aaggie Ormsby De Kol No. 777769 freshened at the age of two years, one month and six days and in the week produced 413 lb. of milk, 19.80 lb. butter. Aaggie De Kol Rigtje Piebe No. 710276 produced 542.1 lb. milk, 25.24 lb. butter in seven days as a junior three-year-old. These heifers were fed and milked by A. V. Chamberlin, manager and herdsman of the farm.

CHAMELEONS

"Two months ago he was the loveliest thing on earth, and now I hate the very sight of him!"
"Yes. Aren't men changeable?"

DISPERSAL SALE

RICHLAND HERD
40 REGISTERED HOLSTEINS
Tuesday, May 27, 12.30 P. M.

Standard time. At the Red Lion
Hotel Stables, Quakertown, Pa.

Cows—Heifers—Heifer Calves—Two Yearling Bulls.
Herdsire is the famous KING SEGIS CHAMPION, sire of Belle Segis Champion, 37.15 lb. butter in 7 days. Sold for \$5,000. His son, King Model, \$15,000.

In this sale are twenty daughters and two yearling sons of KING SEGIS CHAMPION and 7 daughters of the 30-lb. sire, SIR TEHEE LIEUWKJE KORNDYKE. Most of the cows are fresh or soon due. This is a great opportunity to buy highly bred cattle—the blood that made World's Champions.

Quakertown is on the P. & R. R. and the Lehigh Valley trolley, running from Philadelphia to Allentown. All trolley cars stop at the Red Lion Hotel. A cordial invitation to attend this sale is extended to all.

WM. H. WALTERS
Quakertown Bucks County, Pa.

CHOICE BULL CALF

From an ACCREDITED Herd

ONLY \$60**BORN APRIL 19, 1924**

Son of

BOILING SPRINGS HARTOG

Calving at 25 months old she produced 14,697.9 lb. milk, 623.48 lb. butter in 365 days, in Sub-Division B.

In last year's official list she headed her class for milk and stood second for butter. She followed this great showing by making 25.12 lb. butter in 7 days as a senior three-year-old.

Her full sister, in C. T. A. work, made \$126 above feed cost her first year and, in her second year has over 10,700 lb. milk in the first 7 months. These daughters of LOTHIAN DE KOL KORNDYKE are both choice individuals and big producers.

IVO V. OTTO

Carlisle, R. D. 6 Cumberland Co., Pa.

PINE RIDGE HERD is headed by **KING RELIANCE LOCKHART VEEMAN** whose dam

PEARL LOCKHART RELIANCE holds the World's Record for a senior four-year-old in Sub-Division B—by the production of 882.10 lb. butter in 365 days.

Despite the fact that she averaged 4.43% fat, her milk record of 15,837.7 is the second highest ever reported for age in that division.

Then she is a show cow—a first prize winner at the New York State Fair.

DAN E. ANDERSON

Herd under State and Federal Supervision.

Wm. Benning**SUNSET VIEW FARM****Kingsley****Penna.****WALKER HAS WELL-BRED HERDSIRE**

Dutchland Konigen Hengerveld Lad, the splendidly bred bull standing at the head of the good herd of O. P. Walker & Son, Thompson, Pa., has a remarkable pedigree, for he traces to no less than six different century sires, that is, sires with one hundred or more daughters in the Advanced Registry. His own sire is King Segis Pontiac Konigen, who for several years stood at the head of the Dutchland herd and whose daughters have made remarkable milk and butter records in both short and long time tests. He was a son of King Segis Pontiac, who was by King Segis from the former world's champion, Pontiac Clothilde De Kol 2d, the first cow to make 37 lb. butter in seven days official test and the first cow to make 1,000 lb. butterfat in a year, also the first cow to make a 30 lb. official seven day butter record at three successive freshenings. King Segis Pontiac Konigen was from a good daughter of King of the Pontiacs and the 37 lb. cow, Diona Konigen Pietertje. King of the Pontiacs and Pontiac Clothilde De Kol 2d had 75% the same blood lines being sired by Pontiac Korndyke while their dams were daughters of Hengerveld De Kol.

Dutchland Konigen Hengerveld Lad was from Dutchland Colantha Lady Grace, a cow that produced 27.72 lb. butter, 547.9 lb. milk in a week and that as a four-year-old has a year record of 17,539.9 lb. milk, 781.11 lb. butter. She is a daughter of Colantha Johanna Lad and was from Aaggie Grace De Kol Hengerveld, who was sired by Hengerveld De Kol and from a daughter of De Kol 2d's Butter Boy 3d.

A study of a four generation pedigree of Dutchland Konigen Hengerveld Lad shows some interesting facts. His two grandsires were century sires and sires of show animals. His four great-grandsires were King Segis, King of the Pontiacs, Sarcastic Lad, and Hengerveld De Kol, four bulls whose descendants have made tremendous records. Three of his great-granddams were above the 35 lb. mark; two of them were world champions not only in one division but in all three of the great divisions, the seven, thirty and 365 day tests. The six nearest dams of Dutchland Konigen Hengerveld Lad have seven day official records that average 30.605 lb. butter, 556.6 lb. milk. His seven nearest dams average 29.10 lb. butter, 534.1 lb. milk, a daily average of 76.3 lb.

OTTO HERD NOW ACCREDITED

Boiling Springs Herd owned by Ivo V. Otto, Carlisle, Cumberland County has been added to the list of Pennsylvania accredited herds, a certificate to that effect having been received by Mr. Otto. Mr. Otto's herd is enrolled in the Cumberland County Cow Testing Association and always stands very close to the top. Many months Mr. Otto has owned the highest milk and butterfat producer.

At the head of Boiling Springs Herd is the well bred bull Lothian De Kol

Korndyke. He is backed by cows which have demonstrated their excellency both in short time and long time test but better yet, his daughters in the everyday work in the dairy and in official work are showing that he is a sire of unusual excellence. Being a busy man, a farmer-dairyman, Mr. Otto is unable to milk his cows four times a day. Two daughters of Lothian De Kol Korndyke were entered last year in subdivision B and continued in test for the 365 days. The official reports show that these daughters of Lothian De Kol Korndyke stand first and second for milk and second and third for butter, competing with cows from all parts of the United States.

The fact that Uncle Sam has guaranteed the health of the animals in Boiling Springs Herd will increase the estimation in which the dairy public already hold this high class Pennsylvania establishment.

PLAN FOR FUTURE FEEDING

Now is the time to plan for soiling crops to help out when pastures get short next summer and for emergency hay crops to take the place of clover or alfalfa that may have been winter killed. Oats and peas will thrive and give large yields on almost any good soil. This crop is splendid for soiling purposes and any surplus can be made into hay of excellent quality. A field of corn convenient to stable or pasture will be found very useful in providing green feed for the late summer. Stowells Evergreen Sweet Corn is excellent for this purpose.

Soy beans are proving a very valuable hay crop. Two tons per acre is a common yield. The feeding value is equal to that of good clover or alfalfa. Sow May 15 to 30. Ask your County Agent for particulars regarding variety, soil requirements, etc. The most successful dairymen give careful attention to the feed needs of their dairy cattle.—*Pennsylvania State College News Letter.*

From An Accredited Herd

BULL CALF—born Dec. 26, 1923, more white than black, straight and right in every way. Price \$50.

Dam—Maple Grove Pontiac Betti, she by King Pontiac Jupiter, a son of King of the Pontiacs from a daughter of Hengerveld De Kol.

HEIFER—born Dec. 1, 1923. Nicely marked well grown and a beauty. Price \$65.

Their sire is **MAPLE GROVE YBMA GLISTA** whose sire is from Glista Dinah, a 31-lb. daughter of a 34-lb. cow. His dam produced 27 lb. butter, 641 lb. milk in 7 days in this herd.

Maple Grove Stock Farm

F. Jones, Mgr.,
Centerville, Pennsylvania, R. 4.

"Sadie," said a mother to her small daughter, "why is it that you and your little brother are always quarreling?"

"I don't know," replied Sadie, "unless I take after you and he takes after papa."

FEEDING HEIFER CALVES

The fourth Pennsylvania State College article on calf raising relates to feeding grain mixtures to calves receiving skim-milk. These mixtures are so simple that any farmer can easily secure and mix them. Three mixtures are mentioned. Number one consists of equal parts whole oats and corn; number two of equal parts of bran and corn and number three of three parts oats, three parts wheat bran, three parts corn meal and one part oil meal. The schedule for grain feeding published in the April 22 issue can be summarized here. For the first thirty days the young animal should receive all it will eat and should be taught to eat as soon as possible. There is no objection to calves receiving its grain in the bucket in which it received its milk but it is essential that the bucket be cleaned thoroughly before the next feeding. Clean buckets are the best preventative against scours.

Many hand fed calves are over fed on milk while they are very young. There is, however, very little danger of overfeeding on grain for the first five or six weeks. For the first thirty days the calves should have all they can eat. After the first month, about one-fourth pound at each night and morning feeding is about right for the first ten days then, when the calf is forty days old, increase to three-eighths of a pound or six ounces. When the calf is from 50 to 60 days old about 1/2 lb. at each feeding. After two months of age this can be increased to three-fourths of a pound and from the time the calf is six weeks old until it is six months old about one pound night and morning will bring it along in good shape.

Calves should have all the clean, bright mixed hay they will eat. For small calves a mixed hay is better than the best alfalfa hay. Calves fed exclusively on alfalfa leaves and tender shoots do not do well, the feed apparently being too concentrated.

The cheapest way to build up a high class herd is to keep and raise the heifer calves, sired by good bulls, and from the best cows in the herd, and to raise such calves so that they will become good, strong, healthy individuals. This rule applies to purebreds as well as grades. Some calves will be better than their mothers and some not as good but if only the calves from the best cows are kept over a series of years, the herd will rapidly increase in producing ability.

ROBERTSON'S LATEST BUY

One of the best herds in Pennsylvania is owned by H. E. Robertson of York. Animals from this herd have been exhibited at leading Pennsylvania and Maryland fairs and have won high honors. One of the sons of King Piebe of York was exhibited at the National Dairy Show last year. Owing to a delay in transportation, he did not arrive on the grounds until the judging was proceeding and so appeared at a disadvantage, but even then got into the money. Mr. Robertson furnished the bulk of the

Holstein exhibit at the Pennsylvania Farm Products Show at Harrisburg last January and the Robertson Farm exhibit received many commendations.

Despite the fact that he owns such a good herd, Mr. Robertson is always ready to add a good producer or a show animal

LOYALSOCK KORNDYKE WITRA
Now a member of the Robertson herd,
York, Pa.

whenever the price is right. When the Loyalsock herd was dispersed he secured Loyalsock Korndyke Witra. This heifer as a three-year-old made a seven day record of 25.85 lb. butter and a year record of 23,258.3 lb. milk, 1,074.2 lb. butter, state record in class. Part of the time while making this record, she was milked four times a day, part three times, and for the last month only twice.

Her dam was a 28 lb. cow with 1,180 lb. butter, 25,618 lb. milk in a year while her sire, King Korndyke Daisy Hengerveld has a growing list of good record daughters and was by King Korndyke Sadie Vale from S V H Daisy, a 30-lb. daughter of Sir Veeman Hengerveld.

FEED GRAIN TO PASTURED COWS

The cheapest grain feeds on the market, says the April New York State news letter, are the wheat feeds, gluten feed and the corn feeds similar to hominy. Study has shown that a grain mixture containing 15 or 16% total protein and about 12% digestible protein will give enough protein to accompany good pasture grass.

As a mixture to be fed to cows on pasture the following is recommended:

300 lb. wheat bran
500 lb. hominy
200 lb. gluten feed.

On good pasture Mr. Tailby advises feeding one pound of grain to five or six pound of milk. As the pasture gets poorer the grain should be increased and as the pasture grass gets woody and fibrous the percentage of protein in the grain mixture should be raised.

SLIGHT SHOCK FOR MOTHER

Bobby had made a new friend, a boy of whom his mother had never heard. "I hope," she said when he told her about it, "that he's a nice boy."

"Yes, ma, he is," replied Bobby enthusiastically.

"Does he say any naughty words?" questioned his mother.

"No," replied Bobby with emphasis, "an' I ain't going to teach him any."

INVENTORY

Inventory! which thus commences—
I have my sense and I have my senses,
I have my hands and health;
I have my home, be it high or lowly,
I have my coat, be it whole or holey,
And I have my family wealth.

The family wealth? Why, what a question!

The wife and cubs, and a good digestion,
And a keen, clean appetite;

A song in the heart and a chance to sing it,

A jig in the hoof and the grace to fling it,

And a snoreless sleep at night.

What more? Why, haven't I listed plenty?

But add me a friend—or two—or twenty,
And each one worth the friending;

A nook in my heart to be still and sad in,
A big, big world to be brave and glad in,

And a faith in the final ending.

—Edmund Vance Cooke.

COMPANY BULL WITH REMARK- ABLE PEDIGREE

Four Holstein breeders living near Williamsport, Pa., purchased a remarkably well bred bull when the Loyalsock herd was dispersed March 12. This was King Jemima Segis, whose dam, granddam, and great-granddam have year records that average 1,215.67 lb. butter, 26,877 lb. milk. These men are P. C.

KING JEMIMA SEGIS

His three maternal dams have year records that average 1,215.67 lb. butter, 26,877 lb. milk.

Antes, H. R. Paulhamus, F. J. Barrett, and O. A. Shirey.

King Jemima Segis is a three-year-old bull whose dam Jemima Johanna Segis produced in a year 1,175 lb. butter, 26,270 lb. milk, becoming the Canadian champion of her class. She has a seven day record of 30.25 lb. butter, 691.8 lb. milk. Her dam, Jemima Johanna of Riverside 2d, as an eight-year-old made a year record of 1,192 lb. butter, 23,890 lb. milk and she is one of the daughters of the

famous Jemima Johanna of Riverside who has a 30 lb. seven day record with over 700 lb. milk and whose year record of 1,280 lb. butter, 30,373 lb. milk, made as a ten-year-old, stood at the head of the Canadian list at time of making, besides being a world's record for age at that time.

The sire of King Jemima Segis is King Wayne Rag Apple, a grandson of King

Pontiac Artis Canada and King Segis Walker, of Brookland's Korndyke Wayne, a 30-lb. cow with over 600 lb. milk, and the 28-lb. cow, Fairview Rag Apple Imperial.

These four breeders had an opportunity to study the get of King Jemima Segis as a number of young calves by him were sold in the sale. The individuality shown by the offspring and the remarkable pedigree of the bull are the reasons that they reached the decision to head their herds with King Jemima Segis.

DAIRY PRODUCTS GOING INTO COLD STORAGE

Cold storage holdings of butter and cheese were on May 1st of this year considerably above the amount stored last year or the average on May 1st for the

SPECIAL DEMONSTRATION TRAIN

The Erie Railroad Company is planning to run a farm demonstration train through northwestern Pennsylvania for a period of ten days beginning June 2d.

This is to be known as the soils and crops special. The first meeting will be at Bear Lake from 1:00 P. M. to 5:00

P. M. June 2d and the final meeting will be at Greenville, Tuesday, June 10th and will last from 9:00 A. M. to 5:00 P. M.

Prominent speakers have been engaged and the occasion should be taken advantage of by Holstein dairymen. We do not believe there are any cattle on the train but there will be a display of Holstein pictures, some of which depict noted Pennsylvania cattle.

ADDED TO NORTHRUP HERD

At the Loyalsock Herd Dispersal March 12th, Jean Bowden Northrup of Danville, Pennsylvania, purchased Loyalsock Colantha Witra, one of the greatest producing matrons in the Loyalsock herd. This cow is credited with a number of creditable records and what is better yet, her descendants have also demonstrated that they were producers.

Loyalsock Colantha Witra was by King Colantha Clothilde 3d and is his highest record daughter. This bull is closely related to a number of big producers. His dam is from the 31.83-lb. cow, Mary Walker Pietertje and was by Beauty Pietertje Butter King, son of the 30-lb. cow, Beauty Pietertje. His sire, King Colantha Clothilde, was from Abby Hartog Clothilde 31.39 lb. butter in seven

years old, she is credited with 28.20 lb. butter, 640.2 lb. milk in seven days. She was continued on test for a year. After she had been in milk nine months she was given a seven-day official test in which she produced 23.26 lb. butter, 469.1 lb. milk and her full year record is 1,180.42 lb. butter, 25,618.6 lb. milk. She is the dam of four daughters, three of which have been tested.

Loyalsock Korndyke Witra as a senior three-year-old produced 25.85 lb. butter, 549.3 lb. milk in seven days and 1,075 lb. butter, 23,393.3 lb. milk in a year. Loyalsock Witra Colantha tested as a junior two-year-old is credited with 18.22 lb. butter, 382.3 lb. milk in seven days and 631 lb. butter, 14,168.5 lb. milk in 305 days.

Loyalsock Colantha Witra, four of her

LOYALSOCK COLANTHA WITRA

28.2 lb. butter, 640.2 lb. milk in seven days, 1,180.42 lb. butter, 25,618.6 lb. milk in a year, purchased by Jean Bowden Northrup, of Danville, Pa., in the Loyalsock Herd Dispersal.

days and was sired by Colantha Johanna Lad, whose dam, Colantha 4th's Johanna made 35.22 lb. butter in a week.

Loyalsock Colantha Witra is from Loyalsock Butter King Wirta a 23.83-lb. cow that produced 666.5 lb. milk in seven days and in ten months test is credited with 625.43 lb. butter, 16,160.1 lb. milk. She is from an A. R. O. daughter of Beryl Wayne Korndyke of Riverside and is sired by The Milk and Butter King whose dam and sire's dam were both former world's champion cows, his dam Mercedes Julip's Pietertje, making 29.36 lb. butter in a week, while his sire's dam was Aaggie Cornucopia Pauline, the first cow to produce over 34 lb. butter in seven days in official test.

Loyalsock Colantha Witra has a number of good records to her credit. She freshened for the first time at 2 years, 15 days old and in a seven-day test produced 17.17 lb. butter, 338 lb. milk. Continued on semi-official test for 295 days she is credited with 408.98 lb. butter, 9,623.7 lb. milk. She was again tested as a senior three-year-old and this time she is credited with 28.05 lb. butter, 496.6 lb. milk. The next time she appears in the Blue Book was when nearly seven

daughters, one granddaughter and one grandson were sold by Flock Brothers Company when the Loyalsock herd was dispersed. The cow brought \$440.00 and the entire family brought exactly \$2,100 an average of \$300.00 for the seven head.

WANTED—A bull of good breeding and good individuality at a reasonable price. One ready for immediate service preferred but not essential.

C. L. DEERING, Lancaster, N. H.

HILLSIDE ELSIE MAKES 33 LB.

A record of 33.6 lb. butter, 555.6 lb. milk in seven days was recently completed at the Hillside and Spring Brook Farms, Trucksville, Pennsylvania, by Hillside Elsie. This cow is from an A. R. O. daughter of Woodcrest Pietje and was sired by Dutchland Sir Lyons Hengerveld, who had a number of good record daughters and was by Colantha Johanna Lad from Blanche De Kol Hengerveld, a 33-lb. daughter of the famous old sire, Pietertje Hengerveld's Count De Kol. Hillside Elsie has 87½% the same blood lines as Hillside Rhododendron 35.14 lb. butter, 543.8 lb. milk in a week. Both these cows are by Dutchland Sir Lyons Hengerveld, their dams are daughters of Woodcrest Pietje and their granddams were daughters of Sir Count Arthur, one of a number of great sires that formerly stood at the head of the Hillside herd.

Hillside Elsie previous to starting her test this year, dropped a bull calf April 15th by King Pontiac Maple Knoll Ormsby, whose daughters are making fine records and whose sire was King of the Pontiacs. His dam, Maple Knoll Helen, as a four-year-old made 30.97 lb. butter in seven days and as a six-year-old made 33.16 lb. butter in a week. Being by King Korndyke Hengerveld Ormsby, she is, therefore, a sister to Ormsby Korndyke Lad, whose daughters and granddaughters have made and are making splendid records in both short and long time tests.

Both Hillside Elsie and Hillside Rhododendron were tested under the supervision of Dallas P. Honeywell, superintendent of the Conyngham establishments.

ANIMATED CONVERSATIONS

I am going to close this time by giving one of my early matrimonial experiences, after 59 years of married life. I can say, as Col. J. W. Judy used to, "I have lived with my wife 59 years, and so far have never quarreled, but we have had many animated conversations that you could hear four miles against the wind."—Col. J. M. Woods, in *Breeders' Gazette*.

"You there, in the overalls!" shouted the cross-examining lawyer, "how much are you paid for telling untruths?"
"Less than you are," returned the witness, "or you'd be in overalls, too."

Meshoppen, Wyoming Co., Pa.

NEWS FROM WALDRON FARM

In the Waldron herd owned by Mrs. Maud Dwight, South Otselic, New York, a four-year-old heifer is now producing around 65 lb. milk a day and a two-year-old daughter of King Sylvia Pontiac Pietje is giving 45 lb. daily on two milkings a day and ordinary feeding and care. King Sylvia Pontiac Pietje is siring a nice bunch of heifers. He is by Champion Echo Sylvia Pontiac and is from May Echo Pontiac 2d, 26.23 lb. butter, 659.8 lb. milk in a year as a junior four-year-old. She is by Woodcrest Sir Clyde and is from May Echo Pontiac, a daughter of King Pontiac Artis Canada and the famous May Echo Sylvia, so that King Sylvia Pontiac Pietje is both a grandson and a great-grandson of May Echo Sylvia, the only cow that ever produced 1,000 lb. milk in a week.

A bunch of nice calves are coming sired by Calamity Segis King De Kol. This bull was by De Kol Plus Raymondale, a grandson of May Echo Sylvia and a son of De Kol Plus Segis Dixie, whose record of 1,686.64 lb. butter in a year and 3,125.99 lb. butter in two years stands supreme in the American and Canadian herd books. Calamity Segis King De Kol is from a granddaughter of the famous Canadian sire, Pontiac Korndyke Het Loo, and Korndyke Queen De Kol, 6th, a cow that three different years produced over 31 lb. butter and over 700 lb. milk in a week.

Mrs. Dwight has just obtained from the well known Canadian breeder, D. B. Tracy, Coburg, Ont., another young bull which she intends to make the future herdsire at Waldron Farms, and so has offered to sell her two older bulls. The young bull is backed by some of the greatest producers ever known in Canada. His sire is a grandson of Champion Echo Sylvia Pontiac 2d that in all three of her bulls, Mrs. Dwight has introduced the May Echo Sylvia blood. Both sire and dam of the latest acquisition have for a grandparent, Lulu Keyes, a cow that made 36.05 lb. butter, 785.4 lb. milk in seven days and that has a long list of good records made different years. The dam is a granddaughter of Princess Dixie de Annandale, one of whose sons, Sir Segis Dixie, is the sire of the American and Canadian champion, De Kol Plus Segis Dixie.

Mrs. Robert Katz was looking for her husband, and not finding him at the village grocery, she went over to the barber shop. The new proprietor met her at the door and inquired what she wanted. "Bob Katz here?" she asked. "No, madam, we do not," replied the barber as he closed the door.

Mr. Brook purchased a fine Holstein cow, of which all the family were very proud.

One day a visitor said to Marjorie, the three-year-old member of the household: "I suppose you have all the nice creamy milk you can drink now?"

"Yes," replied Marjorie, "since we've got our old steam cow!"—*Home Friend Magazine.*

SOUTHERN DAIRY QUEEN

Ferndell, a Dutch Belted cow owned by Dr. J. G. DuPuis, president of the Dutch Belted Cattle Association of America, recently finished a year test in which she produced 13,477.9 lb. milk, 584.614 lb. butter, being milked twice a day. This record won the state championship for all breeds in Florida and the Dutch Belted world championship.

The noteworthy thing about this performance is that during the time she was on test she was dipped for cattle ticks every fourteen days. Dr. DuPuis owns a dairy farm near Miami, Fla., on which he produces Baby Special Milk. In 1920, his farm became infested with cattle ticks which he believes was brought there through the carelessness of railroad employees. To eradicate the ticks he adopted the practice of dipping his cattle every fourteen days and Ferndell took her turn with her stablemates. Despite this rather strenuous treatment she became a world champion.

ARIZONA BULLS WEAR SHOES

Some Arizona cattlemen are providing their bulls with shoes as a protection from the rough rocks of the mountain ranges. These shoes are similar to those sometimes worn by oxen, reports the United States Department of Agriculture.

Cattlemen say that heavy bulls brought to Arizona from the soft ground of the Middle West are slow to get their feet hardened to the rocky slopes on much of the Arizona range, with the result that the animals stay around the waterholes in the valleys and get little to eat. The result is the breeding of weak cows which also remain near the water. Sometimes the bulls get up on the flat hilltops and refuse to come down over the rocky sides to water. Shoeing the bulls helps to solve the dilemma.

BUILT A DAIRY IN NEBRASKA

Herman Korte is the name of a dairyman who operates a farm near Orleans, Nebraska. Five years ago Mr. Korte had a very small cash investment, to-day he owns and milks thirty-eight Holstein cows and in five years has produced and sold milk to the amount of \$27,000.

His Holsteins are housed in an electrically lighted and splendidly equipped barn. Milking is done by machinery, the average time being one hour and twenty minutes. Most of the feed for the cows is raised on the farm. His cows have a reputation as producers and the demand for calves is so great that he is compelled to keep a waiting list of purchasers, reports Ross Nichols, agricultural agent for Clinton County.

The Old Dear: "Yes, we've been married goin' on forty years, an' my husband has never deceived me once!"

The Young Dear: "My, isn't that wonderful!"

The Old Dear: "Yes, isn't it? I can tell when he's lying—every time."

A REAL DAIRY COW

To produce 16,000 lb. milk in 365 days in the every day work of the dairy, a cow must be a real producer. In the herd of Wm. Benning of Kingsley, Pa., one of the herd foundation cows, Lake Countess Dijkstra De Kol, has made over 16,000 lb. milk in 365 days. For just 60 days she milked three times a day and the rest of the time only twice. In the first one hundred days after freshening, her milk sold at League prices brought, so Mr. Benning tells us, exactly \$100 above the cost of her feed.

Lake Countess Dijkstra De Kol, No. 341510 is an eight-year-old cow. Her dam was Countess Dijkstra De Kol 2d; her sire was Ontario Lennin Lad, a grandson of Pledge Spofford Calamity Paul from Fairmont Zerma Segis Pietje, 35.61 lb. butter in seven days as a junior four-year-old, world's record in class at time of making.

Lake Countess Dijkstra De Kol is just the kind of cow a dairyman-breeder likes to own. Her descendants have been mostly females for 30% of the Benning herd are daughters and granddaughters of this great dairy cow. Sunset View Herd, as the Benning establishment is named, contains a number of animals that have won prizes in local shows. Mr. Benning is a stickler for size and type as well as production.

At the head of this herd is King Ideal Fayne Ormsby, a son of King Ormsby Ideal from a daughter of King Sadie Vale Hengerveld. The six nearest dams of King Ideal Fayne Ormsby have seven day official records that average 30.94 lb. butter and this includes the record of his own dam of 21.62 lb. made as a junior two-year-old. She recently closed a year record of over 800 lb. butter and more than 21,000 lb. milk.

THE IVY HILL HERD

Ivy Hill Farm is situated near Smithsburg, Maryland. It consists of 80 acres, part of which is in timber. The owner is John M. Martin, a typical Maryland dairy farmer.

The Ivy Hill herd contains only eight cows in milk but they are real good ones. A number of tests have been made on three times a day milking. S. J. P. K. Jetta as a senior four-year-old completed a record of 17,662.4 lb. milk, 725.51 lb. butter. Her dam is a 19 lb. cow and her sire is Sir Jessie Pontiac Korndyke who has a number of daughters with good long time records and was by Pontiac Korndyke from Fairview Jessie Korndyke 30.90 lb. butter, 585.4 lb. milk in seven days. S. J. P. K. Jetta is a strong, vigorous young cow, a little more black than white in color, shows lots of capacity and constitution and is a very fair show cow. She is the dam of Champion Valdessa Jetta, a bull that has won several prizes at Maryland Fairs and that is now in service at the Hermes Grove Dairy near Pittsburgh, Pennsylvania.

K. P. C. De Kol Altoana is a daughter of King Pontiac Canary, and, therefore, a granddaughter of King of the Pontiacs. She was in test for the full year and

qualified in the ten months division as she freshened only 29 days after the year closed. In the full year she is credited with 15,237.5 lb. milk, 693.14 lb. butter while her ten months record is 14,178.1 lb. milk, 625.64 lb. butter. She was tested as a senior three-year-old and she carried calf 186 days during the making of her 305 day record.

Windsor Hill Daisy Champion as a six-year-old produced 18,398 lb. milk, 852.25 lb. butter. She is a daughter of Colonia Champion and Columbus Valley Daisy. Clothilde Maud Burke as a junior two-year-old produced 416.60 lb. butter, 9,396.4 lb. milk. Her dam was the A. R. O. cow, Clothilde Maud Segis and her sire was Westtown Major Korndyke, a son of Fairview Klaver Korndyke and the 26 lb. cow, Clyde King Burke.

In partnership with his neighbor, Cyrus Stouffer, Mr. Martin owns Topsy Pontiac Joh No. 349690. This three-year-old bull is from Topsy Pontiac Isabelle 513.5 lb. milk, 25.78 lb. butter in a week. His sire, Prince Lyons Joh, is a son of King Joh from Segis Cleopatra Lyons, a daughter of King Lyons and Segis Cleopatra, she is a daughter of King Segis and the 29 lb. cow, Cleopatra Gelsche, the second highest record daughter of the famous old foundation cow, Prilly.

RETREAT HEIFERS MAKE RECORDS

Heifers in the Retreat Herd owned by the Central Poor District of Luzerne County, Pennsylvania, have recently completed nice records. Traverse Segis Houwtje Model, purchased at the Cleveland National Sale, produced 455.3 lb. milk, 25.33 lb. butter in seven days as a senior two-year-old. Her bull calf in the Retreat Herd has a remarkable pedigree, his twenty-eight nearest dams having seven day records that average 31.33 lb. Traverse Segis Houwtje Model is from Traverse Segis Houwtje 2d, a 28-lb. three-year-old, whose dam produced 31.73 lb. butter in seven days and 933.05 lb. butter in ten months. The sire of this heifer is Echo Sylvia King Model, a son of Champion Echo Sylvia Pontiac and the 36 lb. cow, Belle Model Pietje, who three times has made over 32 lb. of butter in a week and whose dam, Belle Model Johanna 2d, has two seven-day butter records each above 37 lb.

The Junior four-year-old, Fairmont Lyndon Alcartra, already reported as producing 29.06 lb. butter, 440.6 lb. milk in a week, produced in thirty days, 1,833.8 lb. milk, 116.52 lb. butter, reports herdsman J. O. Vaughan.

TOO SPEEDY

In a certain village there was a doctor noted for his reckless motor-driving. One day when he answered the telephone a woman's voice asked him if he were going out driving that afternoon. "No; I hardly think I will have time this afternoon," replied the doctor. "But why do you ask?" "Well," replied his anonymous questioner, "I want to send my little daughter down the street for some thread, if you are not."

A GREAT VIRGINIA SIRE

One of the greatest bulls in the south, perhaps we should say one of greatest sires in the entire country is Homestead Superb Vale, the great old bull who stands at the head of the herd owned by Frank S. Walker, Woodberry Forest, Va.

Homestead Superb Vale does not have a very long list of daughters but they are of uniform high quality. One of his daughters, as a five-year-old made 1,078.73 lb. butter, 23,439.5 lb. milk in a year and as a two-year-old produced 715.12 lb. butter, 15,762.4 lb. milk. Other daughters have records ranging from 700 lb. to well over 800 lb. butter in a year. During the fiscal year 1919-20, the daughters of Homestead Superb Vale made records that for average production of milk and butter were equalled only by daughters of one other sire. When considering this statement also consider that the herd he headed was small; that his daughters did not have the opportunity given to cows making records in many of the great herds of the north and you will realize something of the quality of this sire.

Homestead Superb Vale is from Hazel Burke, 24.33 lb. butter, 438.1 lb. milk in seven days as a senior three-year-old. Her sire and her dam are both by sons of Paul De Kol, Jr., son of Sadie Vale Concordia the first 30 lb. cow, and sire of Creamelle Vale, 1155.55 lb. butter, 29,591 lb. milk in a year, world's record for milk at time of making.

Homestead Superb Vale is by Homestead Superb, who has a number of good record daughters; is from a 31 lb. cow Jessie Maida, one of the best daughters of De Kol Burke and was by Rag Apple Korndyke, a great sire and son of Pontiac Korndyke from the former world's record cow Pontiac Rag Apple.

Those who attend the National Sale to be held in Richmond, in June will have an opportunity to look over Homestead Superb Vale for his owner Frank S. Walker is president of the Virginia Holstein-Friesian Association and so will be very much in evidence during the convention week.

LEGUMES HELP FARMERS

For worn out soils, they furnish the cheapest fertilizers. They provide humus and nitrogen, and prepare the subsoil for air and water. Clover, soybeans, sweet clover, alfalfa and cowpea are among the first of the legumes. Every farmer should have a crop of legumes best suited to the soil grown every year. Legumes are the cheapest help for building up run down, poor fields and farms, they give nitrogen and humus, and open the subsoil to air and water. The cowpea will grow on very poor soil, perhaps better than any other legume. It is well suited for this purpose to start the weak soil back to health, vigor and strength. Don't overlook the economical point of the legumes.—*Baynes Soil Improver.*

Tombstones are cold and cheerless, yet they always have a good word for everyone under them.

HERDSIRE CHANGES OWNERS

King Johanna Korndyke Cornucopia, formerly senior sire in the herd of Fred B. Keeney, of Laceyville, Pa., has been sold to head the herd of Olaf C. Ferris, of Skinners Eddy, Pa. Mr. Ferris's herd consists of seven purebred and twenty grade females.

Mr. Ferris is to be congratulated on securing such a well bred bull whose offspring show splendid promise. King was by Korndyke Abbeckerk Netherlands, a son of Korndyke Abbeckerk and Milanhurst America De Kol, a cow that two different years made over 33 lb. butter in a week as a junior four-year-old. She is credited with 651.1 lb. milk, 34.08 lb.

KING JOHANNA KORNDYKE CORNUCOPIA

High class herdsire recently sold by Fred B. Keeney, Laceyville, Pa., to Olaf C. Ferris, Skinners Eddy, Pa.

butter in seven days, 2,533 lb milk, 125.60 lb. butter in thirty days while in the full year she produced 26,433.4 lb. milk, 1,231.35 lb. butter in a strictly official test which was not only a world's record at time of making but is still we believe, the world's record for a junior four-year-old tested strictly official for a full year.

The dam of King Johanna Korndyke Cornucopia is Johanna Cornucopia Colantha 2d, with a four-year-old record of 436.5 lb. milk, 20.628 lb. butter. She is a granddaughter of Woodcrest Nig De Kol, one of the very best sons of Hengerveld De Kol and her pedigree also shows a combination of the blood of Pieterje, Johanna, Colantha, De Kol and Aaggie Cornucopia breeding.

The picture of King Johanna Korndyke Cornucopia does not do full justice to the individuality of this animal but it indicates his depth of body, his top line, and his attractive coloring. The fact that his offspring show high class individuality and indications of becoming great producers, decided Mr. Ferris to place him at the head of his producing herd.

BETTER GIVE THIS CROP A TRIAL

Are you planning on growing some soy beans in 1924? This crop is rapidly growing in favor. In fact, the time will soon be here when the soy bean will be regarded as one of the staple crops of the country. Its popularity is rapidly increasing, both in the dairy sections and in the great corn belt. Hogs and cattle quickly learn to like it and the hogs will eat the bean plant, stalk and all, and even dig up the roots.

Many dairymen plant soy beans with their silage corn. Soy bean and corn silage is richer in protein than is corn silage alone and protein is the most expensive of purchased food constituents.

In these days of heavy taxes, high prices for labor and comparatively low prices for dairy products and dairy cattle, it behooves the dairymen to figure how to cut the cost of production and many have found the soy bean a decided help.

During 1922 about 175 introductions of soy beans were made from China and Japan. In these oriental countries the soy bean is extensively grown and forms part of the food of the population, partly taking the place of meat on account of its high protein content. In this country the soy bean is used for livestock feed only.

For hay the beans should be planted thickly in the row using from three to four peck of seed per acre. They should be cut for hay when the pods are well formed, but before many of the leaves begin to turn yellow. It is preferable to rake the beans into small windrows using a side delivery rake as soon as they are somewhat wilted. The smaller the windrow the more quickly they will dry out. It will probably be necessary to turn the windrows two or perhaps three times before the beans will be dry enough to bunch. The best quality of hay may be obtained by curing the beans in the cock as with alfalfa, but in good weather this may not be necessary. The main object in the handling of the beans is to cure them with as little loss of leaf as possible as this contains the larger part of the feeding value. If the pods are fairly well filled it may not be necessary to feed much protein concentrate with this hay as there will be a considerable amount of beans in the hay which will almost balance an ordinary farm ration.

Soy beans have been planted with corn for silage purposes for a number of years. They may be mixed with the corn in the planter box, stirring them up frequently so as to maintain the mixture, or better still with a separate planter box which is made to fit almost any make of planter. The biggest difficulty has been to get the beans to grow tall enough so that the corn binder will tie them in the bundle. In case the corn stubble is pastured by hogs, sheep or cattle, all the beans left in the field will be made use of. In any case, care should be taken that a tall growing variety is used for silage purposes.

EXACTLY

Counsel—Now, where did he kiss you?
Plaintiff—On the lips, sir.
Counsel—No! No! You don't understand. I mean where were you?
Plaintiff (blushing)—In his arms, sir.

"What made the teacher so angry?" asked Johnnie's father.

"Oh!" said Johnnie, "he was talking about trees, and I asked him if he had ever seen a pink palm."

"He said 'No,' and I showed him my hand!"

THE HIGH COST OF LANGUAGE

"Hey, Bill!"
"What is it?"
"Your doctor's out here with a flat tire."
"Diagnose the case as flatulency of the perimeter, and charge him accordingly," ordered the garage man. "That's the way he does."

CALLED HIM NAMES

One of these big, strong men walked into a ladies' store and said, "I want to get a set of ladies' furs. That brown set in the window will do."

To which the salesman said, "Oh! you mean skunk?"

And the salesman is still in the hospital.

MERRYALL HERD

is now headed by

TRAVERSE ECHO SYLVIA KING

a show bull whose dam produced 33.27 lb. butter, 736.4 lb. milk in seven days, and averaged 102 lb. milk for a month.

His three nearest dams have 7 day records averaging 33.03 lb. butter; his fourteen nearest dams average 30.175 lb.

J. J. JERMYN

Scranton Pennsylvania
Herd under State and Federal Supervision

Daughters of King Rag Apple Plum Copia

are being bred to King Sylvia Korn-
dyke Tweede, our junior herd bull. His
sire, Woodmont Echo Sylvia Champion
was first prize three-year-old bull at the
1922 N. Y. State Fair, and he is the son
of Butter Boy Empress, grand cham-
pion at the 1921 N. Y. State Fair.
The dam of King Sylvia Korndyke
Tweede is Wynola Korndyke Pontiac
Lass, she made 20 lb. butter and 515 lb.
milk in seven days as a junior two-
year-old. Her sire, King Tweede
Spring Farm, is getting a long list of
high record daughters headed by a
32 lb. four-year-old. We expect great
results from this cross of breeding.
Our herd is under State and Federal
Supervision and our last test was clean.

MAPLE RIDGE FARM

J. S. & F. R. Howard, Proprietors
Susquehanna County SPRINGVILLE, PA.

Betty Botter bought some butter.
"But," she said, "this butter's bitter.
If I put it in my batter,
It will make my batter bitter.
But a bit of better butter
Will surely make my batter better."
So she bought a bit o' better
And made her bitter butter better.
Better than the bitter butter,
So 'twas better Betty Botter
Bought a bit o' better butter.

**NEIGHBORS BUY RELATED
BULLS**

Frank E. Seward and Wilbur W. Mc-
Nair, of Windsor, N. Y., are dairymen
and neighbors. They recently purchased
a couple of handsome young bull calves
advertised in the HOLSTEIN BREEDER AND
DAIRYMAN by that sterling Holstein
dairymen, Fred B. Keeney, Laceyville,
Pa., who owns an accredited herd of
registered Holsteins.

Mr. Seward purchased a son of Jo-
hanna Cornucopia Colantha 3d, 522.4 lb.
milk, 21.08 lb. butter in seven days. She
is a daughter of the A. R. O. cow, Jo-
hanna Cornucopia Colantha who has
three daughters in the official list two of
which have produced over 20 lb. butter
in seven days. Her sire is Inka De Kol
Pet Son, he by that good transmitting
sire, De Kol Pietertje Prince of Cold
Brook.

Mr. McNair purchased a son of Clover
Johanna of Riverside. As a two-year-old
she made an official record of 343.3 lb.
milk, 18.25 lb. butter in a week while as
a four-year-old she averaged 1,700 lb.
milk per month for several months in the
Keeney herd. Her dam was also Jo-
hanna Cornucopia Colantha and her sire
was King Johanna Korndyke Cornucopia
who was from a 20.63 lb. four-year-old
granddaughter of Woodcrest Nig De Kol
and was sired by Korndyke Abbekerk
Netherland, a son of Korndyke Abbekerk
and Milanhurst America De Kol, 34.08
lb. butter, 651.1 lb. milk in seven days
as a junior four-year-old and 26,433.4
lb. milk, 1,231.35 lb. butter in a year in
strictly official test, world's record in
class at time of making.

The sire of these young bulls was
Model Darius King Segis. His sire was
a son of a 30-lb. Glista cow and was by
a son of a noted show cow that two dif-
ferent years made over 30 lb. butter in
a week. Model Darius King Segis was
from Clara Clothilde Lyons, 639.8 lb.
milk in 7 days, 2,658.4 lb. milk in 30
days, 4,872.8 lb. milk in 60 days, and
7,183 lb. milk in 90 days as a senior two-
year-old. Her sixty day record was
world's record for age at time of mak-
ing. She was continued on test ten
months and during this period produced
20,771.2 lb. milk, 723.4 lb. butter. This
noted heifer was by Judge Lyons, a son
of King Lyons from a 28-lb. three-year-
old daughter of a 34-lb. cow who in turn
was from a 34-lb. dam. Clara Clothilde
Lyons was from Clara Colantha Clo-
thilde, 669.1 lb. milk, 30.30 lb. butter in
seven days, a daughter of Clarissa Clo-
thilde Pietertje, 679.5 lb. milk, 32.52 lb.
butter in a week.

Mr. Keeney reports that both of his
New York State customers are very
well pleased with their purchases. The
bulls they have carry some of the best
producing blood of the breed, animals
that have made world's records in both
long and short time tests.

Jack: "I'm hungry for the beautiful
girls."

Bill: "So am I. But the beautiful
girls are too hungry for me."

**PENNSYLVANIA COUNTIES ARE
HEALTHY**

In their campaign to eradicate cattle
tuberculosis in the state, officials of the
Bureau of Animal Industry, Pennsylva-
nia Department of Agriculture have an-
nounced that virtually all the herds in
Crawford, Jefferson and Mercer Coun-
ties have been tested. The widespread
interest of farmers and stockmen is in-
dicated by the fact that applications have
been received for similar tests from 110
townships in eleven other Pennsylvania
counties.

Recently the field force of the Bureau
retested the entire cattle population of
Mercer County, where two previous tests
had been applied. The first Mercer
County test was made a year ago, fol-
lowed by a second test 60 days later.
The recent retest was applied to the in-
fected herds, and those not tested
originally.

According to Dr. S. E. Bruner, in
charge of tuberculosis eradication for the
Bureau, Mercer County probably will be
officially qualified as a modified accredited
area, indicating that not more than one-
half of one per cent tuberculosis cattle
were found in the latest test.

After the county becomes officially
designated, quarantines will be established
prohibiting the introduction of untested
cattle, unless intended for immediate
slaughter.

FIVE CUPS FOR IOWA MILKERS

A number of cups will be awarded for
Iowa Cow Testing Association work this
year and will be presented to the breed
association winners at the time of the
Dairy Cattle Congress at Waterloo. The
Congress itself annually presents a cup
to the owner of the grade cow making
the highest butterfat production. Last
year this was won by J. H. Hansen of
Oelwein. The Kildee cup donated by
Prof. H. H. Kildee of Ames, is for the
highest record herd made up of 75%
or more grade cattle. Last year this
cup was won by J. M. Patterson of
Algona.

At a recent meeting of the state Hol-
stein, Guernsey and Jersey breed associa-
tions, each voted to present a cup to the
purebred herd of their breed making the
highest average production in cow test-
ing association work. To be eligible the
herd must consist of eight or more cows
but only cows completing a record of
nine or more months will be figured. In
this action the breed associations feel that
the offering of such cups will promote
cow testing association work among
owners of purebreds which in turn will
encourage careful and generous feeding
and constructive breeding.

AN ERROR BY THE STORK

"Mom," said little Bobby, bursting into
the house all out of breath, "there's
going to be the dickens to pay down at
the grocer's. His wife just got a baby
girl, and he's had a 'Boy Wanted' sign
in the window for a week."

A Plain Breeder and Dairyman's Herd *that is making a nice profit for the owner.*

Our herd is made up of granddaughters of Napol Sir Keystone Beauty, a son of Keystone Beauty Plum Johanna, the world's champion yearly butter producer as a four-year-old on strictly official test - and granddaughters of King Korndyke Hengerveld Veeman, a 30-lb. son of Sir Veeman Hengerveld.

SOME OF OUR CHOICE YOUNG STOCK

Our present herdsire is from a 20-lb. junior three-year-old that gave 524 lb. of milk in 7 days. His sire is a son of De Kol Plum Copia, who twice made over 30 lb. in 7 days, once 33.26 lb. We can spare ten nice cows bred to freshen this fall as well as choice young stock bred to this great young sire.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

The Holstein Breeder and Dairyman Is Your Paper!

Its purpose is to promote better dairying by the means of improved stock and by the exchanging of ideas and viewpoints of men who are actually engaged in the dairy industry.

If you wish to keep in touch with the work that the Holstein cow is doing, dressed in her everyday clothes, and fed and cared for economically by the plain breeders and dairymen, this paper will give you the desired information.

The special articles written by practical dairymen, college professors, veterinarians and dairy experts are full of good counsel and information. In addition to Cow Testing Association summaries, and work by boys and girls enrolled in Junior projects, this paper, while emphasizing the work of the Holstein cow, keeps you posted in regard to dairy breeds, both in this and foreign countries.

Each issue carries a feature article of special interest, telling of the plain breeder and dairyman's success, financially and otherwise, in handling this breed of cattle, illustrated with photographs of buildings, equipment and outstanding animals.

The Dairyman is published twice each month. You and other members of your family will be greatly benefited by having this publication come regularly to your home.

A one dollar bill or your personal check pinned to the coupon will bring every issue for two years.

A Trip Over the Robinson Farm

Where You Find a Twenty-year-old Holstein Herd

FOR more than twenty years, Arthur E. Robinson of Montrose, Pennsylvania, has been an active breeder of purebred Holsteins and he has been a member of the National Association since 1907. For eighteen years he has owned his present establishment which he calls Sunny Slope Farm, and which contains 200 acres of choice land adapted to dairy keeping.

Mr. Robinson has the reputation of being one of the best judges of Holstein-Friesians in Susquehanna County, and, as many of our readers know, Susquehanna County leads Pennsylvania in number of purebred Holsteins and number of members of the National Association.

Arthur E. Robinson is a working farmer. The illustration used on the cover of this issue was snapped August 24, 1923. Mr. Robinson was feeding the threshing machine at that time and among his neighbors helping him were two or three other owners of purebred Holsteins. The machine is owned in the neighborhood and, we believe, although we are not sure on the point, that it is a company proposition in which

In selecting herdsires, individuality and breeding have both been kept in mind. Therefore, when the herd of Dr. Hand was dispersed several years ago, Mr. Robinson formed one of a company to purchase the Hand herdsire, King Pontiac Alcartra Pietje, and he still owns an interest in this bull together with H. S. Brown & Son of Thompson, and Frank Resseguie of South Gibson, Pa.

King Pontiac Alcartra Pietje is easily the most noted sire of northern Pennsylvania. With the exception of the short time that he stood at the head of Dr. Hand's herd he has been owned by these farmers and dairymen and so his offspring have not had as much opportunity to make large shorttime and longtime records as have daughters of other noted sires. Yet, despite this

GETTING THE DOPE

The representative of the BREEDER AND DAIRYMAN interviewing A. E. Robinson among his pets.

handicap, this bull has one daughter that made over 30 lb. butter in a week and two daughters that have each produced over 700 lb. milk in seven days, while another daughter, K. P. A. P. Gelsche, is the junior two-year-old State champion of Maine in the ten months' division and is credited with a production of 15,349.2 lb. milk, 687.06 lb. butter in 305 days. Yet another daughter, K. P. A. P. Prilly, as a senior two-year-old produced over 23 lb. butter in seven days and milked 60 lb. milk a day from only two quarters. All four of these young cows were tested in different herds and it is even more remarkable that these four animals were developed and tested in herds other than those owned by their breeders, another indication of the uniform high quality which characterizes the daughters of this great sire.

King Pontiac Alcartra Pietje is a beautiful animal and this desirable characteristic is also inherited by his offspring, many of which have won prizes at leading fairs and shows. One of his daughters, K. P. A. P.

IDYLLWILDE KORNDYKE DIONAGEN
and his owner, A. E. Robinson, of Montrose, Pa.

Mr. Robinson owns a share and that these neighbors cooperate to cut down expenses and get their work done. Anyway we can recommend Mr. Robinson to anyone needing a good thresherman.

It is needless to say that the Robinson herd has more than a local reputation for production and individuality. The fact that it has been established for so many years is one of the reasons for this state of affairs, others are the appearance of the animals as shown by the pictures appearing in this article and also by the records of the shipping station.

A number of high-class sires have, at different times, headed this herd and it is only fair to say that many herds in Susquehanna and adjoining counties have been headed by bulls bred and raised by Mr. Robinson.

Prilly was shown last year at several fairs with a remarkable degree of success. At the Tri-State Fair at Trenton, New Jersey, she was first prize senior yearling heifer and junior champion and she repeated these triumphs at the Virginia State Fair.

King Pontiac Alcartra Pietje is a son of King Segis Pontiac Alcartra and the former world's record junior four-year-old, Fairmont Zerma Segis Pietje, 35.65 lb. butter, 608 lb. milk in seven days. His sire was also of world's record breeding, being by King Segis Pontiac, son of Pontiac Clothilde De Kol 2d and from K. P. Alcartra. This heifer tested as a junior two-year-old made a world's record in class in year work and then, freshening again as a senior three-year-old, made world's butter records in class for both seven- and thirty-day production. Pontiac Clothilde De Kol 2d was the first cow to make 37 lb. butter in seven days and the first cow to make over 30 lb. butter in a week at three successive freshenings. She made world's butter records for seven days, thirty days and 365 days. Backed by such producing ancestry, it is not at all strange that King Pontiac Alcartra Pietje has proven to be a high-class sire. It was only to be expected and

KING PONTIAC ALCARTRA PIETJE
Senior herd bull at Sunny Slope Stock Farm.

there would be very little value in breeding for production if his daughters were not producers.

The junior herdsire is Idyllwilde Korndyke Dionagen, and he is one of the handsomest bulls we have had the privilege of looking over for many a long day. We do not know that this bull has ever been exhibited but he looks capable of holding his own almost anywhere. He is straight backed, deep, broad of chest and large of barrel and has a splendid rump. In addition, he has a gentle disposition but at the same time he is full of life and vigor. His offspring seem to have inherited his shape and type.

Idyllwilde Korndyke Dionagen is just five years old. His sire, Dionagen, was by King Segis Pontiac Konigen from Lady Netherland Pontiac, a daughter of the 29 lb. cow, Dretka Netherland 2d Lass and King Pontiac Konigen, he by King of the Pontiacs from the 37 lb. cow Diona Konigen Pietertje. King Segis Pontiac Konigen was, for a number of years, at the head of the Field herd where his daughters made large milk and butter records. He was by King Segis Pontiac from K. P. Diona Pietertje, a daughter of King of the Pontiacs and Diona Konigen Pietertje.

The dam of Idyllwilde Korndyke Dionagen was Bonny Dean Princess Korndyke. As a junior four-year-old she is credited with 480.9 lb. milk, 31.36 lb. butter in seven days; 2,138 lb. milk, 127.44 lb. butter in thirty days and 8,067.2 lb. milk, 413.90 lb. butter in 165 days when, for some reason unknown to the writer, the test was closed. She freshened less than a year previous to starting on this record and at that time made 443.8 lb. milk, 25.69 lb. butter in seven days as a junior three-year-old. She is a daughter of Crown Pontiac Korndyke, a son of Pontiac Butter Boy, and

AAGGIE CORNUCOPIA PAULINE GIRL 2d
31.79 lb. butter, 564.2 lb. milk in seven days. Her record and those of her three direct maternal dams average 30.61 lb. butter.

her dam, Princess of Oakdale 2d, is credited with official records of 536.5 lb. milk, 31.30 lb. butter in seven days and 2,170 lb. milk, 123.35 lb. butter in thirty days. She, in turn was a daughter of Princess of Oakdale, 565 lb. milk, 30.59 lb. butter in a week and 2,436.6 lb. milk, 124.19 lb. butter in thirty days.

The three direct descendants maternal dams of Idyllwilde Korndyke Dionagen are all 30 lb. cows. Their

K. P. A. P. AAGGIE PAULINE
A daughter of King Pontiac Alcartra Pietje and the 31 lb. cow, Aaggie Cornucopia Pauline Girl 2d.

official records average 31.08 lb. butter for seven days and their thirty-day records average 124.99 lb. butter. The daily milk average of the seven day records is 75.35 lb. and during the making of their thirty-day records these three cows averaged 74.94 lb. milk a day.

The females in the Robinson herd are just what one would expect, knowing the reputation of Mr. Robinson as a dairyman. They are large, straight-backed, handsome cows with square udders and are evidently producers. One of them, Aaggie Cornucopia Pauline Girl 2d, has a 31 lb. record but it is only fair to say

that no such record was ever made by Mr. Robinson, who, being a busy dairyman, has had very little time to fit and test his cows, although he has made some very creditable tests with his stock.

Aaggie Cornucopia Pauline Girl 2d was bred and raised in the Robinson herd. She was sold to another party and there she was tested as a seven-year-old cow, making 31.79 lb. butter in a week and 564.2 lb. milk. She also made good records when tested as a junior four-year-old and as a junior three-year-old. The dam's side of her pedigree shows a sequence of large records. Her dam, Aaggie Cornucopia Pauline Girl, has only 542.4 lb. milk, 25.31 lb. butter in a week but she was from the great cow, Aaggie Cornucopia Pauline 2d, with 679.4 lb. milk, 31.05 lb. butter in seven days; 2,842.8 lb. milk, 128.98 lb. butter in thirty days; who is a daughter of the former world champion, Aaggie Cornucopia Pauline, 34.32 lb. butter, 659.2 lb. milk in seven days; 137.62 lb. butter, 2,640.3 lb. milk in thirty days. This great cow is the foundation animal of a strain noted for individuality and remarkable milk and butter production. She is also the foundation animal of a direct descendant string of five cows, each of which have made over 30 lb. butter in seven days. Many other striking things could be said of this cow

A DAIRYMAN AT HOME
Robinson's cattle like to be petted.

and her descendants for they form one of the greatest producing and transmitting Holstein families.

One of Mr. Robinson's favorites is the heifer, K. P. A. P. Aaggie Pauline. She is a daughter of King Pontiac Alcartra Pietje and Aaggie Cornucopia Pauline Girl 2d. The illustration of this heifer does not do her justice. She is a better individual than is her dam. She is as straight as a line on the back and carries a splendid udder of large size with well placed teats while her milk vein development is remarkable for a heifer of her age.

Space forbids individual mention of all the animals in this herd of dairy producers, they must be seen to be fully appreciated. One fact, however, will be firmly impressed upon the mind of anyone who visits his farm and that is, that Mr. Robinson is a capital judge who uses this skill and knowledge in mating his animals and in growing and developing his young stock while the condition of his milking dairy, the freedom from udder troubles, the shape, size and squareness of the udders, shows that, in breeding for straight backs and square rumps, he has ever kept in mind that the udder is the most important part of the cow and that, "no udder—no cow," is the chief text of the dairy cattle breeder's gospel.

Some one has said that, in order to be a success, a

man must love his work. Some one else has observed that, to be a successful cattle breeder, he must love and be loved by his stock. If you take a walk with "Art." Robinson over his pasture fields, you will find that, every few yards, something has come between you and your host for the cattle of this breeder-dairyman are accustomed to be petted instead of being driven, they do not ever wait for his call but crowd around him like office seekers around a successful candidate after a presidential election.

Revival in the French Dairy Industry

MILK production in France is almost up to the conditions in 1913 before the breaking out of the great war. It has been steadily growing during the past three years, as shown by the following figures given in a report to the Department of Commerce by Assistant Commercial Attache J. F. Butler.

Year	Gallons
1913	3,330,843,000
1921	2,813,824,000
1922	2,992,777,000
1923	3,102,147,000

The quantities of milk used for the raising of calves decreased from 765,821,000 gallons in 1913 to 674,683,000 gallons in 1923. For the manufacture of butter, only 1,029,655,000 gallons were employed in 1923, as compared with 1,145,814,000 gallons in 1913. The quantities used for the manufacture of cheese showed a decided increase, being 589,966,000 gallons in 1923. The increase in the manufacture of cheese is attributed to the fact that since the war the consumption of cheese, especially Camembert cheese, has increased greatly and to the further fact that the manufacture of cheese is more remunerative than that of butter.

Valuation of the Hartsook Herd

EXAGGERATED rumors of the official valuation of the Fred Hartsook herd, slaughtered recently in California because of foot and mouth disease infection, has caused the officials in charge to give out figures regarding the indemnity awarded Mr. Hartsook.

The actual number of cattle destroyed was 290 and the total indemnity was \$123,966, approximately \$427.47 per head. We are not informed whether this figure includes the indemnity for Tilly Alcartra as, while she was in the Hartsook herd at time of slaughter, she was the property of the Morris & Sons Corporation.

The men whom I have seen succeed best in life have always been cheerful and hopeful men, who went about their business with a smile on their faces and took the chances and changes of this mortal life like men, facing rough and smooth alike as it came, and so found the truth of the old proverb, that character goes out and drags in the business, while the timorous ponder, and believe, and ever defer action. Deferred action is deferred prosperity.—Hanna.

The Business Meeting of the Richmond Convention

President Lowden called the thirty-ninth annual convention to order at 10:15 A. M. Wednesday, June 4th, and called for the preliminary report of the credentials committee, H. W. Norton, Jr., of Michigan, W. H. Mott of Kansas and Dr. D. B. Armstrong of New York, who reported in attendance seventy-five delegates representing twenty-three states and Canada. Three or four others came in later.

Secretary F. L. Houghton called the roll and H. C. Barker moved that the reading of the minutes of last year's convention be waived. This resolution was seconded and carried.

On behalf of Governor E. Lee Trinkle, who could not be present but sent his regrets, Colonel Hiram M. Smith, his Chief of Staff, gave a brief address of welcome in which he said that the Governor was a cattle raiser, and that there were 1,125 accredited Virginia herds.

In reply President Lowden said the officers, delegates and members of the Association appreciated the welcome. The South had many natural advantages for dairying but hitherto other interests have predominated. Legumes were grown easier, the climate permitted a longer pasture season and allowed of less expensive buildings. He hoped the meeting would result in general dairy expansion in the Southern States.

Owing to boll weevil and other troubles, southern farmers were turning to dairying. The Calf Club and Cow Testing Association work of last year was of great value as extension work. Dairymen during the past few years, like other producers, have had to face low prices for their products. If all unprofitable cows were slaughtered prices of dairy products would have been higher and owners correspondingly benefitted. This would also tend to stabilize prices.

The Association leaders were trying to correlate type with production and he was glad to see that the blue ribbon winners at the last National Dairy Show were high record animals.

Mr. Lowden asked the delegates to express themselves freely. While the charter fixed the time the business meeting should commence it did not designate its close and it could last all the week if thought necessary.

Secretary Houghton announced that visiting ladies were invited to an auto tour during which they could see Richmond points of historical interest.

James A. Reynolds moved that the reading of the officers printed reports be waived. S. S. Ball of West Virginia asked for the Auditor to read a summary of his report. Mr. De Bergh started reading, but after a few minutes Mr. Ball withdrew his request and the officers' reports were accepted and placed on file, as well as the reports of the Prize and Finance Committees.

The report of the General Welfare Committee was next taken up. John B. Irwin, chairman, said that the scoring of males and females had been stricken from the record. Mr. Oldham moved that a class be established for cows milked three times daily for periods of 305 and 365 days. This to be called "Class B." Axel Hansen seconded the motion.

Mr. James Reynolds spoke against the adoption and said that most people who want a class for cows milked three times daily want the four times daily class discontinued.

Mr. Oldham, Mr. H. W. Allyn of Illinois, and J. C. Marlow, of Minnesota, spoke in its favor and the resolution was carried with only one or two dissenting voices.

Mr. D. D. Aitken asked if the Welfare Committee's Report abrogated the powers of the directors to formulate advance registry rules, but President Lowden said it did not.

A spirited discussion took place over the sections relating to breeding, in which A. P. Kaye, Secretary Oldham, and Director Fred Pabst spoke against the provisions in the report, while Director Elder and Secretary Houghton spoke in favor of the proposed addition to the by-laws. A standing vote showed thirty-four in favor and thirty-six against.

Angus Thorne moved to strike out the section which would prohibit the registration of animals from dams less than eleven months' old at time of service. After a standing vote showed

twenty-nine for and twenty-nine against the change was made, Jas. A. Reynolds changing his vote from no to yes.

Dr. L. M. Thompson of Pennsylvania, moved that the Secretary be authorized to transfer animals at actual cost, (seventy-five cents), in the case of a partnership, like father and son, having one member die and the animals have to be transferred to the surviving partner. After a little discussion this was carried unanimously. On motion of Director Noyes the amendments to the by-laws as contained in the report of the Welfare Committee and amended on the floor were adopted.

Secretary Houghton read a letter from the California State Association. Owing to foot and mouth disease in the State, the California delegates would not attend the meeting. They favored extension work and the actions of the present board and asked that E. A. Stuart of Washington be continued on the board. President Lowden appointed a committee consisting of Professor H. H. Wing, D. D. Aitken, F. L. Houghton and M. S. Prescott to draft a resolution on foot and mouth disease and California conditions, this to be forwarded to the proper authorities in Washington, D. C. Thereupon a recess was taken until 1:30.

After lunch Professor Wing read the committee's resolution on the California situation and proposed its adoption. C. F. Bigler of New York moved its adoption and it was carried. It asked for adequate compensation for animals slaughtered.

Secretary Oldham spoke in favor of marketing Holstein milk under a trade name and G. D. Brill of New Jersey spoke along the same lines. In his remarks Mr. Oldham said: "The Extension Committee has spent a lot of money, done a lot of work and got nowhere. O. U. Kellogg said that the Association had no legal right to guarantee the quality of any producers' product under its present charter.

W. R. Roach of Hart, Michigan, advocated having a committee arrange with Dr. McCullom and other specialists to do research work on the value of Holstein milk. At present there was very little scientific basis for some of the claims made by Holstein enthusiasts. Tom Pemberton of North Carolina, said that he had built up a waiting list for all the baby milk he could furnish at the price of twenty cents a quart. Frank S. Walker of Virginia advocated the advertising of Holstein milk by the National Association.

Waldo S. Kellogg of Connecticut, said that advertising in the Agricultural and Breed papers did not touch the milk consuming public. Normal Holstein milk is below the legal standard of Conn. and Mass., while technically, adding cream to milk is adulteration. Most doctors will prescribe 4% milk for babies and invalids, which in most cases is too rich for easy digestion. The physicians need education on this point.

J. C. Marlow of Minn., indorsed getting the views of medical authorities. Holstein milk had revived sick babies which Mankato doctors had practically given up. He touched on Guernsey propaganda and advocated the advertising of Holstein milk, even if it was necessary to draw on the reserve fund.

Mr. Aitken said the Metropolitan Life Assurance Company in their advertising of milk had paid out in one year, six times the entire income of the Association, which was purely a promoting organization. Only in proportion to its income can the Association spend money for advertising purposes. Last year the National Dairy Council spent one million, five hundred thousand dollars in advertising dairy products. The Jersey and Holstein Associations were the only breed organizations supporting the Council by annual contributions of \$6,000 each. Three million dollars would be needed yearly for a full campaign and the Holstein Association could only promote goodwill. The money for Guernsey advertising came from dealers. G. D. Brill, L. L. Oldham and Will Baird spoke in favor of the proposal, which was withdrawn upon the explanation that \$50,000 had been appropriated for the use of the Extension Committee to use as they saw fit.

Owing to the absence through illness of Director Stuart, Mr. Houghton read the proposed resolution in favor of paying the

railroad expenses of delegates attending the Annual Conventions. Mr. Irwin and Mr. Southcott, as well as Mr. Oldham, spoke favorably and Mr. John M. Dennis of Maryland spoke against this adoption, but it was carried with a few dissenting votes.

Mr. Southcott suggested the appointment of a committee of five to carry on the work to improve type, this to report at the next Annual Convention. Mr. Oldham, Allyn, Irwin and Hansen favored such appointment and Director Noyes opposed it. Mr. Hansen gave an explanation of the Danish system of scoring herdsires. The resolution was lost by a big majority.

The election of officers was next in order. President Lowden said he took office three years ago on the promise of the warring factions to get together. This has been accomplished and he did not want to serve again.

D. D. Aitken said in view of important matters now pending in the Association, he moved the reelection of Mr. Lowden. James Reynolds moved that the secretary cast a ballot in favor of the reelection of Mr. Lowden as president and this was done among hearty applause.

For vice-president John A. Bell, Jr., nominated Dr. I. M. Thompson and this was seconded by Director Elder. He was unanimously elected and E. A. Stuart, H. V. Noyes, W. H. Mott and R. E. Chapin were unanimously reelected.

The Banquet

About 200 attended a banquet held Wednesday evening, in the Jefferson Hotel and all had a very pleasant time. The Sabbath Glee Club, consisting of male colored singers, rendered songs of the Southland in a tuneful and pleasing way which captivated those present.

"Joe" Turner, business manager of Hollins College, was

Cow County, U.S.A.

BY LEO J. BROSEMER

WHEN a County—a mere block, twenty-four miles long by twenty-four wide—leads all the other counties on the earth's surface in production of dairy cattle; when that same county can boast of over 1,500 purebred Holstein bulls in actual service, ten of which cost an average of \$19,455 each and over fifty Holstein bulls whose dams have records of over 30 lb. butter or 1,000 lb. butter in 365 days; there must be a reason for it.

The actual history of this particular county begins on the other side of the Atlantic in the building up of such human character as eventually established colonies along our eastern coasts, swept away the forests through New York and Ohio, took possession of the rich lands of Indiana, Michigan and Illinois and pushed on westward.

The first time I visited Waukesha County I drove right across the county, from side to side. It was my first "close-up" view of the county, and I was amazed at the evidence of prosperity and success that were everywhere to be seen. The houses were neither small nor large; they were "comfy."

I went back, and drove up and down the roads, and looked more closely at the farms and the farm homes and the great dairy barns, and talked with the men themselves, so as to come to an understanding of how such unusual success had been achieved. I found it. And because this little tale has no climax I can tell you,

toast-master and his witty stories kept everyone in good humor. A representative of the Richmond Chamber of Commerce made a brief speech, after which Dr. Ferneyhough, Virginia State Veterinarian for many years, said it was the duty of the breeder, to himself and the public, to keep and sell only healthy cattle and products from such cattle. He advised all breeders to study the veterinary rules of any state before shipping into it. Tuberculin is only a diagnostic agent. There were less than 1% of Virginia cattle afflicted with tuberculosis. California reports on the foot and mouth trouble are encouraging.

Prof. H. H. Wing said that milk of quality, taste and flavor, similar to that on the banquet tables would sell at a satisfactory price anywhere, even in New York State.

President Lowden paid a tribute to Virginia hospitality, and said that intimate association with livestock has an elevating effect. The South should at least raise all dairy products needed for home consumption and has great possibilities.

Dr. Thompson, the newly elected vice-president, said he was glad to serve under Mr. Lowden. He knew from experience that the doctors at the Rockefeller Institute thought highly of Holstein milk.

Mr. Scott Parrish of Minneboya Farm, who is president of the Richmond Chamber of Commerce, said a manufacturer must also be a successful merchant. Ten years ago Richmond had poor milk supply, which the authorities took steps to rectify. Now all milk consumed in Richmond comes from farms with inspected and tested herds. Three years ago a milk advertising campaign was started in the city which at that time was consuming 34,000 quarts a day. They spent \$4,000 mainly in the daily papers, and the result was an increased consumption of 42%. He believed in advertising milk as milk.

The "eats" were good and plentiful, the smothered Virginia chicken and the Holstein milk being greatly appreciated.

right here, now. It was blood, inheritance, pedigree (call it what you will) in the dairy cattle, and men that join hands, heads and hearts—that something that lecturers call cooperation.

One's focus on life matters little; one must admit Waukesha is a community of farmers who have accomplished great things.

On the contrary, one would have been astonished had Waukesha County been one whit less great than it is.

A bull is something more than a means of freshening cows. He is the father of the heifer. In a herd of lowbred cows he is the most important factor in determining whether that heifer will make 3,000 or 6,000 lb. milk in a year. Under the plan of the Waukesha County Livestock Board not a single farmer in all Waukesha County has a single excuse for using a grade sire.

Waukesha's success has been due to improvements in the quality of her cow population and not to the increase in quantity—25,680 head "just cows," in 1905, compared with 3,500 purebreds and 20,722 grades totaling 24,222 in 1919, and 4,200 purebreds and 35,000 grades totaling 39,200 in 1924, tells this—need one ask for better proof?

In the distance I see herds of purebred cattle, and to my eyes at least they are symbolic of all this prosperity; because while it was the added blood of the purebred

in the milk cow that saved the county from soil bankruptcy, it was the blood of the pedigreed animal in its absolute purity that has made the county rich in soil, distinctive in character, great in prosperity, and famous the world over.

All prosperity is built upon the basic art of agriculture, and agriculturally Waukesha County is rich. The deposits of her twenty agricultural banks tell this. They alone hold more than double the amount they held five years ago, and many, many times more than they held at the time of that now historical meeting 'round the little coal stove in a Waukesha County farmhouse in the winter of 1905-06, when three zeal-inspired farmer folk laid plans for Waukesha's first effort in community breeding, out of which—it can be said in all fairness—grew Waukesha's greatness, because, argue as one will, the only credential the county can offer for a place on a bright new pedestal in the Hall of Fame is her work with her herds.

Looking back I suspect the three believers in community coöperation as they met on that eventful winter evening, little realized the magnitude of the industry that was to be the outcome of their dreams. The events which followed have been well worthy the quarter of a million dollars of free advertising Waukesha has received. In passing, it may be of interest to the reader to know that it was the farmer breeders, who, by example and precept, pointed out the lesson of help one another to the local business men, because, before the butcher, the baker, and the candlestick maker of Waukesha had an association in the United States: the greatest county Holstein breeders' association in the world; and that together, these men, interested in all of the dairy breeds, had held the first county dairy show on this continent. Three men with a vision—and a few dollars. Three men on whom God had not bestowed much more than He has on you and me; creative thought—then action. That was all. And now the world points its finger to Waukesha as exemplifying what can be done.

All this cannot be a matter of chance.
Is there not a reason for it?

There is more than one reason—two; men and blood. Men with a vision; men unsatisfied with their lot, undismayed by obstacles, unyielding in their purpose; men who religiously believed in blood.....and kept faith.

Their work with blood in dairy animals, the culminating handiwork of breeders, who have gone on before, stands to-day as an assurance of what can be done, an inspiration to do it—and a challenge.

Items from Richmond

The Welfare Committee has been in session nearly all day, Monday, preparing for Wednesday.

Judge Peasley has been appointed to a position on the bench of the Supreme Court of Connecticut. He is not yet in attendance and it is reported that he has resigned as director of the National Association and probably will not be here at all.

Mr. Faitoute of Bloomingdale Farms, Somerville, N. J., says there is no such thing as the farming business—it's a disease.

All the sale consignments are not yet in. It is reported that the Minnesota bunch were held in West Virginia and unloaded for feed and water, owing to a mistake in orders as feed and water was in the car.

Not all the officers of the various state associations were at this afternoon's meeting. The order of sale was discussed. The Virginia men, Crabill and Kirby, think the National Association should have a man to select the cattle for future events of this kind, in order to insure high, good stock. A recommendation to that effect will be made to the directors of the National Association.

The many Eastern friends of Frank White, formerly of Woodstock, Ill., were glad to see him again fitting cattle. Frank is in charge of the Wisconsin consignment.

He is one of the greatest Holstein showmen living. Few in the East know that Mr. White was responsible for the fitting and showing of the Jefferson County Show Herd last fall. This exhibit included the splendid two-year-old, Madam Artis Wayne Denver, grand champion at every fair she was shown in 1923.

Abner Deysher of Reading, Pa., is showing lists of the monthly production of his cows now on semi-official test. Every month this year from eight to ten members of the Berk's Farm dairy have each produced over a ton of milk. During May, Lady Tweede Pontiac Lass, a daughter of the herdsire, King Tweede Spring Farm, produced 2,923.8 lb. milk as a three-year-old and in sixty-four days she has 5,463.4 lb. to her credit. Eco-Sylv Mechthilde made 2,559.9 lb. milk in May and 4,059.3 lb. in forty-nine days. She freshened at four years and six days old and made 34.16 lb. butter, 563.3 lb. milk in seven days, A. R. O.

Eight different animals at Berks Farm have each given more than 100 lb. milk in a day.

Keep Your Money

ONE of our readers asks our opinion of the possibility of his cattle becoming infected with foot and mouth disease. An insurance agent in his locality is willing to insure against loss, charging a premium of three per cent. Our correspondent is located in the State of Washington. While there is always a possibility of the infection spreading, the probabilities are so small that we would not pay an insurance premium of even one per cent unless our herd was in California and then only if we were living in a district very close to where the trouble has been found. There is no use in getting hysteria and no use in listening to propaganda put out parties interested in such a proposition as our correspondent outlines. The veterinary authorities are taking every precaution and, as long as the trouble is confined to the districts affected, we advise cattle owners, especially in other states, to keep their money.

The Latest from Sunny Lawn

AT SUNNY LAWN STOCK FARM, near Milton, Pa., on the Susquehanna Trail is located the oldest herd of Holsteins in Northumberland County. It is owned by Murray A. Miller. Mr. Miller is a real dairyman and also has a real herd, cattle which have been raised on the farm and are handled from a strictly dairy standpoint. The milk produced is weighed at every milking. Some time ago the BREEDER AND DAIRYMAN carried a story on this herd and at that time we stressed the producing capacity so strongly in evidence. Records reported at that time attracted the attention of many of our readers. The cows composing his herd are continuing their good work.

Edna Lilith Pauline De Kol, as a senior three-year-old and freshening for the third time has produced 8,180.2 lb. milk in 120 days; Bess May Lily De Kol, a seven-year-old cow, is credited with 4,760 lb. milk in seventy-six days; Pearl Topsy Lilith De Kol, a senior four-year-old in her fourth lactation period has produced 2,957 lb. milk in forty-five days. Jane Lilith Johanna, as a senior three-year-old, has, after dropping her third calf, produced 6,031 lb. milk in ninety-seven

AAGGIE MAY FAYNE DE KOL
6,325 lb. milk in 100 days. Bred and owned by Murray A. Miller, Milton, Pa.

days while Aaggie May Fayne De Kol, now a five-year-old, has in exactly 100 days produced 6,325 lb. milk.

These animals have considerable blood in common. Edna, Aaggie, and Pearl are daughters of King Pontiac Alcartra Fayne, a son of King Pontiac Alcartra Pietje and Finderne Hengerveld Fayne, an A. R. O. daughter of King Hengerveld Aaggie Fayne. In addition Pearl and Aaggie trace through their dams to the bull Lilith Pauline Paul De Kol and the cow Jennie Lilith De Kol, Edna being a great-granddaughter and Pearl a granddaughter of this pair. Jane is a granddaughter of Jennie Lilith De Kol and was sired by Plum King Johanna; whose sire, King Plum Johanna, was from the same dam as Keystone Beauty Plum Johanna, the famous former world's champion heifer owned by George E. Stevenson of Scranton, formerly vice-president of the Holstein-Friesian Association of America. Bess is a granddaughter of Lilith Pauline Paul De Kol and besides these all these cows have a number of other ancestors in common.

At the head of the Miller herd is Susquehanna Judge Segis Leoraline or as he is familiarly called, The Judge. This bull has a pedigree that includes the names of many famous animals. His sire Sir Yankee Segis is by King Aaggie Segis and is from a daughter of Dutchland Colantha Sir Inka. King Aaggie Segis is the sire of Fancher Farm Maxie, whose record of 46.84 lb.

butter stands at the head of the seven day A. R. O. list of the National Association. He was by King Segis from Segis Aaggie De Kol Beets, a daughter of Paul Beets De Kol, whose record of 32.06 lb. butter in seven

BESS MAY LILY DE KOL
4,760 lb. milk in 76 days. Bred and owned by Murray A. Miller, Milton, Pa.

days stood at the head of the mature class at time of making. Tirania Yankee Colantha Maid, the dam of Sir Yankee Segis as a two-year-old produced 28.67 lb. butter in seven days and as a seven-year-old is credited with 529.6 lb. milk, 31.78 lb. butter.

The dam of "The Judge" was Wolfspring Leoraline, a splendid young show cow who was accidentally poisoned. As a three-year-old she has a seven-day record of 23.71 lb. butter, 476.1 lb. milk. Her sire, Oakland Sethje Mooie is from the 32.55 lb. cow, Sethje Mooie, and her dam, Leoraline Pontiac, has an official record of 31.44 lb. butter, 592.5 lb. milk in seven days. She has a full sister with 30.37 lb. butter in a week as a four-year-old.

The four nearest dams of "The Judge" have seven-day records that average 29.75 lb. butter. His six nearest tested dams average 29.48 lb. butter while the records of his two granddams average 31.61 lb. butter, 561 lb. milk or better than 80 lb. milk a day. In addition he is a very handsome bull and has inherited the

THE MODERN WAY OF HAYING
Murray A. Miller and his 15-year-old son Jacob. The mowing machine, driven by a Moline tractor, cuts an eight-foot swath.

individuality of his dam and granddam, both animals that were capable of going into any show ring and rendering a good account of themselves.

While Mr. Miller is a working farmer-dairyman he yet finds time to join in the activities of the Northumberland County Accredited Holstein-Friesian Association of which he is one of the leading members. His herd is under State and Federal Supervision and passed the first and only test 100% clean. We believe, with the exception of the herdsire, every animal in the herd has been raised on Sunny Lawn Stock Farm.

Great Cow in Small Herd

OTTO A. BUELL, Sherburne, N. Y., has been a member of the Holstein-Friesian Association of America for the past fourteen years. Although Mr. Buell owns less than a dozen animals, they are all purebreds and all are of high quality and he proudly states that no T. B. has ever been found in his herd. The show animal of the herd is Buello Pontiac Veeman, No. 401195, a large handsome cow that is capable of going into almost any show ring and holding her own with the best. About the only place you would fault this great cow is her horns which resemble those of an Ayrshire rather than the kind usually found on a Holstein cow. Mr. Buell informs us that this is an inherited trait, her dam having had, as a young cow, horns somewhat similiar.

Buello Pontiac Veeman was officially tested as a five-year-old and has a seven-day record of 737.2 lb. milk, 28.29 lb. butter, her milk average being 4.21% butter-

BUELLO PONTIAC VEEMAN

28.29 lb. butter, 737.2 lb. milk. Owned and bred by Otto A. Buell, Sherburne, N. Y.

fat. She has two previous official records. She freshened for the first time at the age of twenty-three months and five days. Placed on official test she produced 342.3 lb. milk, 17.91 lb. butter with an average test of 4.19%. Tested again when four days past four years

old, she produced 501 lb. milk, 25.62 lb. butter, her average test being 4.09%.

Both the sire and dam of this cow were bred by Mr. Buell. The dam is Thankful Hengerveld Veeman. As a seven-year-old she is credited with 606.9 lb. milk, 25.24 lb. butter in seven days and 2,487.2 lb. milk, 103.85 lb. butter in a month, a very nice record as both her milk and butter are considerably more than four times the totals for the best seven days. She was by King Burke Hengerveld from a record daughter of King Veeman De Kol.

In 1914, Mr. Buell owned a cow, Burke Pauline De Kol Bess. She had an official record of 543.6 lb. milk, 29.33 lb. butter for seven days and 2,234.5 lb. milk, 121.41 lb. butter for thirty days. She was a splendid individual as well as a great producer. Mr. Buell had her bred to King of the Pontiacs and the resulting progeny was Buello King Pontiac, the sire of Buello Pontiac Veeman. Buello King Pontiac passed into the herd owned by the Harrington Sisters and there sired a lot of young cows that are both producers and good individuals. This bull grew into a big, handsome fellow. At the only fair he ever was shown, he was awarded the championship. This great bull weighed 2,800 lb. in dairy condition, which is certainly an unusual size. He was slaughtered a short time ago and he dressed over 1,600 lb. beef and his hide weighed a trifle over 200 lb. It is evident that Buello Pontiac Veeman comes honestly by her size and quality.

The health of the citizens is the greatest asset of Municipality, State and Nation. Pasteur, in closing his oration at the opening of the Pasteur Institute in 1888, said: "There are two opposing laws contesting with one another—the one a law of blood and death opening at each day new methods of destroying life; the other a law of health—its only aim is to deliver mankind and animals from the enemies that assail them." God only knows which of those two laws will gain the upper hand, it is the duty of the guardians of health of mankind, as well as animals, to use every means at their disposal to help to enforce the laws of health.

SPOTTED COWS and SPOTTED SOWS

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service to all members. They give a twenty-four hour service to all members. They give a twenty-four hour service to all members.

In Richmond

By STAFF REPRESENTATIVE

TUESDAY morning the directors were in session while visitors looked over the city and the cattle.

At 2 p. m. the Henrico Holstein Club had automobiles at the Jefferson Hotel to take visitors to the Fair Grounds. The champion Dairy Calf Club of Virginia gave a demonstration, the subject being the choosing, raising and fitting of a calf in such work. The team was composed of Miss Refa Hoover and Walter Flory, Jr., of Rockingham County, and Forrest Hedricks, of Henrico County. All three did well, Miss Hoover especially, and they were well applauded.

Synopsis of Principal Richmond Convention Doings

FRANK O. LOWDEN was reelected President. Dr. L. M. Thompson, of Montrose, Pa., was elected Vice-President. E. A. Stuart, Seattle, Wash., who was absent owing to sickness; H. V. Noyes, Kenwood, N. Y.; W. H. Mott, Herington, Kan., and R. E. Chapin, Batavia, N. Y., were reelected Directors for the four-year term.

The by-law amendment proposed by Mr. Stuart providing for the payment of the railroad fare of the delegates attending the annual conventions was carried.

Grand Rapids, Michigan, was selected as the place for the 1925 Convention, the friends of Des Moines withdrawing. About eighty delegates attended, representing twenty-three states and Canada.

R. E. Haeger gave a True Type Demonstration, using a cow from the Michigan sale consignment. He pleased his audience, made a good talk and was well cheered.

Then the delegates and visitors were taken around the city. The Capitol, the Confederate White House, the Edgar Allen Poe Shrine, Homes of Robert E. Lee and Chief Justice Marshall, St. John's Episcopal Church, Hollywood Cemetery, several parks, and a large number of noted buildings proved very interesting. Rain somewhat marred the trip but everyone seemed pleased.

State Conservation Council Adds Committee on Farming

AT THE annual meeting of the State Conservation Council held May 23-24, 1924, at State College, Pa., Robert M. Carrons, of Washington County, introduced a resolution asking that a State Conservation Committee on Farming be established. This resolution was approved unanimously by the hundred delegates present representing forty-five state and county organizations interested in conservation.

This committee on farming is a natural outgrowth of the interest taken by farmers in the work of the Council. The Pennsylvania State Grange is one of the original member organizations. Through the efforts of the Council, legislation was secured the last session of the legislature assuring the farmers of the States greater protection to his property from hunters and fishermen and greater safety to his family and cattle.

This committee will bring together all organizations in the State interested in agriculture including the State Grange, the Farm Bureau, Agricultural Extension Service of State College, etc.

The members of the State Conservation Committee on Farming are: Miles Horst, Harrisburg, Pa., Chairman; Robert M. Carrons, Washington, Pa.; Mrs. John F. Hice, Wilmore, Pa.; Frank Moore, Rome, Pa.; Madge T. Bogart, State College, Pa.

Junior Department

Clark Girls Succeed with Lambs

Edith and Alice Clark, of Janesville, Wisconsin, are noted for their success with their purebred Holstein calves, particularly SnowGirl Oakledge Maggie Peak, junior champion at Janesville and Milwaukee in 1921.

Besides winning three silver cups they carried off \$300.00 in prize money. Part of this they invested in four purebred Southdown ewes. In the International Livestock Exposition junior feeding contest Edith showed the grand champion pen of lambs and Alice finished second in the open classes with a pen of grade lambs and won the championship in the carcass contest.

High Schools Compete

Pulaski High School again won the judging trophy in the cattle judging contest held at Phoenix, New York, under the auspices of the Oswego County Holstein-Friesian Cattle Club. Their score was 244 points.

Mexico High School was second with 233 points and Hannibal third with 187. Earl Youngs, of Fernwood; Merwin Robbins, of Daysville, and Maurice Richardson, of Maple View, were the three heaviest point winners.

Grant Farrington, of Pulaski, is President of the County Club and he with Ex-President H. F. Whitney and Farm Bureau agent F. B. Morris, were the officiating judges.

All correspondence should be promptly answered. Promptness is a quality that men like. The delay of a single day may mean the loss of a customer. When letters contain money, the next mail should, if possible, bear with it an acknowledgment of its receipt. A good circular is a great help to correspondence, for in it the breeder can anticipate many questions and has his answer ready and more complete than if he were to write it. This is the very best and most valuable use of circulars.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

June 8, 1924

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Listening In At Washington

MANUFACTURERS of oleo are actively fighting the moves of some of the butter interests to prohibit the use of vegetable oils in oleo manufacture and to utterly prohibit the manufacture and sale of oleomargarine. The States of Oregon and Washington have passed laws against the use of vegetable oils in the manufacture while resolutions favoring the prohibition of the making and selling of oleomargarine have been passed by the Dairyman's League, the National Association of Creamery Butter-makers and several other smaller associations interested in the dairy industry.

In a countermove the Institute of Margarine Manufacturers have sent letters to several dairy professors asking their personal opinion on this question. If the professors take any notice at all of the requests it is hoped that they will answer by clear cut statements as to the difference in food value between butter and its counterfeit.

There is continued falling off in the output of oleo as indicated by the April figures just published by the Bureau of Internal Revenue, although the production is larger than for the same month in 1923. The April figures are: 1923, Colored, 735,015 lb.; Uncolored, 17,298,400 lb.; 1924, Colored, 931,220, Uncolored, 19,151,580. This is about 340,000 lb. less colored and about 3,100,000 lb. less uncolored than was made in March, 1924.

The Bill establishing a Dairy Bureau at Washington was passed unanimously by the House, April 7th; was unanimously reported by the Senate Committee on Agriculture on May 21st and unanimously passed the Senate, May 22d. By its friends the bill is expected to do much for the American dairy industry and is a

recognition of its value. Secretary Haecker of Nebraska, in a letter to Senator Norris said, "The dairy industry of Nebraska brought more money into the State in 1923 than her wheat industry." The Dairy Bureau Bill becomes effective June 1st.

Large quantities of butter were imported during January, February and March and the slump in prices during March and April resulted in representatives of the dairy interests appealing to Congress and the Tariff Commission for help by means of an increased tariff on butter. Political leaders in Congress were loathe to take up this matter in view of the Presidential election next fall but Senator Magnus Johnson, representing the great dairy State of Minnesota, finally offered a resolution in the Senate authorizing the United States Tariff Commission to make an investigation. This resolution was passed May 19th. Under its terms the Tariff Commission will investigate cost of production of butter in the United States and the foreign countries sending us butter and recommend to the President an increase in the rate of duty on butter if it is shown that the difference in costs justifies increasing the present rate of 8c a pound. The Dairy Union will be represented before the Tariff Commission in this proceeding and will also take part in the supplementary hearing which the Commission will hold June 23d on the casein tariff matter. The paper manufacturers have asked for a 50% decrease in the present tariff of 2½c a pound of casein and any decrease is being generally opposed by representatives of the dairy interests.

Hysteria or Propaganda

CALIFORNIA cattlemen are indignant over the statement of a Minneapolis dairy paper which said that "the fact that it (foot and mouth disease) has overspread the State of California and reached into other states has caused real alarm outside of California." The real facts are that the trouble, while severe enough, is confined to very small portion of that great state and there is not the slightest intimation of any spread into any other state and in view of the stringent precautions taken to prevent, and prospects of such a catastrophe. These facts could have been ascertained by requesting the State Veterinarian's office for the information.

There is little or no excuse for any paper or journal editorially making false or misleading statements. Reports come into all newspaper offices that are based on rumors but, if it is thought wise to print them, they should be plainly worded as rumors and should not have editorial backing. In the Holstein industry we are suffering and have suffered from inspired or so-called news editorially published and the repeated falsehoods or insinuations have been taken as gospel truth by well meaning readers who, until shown proof that it is impossible to controvert, firmly believe what they have read in a journal which they depended upon to represent conditions in the Holstein industry and the opinions of men who wrote of what they knew and not what they surmised. The ethics of the editorial profession condemn such actions which is really treachery to their readers and such condemnation will be echoed by all who prefer the truth and nothing but the truth to hysterical propaganda.

HOW MILK PRODUCTION HAS INCREASED

The dairy industry since the war has been relatively more prosperous than certain other types of farming due to an increasing consumption of dairy products in this country.

In 1919 the per capita consumption of dairy products expressed in terms of whole milk was 831 pounds. In 1920 it was 841 pounds and in 1921, 923 pounds. In 1922 it rose to 950 pounds. This represents an increase of 14 per cent from 1919 to 1922. Available data for 1923 indicate a continued increase in per capita consumption.

This marked increase in consumption, total and per capita, was met by an increase in production of milk in the United States from 90,000,000,000 pounds in 1919 to 102,500,000,000 pounds in 1922, an increase of nearly 14 per cent.

In 1923 the net imports of butter and cheese amounted to 18,000,000 pounds and 56,000,000 pounds respectively. With the net exports of condensed milk amounting to 184,000,000 pounds, deducted from these imports, there was left a net import balance equivalent to 477,000,000 pounds of whole milk.

Another significant fact to be noted is that during 1923 there was accumulated in the United States surplus stocks, principally of condensed milk and cheese, equivalent to 603,000,000 pounds of whole milk in excess of the stocks at the beginning of the year.

Estimates of the number of dairy cows in the United States on January 1, 1924, indicate that milk production will closely approximate the amount required for consumption at the present rate of consumption. A somewhat unfavorable factor in the outlook is the possibility of increase in supplies imported from foreign countries.

Dairy production has increased in foreign countries since the war. Already in 1922 the surpluses from exporting countries were fully equal to the pre-war exports and data available for 1923 indicate that a further increase was made that year. If the trend of milk production in exporting countries continues to increase as in recent years the surplus available for export in 1924 will exceed that of 1923.

Preliminary reports show that Denmark has just finished a record year of butter export with 242,000,000 lb. shipped out. Holland's exports of butter during 1923 amounted to 53,000,000 pounds, a slight increase. New Zealand, with 127,000,000 lb. butter to the United Kingdom, more than maintained its record exports of 1922. Butter exports from Argentina were materially increased; its shipments to the United Kingdom alone were 55,000,000 pounds compared with 40,000,000 for 1922 and 7,000,000 before the war. Australia on the other hand suffered from severe drought last year which cut in half her 1922 butter exports of 101,000,000 pounds to the United Kingdom. Siberian butter has again come into the British markets. The Baltic States are becoming factors of some importance with their small but growing surpluses of butter.

Great Britain is the chief buyer of the world's exportable surplus of dairy products. In 1923 Great Britain imported, besides shipments from the Irish Free State, approximately five per cent more butter than in 1922, bringing her total net imports up to 575,000,000 pounds. This was more than the amount of butter imported by that country in any pre-war year and indicates a total consumption of butter in Great Britain exceeding any pre-war year. British imports and domestic production when measured in milk equivalent about balance each other. It is to be noted therefore that the British dairy industry has likewise been expanding in recent years.

If, in 1924, demand in the United States maintains greater strength in comparison with foreign demand it is quite probable that a larger share of the world's exportable surplus will seek market in the United States and may prove to be an important factor in the dairy situation. The effect necessarily will be most marked upon those products which are imported.

Production of creamery butter in the United States has increased in the past five years an average of approximately 45,000,000 pounds annually. The estimate of number of dairy cows in the United States on January 1, 1924, showed an increase during the last year of 238,000 head. This represented more than the average annual increase for the previous five years and occurred mainly in butter producing territory. In other words the probable increase in domestic butter production in 1924 is not likely to be below the prior average figure of 45,000,000 pounds.

From the best information available, the per capita consumption of butter in the United States in 1923 was approximately up to the pre-war level.

Available information shows the production of cheese in the United States in 1923 as an increase over 1922. Cheese imports amounted to 64,000,000 pounds, which slightly exceeded the heaviest pre-war annual importations.

It appears that any further increase in domestic cheese production must take account of the fact that our per capita consumption of cheese is practically back to the pre-war level. A very sensitive relationship usually exists between the price of cheese and the price of butter.

Total unsold stocks of condensed and evaporated milk at the beginning of 1924 are exceedingly large. The foreign demand in 1923, by the inclusion of purchases for European relief, about equaled that of 1922. There was a slight increase in the domestic demand. The present tendency to reduce production of condensed and evaporated milk may help toward bringing the prices of these products back to a parity with butter and cheese.

There is an increasing demand in cities for ice cream and milk drinks which may possibly offer an outlet for a part of the milk supply previously used for condensing purposes. Condensers usually also turn to the butter industry as an outlet for any milk which can not be profitably manufactured.

From many cities reports are current that the surplus of fluid milk and cream available for city distribution is increasing. The effect of this surplus and the relation of the milk market in general to the whole dairy situation may be expected to cause milk prices in 1924 to follow closely the general trend of butter and cheese prices.

In the last two years fluid milk and cream consumption in households has increased four gallons per capita or approximately eight per cent. Improvement in quality accompanied by better merchandising and advertising should tend to promote a still larger increase in consumption.

The past year was one of great industrial prosperity, and consumer demand was maintained at a relatively high level. While the general situation does not appear necessarily disadvantageous to efficient producers, it clearly raises possibilities of increasing imports and a lower margin of profits. Although consumption is increasing, it is not a time for undue expansion of production but rather for greater efficiency.—Bureau of Agricultural Economics.

PRICES FOR PUREBREDS

Average sale prices of purebred dairy cattle for the year ending December 31, 1923, ranged from \$133 for bulls under one year to \$268 for bulls over three years of age, according to reports submitted by breeders to the United States Department of Agriculture. The breeds included were: Ayrshire, Guernsey, Holstein, Jersey, and Brown Swiss. More than twice as many animals were disposed of at private sale as were sold at auction. Auction prices, however, averaged from \$25 to \$50 per head higher than those realized in private sales. Aged bulls were an exception, such animals bringing more in private sales than at auction.

The following comparison by ages shows that prices in 1923 were somewhat lower than 1922:

Ages	1922	1923
Bulls under one year of age	\$156	\$133
Bulls over one and under three years of age	221	206
Bulls over three years of age	435	268
Heifers under one year of age	131	133
Cows and heifers over one and under three years of age	211	229
Cows over three years of age	285	261

The top bull and cow each brought \$7,500. The number of animals represented were: Calves under one year, 4,845; bulls over one year and under three, 947; bulls over three years, 156; heifers and cows over one year and under three, 2,479 and cows over three years of age 2,977.

Here is an ad which came into our hands the other day. "For Sale—Fine Holstein cow, giving milk, furniture and chickens. 208 South Ash Street."

CLUB ACTIVITIES

HAD PROFITABLE YEAR

At the opening of 1923, the Washington State Holstein Association was \$1,000 in debt. At the end of the year the debt had been paid and there was a balance of \$1,275 in the treasury. The income was derived from state dues and from commissions on cattle sales.

RACINE BREEDERS BANQUET

Milk from cows guaranteed to be free from tuberculosis was served at the banquet of the Racine County Breeders' Association held at Racine, Wis., May 9th. It was furnished by the Progressive Dairy Products Company of that city.

Harvey Nelson, president of the club, opened the meeting by introducing Joseph Walker as toastmaster. He called upon Secretary Joseph Cook, of Burlington, who told of the growth of the county organization in recent years.

Eugene Kimpel of Mt. Pleasant, declared that it was necessary for farmers to organize into associations.

Frank Overson, superintendent of the county asylum in Gatliff, told of his experiences with buying cattle and of his success and nonsuccess with his purchases.

J. A. Anderson of North Cape and E. A. Polley of Rochester, favored more testing for production and Mr. Polley spoke in favor of a state law requiring regular T. B. tests of each cow whose milk is sold. J. H. Kamper of North Cape, former state assemblyman, said that a law requiring testing would have passed at the last session of the legislature but for the fact that a big appropriation went with it and Governor Blaine felt that the added expense was not warranted at the time.

State Secretary Oldham said that periods of depression in the cattle business tended to weed out the poorer grades. The cow population of the county is falling behind the human population and therefore more cows were needed. Kentucky has one purebred bull to every 100 farms, Illinois has one to every forty-five farms, Iowa one to every thirty-five and Wisconsin has one to every five farms. This shows the possibilities for the Holstein industry in the entire United States.

More tuberculin tested cattle are needed. Of the three million animals in Wisconsin only seventy thousand were tested regularly. Mr. Oldham declared that farmers expected to make money from Holstein purchases too soon after they made the investment. He asked for support of the dairy show at the state fair next fall and also of the National Dairy Show which will be held in Wisconsin next fall.

TRI-STATE BREEDERS MEET
